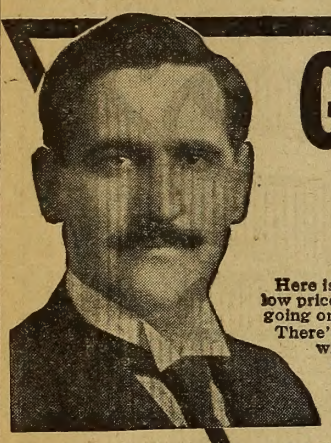
VOL. LVIII. NO. 1 DES MOINES, IOWA, JANUARY 2, 1913. WHOLE NO. 2882.

3 BARGAINS

Settle Your Doubts Right Now of Whom To Buy That Farm Engine, Cream Separator, Manure Spreader. Get My Low Prices. Your Dollar Will Go Twice As Far With Me As Elsewhere. My Free Books Prove It.



GALLOWAY'S 1913 MODEL FARM ENGINE

The Best Engine Ever Made For Farm Use Is Bargain No. 1

Here is the time that you positively must take advantage of my low price offer and get a Galloway New 1913 Model Farm Engine going on your farm.

There's no use putting it off any longer. I've got the engine that will do just what you want it to do—at all times, winter and summer—and you can buy it for $50 to $300 less than others charge you for an old model.

Here's What You Get When You Buy a Galloway

A farm engine that's *so simple* in construction, you don't have to be a mechanic to understand it;

So *economical*, it costs but a few pennies for gasoline to do a big job;

So *reliable*, it won't go wrong;

So *efficient*, a touch starts it going;

So *durable*, I give you a guarantee of perfect satisfaction; and what's more—I'll send you the engine on 30 to 90 days' FREE trial, give you a 5-year guarantee that the engine lives up to all my claims, let you pay for it on installments or any way that you choose.

You can't go wrong on a deal like this. My FREE trial offer protects you. If you don't want the engine after the trial, send it back. I won't charge you a cent for the use you have had of it, and I'll pay all freight charges.

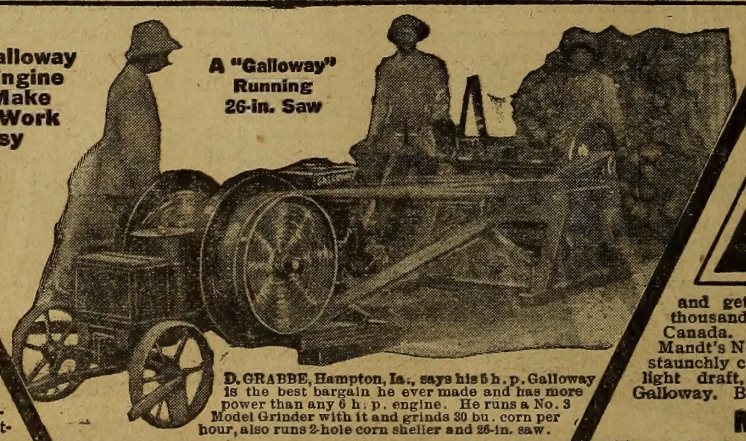
Free Book Reveals The Secret

of my exceptionally low prices and why I can undersell everybody on engine of equal quality. It also explains what a good engine should be and how much to pay for it. Write for my special 1913 proposition and prices, now, before you forget it—and learn what a *real bargain* you can get dealing with me. Address, WM. GALLOWAY, Pres.

The Wm. Galloway Co., 108CK Galloway Sta., Waterloo, Ia.

Here You Save $50 to $300 Easily And Get the Worlds Best Farm Engine

Get a Galloway Farm Engine and Make Farm Work Easy



A "Galloway" Running 26-in. Saw

D. GRABBE, Hampton, Ia., says his 5 h. p. Galloway is the best bargain he ever made and has more power than any 6 h. p. engine. He runs a No. 3 Model Grinder with it and grinds 30 bu. corn per hour, also runs 2-hole corn sheller and 26-in. saw.

Galloway's Bath-In-Oil Separator

(Bargain No. 2)

Mr. Dairyman and Farmers, here's where you and Galloway come together on the greatest separator proposition ever put before the American people.

You've been thinking about buying a new separator for a long time — now's your chance—for

Here You Save $20 to $45

and get a 1913 Model Bath-In-Oil Separator—the *easiest to clean, easiest to run*, greatest *result-producing* separator on the market.

My New 1913 Separator looks 10 years ahead of the rest in improvements. It's the only one with *swinging* supply tank of heavy metal, round corners; all gears enclosed; self-oiling; perfect skimmer under all conditions; all parts standard, interchangeable; and better in its mechanical construction than separators costing at least 50% more.

Don't buy any separator from anyone, until you try my 1913 model. It comes to you on 90 days' free trial. After the trial, if you don't think my separator better than any other, send it right back and I won't charge you a cent for the use you have had of it.

A Separator Book Worth Having

sent free upon request. It tells what size to buy for your needs, explains working parts, how to get the most out of a separator, other valuable information — also my low price, 90-day-trial, introductory offer, TEN year guarantee, etc.

This picture shows exactly how handy a Galloway separator is with respect to the height of supply tank and crank handle. The milk tank is only waist high—just 39 in. from floor, and the center of crank shaft is 35 in. from the floor, which makes it the most convenient height to apply the power.

The Wonder of 1913

Galloway's Spreader

(Bargain No. 3)

If there's a farmer friend of mine anywhere that's running his place without a spreader of his own, I want to tell him some good news.

You need a spreader badly, you need it for the sake of your soil, the sake of your crops, for the sake of your profits — and there's absolutely no reason why you should go without one another season—when

Here You Save $25 to $50

and get the spreader that's making good on thousands upon thousands of farms in the U. S. and Canada. Nowhere else can you get a spreader with Mandt's New Gear, a spreader so mechanically perfect, staunchly constructed, with special patented features, light draft, general appearance and finish as the Galloway. Besides

My 1913 Models

with more liberal measurements, greater capacities, come to you on a 30 to 90 day free trial, 5-year guarantee of satisfaction or money back. I'll take your note if you like or let you pay for it on some other plan in order to let you get this *best* of all manure spreaders.

The Greatest Book of All — "A Streak of Gold" which contains articles on farm management, will be sent you free upon postal request. Write now and I'll also send you my low price offer on 1913 models. Address

PARCEL POST A BOON TO FARMERS

How the New System, Which Went Into Effect January First, Is Expected to Enlarge the Farmer's Market for Small Produce and Reduce His Own Cost of Living.

THE parcel post system, which went into effect January first, is destined to have a two-fold object: To increase the market of the producer and to decrease the living expenses of the consumer. It is doubtful if any class of people will be more directly or more materially affected (and this beneficially) than the farmer. Under the system as now in force, it is possible for any farmer living upon any one of the 42,000 rural free delivery routes to ship fresh produce (such as butter, eggs and dressed poultry) direct to the consumer in the adjacent town or city, at the rate of five cents for the first pound and one cent a pound for the subsequent ten pounds, thus cutting out the middleman entirely, while at the same time the same carrier delivers to his R. F. D. box, groceries, machine repair parts and articles of merchandise, which it has heretofore been absolutely impossible to secure by mail, at such a reduced rate as to materially cut down his own cost of living. This example is typical: "There was a little implement I wanted the other day from another farm, so I called up my friend on the telephone and asked him to send it to me by mail. He could not do so because it weighed five pounds, so he was obliged to hitch up a horse, drive three miles to the express office, pay twenty-five cents to bring it to an express office two and one-half miles from my farm, with a river running between. I had to hitch up a horse and drive two and one-half miles in each direction, paying thirty cents for ferrying across the river, so that it cost me in all, more than $1.00 to get that small repair part, to say nothing of the great inconvenience both to my farmer friend and to myself." Under the new system it is possible for this repair part of five pounds weight to be sent by mail for only nine cents, about one-tenth of what it cost under the old system.

That the farmer is quick to realize the great opportunities which will be opened up to him by the new parcel post system, is evidenced by the general interest which he has shown in the subject and by the large number of letters which have been received by the officials of the department of agriculture and the postoffice department. Letters have reached these departments showing that truck gardeners, farmers and poultrymen are eager to build up a daily farm service among regular customers for shipments of eggs, butter and chickens. Such transactions, the department believes, to a large extent, will remove both the producer and consumer from the manipulation of the food jobber, charged in practically [illegible] the large cities of the coun[illegible] with buying at the lowest m[illegible]k to which he can batter the prices and then selling at whatever figure his control of the market can give.

THE R. F. D. CARRIER BECOMES THE COMMUNICATION BETWEEN PRODUCER AND CONSUMER, CUTTING OUT THE MIDDLEMAN.

It is pointed out that the farmers surrounding the larger cities, heretofore almost entirely at the mercy of the express companies, invariably held eggs, butter and other produce until such time as they had considerable bulk to send to the food jobbers at a shipment that would insure the lowest possible transportation charges. Under the old system eggs and other perishable farm produce frequently are several days old before reaching the consumer. The department officials are certain that a vastly freer movement of all farm produce will result now that the parcel post has become effective and that great encouragement will be given to the small farm producer and poultryman far ahead of former conditions with their concentration in the buying and selling of food products. This concentration will be wiped out, the department officials believe, through the building up of a mail order business for the handling of small farm products. The department has sent out notification that skill in packing the produce will be an important feature in the successful conduct of the business and the design of cartons of minimum weight with maximum security for fragile shipments will call for ingenuity. It is believed that cartons will be devised so that they can be used repeatedly, just as bottles are now used in the milk trade in the large cities. The department officials foresee such a rapid growth of the parcel post system that daily service will be extended far beyond the shipment of butter and eggs. It is believed farmers will supply city consumers with berries of all kinds, shipped at a minimum cost, vegetables and ripened fruit, picked immediately before shipment.

The specific manner in which all this will work out to the profit not only of the producer but of the consumer as well, may be pointed out in this manner: A dozen eggs weigh about a pound; postage on a dozen eggs put up in a carton to pre-

HOW THE PARCEL POST WAGONS LINE UP FOR PACKAGES AT EUROPEAN POSTOFFICES.

HAPPY NEW YEAR.

Seldom, if ever, has the grain-belt farmer been so confronted by a year of prosperity already experienced and so cheered by a year of prosperity already anticipated. The combination gives to our "Happy New Year" a joyous, jovial ring far beyond even its usual optimism and good cheer. There is not one among us who cannot join in felicitations over the happiness and prosperity of the past or the outlook for the future.

The closing year will go down in agricultural history as one of bumper crops and unalloyed farm prosperity. There have been years when certain crops have produced larger aggregate returns, but never a year when crop after crop came in with such bumper reports, until the aggregate of the farms' production reached a mark heretofore untouched. Nor have bumper crops this time meant reduced prices, for the farmer is reaping his financial reward in a manner that should inspire him to go into the fields next spring determined to put every ounce of energy and every particle of brains into a co-operation with Nature that will yield good returns in the harvest time, whether the growing season be one of climatic excellence or not. It is not all Nature's part, this record of bumper crops. It is an equal partnership between man and Nature, for by the rotation of crops and the proper adjustment of crops to soil conditions, and by a thousand and one other manifestations of agricultural knowledge, man has played his share in making thousands of bushels supplant hundreds, and millions come in turn to supplant thousands. And the great glory of it is that what has been done once may be done again, and on and on into the future, so that the farmer may look down the vista of years and see a succession of fat years, interlarded by only a few lean ones, so long as he farms with both brain and brawn and meets Nature half way in the partnership.

These are some of the reasons why our "Happy New Year" at this particular time takes on a new and joyous significance. The future is so roseate with promise, a promise that is based on the actualities of experience and knowledge. In his annual report Secretary Wilson points out that the aggregate of farm crops has increased in sixteen years from four billion dollars to nine and one-half billion dollars. In other words, sixteen years have found the farmer producing two bushels where he produced but one, cutting two blades where he cut but one and finishing two animals where he finished but one. Who is there that will say the record of the past sixteen years may not be duplicated in the next sixteen and that on New Year's day, 1929, we may not felicitate ourselves upon a prosperity double that of the present, magnificent though it is even now?

And so, with riches abounding in material things, and with hearts overflowing for the blessings of the past and the promises of the future, we join hands today as never before in wishing one another "Happy New Year." There is a lilt to the voice, a sparkle to the eyes, a flush to the cheek, a general exuberance which were never in evidence before. As our material prosperity has increased, so have our material comforts, our capacity for enjoyment, our opportunities to make farm life satisfying and ennobling. Therefore in deepest humility, yet with a conquering spirit, we make our chorus this joyous holiday season ring out with a new fervor that shall inspire the lagging and strengthen the weak, a chorus that is not for one day only, but for the whole 365 through which we must labor with a will to make the new year take its place at the vanguard of the long procession gone by: "Happy New Year."

WINTERING BEEF BREEDING COWS.

One of the difficulties of the live stock producer is the selection of a ration on which beef cattle may be suitably and economically wintered. Formerly the beef-feeding business consisted in shipping cattle from western markets and finishing them on eastern-grown feeds, for it was often possible to buy two year olds under those conditions at a lower price than they could be produced locally. But in consequence of the breaking up of the western ranges these conditions have been radically changed. In the future cattle will be raised only on land that is especially adapted to the business, which is prolific in nutritious grass, is supplied with plenty of water and shade, and is located near to central markets.

There is much land of this character throughout the middle West that should be utilized for the production of beef. All that is necessary is plenty of summer pasturage and enough land whereon to produce the necessary winter feed. At present hay is so expensive that many farmers would sell it rather than to feed it to cattle were it not that they desired to maintain the fertility of their soils. Practical tests, however, indicate that silage instead of hay may be profitably fed to furnish winter nutrition for the beefs. It is adapted to a wider range of soil condition than any other crop except grass, it produces a large amount of food nutrients per acre, it is palatable, easily grown, succulent, harvested with comparative ease, and can be stored at less expense for buildings than any other forage crop. Furthermore none of the corn is wasted where it is fed out in the form of ensilage.

Particularly is silage valuable in the beef menu where cottonseed meal is also fed, as the excess of protein in the latter nutrient balances this deficiency of the former. Furthermore the laxative character of the silage is materially reduced by the addition of cottonseed meal to the ration. At the Pennsylvania Experiment Station, accordng to the data set forth in a recent bulletin, ten pure-bred Shorthorn and as many Aberdeen Angus cows were wintered in two separate lots with access to oper-end sheds as well as feed yards, water and salt. The Short-horns were thin in flesh, while the Angus were in a much higher stage of nutrition at the beginning of the experiment. Twice daily the cows were supplied with as much corn silage as they would clean up in one hour, while one pound of cottonseed meal was also fed once daily to each animal.

The animals were fed for 140 days and the results showed that to begin with the Short-horns did not eat as much silage as did the Angus, as they were not accustomed to this roughage However, after the first six weeks each animal was receiving sixty pounds of silage per day. With less than 1 per cent of waste the Short-horns ate this amount of silage throughout the remainder of the winter. However, toward the end of the feeding period the Angus females refused to consume the full allowance of silage, even despite the fact that some of them were suckling calves. This shows that when thin cattle are fed largely on roughage they will make rapid gains, but as they improve in condition their consumption of feed decreases, finally reaching a point where the appetite for roughage is only sufficient for maintenance. At the close of the test the cows were turned out on pasture without grain where they still continued to gain in weight.

During this feeding period, one lot of ten produced 88,405 pounds of manure where 9,851 pounds of straw were used as bedding. During the test the total gain made by the twenty head amounted to 3,290.84 pounds an average daily gain of 1.17 pounds. The average daily gain per cow comprised 57.64 pounds of corn silage and one pound of cottonseed meal, the average cost of the feed per cow amounting to $16.13 for the entire period. Each cow voided $6.63 worth of manure, while the net cost of wintering each animal amounted to $8.22. In this test, corn silage was valued at $3.50 a ton, which is equivalent to seventy cents per bushel for corn. It required four tons of silage to winter each cow, which is equivalent to one-third of an acre of land that will yield sixty bushels of corn to the acre.

These feeding tests were carried out under the most adverse weather conditions. However, figuring that the animals could be maintained on pasture during the rest of the year the total cost of maintenance per cow for the twelve months would amount to $15.22 where pasture is valued at $1 per head per month, or at $22.22 where pasturage was worth $2. In addition some of the cows produced calves during the course of the experiment, which at prevailing beef prices would allow a profit of from $10 to $15 per calf on the cost of keeping the cow. Such a method of farming as this will make for a uniform distribution of labor throughout the year, a maximum profit in the production of crops, the maintenance of soil fertility at a minimum expense, and the utilization of all rough or broken land capable of producing grass. It will also solve the problem of securing feeder cattle at less cost than they can be purchased for on the central markets of the country, it will eliminate loss in transit, and will insure the fattening of beef cattle of better condition, breeding, and quality, for the trade.

THE SHREDDING OF CORN FODDER.

The following communication from one of our Indiana subscribers, Will Meyer, conveys some interesting information on the problem of shredding corn:

I have read several articles in your paper recently in regard to handling a corn crop and will say that I think the only way to handle fodder is to shred it.

I will admit that shredding requires a cash outlay, while husking by hand can be done by the owner of the crop himself if he sees fit to do so. Corn and fodder also have to be well cured and dried out to shred and more help is required. However, you will lose time and money if you do not have help enough and it is on this point that I want to give you my experience as to how my neighbor and I overcame this difficulty.

We had about thirty acres of corn and we knew our chances of hiring a shredder would be slim. Also that we would have to hire most of our help, as there were not enough near us who cared to shred, so we decided to run an outfit of our own. My neighbor had an eight-horse gasoline engine and I bought a two-roll shredder and we started to work. We set our machinery, backed our corn wagon under the elevator and then each of us took our wagon with rack on and started for the cornfield. Each one loaded his own wagon, the other one handing up the corn. When both wagons were loaded we drove up to the shredder and each one would unload his own wagon, the other feeding the shredder. When our corn wagon became full we unloaded the grain in the crib and went back to work.

In this way we cribbed from sixty to seventy-five bushels in a day and finished our thirty acres in about fourteen days. By this method two of us handled our entire corn crops and we like the plan very well indeed.

It must be conceded that an enormous task would have been involved in husking out this thirty-acre field of shocked fodder. We venture to say that instead of the work being done in fourteen days as was the case in this instance it would require all the spare time that could be made available during the entire winter season and furthermore the shredded fodder either in the stack or crow will keep in much better condition than if it were in the shock in the field. Where a plan like that suggested by Mr. Meyer is carried out it solves the help problem in an ideal way so that the corn is quickly put in the crib and the fodder stored in such condition as to give it the highest possible feeding value.

PRINCIPLES IN ROAD ADMINISTRATION.

There never has been in the past so much discontent over the discomfort of traveling over mud roads as there is at the present time. While it is well known that the making of hard roads in communities where there is no hard material must involve an enormous expense, yet more and more taxpayers are expressing a willingness to be taxed for permanent roads. This was plainly indicated last week at a road conference held in Des Moines, Iowa, where 200 delegates composed of typical representatives of both town and country voted unanimously in favor of a one-mill tax to create a state-aid fund. In the past the best that Iowa has been able to do along this line has been to support a non-salaried highway commission with but little power and with practically no money to work with.

This same conference endorsed almost unanimously the establishment of a permanent highway commission with ample power. In addition a recommendation was made to the legislature to submit the question of bonding the state for good roads purposes to the people at the next general election.

We appreciate the fact that this program is not endorsed by all the people and it is just possible that at the present time it may not meet with the endorsement of even a majority, but the rapidly changing feeling indicates that the time will soon come when all states of the corn belt will undertake the construction of permanent roads. This being the case the question of administration is the important one to decide. In this matter there are established precedents which may be safely followed and these precedents in every case tend in a greater or less degree to centralization. In other words, wherever good roads have been economically built in this country they have been built under the general supervision of the state under a plan of co-ordination with the county and with the township. No plan will ever work out practically in the corn belt that does not in a large way leave with the locality the authority to say when they are willing to bear the expense of good roads. When it is decided to incur the expense of building permanent roads the township, county and state will as units find themselves compelled through the operation of a sound business principle to adopt plans and specifications prepared by the best available talent, whether this be furnished by the nation or by the state. Furthermore expert supervision will be acceded to as a part of the same.

The most urgent need at the present time in all states of the corn belt is the classification of highways in order that the question for all time may be settled as to what constitutes main roads and which are the secondary highways. This recommendation was made to the legislature at the Iowa road conference referred to. When this plan is once carried out we will then know definitely the order in which our roads should be permanently improved. It is a well-known fact that 90 per cent of the rural traffic is carried on over 10 per cent of the highways and certainly the first move should be to improve this 10 per cent. In the meantime we are strongly in favor of keeping the secondary roads in the best possible condition by the construction of suitable culverts wherever they are needed and by the sensible and compulsory us of the drag. There will always be large and important township and county duties so that no man need have fear that the adoption of permanent road administration will in any way interfere with the principle of local government.

COMPULSORY EXERCISE FOR SOWS.

Frequently as has this subject been discussed in these columns it has not been overemphasized. We claim that exercise constitutes more than one-half the battle if strong litters are expected, and it should be remembered that the average sow will not of her own accord spend enough energy to answer the purpose.

We believe in scattering feed for

sows and there is no better place to do this than right out on the pastures or in the bare feed lots. Shelled corn or small grain of any kind may be used for this purpose. It is a mistake to feed sows a heavy ration in the morning and allow them to go right back to their sleeping quarters. If they are fed in troughs, they should be immediately turned out so that they have no access whatever to strawy quarters. Unless the weather is too cold they are far better off out on bare ground where the comforts of life are so few that they will spend their time romping around and perchance in squealing. Anything to keep them going is better than to let them loaf in the yards.

Under this plan many a man has been able year after year to raise strong litters even though his sows have been fed on corn alone, while it is never difficult to find instances where balanced rations have been fed only to find very poor results follow in the production of weak litters.

Compulsory exercise by brood sows should be the watchword of every swine breeder during the weeks that follow between this period and farrowing time.

KEEP THE CARS MOVING.

That the railroads are meeting the Interstate Commerce Commission half way in the effort to keep freight cars busy and so relieve the car shortage would seem to be evidenced by this notice recently sent by one of the big lines traversing the grain belt to every one of its agents:

Keep the cars moving. Why? Look at the crop reports. Even under normal conditions there would probably be a car shortage this fall, but crops everywhere are big. Conditions are abnormal and business is going to boom. It is not only going to boom, but it is booming. Here is a matter in which you can co-operate with the railroads to your own advantage. It is to your interest as well as to the railroads' to do all possible to prevent a car shortage.

Do not order any more cars than absolutely needed. Give the railroad all the advance notice possible that you are going to need cars. Do not order a large car if you can get along with a small one. Try to adapt your load to the car available. Large cars are harder to obtain than small ones. Load cars as soon as possible after they have been placed. Load cars to their full capacity. The more freight you load into a car the fewer cars will be required to move all freight. Unload cars promptly, regardless of free time allowed. Somebody needs the empty cars. Cars are built for transportation, not for storage.

Once it is generally understood that every car must be kept in constant, active use (not permitting great numbers of them to be laid over at the termini of the various railroads nor delayed in transit nor held out of commission by shippers simply by the payment of demurrage charges) the problem which has assumed such serious aspects this fall would be simplified. By impressing upon their agents the necessity of keeping cars moving, and of securing the co-operation of the shippers to the end that the greatest possible use be made of each car, much can be done to avert the conditions of this fall, which were so serious that great financial injury was done to farmers who could not move their bumper crops at the time when quick marketing meant larger profits.

PREVENTING FARM ACCIDENTS.

Ninety-four Wisconsin farmers were seriously injured on corn shredders, corn huskers and feed cutters during 1911. Four laborers were killed outright, six victims lost arms, while twenty-one men suffered the loss of one or both hands. In the majority of instances these injuries and fatalities could have been prevented had the workmen practiced care and precaution to protect themselves a gainst accident. Many of the accidents resulted from carelessness and lack of appreciation on the part of the workmen that they were operating dangerous machines which were to be handled with a maximum of care and caution.

There are, of course, many don'ts that should be borne in mind when operating a corn shredder, corn husker, or feed cutter. Invariably a stick should be used to unclog the rolls and never the hands for this purpose. It would be better yet if the machine was stopped when such a difficulty is met. During the last year eight men were severely injured in consequence of trying to stop the rolls with their hands. During 1911 fifteen arms and hands were sacrificed on Wisconsin farms because the machines were not provided with self-feeds. Every husker should be equipped with a self-feed —either of the apron or gravity variety—so that the feeder will not have to stand within reach of the rolls.

Every husker and shredder on which it is possible for the feeder to get caught in the rolls should be provided with a safety lever so attached that the feeder's body will strike it in case his hands are caught in the rolls. In at least eight recent cases of injuries efficient safety levers would have prevented the accidents. It is always extremely dangerous for the feeder to cut bands while standing within reach of the snapping rolls, particularly where the knife is tied to the wrist. In addition the footboard of the machine should always be kept free from ice and snow, as oftentimes the feeder may slip on icy footboards and sustain serious injury.

Every gear on the various machines can be so covered as to make it impossible for fingers to get caught. A machine should never be purchased that is equipped with uncovered gears. Every sprocket should be covered.

LOANING SCHOOL FUNDS.

The proposition to investigate land credit systems abroad has set men to studying and thinking. The three leading political parties have declared in favor of doing everything possible to make it easier for farmers to obtain loans, at lower interest rates and for longer periods. A bill providing for a congressional investigation of the foreign systems will be introduced in congress, with every prospect of passing. The subject was thrashed over at the recent conference of governors, Ambassador Herrick telling of the success of these credit organizations in France and acting, in large measure, as the spokesman for President Taft, who is known to be heartily in favor of trying out the experiment in this country.

Whatever ultimately comes of the entire matter the discussion will have served a useful purpose if it opens the eyes of the moneyed men of the cities to the fact that a loan made to a farmer is not only one of the surest and safest investments possible, but is like bread cast upon the waters in that it increases farm prosperity, which, in turn, augments city prosperity and enlarges the moneyed man's working capital. It has been conclusively shown by Mr. Yoakum, of the Frisco railroad, that the farmer is obliged to pay higher interest rate for money with which to carry on and increase his business than does the manufacturer, the railroad man or any other business man. That this is an injustice, considering the absolute soundness of the security which the farmer gives for his loans, is generally recognized. Now comes a Kansan, a member of the faculty of the state agricultural college, with the proposition to loan the state school fund to farmers, at 5 per cent or even less, on long time, ranging from eight to twelve years and even longer. Inasmuch as the Kansas state school fund approximates nine million dollars and the interest paid by the farm borrowers would be but a trifle less than the interest paid on the school and municipal bonds in which the fund is now invested the proposition deserves to be considered. Its sponsor outlines it in this manner:

The present short-time loan system, with the small amount lent on a farm, prevents thousands of young men from buying farms. Three and five-year loans can never be safe for the farmer who wishes to buy a farm with the profits of his farm's production. The chances are too great against success. There may be "lean" years, sickness of family or live stock and low prices for produce.

With state money there would be no occasion for short loans. A farmer then might have eight to twelve years for repayment of the loan and interest, with the privilege of making two or more payments at any regular payment time. He should also have the privilege of carrying one payment over to the next payment time when the reasons for so doing seem good to the state land commissioner.

It would make it easy for the energetic renter to buy a farm and pay for it; for the young man just leaving home to start a home of his own to buy a small farm and make the farm pay for itself. In ten years our army of tenant farmers in Kansas has increased 6,000. There was little need of farm credit when land was free or to be had at small cost. Today there is no unsettled frontier. There is no more "West."

I would not recommend that any of this money be lent for any other purpose than for paying for land, and would not lend a dollar to a man who already owns 160 acres. Every applicant should produce what Germany and Denmark value so highly, good personal character credit. Oregon has been lending its school fund in this way for forty years. In Denmark eighty-nine out of every 100 farmers own their farms. That is what I want for Kansas.

It is doubtful if any better use could be put to idle money than to loan it, on absolutely safe land security, in such a manner that the prosperity of the state and society as a whole shall be increased. No one will feel the effects of this augmented prosperity any sooner than the moneyed man and the ability to find absolutely safe channels for his capital will rid him of the principal worry which the possession of money entails. Whether it is best, or advisable, to use the school funds for such a purpose we cannot say, but we do maintain that the general proposition of making the question of farm loans the subject for exhaustive study, with the idea in mind of making it easier for the farmer to obtain money at a lower interest rate and for a longer period, is one of the most important before the country today and one which should be studied from every possible angle. Any suggestion which will in any manner shed light on the subject should be welcomed.

OUR RED LETTER SUBSCRIPTION OFFER

THE IOWA HOMESTEAD
KIMBALL'S DAIRY FARMER
WOMAN'S WORLD
KANSAS CITY WEEKLY STAR
PEOPLE'S POPULAR MONTHLY

All sent one year for only **$1.25**

The regular price of these five splendid papers is $2.25 a year. By taking advantage of this unparalleled offer you secure a whole year's good reading matter for the entire family at only a trifle more than one-half the regular price.

Each of these five papers is a leader in its respective field. The combination makes a library of current news, useful information, practical advice and entertaining literature. Kimball's Dairy Farmer is practical and up to date, full of dependable advice and information for the man who keeps cows. The Woman's World is a monthly household magazine of striking and particular interest to the housewife who wishes to make her home attractive and to keep posted with what woman is accomplishing the world over. The Kansas City Weekly Star is conceded to be the newsiest and most reliable weekly newspaper published in the country. It presents the news of the world in a clear and concise manner, without political bias or embellishment. The People's Popular Monthly combines the best fiction, poetry and feature articles dealing with economic development, in a monthly symposium of interest to every member of the household.

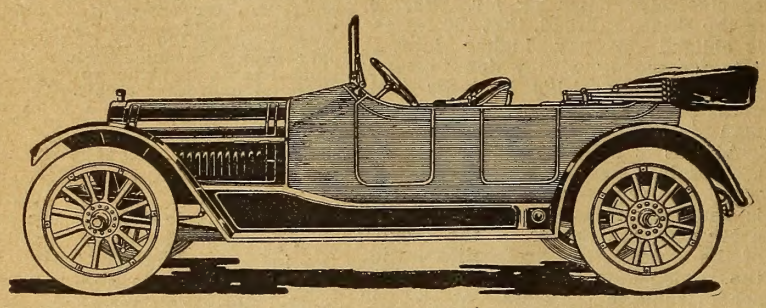
The publisher of The Iowa Homestead has elaborate plans which will make The Homestead better, larger, brighter and more practical in 1913 than ever before. Every department will be continued throughout the year and will be in charge of practical experts who practice what they preach and who allow no unsound doctrine to creep into their columns. The Homestead will continue under the management of the same editor-in-chief, who owns and operates his own farms and gives to subscribers the benefits of his own personal and successful farm experience.

No more liberal or attractive subscription offer was ever made by any publisher. The introduction of our Red Letter Offer created a sensation among farm readers because it presented the maximum of farm and home reading at a minimum of cost. The opportunity is so splendid that it should be taken advantage of at once. Five great papers will be sent one entire year for only $1.25, being a saving of a whole dollar on the regular subscription price. Make your remittance today, so as to insure you getting all the big winter numbers of all these five splendid papers. Do not delay, but remit $1.25 at once to

THE IOWA HOMESTEAD, DES MOINES, IA.

Mitchell

YOU know what the Mitchell name stands for in vehicle building; seventy-eight years of the highest standards in materials and workmanship.



The 1913 Mitchell Automobile

is built according to those same standards. We offer it to you as the best car you can possibly buy at anywhere near its price. You live where ever-ready automobile service means everything to you. The Mitchell has been designed and built with the one idea of giving better service than any other moderate priced car.

Ask the nearest dealer to show you the 1913 Mitchell. Go into its points; the scientific manner in which weight and wearing parts have been distributed. The more you know of its design and construction, the more you will understand its superiority, Pay special attention to the long-stroke T-head motor, there has never been a motor better proportioned for power and efficiency. Be sure and note carefully the left drive and center control, the electric starter and electric lighting system. These new Mitchell features will be of the greatest possible convenience to you. You won't find such a combination of improvements in any other car you may be considering.

All Mitchell 1913 cars have left drive and center control; Bosch ignition; Rayfield carburetor; Firestone demountable rims; rain-vision windshield; Jones speedometer; silk mohair top with dust cover; Turkish upholstered cushions; Timken front axle bearings; gauges on the dash to show air pressure and oil pressure; gauge in gasoline tank showing amount of gasoline it contains; and a portable electric lamp which also illuminates the instruments on the dash.

All with T-head motor, electric self-starter, electric lighting system, and 36-inch wheels

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Hogs will get lousy the year 'round, and while it is impracticable to dip them at this particular season, one can keep a close watch for these pests, and when they appear, thoroughly spray all the animals and their sleeping quarters with a reliable spraying solution.

A good brood mare on the farm pays her way with the work she does, leaving her colt as a clear profit.

As the old year draws to a close, and we begin to lay plans for making the new year brighter and better, all of us can save ourselves making a lot of miscellaneous resolutions by adopting this single, simple resolution: I will do my very best in every way during the season of 1913.

Save all the wood ashes for fertil izing grape vines.

Provide all water troughs with plugs for letting out all surplus water that the stock leave in them after drinking, as it would freeze if left in the troughs, causing a big job of disagreeable ice hacking the next day before the animals can drink; also, giving the water a chill by coming in contact with the ice.

Hang right onto the dual-purpose cow till you know you have learned well how to specialize, either in dairy or beef production.

The housewife who uses butter color to deceive a buyer is little better than the oleomargarine people who sell their product as pure, unadulterated butter.

Cheap or poorly repaired harness often prove very dear articles to keep around the farm, as they are a constant menace to the life and limb of everyone who rides behind them.

If you are foolish enough to neglect selecting seed corn from the field before the freeze, that which is in the center of the shock fodder will not yet be frozen sufficiently to damage the germinating qualities.

As the season for using the automobile is practically ended, the wheels should be jacked up and at least one-half of the air let out of the tires. Where the tires are left inflated and bear up the weight of the machine, the tires will be practically ruined by spring. It will be even better if the tires are entirely removed from the rims, carefully cleaned, wrapped in thick paper and laid away till spring, as light has a deteriorating effect on rubber.

Sour cream makes more butter than sweet cream, but the flavor will not be quite as good.

No breed of cattle brings such profits as—the one that is well fed and properly cared for.

It is now high time for the breeder of pure-bred horses to get busy and buy his stallions and mares for next season. While it is true that the choice animals in all stables command what appears to be extremely high prices, yet, it is also a fact that these are the ones which usually are sold first. Furthermore, they represent greater value according to the amount paid for them, than the cheaper and lower grades that one must take if he waits a little later to make his selection of breeding stock.

Comfortable quarters for the dairy cows are as important as feed from now on.

Where the corn stubble was sown to wheat, the fodder should not be husked out and left lying around on the ground. As the corn is husked the fodder ought to be tied in armful bundles, with binding twine or baling wire, and hauled from the field at once, or else set back up after husking it out. If it is left to lie on the wheat, the ground where it is lying will not freeze now; the wheat under it will turn yellow and puny; then, as soon as the fodder is removed, later on, the soil will freeze, and the tender wheat plants, deprived of their protection, will be killed by the sudden change and exposure.

The "back to the farm" cry is no longer a joke, it is a wail on the part of those who have seen the error of their ways and would be glad to get back and find that the farm has gone away ahead of them.

No strainer ever yet has been devised that will take all the filth from milk, once it gets well worked in.

It seems rather pleasant to have a few days of fine weather after the rush season is over. It makes it possible to get things in shape to meet King Winter with a smile when he comes and to enjoy the good things that even winter season brings.

There are fewer shocks of corn standing in the fields this winter in this vicinity than there used to be. The silos and the shredders are the cause of part of this, and some prefer stacking their fodder to digging the shocks out of the snow. There are enough shocks standing in the fields though to remind us of the good old

BOX H STERLING, ILL.

days when we first began to learn the value of corn fodder.

One of the odd jobs on this farm during the past few days has been to find as many old bolts as possible and fit them with nuts and put them away where they can be be found in a hurry when wanted. A set of stock and dies has helped make the work interesting and has been a great help in adding to the stock of bolts.

The present price of gasoline is making the pumping of water with gasoline power a rather expensive luxury. This must make the windmill manufacturer smile because he knows that the power that makes his wheels go round is free and that it will bring him customers.

It is a fortunate strike when the road drag hits the road just before a freeze-up. Somewhat rough, frozen roads with traffic is a slow and unpleasant process, to say the least.

Now that the "Christmas program' is over, schools may settle down to real work again. It seems to me that preparation for Christmas takes more time each year, and that it now breaks too much into school work.

The healthy boy wants a gun. I should consider something the matter with a boy of mine should he pass the age of fifteen without putting up a plea for a gun, and when the boy reaches the "safe age" I should consider there to be something the matter with his dad if he didn't get him one.

A buzz saw should never run except inside a shield. Hundreds of accidents happen each winter, when the woodpile is being sawed, because the saw is not covered with a shield.

Dairy products are not as high this winter as they were last. Of course the cost of feeding is less, but labor cost is just the same. Had I to buy in the city I might think the price still too high, but out here on the farm the reduction hits rather hard.

Burying potatoes and other products of the garden patch in a pit is sometimes a risky piece of business. A warm, wet spell of weather is hard on the contents of a pit, while severe cold frequently is a test in opposite conditions. The man who loses all his vegetables in a pit is certainly to be pitied.

The distance one lives from a shipping point has considerable to do with the cost of concrete work, particularly where the sand as well as the cement must be shipped in and then hauled out to the farm. Farmers who live over sixty miles from a shipping point find the cost of hauling so much heavy material costly business.

A great deal is being said in favor of the concrete water tank, but I find the galvanized steel tank very satisfactory. It is light, therefore easily moved from place to place, as wanted, and tanks of good material have proven very durable on my farm.

It is quite a problem to keep the pipe leading up to an elevated tank from freezing. A friend writes that the best protection he has ever found is newspapers. He uses about 200 thicknesses, wrapped around the pipe, and finds it the best of anything he ever has tried. Perhaps this hint will be just what some folks are looking for.

The voice of the shoat is a fair barometer of his health and thrift or lack of thrift. There is a tone in a shoat's voice that tells a plain story. When a complaining tone it means that shoat is not doing well, but the low, satisfied grunt tells of steady, daily gains. The tone of the voice, whether of the human or the hog, gives insight into its owner's state of feeling.

I came from New England stock and must confess to having inherited to some extent the old New England horror of debt. Back there, in grandfather's time, it was almost a crime to buy anything and not be able to pay for it, cash down. A neighbor known to be in debt was looked upon as being not exactly a good example to be set before the young. Opinions have changed back there since then, and there, as it is here, the amount of property one has around him is no sure indication of that man's real wealth.

There are many young calves that suffer the tortures of thirst because they are unable to speak up and say that they want a drink of water and are unfortunate enough to have an owner who thinks that milk will supply them with all the thirst quenching ration they need.

January 1st is the time to take inventory of all the stock on the farm that the assessor will ask for when he comes around. Every year there are thousands of farmers who sign a sworn statement to the assessor and fined that they made one or more mistakes after he is gone.

SOME SEASONABLE FLOWER HINTS.

To the Editor of The Homestead:

It is the proper time now, when the ground becomes frozen, to protect your tea roses. Do not cover them up with any kind of mulch, as that causes the wood to decay and is sure death, root and branch. The best method is to turn a box over them. Then you can cover your box with your mulch, though they will come through most winters without. The box should have a tight bottom so water will not drip on the vines, yet the sides should have a small crack to admit air. It is the winter sun that damages tea roses more than winter cold. Dry soil is also detrimental, but water and ice around the roots are worse.

Hybrid Perpetual roses need no protection, yet a light mulch spread evenly is very beneficial, but don't pile it up against the bushes. Six inches of loose mulch all over the ground is all right, but three or four wheelbarrows dumped up against the bushes is a severe test of their vitality. Like some sick people, they may pull through, but it's in spite of the treatment rather than because of it.

See that your tulip beds are moist during the winter and you will have flowers in the spring. All this class of bulbs root in the winter whenever the ground is not frozen, provided there is plenty of moisture. Failure of bulb beds to bloom satisfactorily can usually be ascribed to this course.

When your fancy chrysanthemums are done blooming put the pots down in the cellar or anywhere in the cool where it does not freeze much, and keep them a little on the dry side until the new shoots begin to show up well, then bring to the light and when the suckers are some four inches high shake all the soil from the roots and carefully divide into single plants. These should be set out in pots or boxes and grown on until time to transplant into the open ground. Never plant out the whole clump, as the flowers will come small, usually semi-double and lose much of their purity of color and form.

Did you ever try the fancy-leaved begonias, such as Marguerite, Thurstoni or Argentea, as bedding plants in a shady spot? They are fine and so easily grown. Their root action is strong, their growth luxuriant and their colors are deeper and richer than any other foliage plant. Care should be given to have them protected from sweeping winds or any but an east sun.

The old-fashioned annuals are becoming very popular again, and some of them are well worthy a place in any garden. One of the best of these is the portulacca or rosemoss. Sow the double seed and give them a little care the first year and you will have a permanent bed, for they self-sow. You will have every shade of color and the flowers will range from single to as double as the best roses, nor will the doubleness disappear, at least not for several years.

If you want a really satisfactory tuberose, buy the Armstrong Everblooming, or Mexican variety. They have the same fragrance as the Pearl, but are single and doubleness, in our opinion, does not add anything to a tuberose except stiffness. They bloom much more freely and a good proportion of them will bloom every year.

L. H. Cobb.

I Guarantee to You

that this FOSSTON Automatic Combination Grain Cleaner and Corn Grader will grade your corn *better, cleaner* and *faster* than you can do it in any other way. This machine will absolutely clean your grain—grade your corn—make bigger crops—make you more money. Hundreds of users join me in saying that the FOSSTON is far and away the greatest cleaner and grader in the world—built for perfect work and long service, with heavier crops and larger profits sure to follow its use.

S. N. SORENSEN, President

FOSSTON

Automatic Combination CLEANER - GRADER

has a patented wheat gang that is positively the finest thing for cleaning wheat ever invented. It has zinc sieves; grain is *perfectly* cleaned and separated going through the mill *once*. This gang will not let a single wild or tame oat kernel slip through with the wheat, barley or rye in *one time through*. Ordinary fanning mills couldn't do the job so well running the grain through several times.

Free Trial 30 Days! Let us ship you a FOSSTON *at our expense*; use it 30 days *at our risk*; if you don't say then it's the great machine Mr. Sorensen claims it is, send it back—*also at our expense*. Learn more about the FOSSTON before you buy. Ask your dealer to show it to you. Write today telling us to ship one on free trial, or asking for booklet giving complete descriptions of every style.

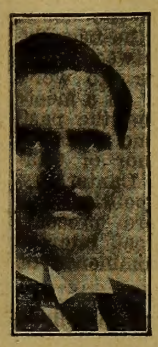
ACT NOW! HERE'S AN "AD" YOU NEVER READ BEFORE

IT'S A STORY THAT WILL INTEREST EVERY MAN WHO FARMS

Alfalfa Can Now Be Grown Anywhere



William Galloway

ALFALFA IS THE QUEEN OF FORAGE CROPS. One acre covered with a thrifty growth of alfalfa is equal in protein feeding value to fifteen acres of timothy. Thousands of American farmers, following Germany's lead, and using the German pure culture, "NITRAGIN," to inoculate their seed before planting, have secured wonderful results. They have heavy, thrifty stands. But there are still millions of American and Canadian farmers who haven't heard of "NITRAGIN"—who are anxious to grow this wonder-crop, alfalfa.

LISTEN! THOSE OF YOU WHO WANT TO GROW ALFALFA AND DON'T SEEM TO BE ABLE TO MASTER THE TRICK—

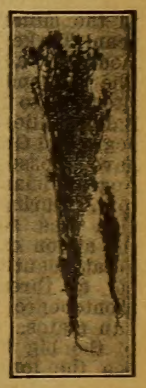
LET ME TELL YOU THE STORY OF HOW IT'S DONE. Last spring I hired a dairyman for my farm here near Waterloo. He came from a big dairy farm near Milwaukee, Wis. Among other things, I explained to him how I had tried to grow alfalfa for my stock, but had never been able to get a stand. The dairyman asked me why I hadn't used "NITRAGIN" to inoculate my alfalfa seeds. He said "NITRAGIN" was made by the German-American "Nitragin" Co., and that it had been on the American market for some three or four years and in constant use by the German and other European farmers for over fifteen years. He told me that his former employer, Dr. G. A. Kletszch, of Thiensville, near Milwaukee, had tried for three years to get a "catch" of alfalfa, and had failed every time until he got hold of "NITRAGIN"; that when Dr. Kletszch inoculated his seeds according to directions that came with the "NITRAGIN" he got a "catch"—and had the most wonderful field of alfalfa he had ever seen.

I did two things, then, and did 'em quick. I ordered "NITRAGIN" for my alfalfa seed, and I started one of the most searching and thorough investigations, into the merits of this product, "NITRAGIN," that I could direct. The results of that investigation amazed me. I found that the Germans had known all about the secrets of alfalfa, clover, and all the other legumes; that they had discovered, more than twenty-five years ago, WHY the leguminous plants added nitrogen to the soil—more than they took away in their growth; that they had opened the nodules or little wart-like bunches, on the roots of these legumes, taken out the bacteria with which the nodules were filled, and were growing, in big laboratories, highly bred strains of these legume-bacteria for each variety of leguminous plant. These bacteria they put up like the manufacturers of yeast put up their product (yeast is a bacteria) and then placed them, in granular form, on the market.

German farmers never think of sowing alfalfa, clover, or any other legume, without inoculating the seeds with "NITRAGIN," just before planting. The fact that a legume has already been grown on a field makes no difference to the experienced grower. He knows the bacteria deteriorate in the changing soil, and he wisely buys fresh, strong, laboratory-grown bacteria, knowing he will get more protein in his crops by doing so.

But to come back to my story. Not only have I now succeeded in getting a very fine stand of alfalfa for my dairy cattle, but I found that all the leading governments of the world, including, of course, those of the United States and Canada, indorsed and recommended the principle of pure-culture inoculation. The editors of all the leading farm papers also indorse it—they even URGE the practice upon their readers. The agricultural scientists and all the more intelligent farmers recommend and urge this form of inoculation.

Well, the outcome of my investigation was the making and signing of a contract with the German-American "Nitragin" Company, through which the Galloway Brothers-Bowman Company have now become the SOLE DISTRIBUTORS of "NITRAGIN" for the United States and Canada, and all orders for this wonderful product will hereafter be filled by us.



Alfalfa Seed of plant on left treated with "Nitragin." Seed of plant on right not treated.

What is "Nitragin?" "NITRAGIN" consists of the nitrogen-gathering bacteria necessary for inoculating alfalfa, clover, and other legume seeds, just before planting, to insure a "catch" and to enable the plant to procure its nitrogen from the air. "NITRAGIN" IS GUARANTEED—ABSOLUTELY GUARANTEED TO BE AND DO JUST WHAT IS CLAIMED FOR IT.

What "Nitragin" Will Do "NITRAGIN" is used primarily to start the necessary bacterial growth in the roots of the leguminous plants. The bacteria live and multiply into billions of little nitrogen-gathering factories. They supply protein to the growing plants and through the decaying roots and stubble put nitrogen fertilizer into the farmer's soil. IT IS ABSOLUTELY GUARANTEED TO DO THIS. Moreover, it makes bigger crops, improves the soil, increases the value of the real estate, insures a "catch" of alfalfa or clover, re-vitalizes worn-out land, MAKES $2.00 DO THE WORK OF $20.00 TO $30.00.

How Does It Do It? The bacteria of which "NITRAGIN" is composed transform the nitrogen of the air into nitrates, which the plants consume eagerly. The story is too long to tell here. Read the foregoing over again carefully. Then send for our literature, which explains this interesting, scientific phenomenon so you can understand it easily. Get our Book "How to Grow Alfalfa," explained below.

How Do You Use It? Simply moisten your seeds with it, let them get dry enough to handle, then plant the seeds in the usual way. "NITRAGIN" will do just what is claimed for it—**We Guarantee This,** and you all know the Galloway guarantee **Is a Guarantee.**

Read What Others Say We'll be glad to send you, FREE, a bookful of letters, with the names and addresses of farmers in all parts of the country who have used "NITRAGIN" and made alfalfa and clover successes where they had failed without "NITRAGIN." Send for this. Ask for "Positive Proof." Write to any or all of these men and see what they say of "NITRAGIN." We quote from a few here: "I have used 'NITRAGIN' for alfalfa three years with success," A. D. Bittner, Beaver Meadows, Pa. "I used "NITRAGIN" on twelve acres of alfalfa. It made a wonderful growth in spite of the extreme drouth we had this season," H. Klintworth, Taydeedah, Wis. "I used 'NITRAGIN' on alfalfa. It looks, by far, the best of any around here," B. M. Avery, Meshoppen, Pa. "The results from using 'NITRAGIN' were so satisfactory that we propose treating all alfalfa seed we sow next year with "NITRAGIN,'" Coats-Evans Co., Brewster, Wash. "I think every seed grew. The alfalfa has been cut off twice and looks well now." D. H. Bingham, Cortland, N. Y. BUT SEND FOR "POSITIVE PROOF." It is positively convincing.

HOW TO GROW ALFALFA On receipt of request we will send you, FREE, a lot of the most interesting printed matter you ever read in connection with better farming. Send at once for this—ACT NOW.

AND IN ADDITION, if you'll send us 10 CENTS, to cover cost of printing and mailing, we will send you a book entitled "HOW TO GROW ALFALFA." After you have read this book through carefully, if you can conscientiously say that it is not the best and most useful book on practical alfalfa growing that was ever printed, send it back and we'll send you 50 cents for it! There is not a $1.00 book on the market that gets right down to the practical points on successful Alfalfa growing like this book does. Don't put this off. GET IT NOW!

INTERESTED, PROGRESSIVE FARMERS, PLEASE TAKE NOTICE! "NITRAGIN" being a laboratory product, and one that should be as fresh as possible when shipped, it is advisable to order as far in advance of seeding time as you can. We are now booking orders for shipment next spring summer and fall. SEND in your ORDERS NOW, to better enable our bacteriologist to measure his season's output. State about when you want the "NITRAGIN" shipped. Then you will be served promptly when you need the bacteria. DON'T PUT IT OFF. Try 10, 15 or 20 acres. OUR GUARANTEE SHOULD CONVINCE YOU THAT IT IS SAFE. And you NEED "NITRAGIN." It is the greatest thing in the history of farming—nature's way of helping the farmer. LET US HELP YOU IMPROVE YOUR FARM. Write to us before it slips your mind.

CURRENT EVENTS

THE fifty-seventh birthday anniversary of President-elect Wilson was celebrated at his birthplace, Staunton, Va., during the past week, the occasion bringing together a large number of distinguished members of democracy. Governor Wilson was born in the little Presbyterian manse of Staunton, his father being pastor of the local Presbyterian church at the time. The president-elect spent the night prior to his birthday anniversary in the very room where he had been born and the next day received the nation's notables in the humble manse of the little town. The visit of the president-elect to his native state was made picturesque by a series of immense bonfires, started as soon as his train crossed the state line and continued almost uninterruptedly until he reached his native town. Governor Wilson has been suffering from the grip during the past week, but this did not prevent him holding conferences with Wm. J. Bryan, Champ Clark, Oscar Underwood and other notable men in the party. The important matter under discussion at present is the formation of the cabinet. There is good reason to believe that Mr. Bryan can have any position he desires, the posts most appealing to him being secretary of state and secretary of the treasury. Mr. McCombs, who was chairman of Governor Wilson's pre-convention campaign, and later managed his general national campaign, is also slated for a good position, probably postmaster-general. Louis Brandeis, of Massachusetts, is most talked of for attorney-general while Willis Moore, Dr. Wiley and President Waters, of the Kansas State College of Agriculture, seem to be in the lead for the appointment of secretary of agriculture.

PEACE negotiations between Turkey and the Balkan states are dragging along slowly at the meeting of diplomats in London. The allies have announced their terms, which cut down Turkish territory until the sultan has little left of European Turkey except the region immediately adjacent to Constantinople. The surrendered and conquered territory is to be distributed among the Balkan allies, Bulgaria, Servia, Montenegro and Greece, the latter country to have possession of the famous Aegean islands, so prominent in history. During the past week the situation was somewhat complicated by the action of Austria, which mobilized great quantities of troops and assumed a threatening attitude toward Montenegro, the smallest of the Balkan states. The trouble is that each of the big European powers hates to see the long-coveted Turkish empire divided among the second-rate Balkan powers, when each has long wished for the lion's share of the territory itself. Austria is particularly incensed because of the prospect of Servia securing a maritime outlet, which will make its commercial possibilities greater. It is not so much a question of right or wrong as it is of seeing that some rival country does not secure some coveted strip of land along the sea or some city that will make it a greater commercial rival. The conflict began in an effort to drive the Mohammedans out of Christian Europe, but it has developed into a petty rivalry between Christian countries, which might have been expected to set the defeated Moslem a better example.

NOTHING could better or more conclusively show the extent of the friendly relations existing between the United States and Great Britain than the preparations made during the past week to celebrate the centenary of the conclusion of the war of 1812 by an international peace conference, the chief feature of which shall be the unveiling in Westminster Abbey of the bust of George Washington. A member of the executive committee for the peace centenary will visit the United States and Canada shortly to arrange for a joint celebration at which the dominant note sounded will be the friendly relationship existing between the countries which 100 years ago were engaged in bitter warfare. At a meeting held in London during the past week Mr. Asquith, the prime minister, Earl Grey, former governor of Canada, the Archbishop of Canterbury and numerous other high political and ecclesiastical officials were present, thus showing the widespread interest in the affair and the prominence of the men back of it.

THERE is good reason to believe that the special session of congress, for the revision of the tariff, will be called within a week or ten days after the inauguration of President Wilson on March 4th. The prominent democratic members of congress are anxious that the lapse between the two sessions of congress (the present one expires March 4th) shall be as short as possible and that the democrats lose little or no time after they assume the reins of government, in putting through their platform program. It is considered likely, therefore, that congress will convene in special session about the middle of March, instead of a month later, as was thought at first. Governor Wilson has abandoned his plans to postpone the formal features of his inauguration until late in April, because of the inclement weather that usually prevails the first week of March. The postponement necessitated so many changes and such an alteration of plans in Washington that it was abandoned. The democrats will come into full power on March 4th, the accession to be accompanied by the usual picturesque ceremonies, including the inaugural parade and ball. It is expected that because of his southern birth and affiliation, people of the South will be more prominent in the Wilson administration than at any time since the civil war.

PRESIDENT TAFT spent the holidays inspecting the work on the Panama Canal which has progressed so well and so far that the formal opening is planned for the latter part of the present year. President Taft expects to appoint Colonel Goethals, builder of the canal, as governor of the canal zone and his visit was largely for the purpose of discussing civil matters with Colonel Goethals. In the meantime the question of canal toll rates continues to be a vexatious one. Great Britain filed a formal protest against the plan to exclude American coastwise vessels from paying tolls, contending that the treaty between the United States and Great Britain, which declared that no favors should be shown to the vessels of any nation, has been violated. A plan to submit this canal controversy to a court of arbitration has been proposed, but has been declared impracticable by Representative Mann, of Illinois, minority floor leader of the house, and other prominent leaders in congress. The great trouble is that the question is of importance to practically every nation which is a member of or represented in the international court of arbitration at The Hague, inasmuch as their vessels will use the canal, so that it would be impossible to secure a disinterested nation to act as arbitrator between the United States and Great Britain. At the same time Mr. Mann contends that this is a matter for the United States alone to determine and that it has been adjudicated by the only jury to which it should be referred, the American congress. It is not at all probable that the controversy will precipitate ill feeling between the two countries, but at the same time it remains a delicate matter on which the two great powers stand directly at variance.

TAKE IMMIGRANTS TO FARMS.

A national system of immigrant protection and distribution will be built up if representatives of eighteen states attending the second annual meeting of the national conference of immigration, land and labor officials can bring sufficient influence to bear on congress.

Exploitation of the immigrant by employment agencies, lodging houses and transportation companies would be a thing of the past if the bureau were organized, it is argued. Efforts would be made to induce the immigrant not to stop in the city of entry, but to go to the South and West to take up agriculture or work in villages and towns.

States represented at the conference are Illinois, Wisconsin, Michigan, New York, Iowa, Nebraska, Kansas, California, Washington, South Carolina, New Jersey, South Dakota, Louisiana and Tennessee.

APEX TRADE MARK FENCE

Every Joint Swings To Fit Your Land

Here is the *only* fence with a joint that allows the line wires to swing up or down with the roll of the land—yet the stay wires are always upright. That's why Apex Fence is the easiest to put up, saves time and labor, and keeps its shape best. Goes over the hilliest ground, and won't bind, buckle or snap.

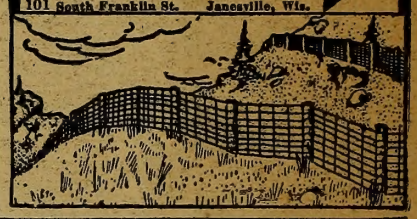
You can stretch Apex 'till it hums. The tension curves allow for expansion and contraction. You can't weaken it in stretching. That is another reason it doesn't sag or snap.

For Longest Service

Apex fence is made of best Open Hearth Steel—it's springy, tough, elastic. It will turn the strongest bull—and holds hogs and pigs. Its superior galvanizing becomes a part of the wire—doesn't flake, crack or chip off. The tension curves allow for expansion and contraction. Let us tell you other reasons why APEX is a longer lasting, better looking and more economical fence.

Send Your Name! If we have no dealer near you tell us how much fence you need and what heights and we will make you a special proposition. Address

Janesville Barb Wire Company
101 South Franklin St. Janesville, Wis.



A Planter That Almost Thinks!

With this Rock Island No. 1 Corn Planter you can actually change the **number** of grains dropped without **stopping**, without even moving out of the seat! Can plant **extra** kernels where soil is extra rich; plant less kernels where soil is **thin**. Gets a lot **more corn** and **wastes no seed.**

It plants just as you want. And all rows straight, regardless of horses' speed. Instantly changed from **edge** to **flat** drop or back again. Has positive **trouble-proof** clutch. Special flexible connection to front frame. Adjustable seat. Adjustable width. Discs or runners. 30 or 36-inch concave, flat or open wheels. Now used by 10,000 farmers. It is no experiment, but time-tried, proven and guaranteed. Costs no more than commonplace planters, but worth a lot more.

Rock Island No. 1 Corn Planter

Write!

Send postal for latest Corn Planter Book and we will tell you the nearest place where you can see this wonderful planter. Free copy of Prof. Holden's great book on Corn Growing will be included if you write now.

Rock Island Plow Co.
1844 Second Ave. Rock Island, Ill.

How to Train Scary, Vicious, Balky, Tricky Horses and QUICKLY DOUBLE THEIR VALUE!

Write for Prof. Jesse Beery's FREE "HORSE-TRAINER'S PROSPECTUS"

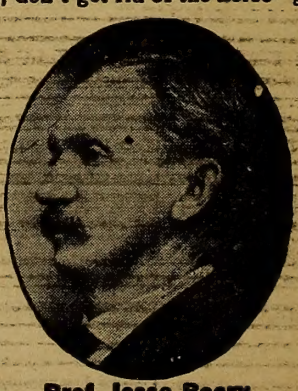
If you are the owner of a vicious, tricky, kicking, balky, dangerous and unsaleable horse or colt, don't get rid of the horse—get rid of its bad habits. Write for Prof. Jesse Beery's "Horse-Trainer's Prospectus," a large, handsome, illustrated book written by the

King of World's Horse-Trainers

Prof. Jesse Beery won world-wide fame and was tremendously successful giving exhibitions of his marvelous skill in mastering man-killing stallions, training wild horses to drive without bridle or reins. The whole country was thrilled by his daring deeds.

Secret of His Power Revealed at Last

In the grand Free "Horse-Trainers' Prospectus" Prof. Beery now reveals the secret of his power and shows the way to duplicate his dazzling success.



Prof. Jesse Beery

What His Graduates Have Done

Prof. Beery's Correspondence Course in Horse-Training and Colt-Breaking is the only instruction of the kind in the world. Thousands of his graduates are reaping the profits and benefits of his wonderful course. For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional horse-trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy a home and an automobile solely through earnings from training horses as taught by your excellent methods."

Buys "Man-Killers" Cheap, Trains and Re-Sells at Big Profit

A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several different men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

S. M. Ryder, Mercersburg, Pa., writes: "I am making money buying 3-year-old kickers cheap, handling them for a few days and selling them, perfectly broken, at a large profit."

So it goes. Everywhere, Beery's graduates are making money as trainers and "traders," giving exhibitions. Write and we will tell you about more of them. It's intensely interesting.

Train a Colt in 8 Hours!

You can do it by the Beery System. There is lots of money in breaking colts. The field is unlimited.

Bang! Bang! Bang!
The Beery System Drives Out Fear

Retires from the Arena—Now Teaching Horse-Training by Mail

Prof. Beery has retired from the arena, after a career of unparalleled success, and is devoting his time to teaching his methods to a limited number of selected pupils—both men and women—by correspondence.

Graduates Making $1,200 to $3,000 a Year at Home or Traveling

The wonderful success of Prof. Beery's graduates—taught by mail at home during spare time—proves beyond question the value of his instruction. People gladly pay his graduates $15 to $25 a head to have horses tamed, trained, cured of bad habits, and colts broken to harness.

A Penny Postal May Make Your Fortune

No matter who you are or where you live, if you love horses and are ambitious to earn more money in a profession you will be proud of, write for the wonderful Free "Horse-Trainer's Prospectus" today, without fail. Tell me all about your horse.

PROF. JESSE BEERY, Box 54 PLEASANT HILL, OHIO

Make Your Farming Fit Your Farm.

By W. M. Kelly.

THE success of farming depends in a large measure upon the selection of plants and animals that are adapted to the farm. The average farmer does not always find himself with productive land, well situated and most economically equipped for conducting his business, but by making an intelligent study of the adaptability of the farm, as regards climate, soil, location, markets and buildings, he can add to its fertility and evolve a system of farming that will fit his farm.

The farmer cannot change his climatic environment, but he can grow plants adapted to it. There are two ways of doing this; by the breeding and selection of hardy and early maturing plants and by the introduction of new species and varieties adapted by nature to the conditions of new locations. The various state experiment farms and the bureau of plant industry have conducted many experiments with plants from all parts of the world for introduction into our own country. The difficulties of adapting crops to climates increase as we proceed from South to North, for the length of the growing season constantly diminishes, so that farmers in the North must select only varieties that will mature before cold weather comes and checks their growth. The work of experiment stations and individuals in breeding cereals, hardy fruits, vegetables and forage plants has been of great benefit to farmers in the northern states. To secure maximum benefit from these experiments one must make a constant study of plants that are particularly adapted to the length of the growing season on his farm, and by intelligent selection of nearly perfect specimens for seed, intensify the early maturing tendencies until he has plants that will mature and produce a fair crop during the normal growing season.

The selection of breeds of animals that are adapted to the climate, products and location of the farm is almost as important as the selection of suitable crops. Inasmuch as the desirable qualities and characteristics of each breed of animals have been fixed in their native homes, and we are only continuing in well-defined lines, and, we hope, improving on them, it is well for us to understand the most important characteristics as well as the home environment of a breed before we attempt to adapt it to our farm.

For example, among the four great breeds of dairy cattle we find that the Ayrshire is adapted to rough, hilly pastures where they are compelled to subsist largely on roughage. Where a large quantity of milk containing a fair percentage of fat is in demand they can be used to advantage. The Jerseys and Guernseys have been developed in a mild climate and fed generous rations of rich feed for so many years that they have become particularly adapted to farms where they have the best of care, rich rations and comfortable stables. They give rich milk that is excellently adapted for cream and butter products or for supplying a fancy trade that calls for very rich milk. The Holstein cattle have been developed for centuries upon rich lowlands where they have had luxuriant grass and early-cut hay and forage. In this way they have become accustomed to handle large quantities of bulky food and obtain their food without going long distances after it. They are particularly adapted to our low and level farms where similar conditions prevail. They give a large quantity of milk that is rather deficient in fat and for that reason are kept on many farms where whole milk is furnished for the city trade.

Among the various breeds of horses, cattle, sheep and swine we find that each breed, in its original home, was developed for some specific purpose and in the course of time it became so accustomed to its home environment that unless these same conditions were met the animals would reach no higher development than their original ancestry.

A Guernsey breeder, well known to the writer, recently sold a pure-bred Guernsey bull. The buyer who owns a large farm in Ohio said that for seven years he had used pure-bred Holstein bulls, but cannot see that his heifers, except for color and uniformity, are one iota better since he used the pure-bred bulls. He is going to change to the Guernsey breed, trusting that it is more prepotent. This man's attitude is characteristic of thousands of farmers who expect that breeders are to furnish them with highly bred animals that will build up their herds and flocks without providing them with systems of care and feeding that will prove adapted to their requirements. These men do not understand that every improvement in live stock has come about through increasing the possibilities in the animal by liberal feeding and comfortable shelter.

To furnish concrete examples of the various types of farm animals and the systems of feeding and housing required to maintain the highest efficiency I will use illustrations from types of similar breeding that are familiar to every farmer. Among beef cattle light rations will produce the range type; medium rations the common native type; and heavy rations the large, perfectly developed type. Among the breeds of sheep light rations have produced the small, hardy type of wool-producing sheep; medium rations, the type commonly found in the well-kept farm flock; and heavy rations the best types of large mutton sheep. Among the breeds of swine we find that light rations have produced the bacon type; medium rations the common type found on the average farm; and heavy rations the large, fat backs and finely developed show animals that attain great size and weight. Among the draft horses we find that light rations produce Shetland and range ponies; medium feeding the common farm horse; and heavy feeding the large draft type that commands such high prices at the present time in every horse market. Among dairy cattle light feeding will produce a lean, unpromising type, with long horns and coarse heads; medium feeding will produce the notoriously unprofitable type, so common in the average farmer's herd; and heavy feeding will produce the highly developed dairy cow that frequently produces her own weight of milk in one month. These facts should guide us in selecting profitable animals. It is a waste or money to invest it in highly bred animals that are not adapted to the conditions on our farms.

In selecting horses the farmer should choose those that are best adapted to handling the class of machinery used on the farm. On some rough, hilly farms light horses are profitable, but on the level farm where the fields are large enough to permit the use of machinery and large implements one cannot afford to employ light horses. Heavy horses and large implements, with a seat, conserve the time of men for other profitable work. In this way they reduce the cost of team work on the farm. Still another factor to consider in selecting work horses is that of using brood mares for farm work and raising a few good colts to sell. In this way it is possible to add a few hundred dollars to the income of the farm each year without seriously affecting the efficiency of the organization. The man who employs geldings and mules for work on his farm is not making his farming fit his farm.

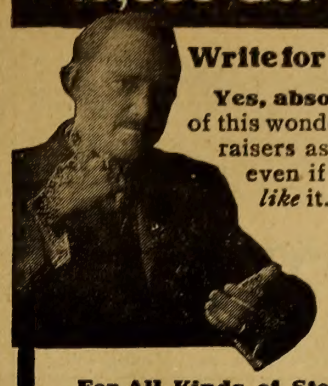
The size of the farm, the distance from market, the kind of buildings and the likes and dislikes of the owner are determining factors in the selection of plants and animals that are adapted to the farm. He must, therefore, study the adaptation of the farm, the distance to market, his own tastes and previous training and make a speciality of the crops and live stock that his own judgment teaches him he is qualified to handle. No one can tell another what he had better do, but once having chosen wisely, his success will be measured by the careful thought and attention he puts into his business. Skill comes by thoughtful experience, and to do one thing better than other farmers always pays, and that self-reliance, I may say pride, that comes from successful doing, will enable one to do still better, and by confining himself to a few standard crops and one or two branches of stock feeding and breeding he shall be more likely to succeed. He should always keep in mind that the better the plants and animals the better the pay—and that the best is none too good.

Kansas farmers and taxpayers contributed 5 million dollars last year for "repairs" on mud roads and tin bridges. In ten years $31,000,000 has been spent in the same way and mostly on the same mudholes and bridges. Only a rich state like Kansas can afford the luxury of bad roads, says the Kansas City Times.

Many farmers make the mistake of allowing their hens to run in the fattening hog pen, where they gorge themselves on corn; then these very farmers wonder why they never get any eggs in winter. The fact is, a hen that picks up her corn ration without any more effort than that grows extremely fat and lazy; while her digestive and egg-producing organs become too clogged, inactive and unhealthy for her to produce any eggs.

Turn the chickens out as early as possible in the morning, these short days. Exercise is one of the prime essentials to egg production, and the hens should be out and hustling from daylight till dark. Then chickens fly off the roost just as soon as it grows light enough for them to see, and the first thing they do is to begin scratching around in the filthy droppings for something to eat. That's another good reason for turning them out early where they can scratch in clean litter for grain.

Stock Raisers! Here's Your Chance! 10,000 lbs. Given Away!



RINGMASTER STOCK FOOD

Write for Your 10-lb. Pail Today

Yes, absolutely free! A 10-lb. pail of this wonderful conditioner to the first 1,000 stock-raisers asking me for it. I don't ask you to buy it even if you're satisfied—nor to buy any more *like* it. All I ask of you is to *try*

Ringmaster Stock Tonic

For All Kinds of Stock. A Conditioner, Blood Purifier and Worm Exterminator of Unusual Merit. Saves Hogs from Cholera and is a Preventive of *All* Animal Diseases

I don't care what experience you've had with other conditioners, I tell you as man to man that here is ONE PRODUCT so far AHEAD of anything else now on the market that it would pay you to try it, even were it to cost you ONE HUNDRED DOLLARS in cold cash; and I'm willing to back this statement with my own personal reputation and every cent I own in the world.

And to PROVE this sweeping statement, I will send you a 10-pound pail without charging a penny for it. I don't *ask* you to buy it. I don't ask you to buy any more *like* it. I *merely* ask that you place it before your wormiest, runtiest, skinniest hogs, sheep or cattle, or before animals you think in the pink of condition! And afterwards TELL YOUR NEIGHBORS WHAT IT DID! That is the ONLY STRING tied to this offer.

Ringmaster Stock Food expels worms and parasites and *keeps them out*. It tones up the digestive apparatus and other vital organs.

It adds weight — slickens coats — purifies blood — increases milk yield — stimulates vitality and keeps disease and pestilence of all kinds away from *stock*, young and old. *Not a single case of cholera* reported among our feeders this year.

Do you suppose I would make this FREE 10-pound offer if I didn't know the *merit* of this conditioner—if I didn't know what it would *do* and what it *contained*—and what all the others contained, too? Well, hardly!

Do you suppose such well-known feeders as those here mentioned would be using Ringmaster if it didn't pay them in dollars and cents?

Supposing you got rid of only one nasty case of worms, wouldn't that well hog alone pay you handsomely for your trouble?

Send for your 10-pound pail *at once*. No obligation—no charge—no expense to you except a few cents for freight. Your name is all we ask in *exchange* for the 10-pound pail.

Hundreds of stock raisers told me at the International Stock Show at Chicago last month that this is the greatest series of pictures they ever saw. (8)

We have only 1,000 books and pails to give away. First come, first served. Write today—now—when it's fresh in your mind. In writing, be sure and tell me number and kind of stock you own.

RINGMASTER STOCK FOOD CO. Dept. 15. Cleveland, O.

Note: The editor of this paper thinks this is one of the fairest offers ever made.

Beauty Among The Roses For You...

This beautiful 1913 calendar is lithographed in ten colors and is by far the prettiest calendar published. The picture gives you only a very faint idea of its beauty. It will be an ornament to any home. Given with a year subscription to People's Popular Monthly for only 30 cents. Our supply is limited. Order now. Dept. D.

People's Popular Monthly
Des Moines, Iowa

This Planter Never Misses a Hill—

No matter how carefully you prepare the soil, select the seed or cultivate the corn—no matter how rich the soil or favorable the weather, you lose money by planting with a planter that misses even an occasional hill. Don't be blinded to this fact—figure it out yourself. How much did the bare spots cost you last year? Eliminate this waste! Get right down to the bottom of the planter question.

The HAYES Drop never fails. It is the simplest, most durable and most efficient ever made. Fewer parts than any other. Has no clutch to miss and give trouble. Never cracks or grinds the seed. Will drop accurately any size or shape kernel.

The HAYES leaves no bare spots in your fields. No re-planting necessary. Increased yields soon pay for it. Farmers who have been disappointed with edge drop planters are now buying the HAYES never-fail drop.

FOUR Wheels—Bigger Yields

Runners set back between the wheels regulating depth of planting to the fraction of an inch.

The HAYES is the only planter made that will plant every kernel exactly the same depth. Corn all comes up at the same time. Cultivation 2 to 4 days earlier. No missing hills from uneven planting.

Wheels running on an angle pack the dirt around the corn, leaving a loose ridge on top. Will cover where all ordinary open wheels fail—even in wet and sticky soil.

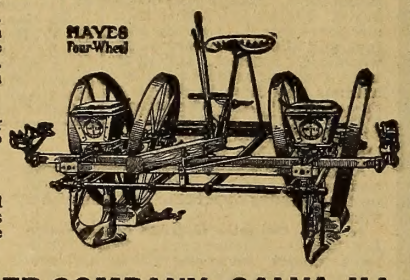
Ridge over the corn prevents wash-outs in hilly fields, gives greater sun surface and loose soil on top allows corn to sprout and come up several days quicker.

CHECKS With Absolute Accuracy

No matter how fast you drive, the HAYES always plants in perfect check, the corn comes up straighter the cross rows than the way you drive. Easiest handled planter for man and team. Also shortest coupled, making it the lightest draft and can be turned in shortest space. For these reasons you can plant from three to five more acres a day with the HAYES and get your corn in earlier—very important, for in some years this makes a big difference in the size of your crop.

LEADS All Other Planters

Over 160,000 in use and every one is giving satisfactory, time-saving, money-making service. Compare the HAYES with every other planter made. Note its strong frame. See for yourself that it has fewer cast iron parts than any other planter—malleable iron and steel are used almost exclusively. The HAYES is practically exempt from breakage, delays and repair bills.



Can be furnished with perfect working Fertilizer and Cow Pea Attachments also Stub Runners or Discs if preferred.

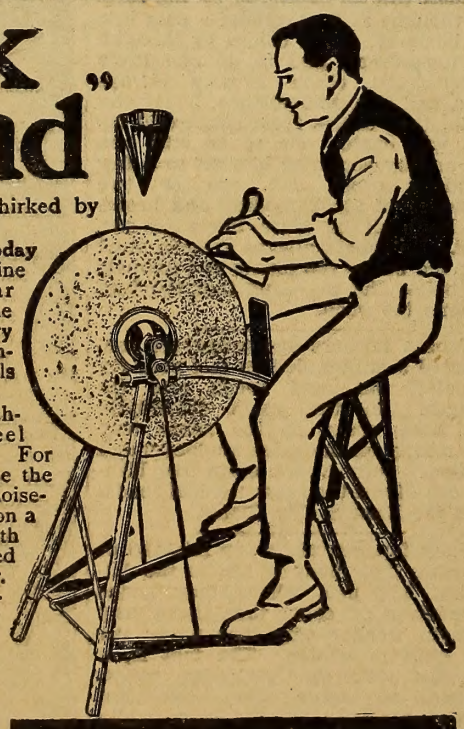
Mail Postal For Booklet

Investigate the HAYES, NOW. Send for free booklet "P" that gives reasons backed by proof of use, also valuable planter facts. A postal brings it.

HAYES PUMP & PLANTER COMPANY, GALVA, ILL.

Hayes Four Wheel Corn Planter

"An Ax To Grind"



Is it a long tedious task shirked by everyone about the place?

If it is, go to your dealer **today** and ask him to show you his line of Richards-Wilcox Tubular Steel Frame Grind Stones. The kind that takes all the drudgery and hard work out of sharpening axes, scythes, mower sickels and heavy tools.

Sharpening an ax on a Richards-Wilcox Tubular Steel Frame Grind Stone is easy. For the ball bearing journals cause the stone to revolve easily and noiselessly while the operator sits on a comfortable springy seat. Both seat and stone can be adjusted to suit convenience of operator. The slightly flexible, but substantially built frame adjusts itself to uneven floors or surfaces. No Grind Stone at any price, anywhere, can "hold a candle" to the Richards-Wilcox.

You'll say the same—you'll be as enthusiastic as we are—when your dealer demonstrates its many advantages over the ordinary muscle-cramping kind.

A postal card will bring you our latest Grind Stone Catalogue and a very interesting little booklet. Send for them today—they're well worth reading.

Richards Wilcox Mfg. Co.

133 Third Street. - - AURORA, ILL.

We also make an excellent Power Grind Stone that can be attached to your Gas Engine.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

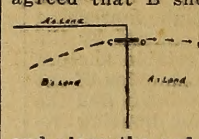
SHIPPING HORSES—NO INSPECTION.

A Subscriber, Farmington, Iowa.—I intend to move from Iowa to Texas this winter, taking with me some horses. Will I have to have my horses inspected before leaving Iowa, and if so, who has authority to do it?

Answer.—The law of Iowa does not require you to have your horses inspected before shipping them from the state.

DRAINAGE AGREEMENT—COMPLIANCE BY ONE PARTY.

Mr. Quincy Scott, Caledonia, Wis.—The diagram represents adjoining lands of A and B, the arrows indicating low land and the direction of surface water. Seven years ago A and B mutually agreed that B should furnish tile for each a bridge from C to D, and A should put in his half of the bridge and plow three furrows about five rods long on A's land from D to E, and place the sod on the bridge, so as to give B a better outlet. Complying with this agreement, B purchased thirty-four ten-inch tile, and put in his bridge, and put seventeen ten-inch tile under A's fence for his use. B waited three years for A to put in his bridge and plow the furrows, and then rolled and harrowed twelve acres of oats for A, before he could get him to plow the furrows—and B put in both bridges. The ditch drained B's land for four years until last fall, when A through spite filled the ditch and bridge and flooded four acres of B's corn and hay land, causing him a loss of $200. Can B recover damages and compel A to keep the ditch open?



Answer.—B can recover damages for the injury done by the overflow, and he can compel A to keep the ditch open by proper proceedings in court.

WARD'S LEGACY—INTEREST.

An Illinois Subscriber.—A's grandfather died when she was ten years old, leaving her by his will $75. A's father was appointed her guardian and when she was eighteen years old he paid her $75 and took her receipt therefor. (1) Should he not have paid her interest on the $75 from the time he received it till date of payment? (2) Can she now recover anything from her father on account of interest, or is such claim outlawed?

Answer.—A's guardian should have accounted for interest on the $75 from the time he received it till date of its payment. At the same time he was entitled to compensation as guardian. Such compensation is fixed by the probate court, and in this case the legacy is so small that perhaps the interest on it would not amount to more than the court would allow the guardian as compensation for his services. (2) A's claim is not to be outlawed, but it is very doubtful whether or not she could recover anything further from her guardian by law.

GRAIN RENT—STRAW AND STALKS.

A Subscriber, Aledo, Ill.—A owns a farm in Missouri and rented it to B for grain rent, but nothing was said about straw or cornstalks. B claims all the straw and cornstalks. Is he lawfully entitled to them?

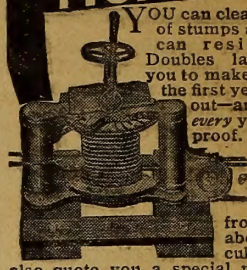
Answer.—As the land was rented for grain rent the tenant is entitled to the straw and cornstalks grown on the rented premises. All that A can lawfully claim as rent is the proportion of grain agreed upon in the rental contract.

PAPERS NOT SUBSCRIBED FOR.

A Subscriber, Goodell, Iowa.—I am getting six different papers by mail, some weekly and some monthly. I never subscribed for any of them. Some have been coming for more than a year, and others for two months. Two of them are German papers that I cannot read. They are delivered on rural route and my children get them out of the mail box. Somebody is continually sending in other people's names without their consent. The postmaster says I will have to pay for the papers. What can I do about the matter?

Answer.—Where a person receives papers through the mail without making objection thereto, he is liable to pay for the same, although he has not subscribed for them. You should take the papers from the box and give them to the postmaster, and

Pull 100 Stumps A Day—With The Hercules



YOU can clear an acre or more of stumps a day. No stumps can resist the Hercules. Doubles land value—enables you to make $1200.00 on 40 acres the first year after stumps are out—and $750.00 in crops *every* year after. Get the proof. Why not

Write Us Now

Book tells all the facts—shows many photos and letters from owners—tells all about the many Hercules features. We'll also quote you a special money-saving price proposition that *will interest you.* Address

GRIND 150 BU. PER HOUR

LESS THAN 1¢ PER BUSHEL!

Bowsher Mills often reduce the cost of grinding one-half. That's because they are light running, with perfect conical shape grinders, different from all others.

BOWSHER FEED MILLS

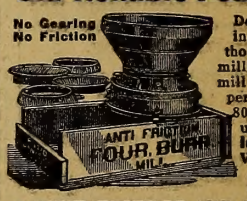
(Sold with or without elevator)

Crush ear corn (with or without shucks.) Grind Kaffir in the head and all kinds of small grains. Handy to operate. 10 sizes—2 to 25 H. P. Also sweep grinders.

FREE Send for folder on values of feeds and manures.

E.N.P. Bowsher Co., South Bend, Ind.

Old Reliable Four-Burr Mills



No Gearing
No Friction

Double Set of Burrs grinding at same time. Many thousands in use—ground millions of bushels. 2-horse mill grinds 20 to 50 bushels per hour; 4-horse mill 40 to 80 bushels. We also manufacture the **Famous Iowa No. 2 mill for $12.50** Write for free illustrated catalog of Feed Mills and Hot Air Furnaces.

BOVEE GRINDER AND FURNACE WORKS
100 8th Street, Waterloo, Iowa

From Cob to Meal

Faster and Cheaper

Wet or dry, cob or grain—all the same to the "Bull Dog". Can't clog—it's *force feed* throughout. One set of rollers grinds 5,000 bushels

The Roller Grinding **Bull Dog**

Use It 10 Days Free

Test this great grinder on your farm. If it isn't the fastest, lightest-running mill you ever saw—send it back at *our expense.* Write for details, stating H. P. of engine.

Letz Mfg. Co., 128 East Road, Crown Point, Ind.

DITTO IMPROVED POWER FEED GRINDER

This new grinder is especially designed to run with a Gasoline Engine. Try it—no money down. I trust you—keep it if satisfied, if not, return it at my expense. I take all the risk.

AN HONEST MILL, SOLD IN AN HONEST WAY

Grinds ear corn, wet or dry, shell corn, Kaffir corn or any kind of small grain. Also make the celebrated Ditto Sweep Grinder. Write for FREE catalogue.

G. M. DITTO. Box 201 Joliet, Illinois

FREE Hauling Test

Try Them 30 Days

Send us measure of wagon skeins and we'll ship you a set of *Empire* Steel wheels to fit—so that you may prove that *low*

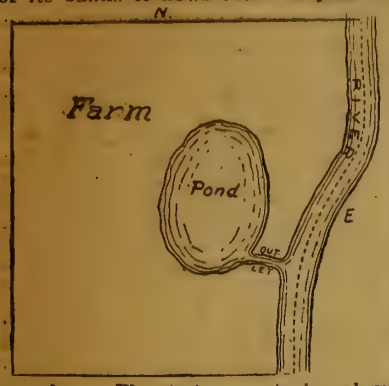
then and there tell him that you have not subscribed for them, and refuse to take them and have him notify the publishers to that effect.

SPEARING CARP IN A POND.

A Subscriber, Dows, Iowa.—My farm is bounded on the east by the center of the river as shown in the diagram. When the water in the river gets out of its banks it flows into the pond on



my place. The water must rise about two feet in the river before it will flow into the pond. The outlet is about four rods long, and is filled in with mud. Last spring, when the river was high, carp got into the pond. Can I spear these carp without violating the law?

Answer.—We think you have a right to spear carp in the pond, and that it would not be a violation of law.

RENT EXCLUDES ROAD.

A Subscriber, Elberon, Iowa.—A owns a farm and rents a part of it to B. The contract provides that B shall pay to A cash rent for all tillable land on said part of the farm. Does such contract require B to pay rent on the ground occupied by a road running along the part rented? There was nothing said verbally or written about this matter.

Answer.—The ground occupied by the road is not tillable land, and therefore B is not required by the contract to pay rent for it.

PRESUMPTION OF DEATH.

A Nebraska Subscriber.—A man died intestate in Nebraska, leaving six living children, and another who had left home and had not been heard from for more than twenty-three years by any one who might have expected to hear from him. An administrator of the estate was appointed and the estate was duly probated. The county judge found that the missing child was legally dead and awarded to each of the six living children a sixth part of the real estate, which is now being sold by the court in partition proceedings. (1) Can a good title to the land be given in such proceedings? (2) Should an administrator be appointed for the estate of the missing child?

Answer.—(1) Where a person is absent from his home and friends for more than seven years, and unheard of and cannot be found, he is presumed by the law to be dead, and when such facts are shown to the court it may judicially declare the fact of death. Such finding should be entered in the records of the court as part of its decree. If this was done a good title could be given to the purchaser in the partition proceedings. (2) It is not necessary for administration on the estate of the missing child.

AUTOMOBILE DEAL—SUIT FOR DAMAGES.

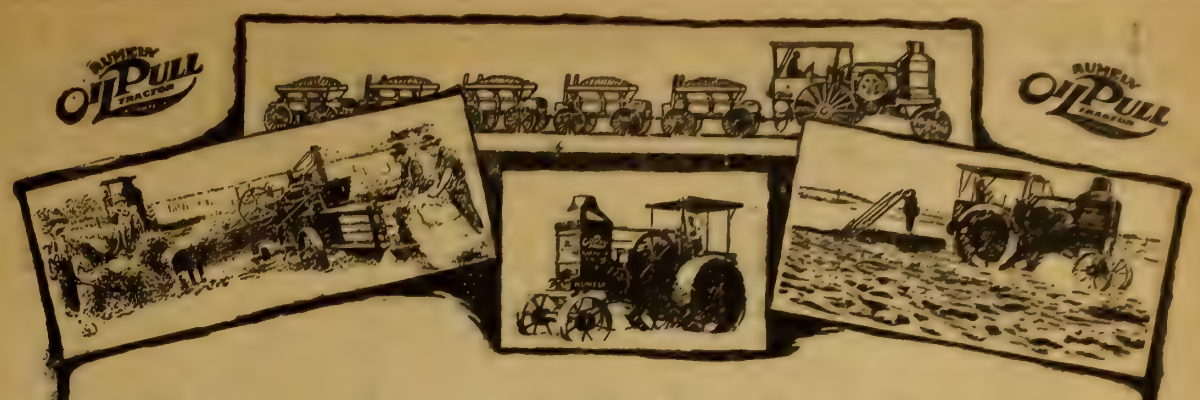
Orin E. Chapman, Redfield, Iowa.—Last spring I bought an automobile from a branch house in Chicago of an automobile works, whose main office is in Anderson, Ind. The automobile had been used and the tires on it were bad, and the manager of the Chicago office promised to send new tires with it. The auto was shipped to me in April, 1912, without the new tires, the manager explaining that he did not then have them in stock, but would send them as soon as he could get them. Soon after this he was discharged and another took his place. The company by letters acknowledge that I was to have good tires, but does not send them and I will likely have to bring a suit against the company. (1) Would such suit have to be brought against the branch house in Chicago or against the company in Indiana? (2) Could it be brought before a justice of the peace?

Answer.—(1) The suit could be brought in Chicago. (2) If the amount of your claim is $200 or less it could be brought before a justice of the peace—if more than $200, in the circuit court.

SON-IN-LAW.

A Subscriber, Rockford, Iowa.—Does a son-in-law continue to be a son-in-law when his wife dies and he marries another woman?

Answer.—The term son-i-law has no particular legal significance, and when his wife dies, and he marries another woman, he ceases to be a son-in-law to the parents of his first wife.



Your Chief Helper

A Rumely OilPull Tractor, 15-30 h.p., would soon win this title

One big advantage of a tractor is this—you can work it hard at the right time—24 hours a day, if necessary. The big advantage of an OilPull Tractor is that it can stand this pace without danger of a breakdown. It's value in a rush will pay you for having it. The

RUMELY OilPULL TRACTOR LA PORTE IND.

Tractor, 15-30 h.p.

is built particularly for small farms. A 160-acre farm can use it with profit and a big farm will find it a mighty handy machine.

You can use it profitably 365 days a year. It will build roads, saw, thresh, bale, shred, etc. It has a range of 100 revolutions per minute in pulley speed—fits any machine. It will run any but the largest separators.

It has plenty of power for ordinary work—pulls 4 bottoms in ordinary breaking—4 to 6 in plowing. It will plow and disc 10 to 14 acres a day. Two boys and this tractor will do the work of 4 men and 12 horses all the time—as much more at night with another crew.

The big part about this tractor is that it is easily handled and will go almost anywhere. It is fine for slow, steady work, and is equipped with two geared speeds, for heavy hauling and quick return, harvesting, hill-climbing, etc.

Every 1913 OilPull is self-steering—Dreadnought guide furnished with it. Any kind of farmer can make use of this tractor to advantage. Write for illustrated catalogue.

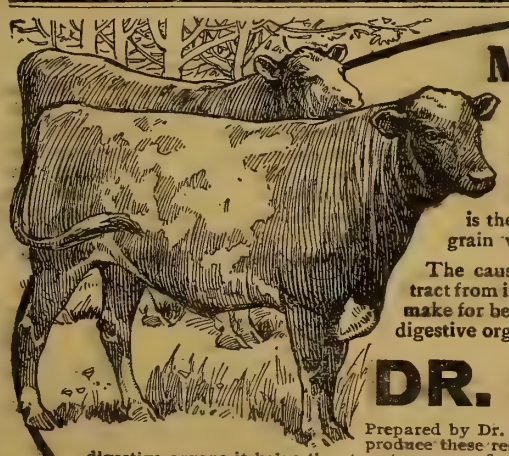
Making Beef Economically



The business of the steer-raising farmer is to turn feed into beef at the lowest cost and in the shortest time. But the fattening steer wastes a good portion of his ration, which is the reason why you let your hogs follow the steers to get the whole grain which they pass off as waste.

The cause of this waste is poor digestion—the inability of the animal to extract from its ration, in proportion to the large amount consumed, those nutrients which make for beef, blood and muscle. Tonics are needed to strengthen and invigorate the digestive organs of the steer—to sharpen its appetite and keep the system generally toned up.

DR. HESS STOCK TONIC

Prepared by Dr. Hess (M. D., D. V. S.) is a scientific preparation which will produce these results. Its actions are manifold. By acting directly on the digestive organs it helps the steer turn more food into flesh. It helps the animal to vigorous maturity and wards off disease germs. The U. S. Dispensatory remarks on the ingredients of Dr. Hess Stock Tonic, printed to the right, speak volumes for this guaranteed flesh and milk producer. Now read

Our proposition: Procure of your dealer Dr. Hess Stock Tonic. Use it all winter and spring. 25-lb. pails at $1.60 or 100-lb. sacks $5.00. Except in Canada and extreme West and South. If it does not pay you and pay you well, get your money back. Every pound sold on this guarantee. If your dealer can't supply you, we will.

FREE. Dr. Hess (M. D., D. V. S.) will at any time prescribe for your ailing animals free of charge if you will send him full details. Mention this paper and send 2c stamp. 96-page Veterinary Book also free.

DR. HESS & CLARK, Ashland, Ohio.

Dr. Hess Stock Tonic contains:
Nux Vomica. Digestive and Nerve Tonic.
Quassia. Digestive Tonic and Worm Expeller.
Sulphate of Iron. Blood Builder and General Tonic.
Sulphate of Soda. Laxative and Liver Tonic.
Common Salt. Appetizer, Cleanser.
Epsom Salts. Laxative.
Nitrate of Potash. Stimulates kidneys.
Charcoal. Prevents Noxious Gases.
Fenugreek. Tonic and Aromatic.
The above is carefully compounded by Dr. Hess (M.D., D.V.S.), with just enough cereal meal to make a perfect mixture.

DR. HESS POULTRY PAN-A-CE-A makes busy hens in January. It tones up the dormant egg organs, brings back the scratch and cackle, takes the hens out of the loafer and puts them into the layer class, and you will plainly see the results of feeding Pan-a-ce-a in the egg basket. The cost is hardly worth considering—a penny's worth feeds thirty fowls. Sold on the same money-back guarantee as Dr. Hess Stock Tonic. 1¼ lbs. 25c (mail or express 40c); 5 lbs. 60c; 12 lbs. $1.25; 25-lb. pail $2.50 (except in Canada and extreme West). If your dealer cannot supply you, we will.
Send 2 cents for Dr. Hess Poultry Book, Free.

INSTANT LOUSE KILLER KILLS LICE

Save Your Hogs—

Anything that helps you keep disease from hogs is certain to increase profits at market time; and in helping you do this Lewis' Lye is therefore worth many times its cost.

In safeguarding your money investment in hogs—don't overlook the importance and value of lye. Lewis' Lye, because of its guaranteed purity, full strength—*its simplicity of feeding*—has long been recognized as the surest hog conditioner.

Lewis' Lye

The genuine has a Quaker label on every can.

The Standard for Half a Century

Saves its cost hundreds of times a year for *others*. When fed to your hogs consistently, according to our specific directions, *it will do the same for you*—and produce big, fat, healthy animals at market time.

On The Farm—

Lewis' Lye, as the pure lye it *is*, is especially recommended as a hog conditioner and preventive of disease. It is also valuable as a disinfectant and for spraying trees, vines, etc., etc.

In The Home—

For soap making, softening water, destroying vermin cleaning pots, pans, dairy utensils, cream separators, woodwork, windows, etc. Lewis' Lye is supreme because it cleans without scouring.

When you order lye see that the purest and best is delivered to you. Get Lewis' Lye—the only lye made and sold by manufacturing chemists, 98% purity and full strength guaranteed.

Our booklet suggests many uses for Lewis' Lye on the farm and in the home that *you* should know about. Mailed free on request. Address:

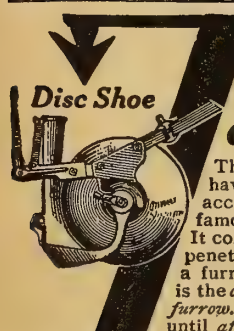
The Only Drill That Sows Grain in Any Kind of Soil—at a Proper, Even Depth

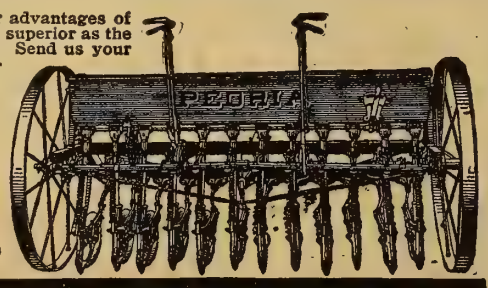


Think what it would mean to you to have *every* seed count and to have *every* stalk come up *evenly* and at the *same time*. You can easily accomplish this—with The New Peoria Drill equipped with our famous Disc Shoe Furrow Opener.

It combines every advantage of the single disc for cutting trash and penetrating hard ground, with every advantage of the shoe for forming a furrow and depositing the seed. The Disc Shoe Furrow Opener is the *only* one that sows every seed at an *exact, even depth*, in a *packed furrow*. No seed touches the disc and no dirt falls back into the furrow until *after* the seed is deposited. No practical, progressive farmer can fail to see the many money-making and money-saving advantages of this wonderful Disc Shoe Furrow Opener—found *only* on

The New Peoria Drill

There are also many other advantages of this drill, each one just as superior as the Disc Shoe Furrow Opener. Send us your name and address on a postal now for catalogue and all details of construction. Let us prove to you that it will pay you to discard even a new drill in order to buy and use the New Peoria. Will you spend a penny for a postal *now* to get all the facts? Address,



Peoria Drill & Seeder Co.
2435 North Perry St., Peoria, Illinois

CLUB RAISERS WANTED

I want a local subscription representative in each town in Iowa, Illinois and Nebraska, where I do not have a solicitor at present, to take subscriptions for The Homestead during the winter months. An energetic person can make excellent money working for me.

A Justice of Peace and farmer made $347.00 during December, January, February and March last year with practically no effort on his part. Just as he happened to meet his friends he asked them to subscribe.

An old soldier has earned $386.00 in the last year and has not been away from his blacksmith shop to solicit subscriptions.

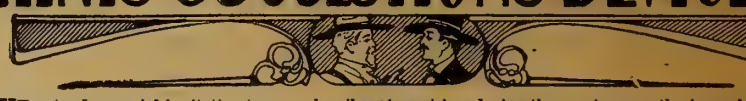
A lady who had sold extracts all her life took up our work last winter and has made over $300.00 this year without leaving her home town.

It requires no particular ability to become a subscription representative. There is no reason why you should not make from $300.00 to $600.00 this winter, looking after my subscription interests in your locality.

If you prefer premiums to cash commissions, write us for a list of the nice presents we can make you for raising a club in your neighborhood. We have everything useful to give away from egg beaters to sewing machines and gold watches. Address

James M. Pierce, Publisher Homestead, Des Moines, Ia.

HINTS·SUGGESTIONS·DEVICES



We extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

KEEPING RATS FROM POULTRY HOUSE.

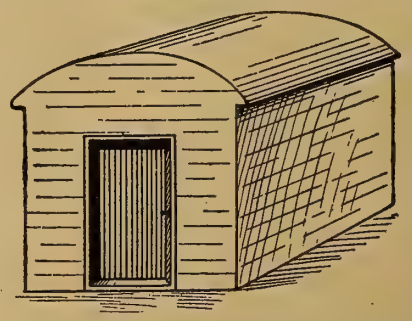
If there are many rats in your vicinity it will pay you to make it impossible for them to enter your poultry house. Put a post in the ground for every corner of the house. Invert over the top of the post an old three-gallon tin bucket. Set your house on these posts and when Mr. Rat attempts to climb a post and go into the poultry house he simply goes up inside the bucket and does not accomplish his purpose.

Feeding Alfalfa to Hogs.

In the West, where alfalfa is the chief crop, it is fed with success to growing pigs, and is used in connection with grain for fattening pigs. When the hay is fed by scattering on the ground at least half of it is wasted, and it therefore becomes necessary to devise some means for protecting it, at the same time allowing the pigs free access to the feed at all times. A tight box six feet long, eighteen inches deep, and the same in width, with a hinged top, has been found very satisfactory. As shown in the ilustration, three circular holes are cut in one side, the holes being eight inches in diameter. By making the box two feet wide, and putting a partition in the center, from end to end, holes may be cut on both sides, allowing more hogs to feed at a time. The hinged lid is raised, the alfalfa hay put in, and the hogs allowed to get what they can from the holes on the sides, when it is filled again. All the dry leaves, which are the more valuable part of the hay, are thus saved. A slatted rack similar to that used in feeding cattle and sheep may be used, if the trough at the base is narrow and is set on the ground so that hogs can reach it. The box with the hinged lid has the advantage, however, of keeping the feed dry, and at all times easily accessible.

A Concrete Milk House.

A house for keeping milk cool in the summer and storing fruit and vegetables in the winter may be constructed out of concrete from floor to roof. Make an excavation in the ground four feet deep, the desired length and breadth of the building. Set two posts in the ground at each corner, leaving a space between them



the thickness of the walls. Inch boards a foot wide should be placed on the inside of the posts next to the ground. The first layer of concrete, made of cement and coarse gravel can now be placed between them. After this is done, put another round of boards just above these and put in another layer of concrete. Then put on another layer of boards and cement and so on until the building is up to the desired height. The door frame can be set between the boards at one end of the building when the walls are built up to the level of top of ground. It can be made secure by bolts extending from the door facing into the concrete at sides. The roof can be made an oval shape by circular rafters resting on the side walls. After rafters are covered solidly with boards a covering of cement may be put over these, a place for chimney being left in center of roof. Leave rafters and sheeting to give strength to concrete. The floor should also be made of cement, sloping to one corner where a ten-gallon jar may be set into the ground to catch the water that may get into cellar. The doors of house should be double, one opening inside and the other outside of house.

The Ice House.

The location of the ice house is important. It should be placed on ground that is easily drained, and if possible

Poorly Mixed Concrete Is Worthless

Cement cannot be thrown together with sand and stone in any old way and good concrete be secured—a fact many farmers have learned to their sorrow.

We have for the past decade been building a hand batch mixer for the individual use of farmers and small contractors.

This machine is simple, strong and durable throughout.

We sell it under an ironclad guarantee to return the money if after a thorough trial it has not proven entirely satisfactory. It does the work swiftly and satisfactorily.

We make a complete line of mixers from this size up to the largest used by contractors.

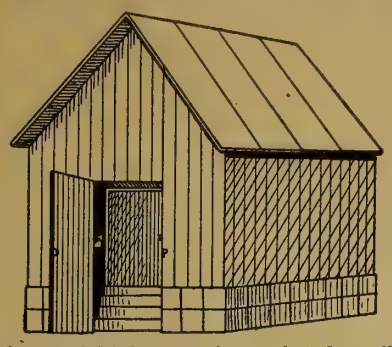
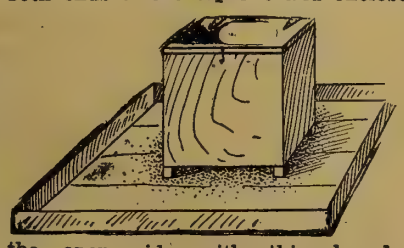
located beneath the shade of some large tree that the beaming rays of the sun may not beat on it in the hot summer time. Here is a good plan for building an ice house which has been used by a number of farmers: Make an excavation three feet deep and twelve by twelve feet. Wall this up with brick or cement blocks, letting the wall extend two feet above the ground. Dig a trench and put in a tile drain. Now put up the house, using two by ten studding ten feet long for the walls. Place the studding two feet apart. Then board up the building inside and out. A cheap grade of lumber may be used for inside work. A hollow space ten inches wide will be left in the walls, and this should be filled with sawdust. Straw is not good for this purpose, and should not be used. Either shingle or felt roofing may be used for covering, but one should be certain to get



the roof high enough so that he will not strike his head when putting in the ice. The door to the house should be two feet eight inches by six feet eight inches or close to these dimensions. Cleats should be nailed to the inner and outer edges of the door facing to hold ends of boards that may be slipped in and sawdust tamped down between them. Put coarse cinders over the floor of ice house and cover them with eight inches of sawdust. Now the house is ready for the ice. Cut the cakes of ice the size to fit your ice box or refrigerator, and be certain to secure the purest ice possible. At the ice house the cakes can be slided down a long board into their places. I believe it is best to set the ice up edgeways. The cakes are easier to get out and they retain their usual thickness. Pack the ice to within five inches of the wall all around the building and pile ten or twelve feet high. The ice should be packed as solidly as possible, therefore all cracks should be filled with small chunks and particles of ice. Put eight inches of sawdust over top of the ice, packing it down in the five-inch space all around the house.

Feed Hopper for Poultry.

The objection to the ordinary hopper is that so few fowls can be accommodated at one time. With the hopper shown herewith that difficulty is entirely obliterated. Simply use two store boxes, the lower one measuring eighteen by twenty-five inches, five inches deep; the other eleven by eighteen and twenty-eight inches deep. The lower one should need no changing, but it is necessary to tear out both ends of the top one and enclose



the open side with thin boards. Later replace one end, putting it on leather hinges which makes it easy to open when wishing to fill the hopper. As shown in the illustration this feed box is placed inside the flat box, raising it from the floor one and one-half inches by means of blocks securely nailed. Being so large nearly two bushels of feed can be put in at a time and the trough all the way around, as is sets in the center of the scratching pen, makes it possible for a large number of hens to feed at the same time. A mixture of grains may be used such as wheat, corn, oats, and if in addition plenty of beef meal and alfalfa meal are supplied the results are very pleasing.

Sherman Says: "IT'S A MONEY MAKER"

HERE'S a letter of more than usual interest. It is written by a well-to-do farmer in the Corn Belt—Mr. Henry A. Sherman, Leland, Ill.

He tells how he cuts down his farming costs and shows why a **Hart-Parr Oil Tractor** is a money maker on Corn Belt farms. But you must read the letter to learn why you ought to apply his methods to your particular power problems.

"Leland, Ill., Nov. 21, 1912.

Hart-Parr Co., Charles City, Iowa
Dear Sirs:—My Hart-Parr Oil Tractor is the best piece of machinery I have on the farm.

A General Purpose Outfit I use it for plowing, threshing, shelling corn, hulling clover, grinding feed and grading roads. I plowed 150 acres in 10 days, but could have done it in half the time had my plows been larger. I used a 5 bottom plow, but could easily pull a 10 bottom plow.

Furnishes Handy Power I pulled a Sandwich No. 7 sheller and shelled a 60 bushel box of corn in a minute and a half, running on one cylinder only. My thresher is a 36x56. I threshed 3,000 bushels of oats a day, working the tractor on only one cylinder.

It's a One-Man Outfit Hulling clover is no work at all for the tractor. I ran both machines at this work. My grinder will grind 60 bushels of feed per hour, yet this is easy for the tractor.

Operates Road Graders When grading roads, I drew 2 Concord horse graders at one time. I graded 1¼ miles of road and raised the pike 4½ feet in 4 days.

Just Eats Up Work Here's a table of the work I did with my Hart-Parr Tractor the past year:

Plowed 90 acres — Threshed 500 bu. of wheat
Shelled 2,000 bu. of corn — Hulled 600 bu. of clover
Threshed 42,000 bu. of oats — Graded 1½ miles of road

I ground very little feed with it, but expect to do a lot of grinding this winter.

Repairs Cost Almost Nothing My repair bill for the entire season's work amounted to only 95 cents.

Uses Cheapest Kerosene For the hardest day's work I used only 40 gallons of kerosene at all loads."

And Now, after you have read this letter, if you want some literature on the subject of power farming with a Hart-Parr Oil Tractor which will prove of interest, write today for our catalog, testimonial folder and Plowing and Tilling booklet.

HART-PARR CO. 228 Lawler St., Charles City, Iowa

HORTICULTURE

BERRY GROWERS' WINTER WORK

To the Editor of The Homestead:

There is no good reason why the berry grower should be idle in winter, for there is much to do in preparation for the growing season which is just ahead. There is work which may be better done now than at any other season. Some of it is work which is done at this time with less labor than at any later time.

We will suppose that the strawberry beds have already been mulched, for as every well posted berryman knows, that work should be done in November or December. But if in the pressure of other work the strawberry beds are not yet protected it is better to do it in January, than not at all. It is better late than never. They have perhaps suffered some injury, from the changes of December, the frosts, and the thaws. But if you mulch in January, you will save them from a repetition of that scorching process, in February and March. The word scorching is used advisedly for to scorch the foliage ha the effect of the alternate freezing, and thawing. You will hear people say, "I can grow strawberries without mulching." Do not let that deceive you. It is true they can grow some berries, but without mulching the crop will be shortened from one-third to one-half. Many a light crop of berries is explained by the fact that no winter mulch was given. People think that the "blight struck them." But it was, in many cases, the blight of winter injury. So apply the mulch to the beds, if it is still undone. But the raspberry patch demands attention.

The old dead wood should all be cut out, and burned. There are different methods of taking this out. Some use a bush scythe, or a sickle. Some use a corn knife. But the best way I have found is to break them out with a pitchfork. Select a cold winter day, for the wood must be frozen, if you succeed with this method. Choose a light four-tined fork. Or at least it should be a fork with straight tines. Put it through the hill so as to take in the dead canes, and no other, and hold it close to the surface. Now give it a vigorous push, and out comes the old wood.

After this has been put out of the way, you can see better, to do the next thing. And that is to thin out the live canes. Reserve three of the more vigorous canes to the hill, and cut out all the rest. Cut them close down, and you may perhaps find that the tree clippers are the best tool to use. You will be tempted to think it is a pity to cut out so much wood, and you will figure up mentally how many more berries you can get from eight canes than from three. And then perhaps you will be scared out from the job. But heroism pays here, as it always does. You may, indeed get more berries in number by count from eight canes than from three, but if you measure them you will find that the larger berries from the three will measure up more quarts than the small, inferior berries from the eight. You cannot cheat nature, you may take your choice of a large number of poor, small fruits or a less number of choice, good samples, but you cannot get both.

The work of tipping back the canes is usually left until spring, and done after growth starts. But I have not found that there is any advantage in this plan. Indeed, it is an advantage to get every possible part of the work out of the way before spring opens. I have ever found that labor is cheap in winter. Then I can hire a man at ten dollars per month. And after April first I must pay the same man thirty dollars. It i clearly better for me to have him spend ten dollar time upon this job than thirty-dollar time. Cut off one foot, to eighteen inches, of the tips of every branch. How much to cut will depend upon the vigor of the canes, and the length of the branch. Rake up all this rubbish and burn it and also all the old weeds, if such have been permitted to grow.

By doing this great numbers of insect eggs and disease germs will be destroyed. The best place for those things is the brush heap and your berry patch will be purified by fire. After all this is done look over your fruit garden and it will delight your heart. It will be in perfect shape and full of the promise of success, which inheres in careful preparation.

Much the same work should be done in the blackberry field. Cut or break out the dead wood and burn it. It will be easier to use the fork here than in the raspberries, for the production of canes is more scattered. Nature does not produce such a surplus, as with the raspberry. For that

SEED CORN

BUY your seed corn early. Hundreds of bushels selected the last of September and first of October and hung on wire hangers. Germination perfect. Send for catalog and order seed to be **SHIPPED WHEN YOU WISH.** Hundreds of dollars returned last year because we could not fill orders. Seed raised in the famous Mississippi Valley. The best corn land in the world.

E. G. LEWIS, Media, Ill.

SOUR SOIL CHEAPLY CURED

WE accumulate in connection with our large stone quarry business an excellent grade of limestone screenings, which is excellent material for fertilizing sour land. Reasonable prices and prompt shipment can be made. Burlington Quarry Co., Keokuk, Ia.

WANTED--MIXED ALSIKE AND TIMOTHY

CAR LOTS or less. Will pay you more than you can get elsewhere. Send samples today. Also want timothy, red clover, alsike, etc.

The Adams Seed Company, Decorah, Iowa.

CLOVER CHEAP Now is the Time to Buy

Prices bound to be higher later. Buy before advance and save money. Write today for special low price and free samples of our Pure Iowa Grown New Crop Recleaned Tested Clover and Timothy Seed. Have alfalfa, alsike, sweet clover, all kinds grass seed. Write us now.

A. A. BERRY SEED CO., Box 103 Clarinda, Iowa

A SET of six booklets, each one about increasing yields and lowering cost of farm, garden and orchard crops. In each there is **a message for you.** For instance, do you know how to plant a field of potatoes, to obtain a 100 per cent. stand? Our booklet, **"100 per cent. Potato Planting,"** will tell. That is one message you should receive. **"Spraying Vines, Trees and Bushes," "Thorough Cultivation," "Gardening with Modern Tools," "Economy and Better Crops"** and **"Digging Potatoes,"** contain many other messages. But we cannot deliver them until we have your address. It is, therefore, up to you to write at once. We prefer to send these booklets to interested parties only, but they are free to all such.

BATEMAN M'F'G CO. Box 148X GRENLOCH, N. J.

ONION SEED 85 CENTS AND UP

We believe we have the best onion seed there is. We supply many of the largest growers and would like to supply you. We have an enormous crop this year in the best commercial varieties and will make special prices to good buyers. Tell us how many acres you are going to plant in onions and what varieties, and we will send you liberal free samples of our seed for testing and quote you special prices. Big illustrated seed catalog.

HENRY FIELD SEED COMPANY Box 25 SHENANDOAH, IOWA

SUTTON'S CORN GROWS

We are the largest seed corn firm in the world. Big plant at Mason City in central Illinois, and big new plant at Geneseo in northern Illinois. Over 75,000 bushels of thoroughbred seed corn in our furnace heated houses. **15,000 bushels on wire hangers selected by men going through fields with sacks over their shoulders.** Germination perfect. **All seed shipped on ten days approval.** Grow our own seed. Begin gathering seed in September. Central and northern Iowa, and northern Illinois farmers, get your seed at Geneseo, Illinois. A perfect stand will make you money. Write today for our beautiful corn book, **free for the asking.** If you are in central or northern Iowa or northern Illinois, address Geneseo, Illinois.

The G. D. SUTTON CO., Dept. D, Mason City, Ill.—Geneseo, Ill.

reason there will be less of thinning out of the live canes. In fact we have but rarely seen blackberries so thick as to need thinning.

Get out all this rubbish and burn it, even if you practice the no-culture plan. If you clean up your field you may retard the attack of rust, the deadly enemy of the blackberry. There are comparatively few insects to bother this fruit, but sometimes they come, and the better you do your work, the longer you will be free from their attacks. Be sure it will pay you to do things thoroughly, and keep up the best possible conditions for future success. A field so kept is very pleasing to the thoughtful mind, for the present perfect shape presages good coming results.

SELECTING PLUMS.

To the Editor of The Homestead:

After a prolific plum year, like 1912, it is a good time to decide what varieties are worth growing. The list of plums as offered by nurserymen, and planted by farmers and fruit growers requires cutting and slashing, without mercy. If half, or two-thirds of the varieties once propagated, and old, could be destroyed, root and branch, it would be a great gain. I would like the task of making up a list which must be tabooed. And there ought to be some way of making it a criminal offense to plant any of these outgrown, obsolete varieties.

The fact is that when we had the great plum planting boom—some twenty-five years since—many varieties were propagated, simply upon their local reputation. Many of them were inferior to the best sorts, but they were recommended by men who had had no chance for comparison. These neighborhood selections proved in many cases, like the "smart man" sent to congress, a poor stick when in competition with real merit. It is wasted effort to grow an inferior plum, one of small size or poor quality, when there are better varieties of the same season for every purpose.

If there were any way of getting at the amount of money lost by growing unsalable plums, unsalable chiefly because they are small and poor, it would stack up into a large sum. With the wider knowledge gained by experience, we should have a general thinning out. And nurserymen who are engaged in propagating the plum should shrink their lists instead of expanding them.

I have before me a catalog which lists over thirty varieties of the plum, and even northern growers have been known to offer, as many of the iron-clad hardy natives. These things ought not so to be. Such long lists are confusing to the planter. Some of them are bad, having some weakness which makes them unprofitable, and there is a long list of about even merit, so much so that if we were confined to one we would be really better off, having all that we can desire.

The one quality of difference of season must have attention, for even a very late or very early plum of inferior quality may be valuable upon the ground of season only. But why have a dozen of the same season, many of them inferior?

Among those marked for slaughter in my own grounds I will name Forest Garden, Wolf, Beatty, Maquoketa and Chicasaw. But I will retain, and am very glad that I have them, Haag, Comfort, Surprise, DeSota, Snyder, Wyant, Miner and Damson. It is likely that every plum grower can make out a list as long, or even longer, worthy of slaughter. Let us sacrifice them upon the altar of progress. And let us unitedly appeal to nurserymen to stop propagating, the host of comparatively useless varieties.

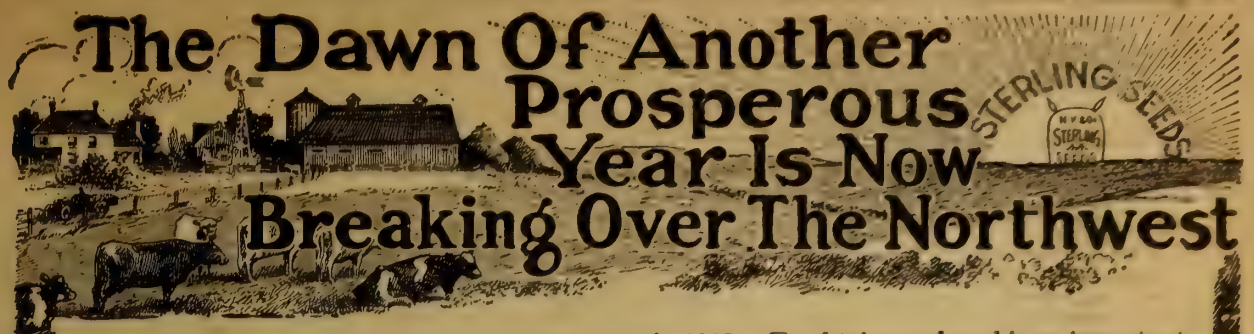
The fact is that there are new sorts coming into view at our experiment stations, of very superior value and if they could be offered in commercial quantities, and the people fully understood their good qualities, not one of the old lists would be retained. This is a startling assertion, but we believe it to be true.

The plums of the future will be high in quality, rich and sweet. They will be very large and perfectly hardy in tree. They will be rich and attractive in color, and they will have the keeping value of the prune. They will either hold to the tree, or if they drop, they will still keep for a week upon the ground without rotting.

In the list named above for destruction I place the Beatty with regret. It is one of the best plums I have ever grown, large, sweet, meaty, but it never bears enough to be profitable. It is great cry and little wool. And why cumber the ground with it, when there are others, of same season, and close to it in quality which will yield five times as much fruit. Kill out the bastards. They have no place in the inheritance of culture which belongs only to the valuable, the true heirs which can richly repay you for room and labor.

M. E. H.

Kansas City has just completed a schoolhouse with a room specially adapted to "social center" uses. The idea is growing. Schoolhouse education should not stop when a boy leaves school. It should spread its gentle influence upon an entire community that is out of school and has little means of intellectual improvement. It is needed to complete the school work. We hear much of "finishing" schools. The only sensible finishing school in America is the social center—a place for brushing up the thoughts and freshening the ideas of the citizens upon whom rest the government of the municipality. It is a great honor to any community to have the social center idea in full operation.



The Dawn Of Another Prosperous Year Is Now Breaking Over The Northwest

CONDITIONS point to another prosperous year in 1913. To obtain good seed is an important point to consider **now.** The best seed is, after all, the cheapest. Never before in the 29 years of our business have we had such an immense stock of high grade seeds of all kinds. Our 29 years of study and experience in growing and selling seeds adapted to northwestern conditions together with our reputation for square dealing give you assurance that seeds bearing our name and trademark are the best obtainable.

NORTHRUP, KING & Co's
STERLING SEEDS

SOLD BY 15,000 DEALERS IN THE NORTHWEST

The Finest and Most Convenient Seed Cabinet

The STERLING seed Cabinet is in almost every dealer's store. It displays the large packets so conveniently that it is very easy to pick out the sorts wanted. The illustrations on each packet are in colors true to nature.

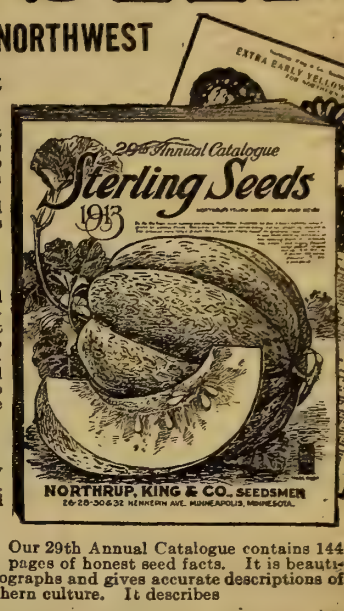
These packets contain the finest vegetable and flower seeds obtainable, the assortment covers nearly all varieties, and honest value is given.

Bulk Seeds in Bags

In addition to packet seeds, dealers also sell our seeds of all kinds in bulk in any quantity desired. If they should not have what you want in stock, they will obtain it from us and sell it to you. If your merchant will not sell you STERLING seeds, send your order to us and we will see that you are promptly supplied. If you do not know who sells our seeds in your town, we will send the dealer's name on request.

One Packet or a Carload

STERLING Seeds are sold in any quantity from a 5-cent package to a carload or more. Our immense stocks enable us to handle all orders with exceptional promptness.



This TradeMark on Package or Bag is an Assurance of Highest Quality Seeds.

1913 CATALOGUE Our 29th Annual Catalogue contains 144 pages of honest seed facts. It is beautifully and profusely illustrated from photographs and gives accurate descriptions of practically all seeds best adapted to northern culture. It describes

Something Special Never Before Offered
Of Interest to Every Farmer

On page 129 of our 1913 Catalogue we list something of interest to farmers and stock raisers. This item has never before been offered and it gives us great pleasure to be first again to introduce a new and valuable seed or plant for the advancement of agricultural interests.

Send for this catalogue today. We mail it free to everyone interested in seeds. Asking for it puts you under no obligation to buy our seeds or other goods.

The Farm Water Supply.

By E. G. Norton.

THERE is more poetry than pleasure in "carrying water from the spring," or any other source of supply, when face to face with the proposition of carrying enough of it for the family washing, the Saturday cleaning and scrubbing, and incidentally, the Saturday night bath supply. With dishes to wash three times a day or more, cream separator to clean, vegetables to wash, cooking, and the hundred and one other demands for water in the daily routine of the home, is it surprising that the housewife seems to see empty water pails before her? A call on Johnnie or Willie brings the invariable complaint, "Didn't I just get a pailful?"—it may have been a couple of hours ago and mother may have carried a dozen pailfuls herself in the meantime to avoid delay. And if father carries in an occasional pail or two, it is with a half-conscious air of having done his duty as a considerate head of the house.

This is a day of labor-saving devices, and there is nothing which will save more labor and give greater satisfaction to the country housewife, and at the same time add so greatly to the comfort of the entire family, as a home water works system.

There are thousands of farm homes where such systems have been installed, and there are thousands more where they no doubt would be adopted were it not that the idea has never taken practical form in the farmer's mind. If it ever did suggest itself it was as a sort of "pipe dream," and with the putting away of the pipe was dismissed as impracticable or altogether too expensive a proposition to be considered seriously.

A home water works equipment is not impracticable for any ordinary farm or village home, and the average farm owner on looking into the subject a little would no doubt be surprised to find at what comparatively light cost such comfort and saving of labor can be accomplished.

Especially is this the case where there is already a gasoline engine on the farm to do the pumping—and there are few farms of any size or pretension nowadays that do not have one of these engines. Even if an engine must be purchased primarily as a part of the house water works equipment, its cost cannot rightly be charged up wholly as a part of the expense for this purpose, as it is used for so many other purposes—sawing wood, cutting and grinding feed, spraying, turning the grindstone, operating the fanning mill, cream separator, churn, washing machine, and every other machine to which power can be applied. Conceding, therefore, that almost every farm either has or will have its engine for general purposes, the cost of an engine is hardly to be considered as a part of the cost of putting in a water works system.

There are three methods by which a farm or village home that is out of reach of a city water works system can be equipped with running water: (1) By gravity from a well or spring on higher ground; (2) By gravity from elevated tanks; (3) By means of a pneumatic tank.

The first method requires conditions rarely found. It depends on having an elevated spring or water source near at hand, from which water can be piped down hill with pipes run into the house up to a height corresponding to the source on the hill. Obeying the natural law that makes water seek its own level, the water will rise in the pipes as high as the level from which it has been secured, and can thus be distributed throughout the house. With this system no pumping whatever is required. This is an ideal method, but the necessary conditions are not often found.

Gravity flow by means of an elevated tank is a system quite commonly used. The tank is often placed in the attic of the house, or in the hay mow, or it may be placed on a tower in the open yard. The use of a tower, however, is apt to prove unsatisfactory, except where the climate is mild enough so that the water will not freeze. Where the tank is placed in the attic, danger from freezing is largely avoided by running the supply pipe along the inner wall of the house; when a tank is located in a hay mow, the pumps are in the stable and the supply pipes are run under ground to the house. As to the size of tank, a 500-gallon capacity should be large enough for a medium-sized farm, for both family and stock. Such a tank could be filled daily by running the gasoline engine from five to ten minutes at practically no cost for fuel. A 500-gallon tank in either galvanized steel or cypress can be bought for about $10.00 or $12.00. If only a house supply, to be located in the attic, is desired, a 150 to 200-gallon size might be large enough and even more desirable, as too great a weight would not be practicable in such a location. One of these smaller tanks could be purchased for about $5.00. A 1,000 to 2,000-gallon tank would cost from $15.00 to $25.00, but with a tank of that size, located so as to avoid trouble in cold weather, a half hour's pumping with a gasoline engine a couple of times a week would furnish water for every possible use on the farm—for both family and stock, and for watering the flowering shrubs, fruit bushes, and the family garden in dry weather—by merely turning a faucet or two. It certainly sounds attractive, doesn't it?

The pneumatic tank system of supplying water for the home, is unquestionably the best and most satisfactory system that has yet been devised, though perhaps costing a little more in the beginning than the elevated tank gravity method. The outfit consists of an air-tight steel tank, a force pump, and piping to connect well to pump, pump to tank, and tank to house pipes. The tank is usually placed in the cellar, or is buried under ground and the pump may be located at the well, in the cellar, or wherever convenient.

Ths principle upon which the pneumatic system is based is air pressure. Water is pumped into the air-tight tank and compresses the air in the tank which exerts a proportionate pressure on the water, forcing it upward in the pipes to the desired height. Some of the advantages are that, owing to the location of the tank in the cellar or under ground, the water is kept cool in summer and does not freeze in winter; also the air in the tank by oxidizing organic matter in the water, purifies the water to a considerable extent.

Any form of power can be used to do the pumping for a pneumatic system—hand power, windmill, gasoline engine, hot air engine, electric motor, etc. It is a safe guess, however, that any one who is interested enough in labor saving to install a water system is not going to do the pumping by hand and is too intelligent to have expensive hired labor to do it. Windmill power requires a tank large enough to hold at least a three day supply; otherwise lack of wind may keep the water system out of commission a good share of the time. In some cases, the electric motor, hydraulic ram, or other special forms of power may be the most practical, but for the average farm, for average conditions, gasoline engine power gives by far the best all-round satisfaction. It can be started in a few seconds and will run all day without any attention whatever. It cannot possibly blow up and there is no danger of fire. It is cheaper than hand labor—if a pint of gasoline costing two cents can be made to do the work it takes a man eight hours to do, the gasoline should be made to do it.

The purpose of this article has not been to give detailed information as to how to install a farm water system, but rather to awaken interest in the subject and direct attention to its practical possibilities.

Why I Failed as a Farmer.

By "Unsuccessful."

WHEN I came in from Wardner, Idaho, with some money which I had saved by the exercise of much will power, I decided to give way to an impulse which had followed me from boyhood up and become a farmer. I had never farmed a day in my life, in fact I numbered few tillers of the soil among my acquaintances, but I thought my enthusiasm was great enough to carry me over all obstacles.

I made my first blunder when I purchased my land. I knew as little concerning the different grades and qualities of soil as a fishhawk, and while under the influence of a glib-tongued agent I purchased a quarter section which seemed to lay well for sixty-five dollars an acre. I had a little over four thousand dollars saved from my work in the mines, and while to the initiated this sum will appear ridiculously small to start in with as I was starting. I thought it sufficient I paid three thousand down on the land and got three years time on the balance. So my land deal left me a trifle over thirteen hundred with which to purchase both stock and implements.

The man who was my nearest neighbor gave a great deal of advice for which he asked no renumeration. He advised me to go to a sale—there was a large one coming off some ten miles away, and purchase my work horses, brood mares, machinery, and a start of hogs.

I attended the sale and in company with my garrulous neighbor inspected everything that was lined up—from fence posts to horses. That sale was a revelation to me. I purchased a harrow, a lister, a disk harrow and a plow before noon, paying various prices all of which according to my neighbor's opinion were very cheap.

After the free lunch at noon I cut loose on the live stock. Here I found that a man must not wink at the auctioneer unless he means business. My neighbor stayed at my elbow and by his kind assistance I purchased a team of mules, a cow, a team of brood mares, three sows and a few chickens. I paid out nine hundred and eighty dollars at that sale and from every point it was a wretched piece of business.

Being aware of my greenness my neighbor had "fixed" the proprietor of the sale, who in turn had hired a man to bid against me.

It was high time to begin spring work so I hitched my mules and mares to the disk harrow and started out. For the first day or two things went badly, but I soon caught on to team work. I noticed while I was disking that much of the land was of rather a sticky consistency. This was especially noticeable on the slopes. At the time I thought this was because of the strength of the soil, but later in the summer I had my eyes opened by acquiring the information that I had purchased the worst gumbo farm in the county.

I had planned to put sixty acres in corn, eighty acres of the place was in wheat when I bought it, and with this aim in view I started to work. Here I learned that there was different grades of corn, and that the small, uneven grains on the ends of the ear had to be "snubbed" off. My lister was a Tartar. Neither myself nor a capable mechanic whom I hired for a day could persuade it to work. That evening just as the sun went down the lister went into a ditch.

The next morning I shacked to town and purchased a new one which worked. One cannot list deep in gumbo for the subsoiler throws the lister out of the ground, so my corn was not planted at the proper depth. Much of it sprouted and died and I did not get more than half a stand.

I could not complain of my stand of cockleburs however, they came thick and fast on the ridges and in the rows between the corn. I labored from early morning until late at night, but in spite of my efforts, by the time the corn tasseled the burs were in the majority.

I was obliged to hire my wheat cut and the crop barely paid expenses. This left me with sixty acres of corn with which to face my mortgage interest and other expenses.

My three sows had their litters the latter part of May. Knowing nothing of the care of hogs I kept the poor animals in small pens instead of grazing them on green pasture. As a result the pigs became stunted and did not grow well. I became discouraged, believing I would never make a success at hog raising. Instead of feeding a mixed ration of shorts, corn and meat meal along with some green stuff I fed only corn.

From the middle of July until the first of October was a period of knowledge gaining. In my haste to plant my corn I had neglected to put in any forage crop. When the hay I had bought to start in with was fed out I was forced to buy at market prices which were high at the time. If I had sowed a few acres to sugar cane

I would have had an abundance of feed.

I finished shocking my corn about the middle of November and fed all I could spare of it to my hogs. The corn was nubbiny and the hogs runty so it is needless to state that it was a profitless undertaking. I was glad when the mangy brutes were disposed of, they were mangy for I had not dipped or sprayed them.

Having disposed of my produce I settled down for the winter. I read somewhere that a poultry farm was a twin brother to a gold mine. I determined to run some chickens as a side line the following summer. By rigid economy I had kept in a financial condition so that it was possible for me to farm another year.

My courage had returned in a measure with the coming of warm weather, and I went to work with a will. It would seem that my past experience in the matter of feed would have prompted me to put a goodly acreage into sugar cane. Such was not the case.

Instead of sowing cane or kafir corn I depended on a piece of alfalfa (sowed that spring) for my rough feed. Knowing nothing about alfalfa save the glowing advertisements of land suited for it, I thought it would produce four or five heavy cuttings the first year. My patch produced two, both very light.

For lack of feed the following winter and being hard pressed for money I was forced to sell my cattle (with the exception of one old cow that gave bloody milk) at a sacrifice. But I am disclosing facts which should come later.

That spring I put the sixty acres which had been in corn the year before into oats. I reserved the wheat land for corn. My oats were about eight inches tall and doing well when a terrific hail storm struck them, beating them into the ground. The corn was also ruined and had to be replanted.

The hail storm so discouraged me that I did not attempt to do anything more with the land that has been in oats. About this time I also made the discovery that both my mares were barren. But I replanted the corn.

The corn did well in spite of its lateness, the wheat had put new life into the ground—and I began to take heart. After the corn was laid by, I purchased some millet straw from a neighbor and stacked it in a little corral through which the creek ran. I thought I would turn the mares in here and save the trouble of fattening them by the usual methods. Someone had told me that millet straw was very fattening. I went down one day and found the best one lying dead. She had become wadded on the straw and had had no loosening feed to counteract it. That same evening a strange dog got into the barn. I was awakened by the racket and ran out to find that one of the mules had kicked at the dog and badly sprained its own leg. This accident made it impossible for me to do any plowing for wheat.

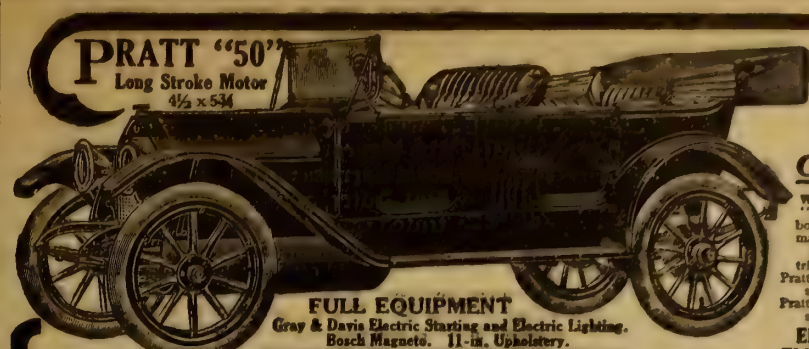
I inherited some money that fall, enough to tide me over and to pay for twenty head of two-year-old steers. I now decided to turn my attention to growing alfalfa extensively. I hired teams and fall plowed the ground. The following winter was unusually severe. My feed soon began to run low; the prices asked by those who had it for sale were exorbitant, so I starved my steers along. They began to die off. I had five head left by spring. Not wishing to be cursed with the remainder of the herd I sold them at a sacrifice. A few acres of rough forage would have made me many dollars.

It would seem that by this time I would have gone to some one for advice, that is some one who could speak with authority, before experimenting further with alfalfa, but I had the matter all figured out for myself.

Instead of having a firm seed bed with an inch or two of pulverized soil on top I loosened the ground as deep as I could. My alfalfa came up in fine shape, but by ten o'clock on the first windy day things did not look so promising. By night my young alfalfa had started on its way for the aurora borealis, traveling at the rate of fifty miles in nothing and three-fifth seconds.

I figured up one night and saw where I stood. I was working for nothing, boarding myself and rapidly losing what money I had.

I traded the 160 for a twenty-acre poultry farm near town. I got the poultry farm clear.



1913 Pratt Cars

Five Years—Every one successful as manufacturers of automobiles.

Forty Years—Every one successful as manufacturers of standard vehicles.

Get Catalogue showing photographic view of all models, and giving you the standards by which to value any car.

We have a business proposition for you. Our goal for 1913 is a "Pratt Car" in every locality. If there isn't one in your neighborhood—if there isn't a Pratt dealer near you it will be to your material advantage to write or wire and let us know.

Three Distinct Models—Pratt 50, 122-inch wheel base, electric starter and electric lighting system. Price $2,150.00.
Pratt 40, 120-in. wheel base, Presto-O-Starter and electric lighting system. Price $1,850.00.
Pratt 30, 114-in. wheel base, Prest-O-Starter and electric lighting system. Price $1,400.00.

ELKHART INDIANA

THE WEALTHY APPLE.

The good people who are so fortunate as to live between the forty-second and forty-third parallels, and who also had the good fortune to plant some Wealthy apple trees some years since are now in this month of November enjoying one of the best apples this world knows anything about. A chance seedling, and grown as Mr. Gideon, its Minnesota father declares from crab seed bought in the east, it has come to be in our days and for great sections of the land, a recognized king in its class. When it was first introduced, some forty years ago, it became at once popular. It was first lauded for its hardiness of tree.

But it was not long before its merits as a superior apple, in appearance and quality, and quality was recognized. It was found to compete, successfully, with other apples of its season in the markets of the world.

This fact increased its range immensely, and it is now grown in great quantities, in the apple regions of the east.

Its hardiness of tree makes it peculiarly valuable in the northwest. But while it is safe to plant in south Minnesota it cannot be carried much farther north. The tree will not stand like the Hibernal, which is the standard of hardiness.

The range of its profitable culture is as wide as the continent, and it extends north and south from Minnesota to south Missouri. On the southern limit it becomes a late summer, or early fall fruit, while at its northern limit it is a winter apple.

But in the region where it is most largely grown the central belt of its zone, where the tree thrives with the least danger of injury, it is only a late fall apple, coming into use in September and lasting until Thanksgiving. It was seriously proposed some years ago that in order to raise a monument fund for Mr. Gideon, the originator, who died in poverty, each person should contribute one cent for every Wealthy apple tree he owned. And it is our understanding that quite a sum of money was so raised. Of course, the range of the effort was very limited. But if this had been done all over the land, enough money had been secured to build him a monument taller than Washington's, and as costly as the Taj Mahal.

Millions of people are satisfied with it as an eating apple. And while there may be some very particular people who find some apples with a choicer flavor and grain for the table, it is accepted by all as a cooking apple unexcelled.

But we have come to these conclusions slowly. Even in places where this apple has been grown for over thirty years it has only been as one of the varieties. Others have been grown alongside, and we have been constantly reaching out and testing every new thing, half expecting that pretty soon the Wealthy would go to the discard, just as soon as fixed upon something better. But somehow the apple possessing all the valuable traits of the Wealthy, and in a greater degree did not appear. It has not appeared yet. And the public, the apple growing public, is settling down to the conviction that in the Wealthy apple we have a fruit such as is produced only once in several hundred years.

The coming years may bring us something better than the Wealthy, let us hope so, but meanwhile let us plant it largely.

A great apple grower, Elmer Reeves of Iowa, a man who has given his life to the fruit business says this: "I have come to the point where I urge the people of my section to grow the Wealthy as a commercial apple. I tell them to plant it largely as the variety offering at both in growth and sale."

This is a high recommendation. And the return of the people to the Wealthy, is a sign of the times. It reminds one of the man who traveled all over the world to find some right people for friends. And he came back at last satisfied that his old neighbors were the best of all.

WHO STEALS THE CHICKENS?

To the Editor of The Homestead:

I thought perhaps some of your readers might be interested in our experience with chicken thieves or rather poultry thieves, as they will take anything they can get whether it be chickens, ducks or turkeys and anything from eggs to adult fowls. They are experts at finding turkey nests and if the turkey hen happens to be sitting, turkey, eggs and all disappear. They are especially eager to get any kind of pure-bred poultry, and as they could hardly get old fowls without being found out they take them when they are about fry size and then by the time they are mature the owners would not know them. The better grade poultry one keeps the more apt they are to lose the chicks.

This year we told some of our neighbors that we were going to mark our chicks and just as soon as we had a nice lot of youngsters on hand here came one of the party for no other purpose than to find out how we marked our chicks and not being told she picked up some and examined them. She did the same at a neighbors who has a fine flock of Barred Plymouth Rocks, having bought eggs at $5.00 per fifteen and paid as much as $10 for a male bird to head one of the pens. She loses a good share of her chicks every year and she is sure they are stolen and also who gets them, but they buy a few eggs of her or someone else who has that kind for sham so she cannot easily tell the chicks.

We have Rhode Island Reds and have been losing two to six of our best ones now and then since the oldest began to show their quality. We have locks on the houses but it is next to impossible to keep every coop locked. The old lady who hunts for the places of attack is past seventy years old and a great many people would pass her inquisitiveness for childishness. Her son does the stealing. She is always asking where a certain size roost, if people know how many they have, etc. One day a relative of hers, who, so far as anyone knows is above reproach, was coming to visit us, and she came too, and was soon telling about several people who had had chickens stolen. Only the night before we had heard a noise exactly like a buggy turning around but as it was raining quite hard we did not investigate. The next morning four of our best cockerels and two pullets were missing and there were about half a dozen very weak, strange chicks in the coop, everyone nearly choked with catarrah. We hastened for remedies to treat the poor little things but forgot to count them. They were not there the next night.

Once before we missed two chickens and found a good size pullet that does not resemble our stock at all. Have since found two good-for-nothing cockerels that anyone who is not very well acquainted with our flock could pick out. The feathers look dead and their heads are different. The old lady was probing to see if we knew but we played innocent for awhile and she seemed to get a great deal of enjoyment out of it all. We have been caponizing most of our cockerels this year and after awhile we told her about it, and that we had missed some. She nearly fainted and did not entirely recover all day, but of course she had to stay as our other visitor ha come for all day.

She told of another party who had lost nearly all his Rhode Island Reds and sold the rest and I suppose we have a few of his. Also she said she bought some eggs that hatched fine but the chicks took the roup which I think accounts for the last donation. They have everything comfortable, have their automobile and more fine clothes than most people in this neighborhood and folks often wondered how they could do it. A man from another town nearly twenty miles away once sent word to a banker in our town to know where a certain man lived as he came there so early and so often with such big loads of chickens. They will take things in daytime if they can find all the folks away, and always want to know where incubators are set and innumerable questions that no one else ever asks. We let them know that we knew who got our chicks and they have been very much worried about something, so we heard, and we do not expect to be bothered again soon. However, we will try to make our coops and houses as safe as possible.

A Kansas Subscriber.

GROWING BETTER MARKET HAY.

Never has there been a better demand for first-class hay and seldom, according to the advices of market experts, has the supply been of as poor quality. Buyers want properly cured hay, well baled and free from weeds. The practice of leaving meadows in grass until long after the yield has fallen below the average is mainly responsible for the excessive proportion of weeds while late cutting generally increases the proportion of "hard" and indigestible forage. Curing is often spoiled by bad weather conditions, and, of course, is not so easily controlled, but a little care at the right time often does wonders to keep a batch of hay nice and bright. A bulletin which is being sent out by the United States Department of Agriculture offers a number of valuable suggestions upon the production of better hay, and may be had by writing to the secretary of agriculture.

You needn't expect any more eggs till the warm days of spring, from the hens that have their combs frozen; so keep them in out of these severe mornings, and see that they have comfortable quarters at night.

A Million More for Corn.

The crop of the corn belt could be increased a million dollars a year if all the seed that went into the ground was good seed. A valuable corn book illustrating this fact more fully is put out by the National Seed Tester Company, 1723 Locust St., Des Moines, Ia. See advertisement on page 14.

PARCEL POST A BOON TO FARMERS.

(Continued from page 3.)

vent breakage is only five cents when shipment is made from a patron of any rural route to a resident of the town or city where this rural route originates. The rate for each subsequent pound is only one cent, so that eleven dozen eggs weighing eleven pounds may be sent by any farmer on a rural free delivery line to any resident of the adjoining town or city for fifteen cents. A small family uses four pounds of butter a week. Postage is only eight cents. Creamery butter costs forty cents a pound at retail, or $1.60 for four pounds. Country butter is worth today at the farm about twenty-five cents, four pounds therefore cost $1. With postage of eight cents the farmer is able to secure a higher price for his butter than was formerly secured by hauling it in and disposing of it in large quantities to the town or city middleman, while the small family consumer saves fifty-two cents each week on the one item of butter alone. The shipment of farm produce in England and other foreign countries, where the parcel post has been in effect for many years, is so extensive that farmers are in the habit of advertising produce bargains in the daily papers, shipping direct to their town and city consumers. The shipment of eggs by parcel post in England is carried on so extensively that in the postoffices in large cities special departments have been assigned to this class of matter. Preserved fruits, jams, honey and all manner of small farm produce are advertised and shipped by the farmer to the city consumer, who simply writes a letter ordering what he wants and enclosing the price and postage, the postman delivering the goods to him the next day. The breakage of eggs in England is extremely small. The government sends out printed instructions how to pack them, and pasteboard boxes made after those regulations are sold everywhere. A result of the egg and butter trade by mail in England and Germany is that the profit of the produce dealer, grocer and other middlemen is cut out and the farmer gets a little more for his goods than he would in the market, and the consumer gets them for much less. A London paper of recent date told how, when eggs were selling in the London market for twenty-five cents, a dozen consumers were getting them by mail for twenty cents.

The contention that the parcel post, while being of great benefit to the farmer, would work injury to the country merchant has been offset by the argument that by means of the new system the country merchant's business will be increased rather than decreased, owing to his ability to make quick and prompt shipments to his country customers at a lower postage rate than the further distant city merchant can On this point an official of the department of agriculture has this to say:

Rural telephones have practically spread all over the entire country and they will be used in conjunction with the parcel post to the advantage of both farmer and country merchant. The housewife, for example, finds that she is out of sugar. She steps to her phone and orders it sent by parcel post. She will not order it from a city when the nearest country merchant can send it more quickly. If the farmer breaks a harrow or a part of some farm equipment, it will not be necessary for him to hitch up and drive to town; he will merely step to his phone and order the new part sent by "P. P." The time saved will more than compensate him for his outlay of stamps. I expect to see the country merchants advertising free delivery in their local papers, just as their city brothers do. They will use the parcel post as their delivery wagons.

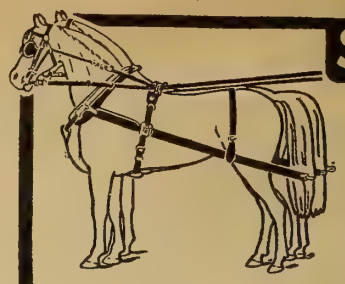
The rates under the new parcel post depend upon the distance, maps being made for practically every one of the postoffices. The rates are dependent upon the distance a package is shipped, the official table issued by the postoffice department being as follows:

	First lb.	Each add'l lb.	11 lbs.
Rural route and city delivery	$0.05	$0.01	$0.15
50-mile zone	.05	.03	.35
150-mile zone	.06	.04	.46
300-mile zone	.07	.05	.57
600-mile zone	.08	.06	.68
1,000-mile zone	.09	.07	.79
1,400-mile zone	.10	.09	1.00
1,800-mile zone	.11	.10	1.11
Over 1,800 miles	.12	.12	1.32

Parcel post and express charges compared on 5-pound package:

Zone distance—	Parcel post rate.	Present express rate.
City and rural route	$0.09	$0.25
50 miles	.17	.25
150 miles	.22	.35
300 miles	.27	.45
600 miles	.32	.50
1,000 miles	.37	.60
1,400 miles	.46	.75
1,800 miles	.51	.75
Over 1,800 miles	.60	.80

This zone system is the one feature of the existing law which it is believed disposes entirely of the opposition of the country merchant inasmuch as he not only has the advantage of quicker service but also the advantage of a lesser rate of postage than the mail order houses or the department stores in the larger cities at a longer distance.



SAVE 25 TO 50% ON HARNESS $25.00 FREIGHT PREPAID

For $25.00 we offer our Leader No. 53—1½ inch Team Harness set down at your railroad station. This harness, designed and made for durability and service is the biggest bargain we have to offer. While the price is exceptionally low for a harness of this nature, quality has not been sacrificed on that account. But, "after quality, it's the price that counts." In the harness here illustrated only the very best grade of Oak Tanned Leather has been used in its manufacture and our money-back guarantee stands behind every sale.

We issue a 100-page, completely illustrated catalog, jammed full of just such bargains as shown in the illustration. Just drop us a card and we will send you by return mail one of these handsome books. We manufacture all our own harness in our spacious factory at Waterloo. This alone accounts for the rock bottom prices we quote—no jobber, salesmen, agents or brokers to split up the profit—just the manufacturing cost with one small profit added. This accounts for the fact that we are absolutely the largest manufacturers of harness and leather goods, selling direct from factory to user.

A comparison of quality and prices will surprise you. Write today to

WESTERN HARNESS & SUPPLY CO., 613 Main Street, WATERLOO, IOWA

Handling Manure Economically.

By W. F. Purdue.

VERY few farmers have manure sheds in which to house their stable manure, consequently it must either be drawn directly to the fields or piled back of the barns. Where manure is piled in the open air for several months there is a loss by leaching of nearly 50 per cent. This fact has been ascertained by careful experiments. There is also some loss by the heating of the manure in the piles, when the nitrogen is turned to ammonia and thus it passes into the air.

The best way to avoid this waste of valuable elements of fertility is to haul all stable manure direct to the fields as produced. Many progressive farmers long since proved to their satisfaction that this system of spreading manure from stables enables them to handle it very economically. They save much time in the course of a year by this system of handling. It requires no more time to fork the manure from the stables into a manure spreader or wagon box than it does to throw it into piles back of the buildings, where it lies and wastes away until one gets ready to handle it a second time and haul to the fields. Those who have adopted the former system of handling their manure are firmly of the opinion that the only time during the year when there is any excuse for letting any manure accumulate around the barns is during the busiest part of summer, and this is seldom necessary for more than a few days at a time.

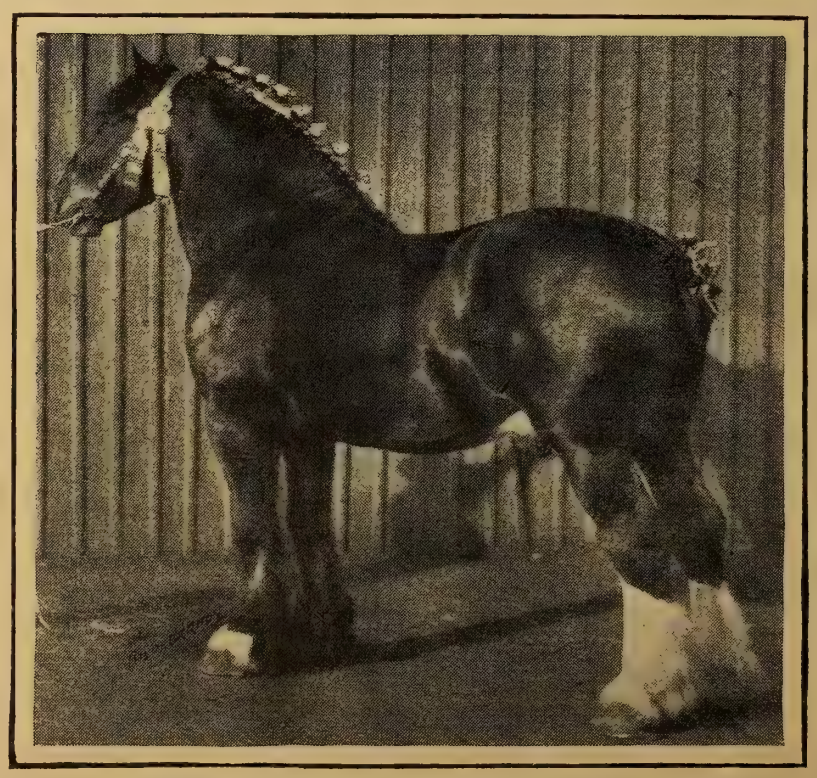
Some farmers practice this system of handling their manure in summer, but not in winter, because of an idea they have that there is a great loss by washing or evaporation when manure is spread over the fields in winter. But this is far from being true except in a few exceptional cases. If the land is very hilly or if it is covered with a thick coating of ice at the time the manure is spread, some loss by washing may be sustained. Otherwise, there will be no loss from this source. As to loss by evaporation, it can be stated emphatically that fertility cannot evaporate when spread on the soil. Nitrogen can escape into the air only when liberated by heating, as it escapes when manure heats in the pile. When the manure is spread thinly and uniformly over a field no heating process can take place. And the potash and phosphoric acid contained in manure are mineral elements and, consequently, they cannot evaporate.

One who has never tried the plan of spreading all manure directly from the stables does not know how satisfactory it is to have most of the manure hauled out when spring arrives. One of the spring jobs that is dreaded by many farmers is the laborious work of moving several tons of manure that have accumulated back of the barns and in the feed lots all winter. The work of getting the spring crops in on time may be very urgent, consequently hauling manure for several weeks is work that is not relished at that time. Some of that in and around the barns may be hauled out while other accumulations in the lots and fields are untouched. This is evidenced by the fact that in a summer drive through the country one can notice many corn and oats fields in which the farmer has plowed around old straw stacks rather than take the time to distribute them over the fields before the crops were put in. The soil may be crying for this fertility and these heaps also cause to remain idle large areas that would produce crops worth many dollars. Possibly some of the straw piles were not sufficiently rotted to be distributed over the fields much before spring. But here is the point: The man who keeps all manure from the stables hauled out as made will not be so swamped with work in the spring that he cannot spare the time to get his old straw piles distributed before he puts in his crops.

The modern manure spreader plays an important part in the economical handling of manure. Hundreds of farmers have proved this to their complete satisfaction. The manure spreader increases the value of manure by spreading it thinly and uniformly, thus bringing every particle of manure into contact with soil particles, and then the spreader enables a farmer to move his manure to the fields quickly. Handling manure entirely by hand is slow and laborious work. The spreader eliminates about one-half of this work. It will not load itself, but it will unload itself in from three to ten minutes while the driver rests after the exertion of loading the spreader.

The owner of a manure spreader finds it entirely feasible to haul all his manure directly from the stables to the fields every month in the year. Many farmers who do not have a load of manure per day keep their spreader standing back of the barn and throw all manure into it when removed from the stalls, then when there is a full load it is the work of but few minutes to hitch a team to the spreader and drive to some field where there is a need of fertilizing elements. Except in extreme northern portions of our country where deep snows may remain on the ground for long periods, there are few times in the course of a year when this system cannot be practiced regularly. During these times a sled and wagon box can be used for hauling the manure until the spreader can again be put to work.

By all means get the manure onto the land as speedily as possible. Should there be any waste of fertilizing elements after the manure is spread—and there will be little, if any, such waste—this waste will not be



International grand champion Shire stallion, Lockinge Hengist, imported and owned by Trumans' Pioneer Stud Farm, Bushnell, Ill. Four years old and weighs 2,320 pounds. See the advertisement on page 47.

so great as would occur if the manure were piled in the open air back of the barns where it will demand your attention next spring along with the other spring work.

WINTER PROTECTION OF THE PLANTS.

There is a great section of country, reaching from the forty-first parallel of latitude northward where winter protection is needed for many of the hardy, and half-hardy perennial plants. Constant and heavy losses are incurred yearly, for lack of the needed protection. One thing which tends to neglect in giving the suitable protection to this class of plants, is the fact that our winter seasons are variable, and the amount of injury depends upon weather conditions. An open, dry winter, with frequent changes of frost and thaws, is far more injurious than a wet and steadily cold season. Gardeners are lulled to a false security by seeing the roots go safely through a hard winter and then they are correspondingly surprised when a mild winter works havoc among their garden pets. The principle to be observed is this: Protect from frequent changes of heat and frost.

A moment's reflection shows that protection enough to keep the roots steadily frozen is what is needed, and all that is needed. There is no harm in the freezing, but the frequent thawing out, and the drying winds work ruin.

There are some hardy perennials which need absolutely no protection. The familiar rhubarb and asparagus are examples. Roots like salsify and parsnips to be left in the earth until spring are safe, if the winter is steady and cold enough. But the untimely efforts of spring to usurp winter's place along in January and February are disastrous to them, and indicate the need of the inch of mulching which will save them by retaining the frost in the surface of the soil.

Among the ornamental perennials, the dicentra, or bleeding heart, is an example of the ironclad roots, standing unscathed in all seasons and changes. The peony is another well-known ironclad. The hollyhock comes very nearly up to this standard of hardiness, but it is safer to give this plant protection. All the list of lilies and pinks, including pansies, need the mulching to retain frost. But care must be used in the application. Too much is dangerous. Many fine plants are ruined every winter, by a heavy mulching, which rots them.

Just enough dry leaves to cover the plants well, and held in place by weights just sufficient to retain them in the fiercest gales, is the safe application. In the case of pansies, put the leaves loosely between the plants—by hand. Then, after they are covered so as to conceal all but the top leaves put a wire screen over them, not resting upon the plants, but suspended from the edges. It should be held in this way, to prevent snow settling down, and forming a compact mass. Do this carefully and your pansies will come through the most severe winter and reward you with abundance of bloom in early spring.

The whole family of the iris is safe to go through an ordinary winter with no protection, except in the case of the Japanese sorts. We have often lost them for lack of the cheap and easily applied mulch.

It is best to wrap the flowering almond and forsythia in burlap than to bend them down for an earth cover. If you put on two layers it will keep out the drying winds, and the hot suns, which do the damage. For all the finer roses, the best rule is to treat them exactly as you do the tender grapes, lay them down and give them a blanket of earth. There are a few of the extra hardy kinds which do not need it, but if you would enjoy next summer all the glory and beauty of Gen. Jack, Furst, Clio, Helen Gould, Dorothy Perkins Wilder, Meyer and a dozen others, you must protect. It is not really necessary to use earth. But that is the cheapest and handiest material and just as good as anything. As a rule the most of them are safe if laid down and covered with leaves, and then a heavy rug or oilcloth placed over them.

Let Me Send You This Book and I'll Quote Wholesale Prices

—on the Plows, Harrows, Discs and Drills that thousands of farmers swear by. I sell the famous high quality **Monmouth line** and I save you big money on the machine you want. I sell direct from factory. You keep the middlemen's profits right in your own pocket.

Try Any Monmouth For 30 Days—Free

at my risk—and I'll even pay the freight. If it is not perfectly satisfactory to you, and the biggest value for your money—send it back at my expense and the trial won't cost you a dollar. Read some of the letters in this book from my customers. And be sure to read how **Monmouth** implements are made. Whether you want a Plow, Cultivator, Disc, Spike Tooth Harrow, Drill, Gate, Farm Wagon, Gasoline Engine, Mower or Rake, I'll sell it

DIRECT FROM FACTORY, FREIGHT PREPAID, SO YOU KNOW EXACTLY WHAT THE COST IS

News of the Sale Ring.

Stemen & Son's Duroc Sale.

On Wednesday, December 18th, E. C. Stemen & Son sold at their farm sixty great Duroc sows at an average of $53 per head. While it was a good, even sale they did not bring near their real value and it was a bargain day event. L. E. Huffine topped the sale on No. 55, the Highland King gilt that has won so many prizes on the state fair circuits this year. She is sure a good one, as was her sister, No. 54, she going to J. Chapman, Woodburn, Ind., at $172.50. Cols. H. L. Igleheart and W. H. Irwin conducted the sale in a most satisfactory manner. Below is a list of most of the buyers and prices paid:

1. F. J. Rupert, Spencerville, O.$ 69
2. F. J. Rupert..... 50
3. E. A. Herrod, Lima, Ohio..... 49
4. J. Chapman, Woodburn, Ind... 52
5. Chas. Davis, Spencerville, Ohio 51

McKelvie & Son's Sale of Red Polls.

The dispersion sale of Red Polled cattle that was made by S. McKelvie & Son, Fairfield, Neb., on December 20th, was well attended and a very satisfactory sale was made. However, prices ruled a little too conservative in most cases. The southern buyers, those from Kansas and Missouri, were the support of the sale and the heaviest buyers. Practically all the veteran breeders of Nebraska were on hand, but they bought very sparingly, owing partly to the fact that rough feed in many sections of Nebraska is very scarce. It is the opinion of the writer that these same cattle would have sold for at least 25 per cent more money at some of the Missouri river points. However, what is the loss of the sellers is undoubtedly the gain of the buyers, and in this particular case one of the great herds of the entire country, builded by master stockmen, has been dispersed and they have gone into new hands and must of necessity result in much good to the breed and to the cause of the dual-purpose cattle in general. Touching on the point of dual-purpose cattle, the writer wishes to say that, while it sounds good to talk about them, and in this breed they undoubtedly exist to a greater degree than in any other, yet it is a fact that when it comes to selling them the breeders, the old ones as well as the new ones, will persistently bid on the beefy ones, and the really dual-purpose ones are sold at a sacrifice as compared with the real merits of the two. A clear example of this was shown in this sale when the splendid bull, Luther, the magnificent two-year-old herd bull, a former champion at the Nebraska State Fair, and without question one of the greatest dual-purpose types of bull we have seen in a long time, was allowed to sell, or rather forced to sell at the low price of $190, when at the ringside sat any number of veteran breeders who positively could use this bull to advantage. The same was true of Luke, Lot 9 in the sale, who sold for $127.50 when really less valuable prospects, but greatest flesh carriers, sold for considerably more money. A great many breeders complain that the breed is slowly drifting toward a beefier type of cattle, and if any one is to blame for this condition it is certainly the buyers who cannot discriminate between the ones that fill the eye and the ones that fill the pail. Colonel Callahan conducted the sale in a very efficient manner, working for the last dollar, and really much of the total is due his untiring efforts. Those selling for $100 or more are listed:

Pansy, calved 1902; T. G. Mc Kinley, Junction City, Kan....	112.50
Lady, calved 1903; T. C. Dungan, Oregon, Mo.	125.00

E. S. Mayes, Jr.'s Defender Sale.

On Saturday, December 21, 1912, E. S. Mayes, Jr., Springfield, Ky., offered a good bunch of high-class, high-bred Durocs at auction. Twenty-five sows were sold bred to Defender. They were the attractions of the sale and were picked up quick at good prices. These twenty-five sows bred to Defender averaged better than $138 per head. Colonels Igleheart, Reppert, Irwin and Wheeler did the selling. A large representative crowd of breeders were present and mail bids were much in evidence. Below is a list of buyers and prices. The following twenty-five sows were bred to Defender:

1. H. E. Browning, Hersman, Ill. $192.50
2. Smith & Rogers, Springfield, Ohio 525.00
3. Chas. F. Ogden, Anchorage, Ky. 250.00
4. G. H. Ruple, Buena Vista, Ky. 87.50
5. J. P. & W. H. Peacock, Cockerin, Ga. 135.00
6. Henry Thomas, La Fountain, Ind. 97.00
7. McKee Bros., Versailles, Ky. 105.00
8. Chas. Druery, Irvington, Ky. 105.00
9. G. F. Long, Holland, Ky.... 102.50
11. J. R. Wade, Bloomburg, Pa. 110.00
12. J. W. Storm, Seville, Ohio... 187.50
13. Gillock & Miller, Nashville, Tenn. 135.00
14. Geo. W. McKnight, Howel, Ky. 135.00
15. F. Bieth & Son, Joliet, Ill.. 87.50
16. W. F. Gillespi, Bethgage, Tenn. 117.00
17. Sam Sullivan, Bloomfield, Ky. 95.00
18. Norton Garth, Trenton, Ky. 130.00
19. Unger & Alter, Forrest, Ind. 108.00
20. A. G. Borrow, New Iberia, La. 100.00
21. G. F. Long..... 109.00
22. A. L. Ticer, Horab, Okla.... 75.00
23. J. Downing 92.50
24. Jess Chilton, Campbellsburg, Ky. 100.00
25. J. H. Williams, Pembroke, Ky. 180.00
Extra. Dr. Stanberry, New Port, Tenn. 84.00
26. Boar, Horris & Daniels, Morganfield, Ky. 150.00
27. Boar, McKee Bros., Versailles, Ky. 62.00
29. Boar, Miller & LaRue, Hodginsville, Ky. 68.00
31. Elmer Commings, Emerson, Ind. 45.00
32. J. C. Holloway, Nicholsville, Ky. 53.00

36. J. O. Duncan, Lebanon, Ky. 102.00

A CHAMPION CHESTER WHITE HOG. SEE READING NOTICE ON PAGE 38.

We hear much about warming water for poultry in winter, but this can be very easily overdone. Chickens do not relish warm water, and it is not at all necessary. Their drinking water simply should have the ice chill taken from it, and a small quantity of warm water added occasionally, to keep it at the proper temperature.

June Milkings all the year round

Most anybody can make a dairy pay in springtime, but it takes science to make it equally profitable in the drought of August and the zero weather of mid-winter. We know what we are talking about because we used to be cattle men ourselves. And we found out how to make June forage last all year and how to get June milkings in mid-winter. That's why we went into the Silo business. The

INDIANA SILO

has revolutionized the live stock industry. It is the practical product of practical farmers. When we made the first Indiana Silo ten years ago we made a better silo than anybody had ever made before. We sold it before it was finished and then made another even better than the first. Altogether we built 50 Indiana Silos that year.

Now we have four great factories with a capacity of 150 Indiana Silos a day. We are the largest silo manufacturers in the world. We have our own salaried timber experts at the mills who reject every piece of material that fails to come up to the standard of perfection that has made the Indiana Silo famous. We have built and sold more than 25,000 Indiana Silos and the first one is still standing and giving perfect satisfaction.

Let us build an Indiana Silo to your order now We will make delivery when you want it.

IF you are farming for profit, we want to send you our catalogue and a free copy of the book "Silo Profits," which is the story of the Indiana Silo as written by scores of owners of Indiana Silos. Write for it today and let us send you the name of our representative in your locality.

Remember you don't need cash to buy an Indiana Silo—"It buys itself."

THE INDIANA SILO COMPANY

For irrigation or any other of a hundred farm uses—

the particular farmer wears a pair of good, comfortable, water-tight rubber boots—he believes in safe-guarding his health and increasing his efficiency as well as making his work more comfortable and enjoyable. Farmers the land over have come to recognize

WOONSOCKET
ELEPHANT HEAD
RUBBER BOOTS

as the perfect protection for the farmer's feet.

Made from the toughest rubber, "Elephant Heads" are wonderfully long-wearing—they're built for hard usage, being triply reinforced at all wearing points. Lined with fine wool net—this means warm, dry feet and freedom from colds and rheumatism. "Elephant Heads" won't tire the feet—because they *do* fit. North, South, East or West you'll find the farmer who wants the greatest amount of rubber boot wear, comfort and warmth, swears by "Elephant Heads"—all sizes, shapes and lengths. Your dealer will show you a pair today.

Before You Milk Your Cows Again Write for the GREAT WESTERN SEPARATOR Book Sent FREE

Our free book is a gold mine of cream and butter-profit facts. It tells you how to get *all* the cream, *highest quality* cream, with *least work* and *biggest profits* for the *longest term of years*. It shows you in plain figures how to make from $5.00 to $15.00 more from every cow, per year, whether you now own a cream separator or not. Don't you want this great book, FREE? Get all the

Facts You Want to Know About Separators

Read about the Great Western. Note that the *bowl* delivers *cream* from the *top* and *skim-milk* from the *bottom*, so there's no chance of their mixing. It is self-draining and self-flushing; there are no long tubes, no minute slots, corners, crevices, or ragged edges to hold milk and collect dirt. The Great Western is ball-bearing throughout. Perfectly uniform balls, 50 to 100% harder than regular. Ball races tempered so file cannot cut them. We will arrange for you to get a Great Western on any kind of a trial to prove that our claims are not strong enough.

Now! Just mail us your name and address on a postal for the big, fine, illustrated Great Western Book. It's worth MONEY to you.

ROCK ISLAND PLOW CO., 1836 Second Ave., Rock Island, Ill.

DAIRY

GOOD FEEDING NECESSARY TO PROFITABLE DAIRYING.

To induce his cows to economically produce large quantities of milk and butter fat the dairyman must feed liberally and provide his herd with all of the necessary cow comforts. The art of feeding and care taking should be learned before the dairy farmer launches out into the breeding business.

These were the exclusive statements made by Fred H. Scribner, of the United States Dairy Division, before the forty-first annual meeting of the Wisconsin Dairymen's Association, which was recently held in Ashland. Previous to accepting the appointment with the federal department, Mr. Scribner was a popular Wisconsin farmers' institute conductor and prominent as a dairyman and breeder of dairy animals.

In his travels he has seen repeated failures where men have started in to breed up a dairy herd who have had little knowledge of feeds and feeding. One farmer, with whom he is acquainted has by the continued us of pure-bred sires graded up a herd until they are nearly pure bred, but nevertheless are about the scrubbiest lot of cattle this noted expert has ever seen and simply because the owner has neglected to properly feed his herd. It should be the aim of every dairyman, Mr. Scribner declared, to raise all or much of his roughage. This is the foundation on which an economical ration is built. In planning a ration it is important to have it bulky and yet as free as possible from indigestible material. Corn, clover and alfalfa are particularly well adapted and combine in themselves to almost a perfectly balanced ration. Because they carry in them that for which he pays high prices for the protein, the dairyman should plan to grow plenty of clover and, if possible, alfalfa. The corn crop is, of course, the one from which is secured the largest amount of feed per acre and that which all stock eat with a relish. With the modern way of handling corn, through the silo, the dairyman may preserve it in all its freshness and store its succulence in such a way as to be able to utilize it throughout the year, thereby approximating summer conditions during the winter months.

For the reason that there are so many things to be taken into consideration, the grain ration is the most complicated to arrange and in the selection of grain feeds the good judgment of the feeder shows itself. He must have a knowledge of the analysis of feeds, know something of their digestibility as well as palatabili and then consider the likes and dislikes of his cows, for they will do best on what they like best. In arranging a ration it is not always best to complete it of the grains grown on the farm. Oftentimes the use of these would make the ration too expensive whereas by exchanging for other good feeds on the market the cost of butter fat could be lessened two or three cents per pound.

As a rule the bulkier the grain ration the better, for it gives more chance for the juices of the stomach to penetrate and makes the digestion more complete. For example, the feeding of corn and cob meal has been found to give as good results as does the feeding of corn meal. There is no particular virtue in the cob, but because of its woody, fibrous nature, it lightens the feed.

There is no hard and fast rule that can be laid down for the amount of feed to be fed daily. The rule that now prevails calls for the feeding of one pound of grain for each three and one-half or four pounds of milk, testing from 3 to 3.5 per cent fat and cows giving milk testing around five per cent fat are allowed about one pound of grain to every three pounds of milk they produce. The large cow naturally would eat a larger per cent of roughage while the smaller animal does not consume as much roughage, but requires a larger proportion of grain feeds. Accordingly the cow giving sixty pounds of 3 per cent milk should receive twenty pounds of grain per day. This, however, is getting very close to the danger line and the cow being fed this amount should be watched closely.

Mr. Scribner believes in liberal feeding, for it not only develops and brings out the best there is in a cow, but is economical as well. Many dairymen feed but little more than a maintenance ration and thus make it impossible to realize a profit from their dairy, for it is only in feeding more than a maintenance ration that a dairyman is paid for his trouble of feeding and caring for his herd.

TO SUCCEED IN DAIRYING.

That dairymen may, with a minimum expenditure of time and money, produce milk and cream of the most palatable flavor is the opinion of Prof. C. E. Lee, of the Wisconsin Dairy School.

To be able to market a product which will be in strong demand on any fair-sized market they have, he recently declared at a meeting of dairymen held in Ashland, but to observe a few very simple rules.

Successful dairying he has found depends upon:

1. Having the herd in good health and to make this possible the barn must be properly ventilated and provided with a floor so constructed that it can be kept clean and sanitary.
2. Realizing that there are certain feeds that impart a flavor to milk that from the butter and cheese maker's viewpoint are objectionable.
3. Having the milk and cream stored

Even without the Beatrice Centrifugal Disc Washing Device and the 1-piece Steel Pail, both of which we give free with each machine, the BEATRICE CREAM SEPARATOR is the greatest money-saving and service-giving skimmer you can buy. Get our money-saving prices. Free booklets worth reading, if you ask.

Write today for free book, "How to Raise Calves." Your name and address on a postal is enough.

Blatchford's Calf Meal Factory
Waukegan, Ill.

DE LAVAL CREAM SEPARATORS

There's no good reason why you should wait till spring before getting one

On the contrary you may buy a DE LAVAL NOW and save half its cost by spring. Moreover, if you can't conveniently pay cash you can buy a DE LAVAL machine on such liberal terms that it will actually pay for itself.

As to your NEED of a separator, if you have the milk of even a single cow to cream you are wasting quantity and quality of product every day you go without one. This waste is usually greatest in cold weather and with cows old in lactation, and it counts most, of course, when butter prices are high.

As to a choice of separators DE LAVAL superiority is now universally recognized. Those who "know" buy the DE LAVAL to begin with. Those who don't "know" replace their other separator with a DE LAVAL later — thousands of users do that every year. If you already have some other machine the sooner you exchange it for a DE LAVAL the better.

Why not start 1913 right in dairying? SEE and TRY a DE LAVAL NOW. The nearest DE LAVAL agent will be glad to set up a machine for you and give you a free trial of it.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

from the time of milking to serving in rooms free from taints of any kind.

4. To induce greater cleanliness, having the barns whitewashed at least once a year in the creamery and cheese factory sections of the state as they are in the territories where the condensories are located.

5. Having dairy utensils made of the best grade of tin and never used for any other purpose. (All joints in the pails, cans and strainers should be well made and filled with solder. Cans with the tin partly worn off are not suitable receptacles for milk and cream, because they rust and this condition imparts a metallic flavor to the butter.

6. Keeping the separator in a room free from odors that are likely to taint the milk.

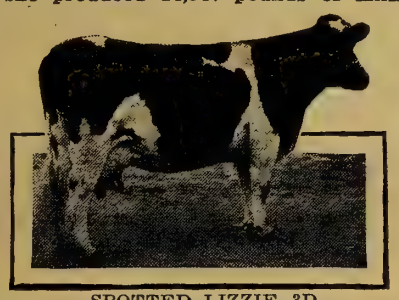
7. Storing the cream in a suitable place in clean cans equipped with tight-fitting covers.

8. Skimming cream that will test between 30 and 40 per cent in butter fat. (This kind of cream will give good results for both the producer and the manufacturer. If 40 per cent cream is skimmed, more skim milk will be left on the farm to be fed to young stock than when 30 per cent cream is produced.)

9. Delivering cream four times a week in summer and three times in winter. (Too many creameries in Wisconsin are taking in cream that is too old. As a rule, when the age of the cream increases it reduces the quality of the butter. Milk and cream producers in Wisconsin are able to do a great deal to assist in placing the quality of the butter on a higher plane than it is at the present time. Wisconsin butter has improved in quality during the past three years, but we are still short of possible perfection.)

ONE THOUSAND POUNDS OF BUTTER ANNUALLY.

A cow that produces upwards of 1,000 pounds of butter in a year is a fit and proper subject to be introduced to the readers of this paper. This record was made by Spotted Lizzie 3d, a Holstein cow in the herd of the Chicago Stock Farm. This cow freshened September 27, 1911, and started her test record four days later. In exactly 365 days following this date she produced 24,347 pounds of milk,



SPOTTED LIZZIE 3D.

or in terms of butter 1,011 pounds. During the period of her poorest month Spotted Lizzie 3d produced 1,542 pounds of milk and sixty-four pounds of butter. At the end of her yearly test this cow is in good flesh and tips the beam at 1,700 pounds. She comes by her milking ability honestly as she is the daughter of Johanna Pauline 2d's Lad, one of the greatest producing bulls of the Holstein breed.

MARKET YOUR CREAM OFTEN.

To the Editor of The Homestead:

One cannot make first-grade butter from second-grade cream, and every one knows that second-grade cream does not command the best prices. The man who markets dirty or sour cream need not be surprised if it is docked a few cents to every pound of butter fat. This dock will about represent the profit that should go to the farmer. The loss came from not marketing the cream at the proper time.

Too many farmers allow dirt to get into the cream while milking or the separator may not be thoroughly cleaned every time it is used. It may be the cream has been kept too long.

I believe it is best to market the cream at least every two days in summer and every three days in winter. All the while the cream should be kept as cool as possible either by cold water from a spring or well, or with ice put into a box or chest where the cream is kept. The first cream should be stirred until it is cool, and the next cream should not be poured into it until it has cooled. Then it should be stirred thoroughly into the old cream.

In the largest corn-growing contest ever held in the Northwest, Harper Brush, a 12-year-old boy, has been declared the winner. More than five hundred North Dakota farmers contested for the honor carried off by this boy, who grew more than seventy-one bushels of corn to the acre on a four-acre plot. The state was divided into two contest divisions, and scattered all over this territory were 513 contestants. Among the winning contestants the average yield of corn was 52.2 bushels an acre. The highest yield, grown by Harper Brush, was 71.7 bushels of corn.

HOLSTEIN-FRIESIAN CATTLE.

Pure-bred Registered
HOLSTEIN CATTLE

The Missouri Agriculturist says: "In this state, one-half the cows that are being milked are absolutely worthless for that purpose. They do not produce enough to pay for their feed, not to mention the time and care given them."

This is the case all over the country. If your farm is burdened with any such cows, it's time you weeded them out. Replace them with pure-bred Holsteins. That's what has been done by the most of the men who are making a good thing out of dairying.

Send for Free Illustrated Descriptive Booklets.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

WHAT SHOULD WE EXPECT?

To the Editor of The Homestead:

Much has been said concerning the frauds practiced in the poultry business.

There are without a doubt instances where the buying has been imposed upon; yet there are also instances where statements are exaggerated.

It is not my purpose to write this article in defense of the guilty, neither to censure any one for doing something which they have not done, but to illustrate a few points which should be brought to light.

I know a lady who purchased a setting of duck eggs and while unpacking them noticed that one had a hole in the air cell end. She examined all and found only three that were not punctured.

Another purchased a setting from a store keeper that came from a breeder of a variety of thoroughbred fowls that she was particularly anxious to get. She considered it a better investment, as they could be purchased cheaper than from the breeder direct. When the three weeks were up and the eggs showed no sign of pipping she examined them closely and found holes in the air cell end.

In both instances the eggs were subjected to the same treatment yet the first case shows a fraudulent seller while the second was only defending his own right.

In every case we should expect what we order and give what we offer for sale or in other words to expect and to give a square deal.

When buying stock or eggs do not expect more than you would be willing to give.

Most breeders give full value for the money, but many times the buyer expects too much.

One year I bought a couple of full blooded cockerels of a buff variety several hundred miles from home. When it became noised about that I had paid a good price a neighbor dropped in and gave me a piece of his mind. He meant well, no doubt, yet I didn't feel like taking his advice.

To broach the subject he asked me what price I expected for eggs from my best pen. When I told him $5, he said, "If you ask a decent price you will sell more. Why didn't you go down here to Mr. So and So's and get your roosters. He keeps full bloods and asks only seventy-five cents each, and then you wouldn't have to charge an exorbitant price. There is where I got mine, and they are just as good as yours that you paid a high flying price for. Come down and see for yourself."

I questioned him regarding the standard requirements of his "roosters," and found he didn't know anything about them, nor what they ought to be.

Shortly afterwards I saw one of them. He had a solid black tail (where it should have been buff) and a greenish blue eye. The color of his legs was the only characteristic of his breed that he had.

The other, I was told, had white wings noticeable at quite a distance.

Again some dealers no doubt use any means to dispose of their stock just so they get rid of it at a profit. These usually find no money in the chicken business after a few years.

A breeder once phoned me that she was going on an extended visit and would dispose of her surplus stock so as not to have it to leave in any one's care. She had been informed by a mutual friend that I was in need of a cockerel of this particular breed and as she was selling at a sacrifice price I would surely want one or more of them. A dollar each was all she asked under the circumstances, but otherwise she would have asked $4 or $5 as they were well worth it.

I told her I had a pen in view where I expected to purchase. I could not go to see her flock and I preferred to see the cockerel before I bought.

"Well, it wasn't really necessary," she said, "to see him. She could describe him to me."

Her description was of a perfect bird, big and five points in his comb. She called me for three consecutive days, gave the same description each time, wanted me to send the dollar and she would find some way to send the bird, or would leave him in good hands until I could get him. The third day I told her to send him out with a party coming here and I would send the money back with him. When the big bird came he weighed somewhere between three and four pounds, was long legged, knock kneed, had seven serrations in his comb and had two other bad points, each of which would have disqualified him.

I promptly returned the bird and kept the dollar. There was no proviso in the deal about keeping the bird if he suited, but I took the liberty to return him just the same, and felt justified in so doing. He wasn't the bird I bought.

I have a faint suspicion since that she had a reason for wanting the money before she sent the bird; also that she wasn't over anxious to have me call and select him.

My advice is to have an understanding with the man or woman of whom you are buying if you cannot select your bird and if you are selling give a square deal. Don't sell a good bird and send an inferior one. Little crooks don't make a straight line to success in the poultry business.

No matter what you do, be honest and fair with the party with whom you deal. Don't ask too much and don't give too little.

A Farmer's Wife.

GETTING A START IN PURE-BRED POULTRY.

To the Editor of The Homestead:

There is one resolution that every farmer's wife keeping a mixed lot of chickens should make for the New Year, and that is that next season she will get a start in pure-bred poultry, for several reasons. They make a more uniform growth, require the same care and the best may be sold for double the market price for breeding purposes. It does not cost very much to get a start in pure-bred poultry if you are willing to begin in a small way. In fact, it cost me almost nothing. This is the way I began:

Ten years ago I had never kept anything but a mixed lot of chickens when I decided to get a start in White Wyandottes. Late in the spring when there was no longer any danger of the eggs getting chilled and broody hens were plentiful I sent to a reliable dealer and paid two dollars and twenty-five cents for a setting of White Wyandotte eggs. When they came the box had been broken into and some of the eggs taken. Of course the dealer made it right when I wrote him. There were eleven eggs left. I set them away for a day or two for eggs must rest after a long journey before they are put under a hen. Then I carefully prepared a nest for a gentle old biddy that was broody and from the eleven eggs she hatched and raised ten chickens. You may believe she had extra good care for those beautiful white chickens ere the apple of my eye. There were five cockerels and five pullets and I decided that next year I would keep only Wyandotte roosters and set only

Why Don't You Buy a Guaranteed Incubator?

That means a Fairfield. The tried and tested incubator acknowledged by all to be the World's Best Hatcher. Don't experiment. Don't gamble with your chicken profits. Make money on every hatch with a Fairfield, the only incubator in the world guaranteed to hatch 90% or better. No experience necessary to operate a Fairfield. Hatches equally well in cold or warm climates. Costs no more than ordinary uncertain hatchers, but pays for itself every hatch and earns a profit besides.

FAIRFIELD Incubators

The Only Guaranteed Hatchers in the World. Write for Trial Offer.

I know the Fairfield is the best Incubator made. That's why I guarantee it in the strongest way. The thousands of Fairfields in use back my claims. To convince yourself, write for my trial offer. Get full particulars of my guarantee. Get my free catalog before you buy, then you will be able to settle the incubator problem right.

Wyandotte eggs. I kept the best three roosters. The other two almost paid for the setting of eggs when I disposed of them in the fall.

At the end of the next hatching season having a nice little flock of white chickens I sold my mongrels and have never kept any since. I get new blood by buying a setting of eggs from some reliable dealer and selecting my roosters for the next season from these chickens. By careful selection, keeping only the best, and by good care, I have built up a flock of chickens that are an ornament to the farm and that bring me a nice supply of pocket money. So do not let lack of capital keep you from having pure-bred chickens. Mrs. E. E. Hunt.

Illinois.

LOSS FROM FERTILE EGGS.

The National Department of Agriculture is engaged in an educational campaign for the purpose of propagating sound knowledge in regard to the prevention of loss through the decay of eggs The poster system has been resorted to and a recent one contains the information that the loss due to bad method of handling eggs is $45,000,000 annually. One-third of this loss is said to be due to "blood rings" and every dollar of this loss is directly preventable on the farm. These blood rings develop only during warm weather from fertile eggs and it is therefore recommended by the department that all males be removed from the flock after the breeding season is over.

Bulletin 141 from the Bureau of Animal Industry, Department of Agriculture, deals with "The Improvement of the Farm Egg." It contains much valuable data and we advise our readers to make application for a copy of this bulletin to the Department of Agriculture, Washington, D.C.

If you let the layers out to wade around in the snow, you had as well hang up the egg basket till spring opens up.

Gather in the eggs often these frosty days, else they will freeze within a very few minutes after being laid.

POINTERS.

—Earl Welch, Kanawha, Iowa, is offering Rose Comb Rhode Island Red cockerels for sale in his advertisement on this page.

—Two-year-old Mammoth Bronze turkeys are offered for sale by F. B. Dann, Dewitt, Iowa, in his advertisement on this page.

—G. H. Burge, Mount Vernon, Iowa, writing in regard to his Silver Laced Wyandottes, an advertisement of which appears on this page, says: "At our recent poultry show I won three silver cups with my Silver Laced Wyandottes. I still have a fine lot of cockerels for sale."

—Mrs. O. W. Barrett, Ross, Iowa, is quoting prices on Rose Comb Rhode Island Red cockerels in her advertisement on this page.

—A price on young Mammoth Bronze turkey toms will be found quoted in the advertisement of F. S. Sexsmith, Orient, Iowa, that appears on this page.

—Indian Runner ducks and Toulouse geese can be purchased from Elsie McKibben, Hazleton, Iowa, at prices named in her advertisement on this page.

—Mrs. A. Kitson, Audubon, Iowa, is offering Mammoth Bronze turkeys, White Wyandotte cockerels and Pekin ducks for sale in her advertisement on page 24.

—Single Comb White Leghorn cockerels having free range are offered for sale by W. C. Kimball, Shellrock, Iowa, in his advertisement that appears on page 24.

—W. H. Mathews, Sterling, Ill., has 100 White Leghorn cockerels and 100 White Orpington cockerels on which he is quoting prices in the advertisement that appears on page 24.

—Express will be prepaid through January on Bourbon Red turkey toms and hens by Harry Sprague, Midland City, Ill., at prices named in his advertisement on this page.

—Mrs. E. E. Johnson, Milo, Iowa, has some pure-bred White Plymouth Rock cockerels of the Fishel strain that she is offering for sale in her advertisement that appears on this page.

—F. B. Dann, Dewitt, Iowa, is closing out his entire flock of Rhode Island Reds. Prices at which he will sell pullets and cocks are named in the advertisement found on this page.

—The advertisement of M. A. McWilliams, Wall Lake, Iowa, offering White Plymouth Rock cockerels weighing from seven to eight pounds, will be found on this page of The Homestead.

—Mammoth Bronze turkey toms and hens and Black Langshan cockerels and two-year-old hens are offered for sale by Mrs. James Bristol, Kirkman, Iowa. Her advertisement appears on this page.

—W. C. Runft, Reinbeck, Iowa, desires to purchase in large numbers White Indian Runner ducks, White Plymouth Rock pullets and White Leghorn pullets. His advertisement appears on this page.

—Mrs. Francis Culver, proprietor of the Culverdale Farm, Red Oak, Iowa, is offering large-boned, vigorous Single Comb Rhode Island Red cockerels for sale. Her advertisement is on this page of The Homestead.

—Fifty choice, early-hatched Single Comb Buff Orpington cockerels are offered for sale at very reasonable prices by Mrs. Emilie Plough, Carter Oak, Iowa, in her advertisement that appears on page 24.

—On account of removal, Alex McNeill, Harlan, Iowa, proposes to close out his Single Comb Rhode Island Red cockerels and pullets at bargain prices. Among the lot that he has for sale is one prize cock. See advertisement on this page.

—Sixty choice Buff Rock cockerels are advertised for sale by Mrs. P. J. Eggers, Denison, Iowa, on this page. She also offers some choice pullets for sale. Send her your order right away if you want a good cockerel or a few extra good pullets.

—Monster Mammoth Bronze turkeys sired by Iowa King, scoring 98, and 400 Barred Plymouth Rocks sired by a son of the Chicago first-prize winner, are advertised for sale by Strater Bros., Monroe, Iowa, in their advertisement that appears on page 24.

—R. H. Patterson, Vensailles, Ill., has two advertisements in the poultry department. Under the duck head he is advertising English Standard Runner drakes. In the Leghorn column he is offering high-class Rose Comb Brown Leghorn cockerels.

—E. & J. W. Trettin, Grafton, Iowa, have fifty-two varieties of chickens, ducks, geese and turkeys on which they have won thousands of blue ribbons and first sweepstakes prizes, that they are offering to Homestead readers in their advertisement on page 24.

—Henry Schehl & Sons, Prophetstown, Ill., write that they have a few large Rouen ducks left, both drakes and hens. At the Midwestern Poultry Show in Chicago this year they won three firsts and one second. This makes them twelve firsts and one second in four years.

—William Neiers, Cascade, Ia., whose advertisement appears on this page, writes: "I still have a very fine lot of Silver Laced Wyandotte and Barred Plymouth Rock cockerels, cocks, hens and pullets that I am selling at one-third their actual value, as they are equal to those of any breeder in America. I can furnish these in any numbers, single birds, pairs, trios or pens, and can furnish them properly mated, males not related to females."

—W. I. Mouser, Red Oak, Iowa, in furnishing copy for his advertisement on this page, writes: "At Clarinda, December 2d to 7th, at the Southwestern Iowa Poultry Show, we won silver cup for ten highest-scoring Rhode Island Reds. Also on our Single Combs we won first on pen; first and second on cocks; first, second and fourth on pullets; first, second and fourth on cockerels and first on hen. On Rose Combs we won first and second on cockerels; first on hen and second on cock. There were 718 exhibits in the show." In writing Mr. Mouser for

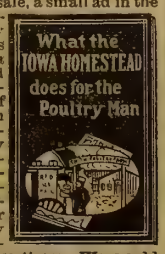
Good Prices for Your Poultry

THE shortage and high price of meats have led to a greater consumption of poultry. This and the cold weather last spring which cut down the spring hatch have greatly reduced the supply. Demand and supply always control price. Consequently, the high prices being realized because of an increased demand and a diminished supply are encouraging hundreds of farmers to go into the poultry business in a more earnest manner. One result is a great demand for breeding stock during the coming season.

If you have anything for sale, a small ad in the columns of The Iowa Homestead will find you ready buyers. The 140,000 farmers of Iowa, Illinois, Nebraska and sister states who read The Iowa Homestead regularly have, on account of their increasing interest in poultry, grown to greatly appreciate its regular poultry department which is recognized as the reliable, progressive and practical authority on farm poultry raising of this territory. For years, hundreds of poultry breeders have been patronizing The Homestead as advertisers. We would like to send you a little booklet of testimonials telling about the results these advertisers have received. No obligation attached. It is free to all our friends and every poultry raising farmer is our friend.



Poultry Advertising Department, IOWA HOMESTEAD, Des Moines, Iowa.

SCOTCH Collies—Bred females and young stock from imported and trained parents for sale. Also Airedale Terriers. Sunnyvale Kennels, Cumming, Ia.

stock please state about what price stock is wanted.

—Mrs. M. Moss, Tipton, Iowa, is quoting prices on Bourbon Red turkeys in her advertisement on page 23.

—On page 23 of The Homestead may be found the advertisement of R. H. Coyle, Cascade, Iowa, offering pure-bred Mammoth Bronze turkey toms and hens for sale. They are of the deep bronze color, full breasted, large boned, free from disease and the choice of a flock of 160.

—Good Bros., Montezuma, Iowa, breeders of Partridge Wyandottes, Buff Orpingtons and Buff Plymouth Rocks, have an advertisement on this page in which they are quoting prices on same. They write that they have won many prizes at different shows, including the Iowa State Show.

—The supply of winter eggs which, of course, are the most profitable for market purposes, can be readily increased at small expense by feeding chickens grain sprouts. In this connection the advertisement of Clark's grain sprouter on page 22 will be interesting to many of our readers.

—"My turkeys have had farm range and are hard to beat," writes Mrs. C. H. Schmidt, Tripoli, Iowa, in sending copy for her advertisement offering eighty White Holland turkeys for sale which will be found on page 23. She has two separate strains from which Homestead readers can make their choice.

—M. Hummel, Monroe, Iowa, has 200 Barred Plymouth Rocks from high-scoring, first-prize winning stock with large bone and finely barred, which he is offering for sale in his advertisement on page 23. He writes: "We won thirty-seven prizes at our last showings." Anyone in need of some choice cockerels write to the address named.

—Charles J. Mackey, West Liberty, Iowa, in furnishing copy for advertisement found on this page, writes: "My Single Comb White Leghorns are splendid layers. We want to close out our surplus stock soon, as we are getting our pens ready for our egg trade, and will make low prices on cockerels, hens and pullets from $1 up. Get your order in at once."

—Toulouse geese, both ganders and hens, are offered for sale by James Cockerton, Whiting, Iowa, on this page. He won first and second prize on these at the Sioux City show this fall. He has the very best and at reasonable prices. He also offers 100 head of splendid Barred Plymouth Rock cockerels, of the Bradley-Thompson-Easton-Shellenbarger strains. If you want a good one send him your order at once.

—Mrs. L. C. Reece, Prescott, Iowa, starts her Barred Plymouth Rock cockerel advertisement on page 23 and she offers forty very choice birds for sale. She also offers forty choice pullets for sale. These are all Bradley bred and are all from high-scoring roosters and hens. In fact there is not a better flock of Barred Plymouth Rocks in the West. If you send Mrs. Reece an order you will be pleased with what she sends you.

—Mrs. Allie Davis, Saline, Mo., in furnishing copy for her advertisement on this page, writes: "I have the best flock of turkeys this fall for sale that I have ever raised. The Bourbon Red turkeys are the best layers and stay right around the house the same as chickens. The young turkeys are very strong and easily raised. I can suit anyone who wants good stock, as I cull very closely and do not offer anything but the very best birds for breeding purposes."

—"The Barred Plymouth Rock and Single Comb Rhode Island Red cockerels we are offering for sale," writes Frank Santee, What Cheer, Iowa, in furnishing copy for advertisement on this page, "are large, heavy-boned, thrifty birds, young stock having free range. The Barred Rocks, scoring to 91¼ by Shellabarger, are a fine, even lot of birds sired by a Bradley bird direct. I have been using Bradley birds for several years. We guarantee satisfaction and safe delivery."

—Mrs. James McNally, Victor, Iowa, whose advertisement of Barred Plymouth Rocks and Single Comb Rhode Island Reds appears on this page, writes: "I have a splendid lot of young Plymouth Rock cockerels for sale, the best I have ever raised. They are from cockerels scoring 90 points and from hens that are good in color and shape. The young birds weigh seven to nine pounds, one young bird weighing nine and one-half pounds. They are of that fine, even barring, of the same color throughout, good five-point combs, yellow legs and beaks. I have some cocks that I am pricing very cheap. They are scored and weigh from ten to twelve and one-half pounds. The Reds are of that deep, rich color and have good markings. They weigh from seven to eight and one-half pounds. Single birds, $2 to $3 each, in lots of three or more at a reduction. These are bargain prices, quality considered. Can ship over two different express companies, United States from Victor or the American from Hartwick."

Guth's White Rock Cockerels.

The White Rock cockerels being offered by Charles Guth, Berwick, Iowa, are something extra in size and in quality. They are sired by the bird that was grand champion at the 1911 Des Moines show and they show up their blue-blood lineage in fine shape. These are strapping big cockerels, weighing eight, nine and ten pounds each. They are priced right—$3 for a single bird and $2.50 each for two or more. Every bird guaranteed to please.

NEED OF ORGANIZATION FOR LIVE STOCK.

As long as plentiful supplies of good feeder cattle could be procured from the large grazing areas of the West and Southwest the extensive feeders of the corn belt preferred to buy rather than produce animals for their feed lots. During the past few years, especially the range area of the country has been diminished materially by the fences of the settler and at the same time the West is fast becoming a finisher of beeves as well as a producer of feeders because of the rich forage and abundant grain that is being produced both with and without irrigation. In the meantime, therefore, beef cattle production east of the range country has been neglected. At present the native breeding stocks of the country are badly mixed as to their blood lines. Casual observation only will reveal in the majority of our farm lots cows greatly varying in color, conformation and type, hence a marked lack of adaptability to some specific purpose. In order to overcome these conditions it is desirable to establish some form of organization for the purpose of bringing about unity of purpose in the community and induce as far as possible the use of pure-bred sires.

The form of organization which has been established and extended throughout the state by the animal husbandry department of the Michigan Agricultural College has proved to be very successful. These are known as co-operative live stock breeders' associations and are planned as follows, viz.:

The people of the community must first decide upon the line of production they desire to pursue, and this step is followed by the selection of some breed with signed agreements of every member of the association to use nothing but pure-bred sires of this particular breed. The best of the grade and mixed-bred females of the farm are retained and the process becomes one of up-grading. These associations are being organized in communities where the farms are not large and the herds are close together. The owners of forty cows form sections or groups, and a pedigreed sire is procured for each of these sections. At the end of two years, to avoid inbreeding, the sires are shifted to another group, and so on at the end of four and six years. In the case of the three-group or three-bull associations the initial purchase furnishes pedigreed sires for a period of six years, barring accident or death.

Most of the associations now operating in Michigan are incorporated under state law. Copies of the articles of association and rules and regulations may be obtained from Michigan Experiment Station Circular No. 4.

By this plan of organization the smaller producer of live stock is induced to undertake improved breeding methods. While this type of stockman may own but a few head, still in the aggregate for the entire country this class possesses a large share of animals. In instances where large herds are found the owners enter the association freely, even though possessed of females sufficient to warrant his keeping one or more males on his own farm.

In Michigan there are now about forty co-operative live stock breeders' associations, with over 700 members, organized on the plan heretofore described, including beef and dairy cattle and swine. In the communities where these organizations are formed a great many individuals engage in the same lines of breeding who do not actually join the associations. This number has been estimated as fully equal to the exact membership.

Of all the organizations formed thus far, all are in successful operation except one or two. The organization interests and ties the individual up to some one specific thing. Improvement in other lines of farm practice inevitably follow, as indicated by the following improvements in a community where the co-operative breeders' association was visited within two years after its establishment. Many individuals had become sufficiently interested to procure one or two females of the same breed as the sire in use. They are gradually growing into pure-bred herds in a safe way. These men were keeping records of the cost of production, were using commercial concentrated feed stuffs, building silos, growing alfalfa and manifested a keener interest in everything pertaining to soil fertility and better crop production.—[R. S. Shaw, at International Exposition.

A RATION FOR DAIRY COWS.

To the Editor of The Homestead:

A Warren county, Iowa, subscriber writes as follows:

I have corn fodder, hay, corn and can buy oil meal, cottonseed meal, bran and shorts. Could you fix me up a ration for my milk cows out of those feeds?

The subscriber has not said what kind of hay he has on hand and as there is such a wide feeding difference in the various kinds of hay it will be necessary to give two or three rations in order to fit his case. Supposing he has mixed timothy and clover hay, a very good ration could be compounded as follows:

Ten pounds mixed hay.
Three pounds bran.
Three pounds corn and cob meal.
One pound cottonseed meal.
Corn stover ad libitum.

This will give a nutritive ratio of from 1:6 to 1:7 depending on the amount of clover the hay contains. A ration including all clover of a good quality can be made up in the same manner except that the cottonseed meal could be cut out. The above rations are calculated for cows in a moderate flow of milk. If the subscriber has exceedingly heavy milkers he should increase the feed of the grain mixture accordingly. If the cows are approaching parturition and it is desirable to dry them off, a very light feed of the grain mixture, say two or three pounds a day with all the hay and stover they will clean up will do.

I have found it convenient to mix the above ration in 100-pound lots by dumping 300 pounds of corn and cob meal. One hundred pounds of cottonseed meal and 300 pounds of bran on a smooth, clean floor and scooping over several times till it is thoroughly mixed. Then for feeding, cut an oyster can down until it holds one pound of the mixture and use it when feeding. To get the best results it is necessary for one person to attend to the feeding and do it regularly. In all my feeding experience I think I have never fed an animal that responds as quickly or as certainly to regularity and quality of feed as a good milk cow.

O. O. Brewbaker.

Last year this muslin sack of "Bull" Durham was bought by more millions of men than all other high-grade smoking tobaccos combined—more than 352,000,000 sacks sold, nearly a million a day!

This homely muslin sack is a familiar sight the world over—because "Bull" Durham Tobacco is sold and smoked in every corner of the globe! It has been the standard smoking tobacco of the world for three generations.

"Bull" Durham comes to you in this plain, muslin sack because the *quality* is *all in the tobacco*—where it *belongs*. There are no "premiums" given with "Bull" Durham—the tobacco is *a premium in itself*—and more millions of smokers are discovering this every year. The sales for the last year have been greater than during any other year in the fifty-three years "Bull" Durham has been on the market.

GENUINE
"BULL" DURHAM
SMOKING TOBACCO

(Forty "rollings" in each 5-cent muslin sack)

"Bull" Durham is the cheapest luxury in the world—and the most universal. In pipe and cigarette it is the *one* luxury of millions of workers of all kinds—the *favorite* luxury of hundreds of millionaires—because this pure, honest, thoroughly good tobacco affords a degree of enjoyment and satisfaction *not found in any other tobacco!* No matter where you are, you can always get "Bull" Durham—and get it fresh. It is sold by more dealers throughout the world than any other single article of commerce!

A book of "papers" free with each 5-cent muslin sack.

Blackwell's Durham Tobacco

This famous "Bull" sign is the most widely known and recognized advertisement in the world. "Bull" Durham tobacco is the most favorably known and widely smoked tobacco in the world.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

LUMP JAW.

I have a Jersey cow that has a large jaw and I am satisfied that it is lump jaw. This enlargement is hard as bone and does not suppurate. This cow is four years old and a good one outside of this trouble. I would like to know what steps to take to relieve this condition.

If the bone is badly involved, treatment will not be likely to prove profitable, but when soft tissues are affected they may be cut out or sloughed out by caustics. Iodid of potash may also be given internally, but it causes inaction and shrink of milk and may induce abortion. You can get a free bulletin on lumpy jaw by writing to the department of agriculture at Washington. Meanwhile it would be well to have a graduate veterinarian examine the cow.

GROWING MANE.

(1) What preparation is best to make hair grow on the mane of a horse? The mane has worn off very short and I think it was caused by dandruff. (2) What is the heaviest two-year-old horse in the state of Iowa?

(1) Scrub parts perfectly clean with soap and hot water. When dry pour on and rub in a little of a mixture of equal parts coal oil and machine oil Repeat twice a week. On other days apply a creamy mixture of sulphur and sweet oil. (2) It would be impossible for us to say.

LAMENESS.

I have a six-year-old dapple gray mare that drags her hind feet. She seems to be a little stiff in the hocks. This trouble is of two years' standing and seems to be getting slightly worse. I have done nothing for it so far. Can this be cured and if so, in what way?

It you are feeding her hay from ripe millet that explains the trouble, for such hay causes hock lameness of rheumatic character. If no such cause is present and removable, chances of recovery are poor, but you might try the effects of half an ounce of salicylate of soda given two or three times a day in feed. Allow her a box stall in stable.

SUMMER SORE.

Having received much benefit from your paper I would like to ask some advice or information. I have a yearling mare which has been running in the pasture all summer. Between her knee and ankle on hind leg is a spongy, raw or bloody surface wart about three inches long by two wide and an inch or so high.

Such sores tend to subside in cold weather, but reappear in summer. Better have a veterinarian cut out the sore and cauterize the wound; or he may prefer to use caustics to slough off the surface layers of the sore. They are very difficult to heal. The sloughing may be accomplished by applying a little powdered yellow sulphuret of arsenic after smearing lard around the sore. The animal must not be allowed to bite the sore.

COUGH.

I have a bunch of hogs that have a cough, seeming to cough more in the morning than during the rest of the day. They eat good and are doing fairly well. They also have the itch, but I have sprayed them with a dip. It seems to me that they must have the mange. If so, how can I get rid of it? They were vaccinated about six weeks ago. How long will vaccination last?

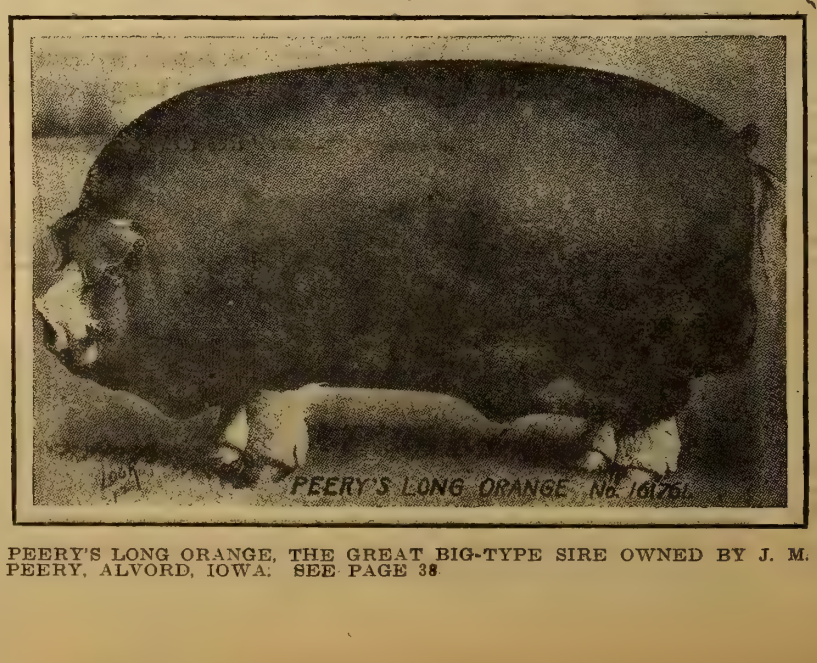
Lung worms commonly cause cough of the kind you describe and there is no practical cure. Hogs tend to outgrow the trouble if well fed. See that the beds are clean, dry and free from dust. Dirty beds tend to cause skin disease, which is not true mange. Lice may also cause irritation. Wet or dusty beds may induce cough. Repeat the spraying and then rub in sulphur on affected parts of skin. Single vaccination makes the hogs immune for a few weeks; double vaccination causes permanent immunity. The man who vaccinated your hogs will give you the information desired.

INJURED HOOF.

I have a bay filly, two years old last June, grade Percheron, which weighed 1,200 pounds in August. On September 4th she got into a wire fence and cut her left front ankle between the pastern joint and hoof. It was cut deep and badly haggled up three-fourths of the way around. Being away from home at the time and returning about four days later, I washed the wound with a solution of creoline and water and then greased it with raw linseed oil and carbolic acid mixed twice a day and left her in the pasture. It seemed to be doing all right, as far as I could see, until about three weeks later a rain came up and I put her in the barn until it was over, then turned her out again, as she was discontented in the barn by herself. There was some dew for several nights, which is uncommon in these parts, and her ankle and foot began to swell and run pus. I then put her in the barn and have kept her there ever since. I lanced her foot in six or seven places and the hoof came off. No graduate veterinarian being available, just before the hoof came off I had a horse doctor examine her, and he prescribed a hoof tonic composed of oil of tar four ounces, oil of organum one ounce, oil of linseed six ounces, alcohol seven ounces, to be applied to her foot about three times a week, and one teaspoonful of nux vomica once per day. Both of these I am still using. He also prescribed a lotion composed of one ounce sulphate zinc, three ounces sugar of lead mixed with boiled water to make three quarts with which to bathe her leg, which was badly swollen at that time, but as there is very little swelling present now I have discontinued the use of this lotion. Ever since I have had her at the barn I have had to keep a broomstick fastened between her halter and her ankle to keep her from biting the sore. The hoof came off about seven weeks ago and the new hoof has made quite a good growth on one side, but very little on the other. Two pieces of bone have come out at the bottom and it runs some pus and a good deal of juice of some kind from the bottom where the frog of her foot should be. The cuts are healed over in a way, but still slough off a good deal, and at the top of the new hoof, just at the edge of the hair, it is inclined to rot away. There are large running sores on both hips which I wash out with a solution of cresylic ointment and inject tincture of iodin into them. The filly is very thin and will not lie down in the barn, but I let her out in the stack yard nice days where she lies down. I feed her kafir corn and maize heads and kafir corn fodder. Her appetite is good.

Unless you can have the filly properly treated by a graduate veterinarian it would be humane to put her out of her misery, as there is open joint, indicated by leaking of synovia, besides the infected condition described. Even with the most expert treatment it is quite unlikely that satisfactory recovery will take place.

Since a sire of any kind is more apt to breed back and deteriorate slightly, rather than improve through his offspring, it is obvious that one cannot hope to build up his herd or flock without first investing in pure-bred sires to head these herds and flocks, at the same time culling out and disposing of all females every season that are not true to type.



PEERY'S LONG ORANGE, THE GREAT BIG-TYPE SIRE OWNED BY J. M. PEERY, ALVORD, IOWA. SEE PAGE 38

Horse Lameness
Hog Cholera
Poultry Distemper

Sloan's Liniment is a quick and safe remedy for any kind of lameness in horses, for cholera or distemper in hogs and chicken distemper or roup.

Good For High Lameness.

Mr. BAILY KIRBY, of Cassidy, Ky., writes:—"I used Sloan's Liniment on a mule for 'high lameness' with success. I am never without a bottle; have bought more of it than any other remedy for pains."

Chickens All Got Well.

Mrs. J. H. WHITE, 101 Cedar St., Montgomery, Ala., writes:—"In the fall my chickens were all sick. One had bumble-foot and one had the worst kind of a sore mouth and windpipe, her eyes were closed and her head turned around to the back. I used Sloan's Liniment on them and I am happy to say that every one of them got well."

SLOAN'S LINIMENT

A Remedy For Hog Cholera.

A. J. MCCARTHY, Idaville, Ind., writes:—"My hogs had hog cholera. I have used Sloan's Liniment now for three days and they are almost well. One hog died before I got the Liniment, but I have not lost any since."

At all Dealers—Price 50c. and $1.00. Sloan's book on horses, cattle, hogs and poultry sent free.

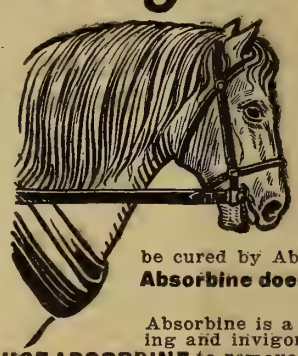
A Vigorous Farm Horse
The Result of
ABSORBINE
TRADE MARK REG. U.S. PAT. OFFICE



All ills in man or beast usually have a small beginning. The breakdown of a horse starts, as a rule, with a shoe boil or a wire cut, or bruises, collar sores, swollen glands, strained ligaments or something else of this kind—all of which can be cured by Absorbine.

Absorbine does not blister or remove the hair and horse can be worked.

Absorbine is a mild, pleasant liniment to use—is healing, soothing and invigorating and a positive **Antiseptic and Germicide.**

USE ABSORBINE to remove **Bursal Enlargements, Bog Spavins, Thoroughpins, Puffs, Shoe Boils, Capped Hocks, Swollen, Painful Swellings;** to cure any strain or lameness; to repair strained, ruptured tendons, ligaments or muscles; to strengthen any part that needs it. You can buy Absorbine at regular dealers, price $2.00 per bottle or sent to you, express prepaid with full instructions. Write me about any case on which you would like advice. Horse book 1A free. Manufactured only by

W. F. YOUNG, P. D. F., 391 TEMPLE STREET, SPRINGFIELD, MASS.

Don't Have a Blind One

If Your Horse Has Eye Troubles Use **"VISIO"**

An Absolute Cure For MOON BLINDNESS

(Opthalmia) Cataract and Conjunctivitis

Shying horses all suffer from diseased eyes.

"Visio" will convince any horse owner that it will absolutely cure defects of the eye, irrespective of length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "Visio" under our *guarantee* to refund money if it does not cure.

$2.00 per bottle, postpaid on receipt of price.

VISIO Remedy Assn., 2458 Calumet Ave., Chicago, Ill

SICK HOGS

Cured and disease prevented with Snoddy's Powder. Clears hogs of worms. Makes hogs thrifty. Will send man and treat sick hogs on insurance. Treatment is simple. Any one can use it. $5 case cures 40 hogs. Book and test reports free. Agents wanted. DR. D. C. SNODDY CO., Dept. O, Nashville, Tenn.

CLEAR-EYE
FOR HORSES' EYES.

Best remedy ever discovered for Moonblindness, Pink-Eye, Cataracts and all ailments of eyes of animals. $2.00 a bottle. Guaranteed. Write for our free horse book, "Forty Facts for Horse Owners."

NEWTON, IOWA.

Dobry's Hog Remedies

POSITIVELY cure sick hogs and prevent well hogs from getting sick. Cure your hogs now or make your well hogs sick proof before the winter sets in. Will ship remedies without money. If they fail no money will be asked. Write today. Give number, sizes and true condition of all hogs in herd. John Dobry Mfg. Co., Cedar Rapids, Iowa.

Farmers Sons Wanted with knowledge of farm stock and fair education to work in an office; $80 a month with advancement, steady employment, must be honest and reliable. Branch offices of the association are being established in each state. Apply at once, giving full particulars. The Veterinary Science Association, Dept. 22, London, Canada.

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep, to this office.

IN THE SHEEP-FOLD.

Select sheep that mature early for breeders.

Keep only the best of your flock, and only what you can properly feed and care for.

Sheep are the missing strong link in many a farmer's system of crop rotation and stock production.

Buying sheep from the stock yards and placing them in one's breeding flock at home is risky business.

Any building where the sheep get their backs wet and their feet muddy is not what could properly be called shelter.

The farmer who is keeping abreast of the times, recognizes in the sheep a sure profit maker and soil builder in a single animal.

Because the sheep wear warm coats of wool is no reason why they should be exposed to piercing winds, bitter cold and chill, driving rains.

Fortunate, indeed, is the breeder who choses for his herd a ram full of vim, activity and alertness, without combining treachery and ill temper with those most desirable qualities.

There ought to be universial law against a farmer buying a pure-bred flock of sheep when he hasn't the knowledge necessary to maintaining the principles that produce and improve the excellence of such flocks.

Show us another farm animal that will so quickly and effectively clean up all the odd nooks of grazing and small bushes about the farm, kill out the weeds, and add to the fertility of the soil as the sheep. These features are what lower the cost of wool and mutton on the farm.

The farmer who has learned how to handle sheep in a manner that will promote good health and vigor among the animals, and how to keep sheep killing dogs off his premises or away from his flocks, is on the highway of successful and profitable sheep raising; otherwise, he may find it a hit-and-miss business.

One of the greatest drawbacks to efficiency in sheep raising is the lack of variety in their rations. While a little clean, tender roughage and some shelled corn will carry them along, the cost of wool and mutton production really will be cheapened by furnishing the animals with more of a variety, especially in the matter of grains. A few oats and bran mixed with the corn will keep them in so much better condition that less grain will be required to maintain the tissues of the body and promote the growth and development of wool and mutton.

WINTER FEEDING OF BREEDING EWES.

To the Editor of The Homestead:

Sheep naturally consume large amounts of succulent feed. Green stuff of some kind must be provided during the winter to take the place of the summer pastures so our plan has been to plant a couple of acres of rutabagas every year, to secure this necessary succulent feed. The bagas are cut up into small pieces and fed morning and evening and are greatly relished by the ewes, especially when on a dry winter ration, and they are without doubt the best of all succulent feeds, and cheap also. On our farm in northern Wisconsin we have no trouble in raising large crops of rutabagas, but in some places they do not grow so well and are more expensive. If the bagas are not available good corn silage may be substituted. Silage must be fed with great care to breeding ewes, for if it is sour or too much is fed there will be trouble. Too much silage causes large flabby lambs which are weak at time of birth and very liable to die.

Moldy silage is also dangerous to feed. Experiments at the Wisconsin Experiment Station have shown that two pounds of succulent feed per day is plenty for a breeding ewe. Timothy hay is a very poor sheep feed and should never be fed if it can be avoided. The tough, woody timothy causes indigestion and constipation. The seeds also get in the wool making it dirty and gives the sheep an unthrifty appearance. We have always had plenty of good clover hay on hand for the winter's roughage. Either alfalfa or clover is good; the alfalfa having a slightly higher protein content. We have found the clover produces good results and have fed it because it was at hand.

The grain ration for breeding ewes does not need to be heavy. Too much grain is almost as bad as none at all. A few weeks before lambing is time to start on a light grain feed, increasing it gradually so that when the lambs come there will be a good supply of milk provided by the ewes. A good grain mixture is equal parts bran and oats, which can be fed twice a day. The amount to feed depends largely on the condition of the ewes and must be left to the shepherd to decide. A good crop of strong lambs cannot be expected if the ewes are not given plenty of exercise throughout the winter. Every nice bright day they should be driven out into the fields or they may have a feeding place a long way from the home sheds and thus compel exercise. Success will follow such a system.

F. E. Huser.

CLEAN, BUT NOT FUSSY.

To the Editor of The Homestead:

Not long since at a farmers' meeting I heard two things advocated relative to sheep management that I am sure are wrong. First, the speaker advocated cleaning out the sheep barn every week or two during the winter. Of course, I would not for a minute have the sheep kept in dirty quarters, but if they have plenty of litter under them they will be clean, and the animals will keep it so firmly trodden down that there will be no offensive odor or loss of ammonia.

With a plentiful supply of bedding under them, the liquid excrement will all be saved and the manure worth much more than if there is no accumulation of bedding under them as an absorbent. Then, too, if the lambs are born in the winter, the fact of there being a foot or so of litter for them to drop on, instead of on the floor or ground, may mean all the difference between a lively or a chilled and perhaps dead lamb.

The other was the advice to feed the following winter, lambs born in February or March. First, such lambs if they are crowded along will be worth as much at ten weeks old as when ten or twelve months. Surely not a profitable thing to do. I have fed a great many lambs, and have always made most money when I put in late lambs weighing about sixty pounds each. Such lambs are usually growthy, having had plenty of their mother's milk until the fall feed came on. It takes less feed to maintain them, and there is a frame to develop, on which can be put twenty to forty pounds of bone, flesh and fat.

The early lamb has probably become thin (if not, he would better have gone to market), and any young animal that has had a setback in its growth will never make so good a feeder. Neither will there be a chance to put on very much more weight, other than to fatten them up. It will also cost more for a maintenance ration. The same money will buy 100 lambs, each weighing sixty pounds, that would be required to buy about seventy, weighing eighty pounds each. I can put thirty or forty pounds on the former as cheaply as I can put twenty pounds on the latter. As between the two, the extra ten or twenty pounds will be clear profit.

W. H. Underwood.

RESTORING NEGLECTED ORCHARDS.

A subscriber writes:

I have lately inherited a small farm in eastern Nebraska, and upon it I find an old orchard of about fifty trees. It has been neglected, untrimmed and is in grass. Some of the trees have dead limbs, but none of them are entirely dead. The neighbors tell me that a few years ago it bore fine crops of good, salable apples. Now, I want to ask you if there is any process by which such old trees can be renovated, or had I best cut them all out and plant a new lot? I incline to the last plan.

We would advise this subscriber to go a little slow about cutting out an orchard of fifty trees, not one of which is yet dead. There must be a great deal of vitality there, and we infer the trees have not been planted over eighteen or twenty years. Its present unthrifty condition is doubtless due to lack of care. Very probably it has had no manure and has been pastured, or had crops of hay taken from it continually for some time. If you will reverse the treatment of those trees, and instead of starving and neglecting them, give them feed and care, you will reverse the present condition.

We advise this treatment in the effort at restoration. Give the trees a good, careful trimming, but do not put a rough, unreliable hand at the job. It is a job that must be done with sense and discretion. Cut all the dead wood away and then thin out the tops, so that the sun can reach all parts of the tree. Paint over all cut surfaces either with white lead or a thin grafting wax. If you find rotten wood or holes in the trees, clean out thoroughly and fill with cement. Mix with one part of cement to three parts of sand. Be sure to remove all the rotten wood first, for if that is left it will make your tree rot more and more.

Go over all your trees and scrape off the rough, broken bark. That makes a hiding place for insects. Then wash the trunks and all large limbs with soap suds (use soft soap) to which you have added carbolic acid, at the rate of one tablespoonful to a pailful of the suds. Burn all the brush and rubbish which you can gather. In this way you will destroy hosts of insects and their progeny, which would otherwise survive to trouble you next season. Then if you have time before it freezes up, plow and disk the ground thoroughly. If you cannot do it this fall, do it the first thing next spring. Have the sod removed from about the tree trunks and put loose dirt in its place. Then manure the patch. You do not say how closely your trees are planted. But they perhaps cover an acre or three-quarters of an acre. Put on fifty good two-horse wagon loads of barnyard manure. It is better to have it well or at least partly rotted. But put it on anyway. Scatter it evenly over the surface. Don't do as one farmer did who had been told to manure his trees. He piled a wagon load about each tree, three feet deep, close to the trunk. That was doing a right thing in a wrong way. He followed directions too literally, like the man, when told to set his plum trees in clumps, dug a small hole with a spade and put five trees in that one hole.

Then in midsummer go over the patch with a disk, or at least a good harrow, and if the grass starts up well plow it again next July or August. Your trees ought under this treatment start a good growth at once. And that is what you must have before you can expect fruit. Once get the growth started and you will have plenty of fruit buds. If the second season after your treatment begins is a good apple year, you will get some reward for your labor. And after that constantly better returns for some six or eight years. Put on more manure every second year.

Get posted upon the modern ways of fighting insects—don't let the trees get hidebound again, and you will find your old orchard good for ten years of service. And meanwhile you had best plant another in a different place.

The above engraving is a likeness of a few imported draft stallions to be found in the barns of A. B. Holbert, Greeley, Iowa. This firm has 150 stallions and mares for sale and more importations coming. See page 45.

Try not to let the water troughs and tanks run over and get a glare of ice started around them when the water freezes, as such spots are dangerous to both man and beast. Where any already have formed, scatter old hay, straw, manure or brush over them some day when the ice is thawing slightly, about noon. When it again freezes that night, this material will adhere to the ice and form a rougher surface for the stock to stop on, thus making it safe for them to walk up and drink.

Now is a good time, before the heavy snows of winter fall, to rake up the cobs in the hog lot and burn them in one large heap, putting the drier ones in the bottom of the pile and adding the damp ones on top as the fire gets started well. This not only cleans up and renovates the pen, but it will supply the animals with that excellent corrective, appetizer and tonic; charcoal.

SHEEP

REGISTERED SHROPSHIRE RAMS

FROM best imported stock. Fifty head rams to go at quick sale from $15 to $25 each. These are thrifty, weigh up good, and include lambs, yearlings and a few two year olds. Will also offer a select lot of ewes. Angus cattle of best types for sale at all times.

The New Year's Outlook.

By M. Coverdell.

LOOKING back is a dangerous act (one is so apt to stub his toe and fall, or meet the fate of Lot's wife), but as we pass from the shadows of 1912 and emerge into the full sunlight of 1913 it will be well for us to pause and reflect upon the agricultural achievements of the past year, and to lay plans for a better season. While most of us doubtless have improved our methods of farming, with its allied interests of live stock raising, poultrying, etc., none will deny that there is still plenty of room for improvement along every line.

We boast of our national resources and advancement, yet, if you will investigate, you will find us far in the rear of many other nations. We have been the last of our European sister nations to adopt the postal savings bank (and ours is a poor excuse for the beneficial institution it should be to the common people). Parcel post is in successful operation throughout Europe, and we could well learn many a lesson in soil management from our foreign brothers in the country, since they still are feeding more people for every tillable acre of land than we are, and on land that they have farmed for hundreds of years.

Outside of the above-mentioned causes and others of like merit there are many items of improvement that may be instituted around the farm. We can, and at a small cost, secure pure-bred stock and poultry for breeding purposes, and thus raise the standard of our flocks and herds. Systematic bookkeeping will greatly assist in putting the farming on more of a business basis. We can learn by experiment that scientific feeding and careful handling will about solve this question of high-priced feed, and that the farmers must show a solid, well-organized and intelligent front in coping with market conditions and in the disposal of their products.

There is a pressing need of more conservative methods, not only in our farm management, but in national affairs. If our children and our children's children are to be given a fighting chance for the necessities of life we must be more conservative in draining the land of its fertility, and this can best be accomplished by feeding all of our crops to animals on the farm, returning their manures to the fields, thereby giving back to the soil the vitality which those crops sapped from it for sustenance in their development.

We thus will not only be practicing conservation of soil fertility, but will greatly assist in solving the meat problem now confronting the country. Crops must be systematically rotated to rest the ground, and more of the leguminous plants, such as clover, alfalfa, vetch and cowpeas, be grown as rejuvenating crops. The saving of various waste products as fertilizers may be made to play an important part in this soil conservation.

The conservation of our national forests, coal lands and other natural resources demands immediate and continued attention, and while the farmer cannot assist personally in this movement, he can help in no small degree by protecting and fostering his wood lands, at the same time voting intelligently for those national officers who show by their actions that they have the future welfare of the country at heart; who love and serve the common people and pander not to the gold of the money bards by permitting their ruthless hands to destroy those natural resources upon which so much of the happiness and comfort of our future generations depend.

While much is being done to establish a good roads system throughout the country we still are sorely in need of better highways. Be a good roads booster this season; do your part of the actual improvement; attend every good roads meeting; write to your congressman asking him to support any worthy bill providing better roads or a good roads appropriation. Why not thus spend a small per cent of the enormous sum we are lavishing on our army and navy departments?

It is sad and lamentable, but none the less true, that our rural churches are deteriorating in membership and spiritual enthusiasm. Not only do we frequently see country churches without a pastor, but in some cases the structure that was reared for the worship of the Creator of all things is actually deserted, weather worn, and fast crumbling to ruin. All of us need to exert more influence in establishing the country church on a firmer basis, for it is of all rural institutions the most potent in shaping character, purifying society, and building up the neighborhood in general.

That there is something radically wrong with our present school system, every intelligent, thinking farmer is beginning to realize. Our school buildings are inadequate to the requirements of present-day education; while the playgrounds need improvement in size, utility and attractiveness. Then the course of study is not adapted to the needs of rural pupils. We must place our system of education on a basis that will furnish our boys and girls with more practical knowledge—teaching that will enable them to solve the everyday problems of farm life through the instructions received in the schoolroom.

Let us resolve that this will be the best year of our lives in and around the home. All of us can make many improvements. We can lighten the work of the housewife by supplying modern machinery and labor-saving devices almost without number. The men and even the work teams can be favored in this respect by installing those implements that are modern, up to date and easy of operation.

Literature, music and various forms of amusements may be made to add materially to the attractiveness and comforts of home life, thus keeping the boys and girls from seeking those things in the glare of the great cities and abandoning the old farm. A neat grass lawn, flowers, shrubbery, attractive yard fence, nicely painted house—all these work toward establishing surroundings that will entwine the heart of every member of the farm household till, some day, who knows but that it may be through memory of it that some prodigal boy or girl will wander back to the old homestead?

DEFECTIVE DISTRIBUTION.

B. F. Yoakum, chairman of the Frisco system of railroads, has made a study for years of the causes for the low prices that farmers receive for their products while consumers pay very high prices. He finds the cause, not in high railroad charges, only partly in "trusts," but mostly in an antiquated and wasteful system of marketing. In World's Work he says:

It cost (last year in the United States) $7,000,000,000 to distribute $6,000,000,000 worth of products from the farm to the producer.

New York City's total bill for one year for eggs, coffee, rice, cabbage, onions, milk, potatoes, meat and poultry, was $464,147,000. Out of that the farmer received $274,289,000, or 59 per cent; the railroads received $25,045,000, or about 5½ per cent; and the cost of selling and profits on the products was $164,813,000, or 35½ per cent.

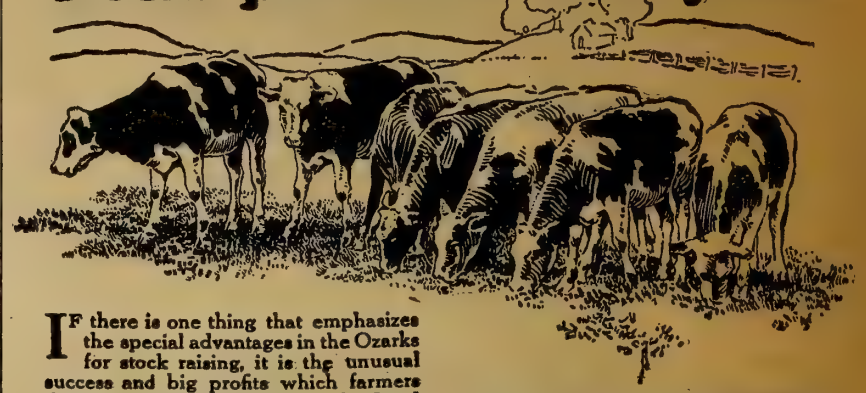
The following table shows a few important items of daily food, what the farmers received for them, and what the consumer finally paid for them.

	Farmer Received	People Paid
Eggs	$17,238,000	$28,730,000
Cabbages	1,825,000	9,125,000
Milk	22,912,000	48,880,000
Potatoes	8,437,000	60,000,000

From my own investigation, made some time ago, I was persuaded that the system of distributing food in New York City was little short of a disgrace to the city. In August, there was published the digest of a report to be made by an independent committee acting under authority of the state. This preliminary report contained general figures that seem to bear out the impressions I gained from my own researches. The annual total food supply is estimated to cost $350,000,000 at the city terminals; that is, with all freight charges paid. The consumer is reckoned to pay $500,000,000. It is flatly stated that the difference is made up mostly of cost of handling, and not of profits. In fact, it is stated that the average small dealer, the corner grocer one hears so much about, does not make more than a bare living for himself and his family. It is roughly estimated that the simple inauguration of a fairly scientific method of marketing would save at least $60,000,000 a year in New York City, or about one-fifth of the total amount that the producer receives for his products.

Here, then, is one definite figure, which throws at least some light upon the question where that $7,000,000,000 goes. New York, in its marketing methods, is no worse than any other large city. I think it is better than some, and probably stands as about an average. Assuming that it is a fair average, it would mean that about 12 per cent of the total amount the consumer pays is paid to make up for pure waste in marketing methods. That would be approximately $1,560,-

"Baby beef" is bringing Ozark farmers $50 per head profit in one year



IF there is one thing that emphasizes the special advantages in the Ozarks for stock raising, it is the unusual success and big profits which farmers there are making with baby beef. Good stock, after one year's feed, is bringing them $50 per head profit!

Here is the plan that the Ozark farmer is following to get such profits. He buys up good grade calves at $15 to $20 a head (providing he dosn't raise them himself). Then, instead of letting them "mosey along" until the second year with just enough rations to keep them in good trim, he starts feeding them for quick flesh gains *right away*. The calves are put on flesh-producing field grasses until after corn is harvested; then the shocks, with a little extra now and then, keep them going until January. That leaves only three months of winter feeding (for pasture is green again by April 1st).

By that time the beef will weigh around a thousand to twelve hundred pounds easily, and will top the market at $8 a thousand or more. The feeding, on account of the short winter and other advantages in the Ozarks, doesn't cost more than $25 per head, all told—that's a clean profit of around $50 from every baby beef.

It's a mighty profitable business, and Ozark farmers are not slow to take it up.

Baby beef is just *one* way of making money in the Ozarks. It is *just one* example going to show why all kinds of stock raising is so profitable in the Ozarks. Hogs, for example, bring Ozark farmers around 5 cents a pound profit, because they cost so little to produce per pound—only 2½ cents, or less. Sheep make $12 per ewe easily, and Ozark dairymen are getting $8 to $10 per cow per month, regularly.

The reasons for these profits are easy to understand. The Ozarks have very mild, short winters—good pasture from April 1st to January 1st—only three months of winter feeding. Right there is a mighty big cut in costs.

The soils of the Ozarks will grow practically every variety of grass, and forage crops—alfalfa, peanuts, cowpeas, corn—all the quick-fattening products.

The Ozarks have an unlimited supply of pure water, splendid drainage and a healthful climate that keeps stock sickness down to the minimum.

The Ozarks are *right at the doors* of St. Louis, Kansas City and Memphis—big markets offering the very highest quotations for all kinds of stock and farm products.

But all these advantages mean more when it is realized that good land can be bought now in the Ozarks at $12 to $15 per acre. It's a proposition that deserves any man's serious thought and investigation right *now!*

A free book for you!

It's not the kind you can pick up anywhere. Double sized pages, 75 actual photo pictures of farms—some in full color. Written by a man who knows farming. Takes up the Ozark sections, county by county, and describes the farming conditions there. Also tells actual experiences of Ozark farmers. I haven't many copies of this book on hand; please drop me a postal to-day for your free copy.

FRISCO LINES

A. HILTON. General Passenger Agent, 1502 Frisco Building, St. Louis, Mo.

YOUR OPPORTUNITY

is NOW in the Province of

SASKATCHEWAN

Western Canada

160 ACRE FARMS IN WESTERN CANADA FREE

Do you desire to get a Free Homestead of 160 Acres of that well known Wheat Land? The area is becoming more limited but no less valuable.

New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no Free Homesteading land left.

A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead, March, 1906, with about $1000 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wheat, 300 acres of oats, and 50 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

MILK---BETTER BEEF

Economically increased by balancing rations with OWL BRAND Cottonseed Meal. 41% Protein. Cattle require it for best results. F. W. Brode & Co., Memphis, Tenn.

GOVERNMENT Positions are easy to get. My free booklet X-1143 tells how. Write today—NOW. EARL HOPKINS, Washington, D. C.

000,000 out of the $13,000,000,000—would be more than $1,500,000,000 thrown away in 1911.

My own figures on transportation cost show that the railroad freight earnings of the whole country on agricultural products are less than 4 per cent of the total paid by the consumer, or approximately $495,000,000 on last year's production.

Legumes and Soil Inoculation.

By W. A. Freehoff, Wisconsin.

IT HAS been claimed and sometimes taught that in order to enrich a piece of poor land it is but necessary to grow clover or alfalfa upon it. In actual practice this does not always work out as planned. Legumes to be able to take nitrogen out of the air must be infested by a certain type of soil bacteria that co-operates with the plant in the process. Little buds or nodules are formed on the roots of the clover or the alfalfa plants which act as the host for the bacteria and as a storage chamber for nitrogen.

There are really two great methods of taking atmospheric nitrogen from the air into the soil; one is that already mentioned, and the other has not yet been very clearly described in farm literature.

In the advertising literature sent out by some firms, the farmer is told that if his clover or alfalfa does not grow, he must inoculate. They are prepared to furnish enough bacteria, or pure culture, at $2 or more per acre, to get the soil into proper condition. What they do not tell the farmer is that alfalfa may not have grown because of poor seed, badly drained land, unsuitable soil, or weed competition. They do not say anything about a condition of land known as clover sickness brought on by continued cropping of clover, nor that liming might solve the whole problem. Neither do they mention that it is never necessary to inoculate for clover, anyway. If clover will not grow the soil is in such condition, generally of acidity, that the proper bacteria are killed.

On the other hand, it has been demonstrated too often in practice that by the introduction into a new field of soil from a field which had been cropped with alfalfa growth was secured where nothing but failure had been experienced in the past. Even the once entirely despised pure cultures have at times returned dollars for cents expended. Bacteriologists and the soils expert admit the utility of inoculation for alfalfa and a few of the less common legumes.

This inoculation, however, must not be done blindly. If the propor bacteria are already present it would be throwing good money after bad to buy infected soil or even pur cultures. Again, the soil must be in such condition that the proper bacteria are not killed if introduced. If the soil is acid, some form of lime must be added, for alfalfa and clover require a sweet soil.

It is a mistaken notion that these bacteria can take the place of manure. Somewhere farmers will read that legumes enrich the soil, particularly with nitrogen. So they take a piece of worn-out land, buy some alfalfa seed and inoculated ground, and scatter the two over the field. But no glorious crop of alfalfa follows. Bitter experience has taught that alfalfa and clover must be started on comparatively rich soil, and soil that is well drained. They are heavy feeders and must be well nourished from the very beginning. Alfalfa, especially, must be of some size before enough nodules form on the roots to supply sufficient nitrogen for the needs of the plant. Again, farmers are misled into the belief that the mere growing of any legume will enrich the soil, or at least keep it at its original state of fertility. This, also, is a fallacy. It is true that where there is a good stand of alfalfa or clover the bacteria store nitrogen in the roots, but it is also true that more nitrogen than is stored in the roots is used in the growth of the plant. Thus if hay is cut season after season there is a slow but sure depletion of the soil, not only in nitrogen, but in other mineral elements. This tendency is not so pronounced in clover nor alfalfa as in the less common legumes like cowpeas, beans and vetches.

How then may the fertility of the land be increased by the use of legumes? There is one way, and only one way. After determining whether the soil is acid or sweet one must manure it heavily, either with commercial nitrogen or barnyard manure. With the alfalfa seed, if alfalfa has been selected, should be sowed about 100 pounds of inoculated soil to every acre of land. If the seed bed has been properly prepared little difficulty should be experienced with weeds. Once a crop is started, it is all right to cut it for hay for at least one season. Alfalfa is cut several years as a rule. But it is greatly to be desired that one full crop be plowed under when the rotation is changed. In the case of clover, vetch, peas and soy beans it is imperative that a crop or two be plowed under on a certain piece of land, as these contain as much as 85 per cent of all nitrogen in the stems and as little as 15 per cent in the roots.

While the legume bacteria all belong to the same family and resemble each other externally, there is enough difference between them to prevent bacteria native to alfalfa from flourishing on clover, or vice versa. Each legume, with a few exceptions, has its own special bacterium. The most notable exception is the sweet clover organism, which may be used in inoculating alfalfa fields.

The thrift of legumes being now generally admitted as being in direct relation to the virility and number of proper baeteria in the soil, physical and chemical conditions correct, the probem of the soil bacteriologists develops into the supplying of pure culture that may be used by the farmer with certain success and which is not prohibitive in price. This pure culture has not yet been prepared, although several firms in this country and in Europe claim to have done so. Until they prove out to the satisfaction of the experiment stations, however, the farmer had best rely on the old-fashioned methods of using inoculated soil, provided inoculation really is needed on that particular field.

Cows Thrive and Owners Prosper in the San Joaquin Valley California

Here is the dairyman's opportunity. Conditions are just right for his business and there's a hungry market right at home. Great cities like San Francisco and Los Angeles make steady, profitable markets for fresh milk and dairy products. And think of the thousands who devote their time to orchard and vineyard, who have no room for cattle. And the other thousands devoted to mining and lumbering. The creameries paid an average of over 32 cents a pound last year for butter fat. Can you get as much where you are?

The 200,000 people now in the San Joaquin Valley have only made a beginning in developing its marvelous agricultural resources. Over seven million acres of wonderful crop-producing soil are awaiting the men who will set them at work. Your dollars will have greater earning power here; your brain and muscle will count for more.

The best of it is that you can buy this land with water developed, or with water rights, at about $125 an acre, on favorable terms. You can get quick results. Most of the land was wheat-fields or grazing land, and it is easily put into alfalfa. There's a creamery in nearly every hamlet which will sell you cows on time. Little shelter is required, as stock thrives out of doors the year around. There is no time that you can not do out-of-doors work comfortably and profitably.

You will find here good schools, good roads, telephones, rural delivery, electric light and power, trolleys, and a "get-together-and-help-each-other" spirit that makes the newcomer feel at home at once.

The Santa Fe has published a folder about the San Joaquin Valley which is filled with information for the homeseeker. It gives the experiences of people who have taken up different lines of farming, and tells of the results they have secured.

Read the book; then see the country. It will cost but little. Go now, while work is slack. The Santa Fe runs low-fare homeseekers' excursions to California, and elsewhere southwest, on first and third Tuesday each month. Time on the road, only three days from Chicago. I will gladly send the San Joaquin Valley folder free and give you full information about trains and fares.

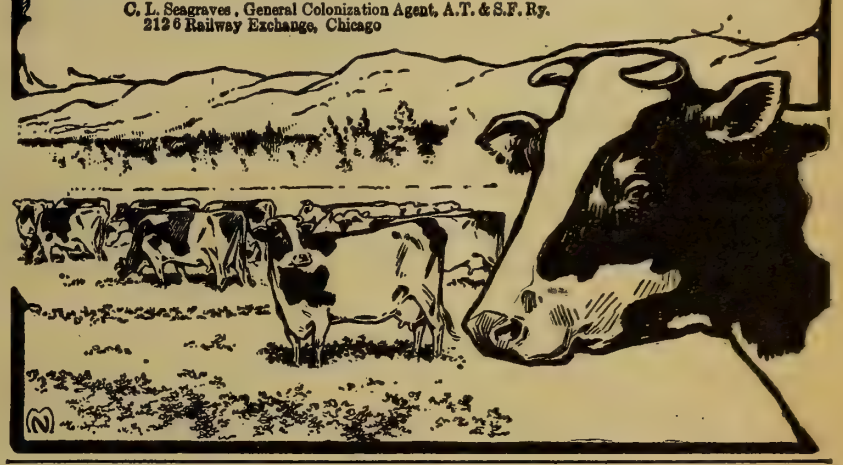
2126 Railway Exchange, Chicago



LAND AND HOMES FOR SALE

143 ACRES EIGHT-ROOMED house, two barns—38x40, 36x70, henhouse 12x30, concrete milk house, fruit, watered. Best 38 acres timber and wood; 1¾ miles to railroad town. To close it at once will include pair horses, 7 head cows and heifers, mower, rake, sulky plow, wagons, buggy, harnesses, grain drill, reaper, numerous other tools. All goes for $3,100. Part cash, balance 5% interest. Also 11½ acres, 7-roomed house, barn 26x30, 1¾ miles from railroad town, for $600, half cash, balance 5% interest. Don't wait. These must go. We protect buyers. Square dealing our only motto. Hall's Farm Agency, Owego, Tioga Co., N.Y.

10 Big Iowa Farm Bargains

10 IMPROVED farms, 80 to 480 acres, unsold from our list of 1912. Contracts expire January 1st. Save from $10 to $25 an acre buying now as we listed these March 1st last. If you ever expect to buy an Iowa farm now is your chance. Your money back in one year, if not satisfied. Write or telegraph for description. Northern Iowa Land Co., Independence, Iowa.

RENTERS, Own Your Own Farm

I HAVE some good Oklahoma land that can sell for one-fifth down and ten years on the balance at 5 per cent, just like rent. If you are a young man wanting a start, this is your chance. Own your own home; don't pay rent. Write me now.

W. J. FINCH, - El Reno, Okla.

BIG FARM SNAP Good 120 acre farm will be sold on payment of $2,000. Land lies well, good house, poor barn. Only $75.00 an acre. Its cheaper to own this farm than it is to rent. Address the owner,

CLYDE LESAN, - Mt. Ayr, Iowa.

80-ACRE TAYLOR CO., IOWA, FARM FOR SALE

ONLY $2,000.00 by March 1st. $4,000.00 four to ten years. Address S. G. Hunter, Cambridge, Iowa.

SOUTHEASTERN KANSAS

IS the place to go for good homes, low prices and easy terms. Send for full information. Address The Allen County Investment Co., Iola, Kansas.

Eastern Kansas Bargains

200 A. 4 mi. to good town, 90 mi. to Kansas City. Finely improved. A snap at $45 per acre for quick sale. Sewell Land Co., Garnett, Kan.

Iowa Lands For Sale in Howard county, $65 to $100 per acre. Large list on request. Address SPAULDING & O'DONNELL, Elma, Iowa

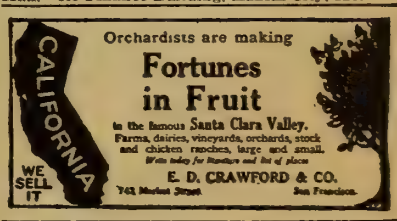
LIKE IOWA --AT-- HALF PRICE

WESTERN northeast Kansas, 50 miles Kansas City. Best black land at from $55 to $85 per acre. Equal to $150 in Iowa or Illinois. Sample snaps:

240 ACRES, 35 miles Kansas City, richest soil, 2 big barns, fine house, fruit, water, alfalfa, corn, wheat, oats, clover, blue grass. Price $85. Terms.

560 ACRES, ¼ mile R. R. town, 2 sets buildings, all tillable, mostly hog tight, price $75 per acre. Has paying oil and gas wells on it. Sure bargain.

These are samples. Write for big free list, 40 to 1000 acres. Price $40 to $125 per acre. Up-to-date map Missouri, Kansas, Arkansas, Oklahoma or Texas. Each state 15c postpaid. Lott "The Land Man," 309 Finance Building, Kansas City, Mo.



MR. FARMER! Do you intend to retire? I must sell my beautiful home, 9 large rooms, bath, hot and cold water, gas, large barn, sheds, 93 ft. frontage, lots of trees, the best furnace there is, extra large porch, ten minutes' walk down town. Also four-room house which rents for $8 per month. All this for only $4,000, would be a bargain at $6,000; reason for selling, going west for health; come see me. Bill Davidson, 310 W. 3d St., Des Moines, Ia.

FARM BARGAINS 400 a., 4 mi. to county seat, east Kansas, 175 a. in cult., all tillable, 50 a. in tame grass, 120 a. in blue stem meadow, black loam soil, fenced, 15 a. in pasture, two sets improvements, 6-roomed house new, barn 40x60, also tenant house and barn, sheds, etc., two good wells, near school and church. Will exchange for southern Ia., or Ill. Price $24,000. SEWELL LAND CO., Garnett, Kansas.

AUCTIONEERS

LET us sell your farm and other real estate at auction. We are making successful sales for others. CAREY M. JONES & CO., Auctioneers, 2856 Washington Blvd., Chicago, Illinois.

To the Man Who Likes Good Things to Eat

No matter how excellent the cooking in your home now is we will guarantee to improve the taste and goodness of every loaf of bread, every biscuit, cake or piece of pastry baked for your table if you will provide a sack of

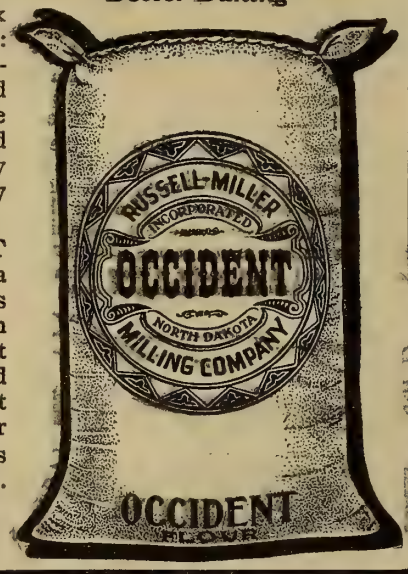
The Guaranteed Flour

OCCIDENT

If OCCIDENT fails—in your opinion—to give better baking results than your family has ever had from any other flour, your grocer will refund the price of the flour without argument.

There are two reasons why we can put a binding, Money-Back Guarantee on every sack of OCCIDENT Flour. First: we use only the choicest selection of the most valuable bread wheats grown. Second: we wash and scour the wheat and purify the flour so thoroughly that OCCIDENT is absolutely clean.

Send for Our Free Booklet, "Better Baking"



Costs More—Worth It OCCIDENT costs but a few cents more than other flour, but it is the most economical in making more and better bread, and bread that keeps sweet and fresh longer than any other bread. This saves many tiring baking days.

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 324, Augusta, Missouri.

WITH THE EDITOR.

Everyone who loves dumb creatures should feel grateful that the cause of animals has been championed at different times by men the world has delighted to honor. Every American knows how tender and reverent of animal life Abraham Lincoln was. He is one of many. Among others was that brilliant and popular lecturer, Dr. Talmage. One year, in his Christmas sermon, Dr. Talmage spoke as follows:

Behold, in the first place, that on the first night of Christ's life God honored the brute creation. You cannot get into the Bethlehem barn without going past the camels, the mules, the dogs, the oxen. The brutes of that stable heard the first cry of the infant Lord. Some of the old painters represent the oxen and camels kneeling that night before the new-born babe. And well they might kneel! Have you ever thought that Christ came, among other things, to alleviate the sufferings of the brute creation?

Not a kennel in all the centuries, not a bird's nest, not a worn-out horse on the tow path, not a freight car in the summertime bringing the beeves to market without water through a thousand miles of agony, not a surgeon's room witnessing the struggles of fox, or rabbit, or pigeon, or dog in the horrors of vivisection, but has an interest in the fact that Christ was born in a stable surrounded by brutes. He remembers that night, and the prayer He heard in their pitiful moan He will answer in the punishment of those who maltreat them.

The enactment of better laws, the multiplication of humane societies, and the enlisting of children in bands of mercy, have done much to better the lot of animals since Dr. Talmage gave utterance to those words, but dumb creatures still suffer from the thoughtlessness if not the cruelty of man. It may even be that the horses and the stock of some of those who read do not fare as well as they should.

By way of increasing their comfort at this season consideration might be given to cold weather stalls, water, food, etc. A lover of horses gave some capital advice to men having the care of horses when he said:

Let the stall be well lighted. A horse does not enjoy being in a dark, gloomy place any better than we do. A dark stable is injurious to the eyes, as the sudden change from it into the bright sunshine, especially when snow is dazzling bright in the winter, affects the sight. Nearly all the common diseases of horses may be traced to unsanitary stables. A horse must have pure air and a dry stable.

If you will note how the stock humps up and shivers these cold days after drinking of water that curdles into ice at the touch you will very soon come to the conclusion that for a sub-zero climate the tank heater is the thing. It stands to reason that before the animal can use this water it must be warmed up to body temperature, and that a good share of the fuel of the body must go into warming water rather than into building flesh or producing milk. Apart from its humane side, the cost of forcing stock to drink water out of an ice-bound tank should be carefully considered by the man whose eye is fixed on larger profits.

Warming his food has been of incalculable advantage to man. He gets greater returns in power and quicker returns in digestion. Your horses are likewise benefited by warmer food, and of course, you are the ultimate gainer. A bran mash at night is enjoyed by most horses—about two quarts of bran stirred into enough water to moisten it well. If the night is cold use hot water, and if very severe add a tablespoon of ginger. It will ginger up the animals for that trip in the frost next day. And what man who is anything of a horseman at all will ever forget to warm the bit first and not cause the poor brute's tongue to lose its skin from the icy contact.

Horses being so high spirited and intelligent make greater appeal to our sympathy than do cattle or swine and fowls. But all these creatures being our servants are dependent upon kindness at our hands. At this season when we are planning extra things for the comfort and happiness of our families, friends, and acquaintances, in order to quite fully carry out the real Christmas spirit, we should think also of our dumb animals and do what we can for them.

In Norway a Christmas dinner is prepared for the birds by tying to the top of a pole in the dooryard a large sheaf of grain. This is being followed here with variations. Instead of the sheaf, a little tree is dressed with bits of suet and bread. This is set on a broad shelf outside the window, a burlap foundation about it being liberally sprinkled with bird seed, chaff and hay seed.

This is a beneficial as well as a pretty fashion, and is the more to be commended because where the birds are so well cared for it is pretty sure that the farm animals are not neglected. Next year the farmer has more feathered friends to help fight the crawling pests.

HOME AND HOMEMAKING.

Don't ask, "Has the world been a friend to me?"
But, "Have I to the world been true?"
'Tis not what you get, but what you give,
That makes life worth while to you.
'Tis the kind word said to the little child
As you wiped its tears away,
And the smile you brought to some careworn face,
That really lights up your day.

'Tis the hand you clasp with an honest grasp
That gives you a hearty thrill
'Tis the good you pour into other lives
That comes back your own to fill.
'Tis the dregs you drain from another's cup
That makes your own seem sweet,
And the hours you give to your brother men
That makes your own life complete.

'Tis the burden you help another bear
That makes your own seem light.
'Tis the danger seen for another's feet
That shows you the path to right.
'Tis the good you do each passing day
With a heart sincere and true—
For through giving the world your very best,
Its best will return to you.

The devil is nearer to God by the whole height which he fell, than the average man who has not recognized his own need to rejoice and repent.

It is helpful and inspiring to almost any person to meet, associate and converse with other people. This is true in a general way, but it is particularly the case with reference to business. To come in contact with others, to hear them talk about themselves and their affairs and experiences, how they cope with difficulties, is helpful and inspiring, and every man is better off for having talked with others, especially other men who are successful and competent.

Every great man nowadays has his disciples, and it is always Judas who writes the biography, not for what he puts into it, but for what he expects to take out.

It takes high hopes, energy, determination, zeal, to carry big things through. Never has anyone succeeded who wore a perpetual grouch. Every big man is a hopeful one. He may see the pitfalls, know where the rocks are, but, like Mark Twain's pilot, he makes it his business to also "know where they ain't."

How much larger life would be if self could become smaller in it!

True it is that the great are few, the mediocre many, but the few who have scored highest in the business game are the men who have built on "quality."

The pilot cannot mitigate the billows or calm the wind. That is not his job.

Americans are noted for loving their homes, their home town, their home state and their home country. This love is the foundation not only of prosperity, but of liberty.

The way you look at life determines the way folk will look on you. If you are sunny, sweet tempered and try to make the best of the worst of it, you will get better than an even break with life, or fate, or whatever you want to call this existence, as the years roll by.

AMONG OURSELVES.

And this is our New Year's meeting! And this is our New Year's greeting! And as we meet for the first time "Among Ourselves" in this

year of our Lord nineteen hundred and thirteen, we come from our spheres of service to think together and to ask for and to give help. Without flaunting our opinions in each other's faces, or wounding each other's sensibilities, all along through the year whose passing has just been noted, we have given what we had to give, and gave ourselves in the giving.

You have spread a bounteous feast at the table the publisher provided and the editor laid—a feast where, no matter what or how much was taken, there was abundance left for everyone else. Good seed you have sown, and with a free hand. From the bitter as well as the glad experience of your lives you have given, withholding nothing that might aid others. It is well, friends. The sowing of such seed will bear a mighty harvest of choice grain. Your latest friendly act, your letters to "Sorrowful," have brought these words from her saddened home, into which your rays of light have penetrated with happy cheer: "They have cheered me more than I can express in words. They have given me much food for thought, and I am

Drawn Expressly for Montgomery Ward & Co. By Dan Sayre Groesbeck

The Store of a Thousand Windows

If we would promise to send you a collection of one thousand of the best windows of Marshall Field & Co., of Chicago, or Wanamaker, of New York, so that you could study them carefully in the quiet of your own sitting room, pass and repass them as you would on State Street or Broadway—wouldn't that be wonderful—wouldn't you eagerly accept our offer?

The Ward Book of 1913 is really more wonderful than that. In the preparation of every one of the thousand pages, we spend more money than is ever spent in the decorating of a single Wanamaker window, or the erection of a Marshall Field display. And there is this vital difference: while you are studying the thousand windows of **Montgomery Ward & Co.**, there are no urging clerks to hurry your purchase, no pushing crowd to induce unwise selection.

In the quiet of your own sitting room, with the help and advice of your husband and family, you can select every home necessity from a collection of modern merchandise, the equal of which was never before gathered in any one store or presented by any one establishment.

Don't read **Montgomery Ward's** Book of 1913 as a catalogue—take it as an array of the world's best shop—let each page visualize to you the tempting displays of the world's greatest bargain centers, and then remember that every bargain you see on these pages not only surpasses anything that you could ever hope to see in any other place, but is absolutely guaranteed to be just as you see it in word and picture.

This big book will be sent you without delay or cost. Fill in the coupon opposite and mail today.

COUPON

Montgomery Ward & Co., Dept. K 17, Chicago

Gentlemen: I want a copy of your new Catalogue. Please send it to me at once, all charges prepaid.

*Name*_____ *Street*_____

*Town*_____ *State*_____ *R. F. D.*_____

sure I am much happier for receiving them—the writers or friends that came to me in the darkest hours of my life."

In wishing all of you, those who wrote to her and those whose hearts went out to her, a happy New Year, "Sorrowful" says she has come to believe that there is no better way to have a happy New Year than "trying to win souls for Christ as those sisters are trying to do for me."

And this brings us to our New Year letters. I believe you will thoroughly enjoy the five that have been selected as the prize contributions this time. They are quite different from each other as you will see. They will be the chief courses at our first banquet of the year. But save some of your appetite for the "dessert" which follows. From ever so many letters there have been culled choice sentences for your special consideration. Perhaps one of your own is there. You may not have put it on paper. If not, take some along with you and may they refresh you and cheer you, not alone today or tomorrow, but in the night, in the storm, when anguish, or terror, or despair seems to hover near and may approach.

And as we wish each other "happy New Year" may the graciousness of it enter deeply into our lives to keep us in newness and brightness, in cheeriness and heartiness inwardly and outwardly each day and every day of nineteen hundred thirteen.

THE DAY OF HOPE.

A "happy New Year" literally means happiness throughout the new year, the very highest possible condition to be desired in life. Under such a circumstance one would be altogether at peace with himself and his outside world or environment. The mainspring of his life would make for contentment, gratifying his highest aspirations. Not a condition in which satisfaction would be felt in reviewing the fruits of his labor at the close of the year's work only, but one keeping him conscious of joy in his work all along the way. Upon how to secure this happiness, philosophers differ. It seems to have been decreed by God, however, that the only kind of work or thought that can possibly maintain in man a happy state of mind is the worthy and soul uplifting. No amount of material prosperity has ever been found alone sufficient to bring about a whole year's contentment, nor has any system of philosophy, no matter how subtle, been ever devised that could furnish even a poor substitute for the genuine article experienced by the Christian actuated by his God. The desire for happiness which God implants in every soul is the chief motive to seek "the kingdom of God." The trend of human affairs through this ceaseless yearning for inward peace has baffled philosophers who prophesy a "golden age" solely through the agency of man's intellectual and physical energy. The Christian alone remains unruffled, having been taught better by Christ, the greatest hero of all. For his sake let us approach nearer to each other and speak the "old-time greeting" with the genuine ring.

Thos. J. Hannon.

THE DAY OF FAITH.

I suppose there are almost as many different ideas of happiness as there are different people. I think that the greatest happiness of earth is that of the truly mated husband and wife, each loving and helping the other to be the best that is in them. Halving their sorrows and doubling their joys by sharing them, so happy in each other and their children that they seek to bring happiness to all who come in contact with them. But those of us who have missed this greatest good may still have the real and enduring happiness that comes from a clear conscience. To know that always we do what seems to us just and right, though some, perhaps even those who should be nearest and dearest, condemn us, that makes for some of us our happy New Year. Knowing that in our hearts there is no hatred for anyone, but only good will, even for those who misjudge us, and that we have been and are a comfort and help to our parents and have made, through difficulties, a happy home for our children, these, too, help to make a happy New Year. Then to know that you are one of that mighty host, millions strong, banded together by comrade love, who work unceasingly the world over for the greatest cause of all, the cause that will abolish poverty and war and bring real freedom to all mankind, that in itself is cause for a happy New Year. Then, in the words of the people's president, our great Lincoln, "Let us have the faith that right makes might and in that faith let us do our duty as we understand it," and all our New Years will be happy ones.

Belle Brant.

THE DAY OF ACTION.

The cast of old 1912 is disappearing over the hill and little 1913 will soon take his place among us. Let us keep him young and care free as long as we possibly can. At the very best our faults and follies will age him rapidly. Here in our little cottage beneath the pines dwell with us three little children, and to them we plan to consecrate 1913 who will bring to the oldest his fourth birthday. May mother and father be enabled to care for them better than ever during the coming year. May we be enabled to restrain that harsh word when little hands persist in mischief, and may we remember that the normal child must be active. We must invest a few hard-earned pennies or hard-earned moments of leisure to provide from our work box or tool chest playthings that will take their attention. Nineteen-thirteen will bring that time one year nearer when, with saddened hearts, we see the last of our fledglings leave the little nest and strike out to try their wings in the great world. Our parents tell us that, with all their cares and troubles, their happiest days were those in which their children played at their feet and they knew them to be safe from harm. In our home we seem to feel this and little Two Year Old, who can barely lisp, "I want to kiss sissy" (referring to his six-months-old baby sister) is petted and praised, as is our three year old, who has now succeeded in learning to talk as well as his parents. We believe in "spoil the rod and spare the child," rather than the old-time adage of opposite direction. While we are busily working on their clothes and caring tenderly for them in the home, or toiling all day long that they may have bread, let us not forget to make them realize this great love we have for them. If we have this feeling for them and express it, surely it will be difficult for the children to do things they know will grieve us. Then, too, perhaps more important than all the benefit that comes to the boys and girls, these loving words and thoughts in common will draw father and mother so much closer together that 1913 must bring to us, as we fervently hope, a happy New Year.

Wildwood.

THE DAY OF CHARACTER.

There is a feeling of timidity and shrinking with many of us in facing the new year. We know not what it may hold in store for us, but, could we know, it would be even moderately "happy." "A flower to the living is more than sumptuous wreaths to the dead." Happiness, as most of us theoretically believe, is a matter of character and choice, rather than of possessions or position. We frequently have illustrative object lessons along this line: A rich or fortunate (in our eyes) or distinguished person is profoundly unhappy, while one poor or hard-working or in hampering environment just bubbles over with the sheer joy of living. Again, one person's idea of happiness will differ materially from another's. Some long for ease; others desire wealth, and the means for travel, culture or helpfulness it affords; others (and among these I count myself) are happiest in having work which is both helpful to others and remunerative to self. "Heaven on earth," said the brilliant Alice Wellington Rollins, "is having work you love, and being well paid for it." My idea of a "happy New Year" is a succession of days crammed full of such work, and the personal health and ability to do it with ease. To have the confidence of little children and some share in helping them "grow up:" to meet and give back pleasant greetings from one's associates abroad, and to find love and peace always at home; to have time for a little travel, daily news of the world's work and an occasional book; to never lack for the financial ability to lend an unexpected helping hand when opportunity offers; in short, to feel that one is of use; filling one's own particular niche as no one else could, and to have and freely give one's "flower" here and now.

Agnes Rosenkraus.

MOVING DAY.

New Year's Day is the universal moving day. We must move whether we wish or not, from No. 1912 to No. 1913, and January 1st is the door of our new house. Since we have to move, why should we not take the opportunity of changing our ways of living? Nothing is cleaner than the future and January 1st is a fitting time to begin. It is only in so far as we have been generous and kindly and helpful in the past that we have realized any sound satisfaction out of life. The unselfish spirit of helpfulness, the thoughtful consideration of others is the keynote to a true life. Let freedom, fair play and friendliness be substituted for greed, grab and graft, and notice if the effect isn't gratifying. Let us not be discouraged if we cannot realize this great change at once, but on this and every succeeding New Year's Day we can each of us resolve to contribute our little part toward bringing the good time nearer, for "justice is the architecture" of the new house and its "courts are ruled by love."

"A little thing, a sunny smile,
A loving word at morn,
And all day long the day shone bright
And cares of life were made more light,
And sweetest hopes were born."

Mary of Canada.

Oysters come nearer in composition to cow's milk than do most other meat as all the four kinds of nutrients needed are present in large degree. Oysters have a larger excess of the flesh-building substance relative to the other constituents than milk, so we "balance the ration" by addition of starchy food and fats when eating oysters, thus obtaining a good meal at a cost that compares favorably with that when other meats are chosen.

As small as your note book and tells the story better.

Flo	Silver Moon
Flotis	Sybil Lena
Goldie Lock	Thalia
Gwen	Violet Eyes
Happy Thoughts	V. L. M.
Wanola	

Those winning pansy badges this week are Imogene, Myrtline and Silver Moon.

The winner of the Christmas cards for first handiwork entry opened on December 16th was Dakota Blue Eyes.

Additional answers to the old verse puzzle have been received from Frances Ver Canteren, Nora Jorgensen and Marie Hachhousen.

No credit on the Roll of Honor is allowed for the following: No address given, Iowa Chum, Hayseed, Carol, Orange Lily, Quotations, Sally, Conundrums, Utts, Queen Inez, Recipes, Apple Blossom, Elma, Fidget, Casey Jones, No general interest, Moon Flower. Both sides written, Wildfire, Selection, Dora Thomsen.

Be careful, when writing to ask for badges, to give the three dates correctly on which your pen name was published in the Roll of Honor.

REQUEST.

A friend of Aunt Mary's wants a good recipe for making whole wheatt bread. Can any of our girls send one? Address Aunt Mary, Hawley, Minn.

NOTES FROM THE LETTERS.

Wildfire says her hands have a tendency to chapping, and wants a remedy. Use only soft water for washing, and always have the hands thoroughly dry before going out in the wind. Either wear gloves or mittens when outdoors, and a little talcum powder rubbed on the hands before going outside will help. Use the best of toilet soaps.

You all like conundrums, so we will give you a few new ones: Utts asks, "What is it that is hard outside and soft in the middle?" Queen Inez propounds this: "If you had a cent and a quarter and butter was twenty-six cents a pound, how much could you buy?" Here is another: "What is it that runs all over the roads, and then comes home and runs under the shed and sticks its tongue out?"

Johnnie is hard at work husking. Flotis has only missed one day in six terms of school, and lives two miles away. Wanola tells of a box social at the schoolhouse. Carnation wants to know if she can write oftener than once a month. Write as often as once in two weeks if you have something worth writing, otherwise, don't write at all. Alicia is one who has been to California and back, and looks forward to a good time coasting "in good old Minnesota."

V. L. M. has taken vocal and instrumental lessons, and likes vocal best. Her favorite song is "The Rosary." In the school that Gwen attends they have a grab bag at Christmas. Each one brings presents for the others, and puts them in the bag. Then they take turns drawing out parcels. Minnesota Lassie sends New Year greetings to all.

De Pera loves horses, and can hitch and harness, unhitch and unharness them. She helps in the haying. Violet Eyes is glad to see A. E. S. stand up for his sex. She knows quite a number of boys who neither drink nor chew. Retha writes about the school; there are only seven pupils, but they had a Christmas tree. Flo goes to school in a white schoolhouse which has cement steps and platform in front.

Eden visited the penitentiary at Fort Madison, Iowa, and saw the convicts at work making furniture. Thalia writes about the picnic in the schoolhouse the last day of school. They had a program and ice cream and games. Irene visited her grandmother in Blair, Neb., during the Old Soldier's Reunion, and saw a balloon ascension and an electrical trapeze, whatever that is.

Princess Zora thinks we do not have enough book talk in our columns. It isn't because the young folks are not interested, Princess, for they write more about books than anything else, but variety is the spice of life, and so we give space to talks on other topics. Dixie Maid writes the story of her dog. She used to take him to town in her doll buggy, all covered up, and then when people asked what she had in the buggy, she would uncover him and how they would laugh!

We have received a good many Christmas stories, more than we can use, and some of them too late to use. Some good ones are by E. M. P., Pretty Poll, Happy Thoughts, Miners, Goldie Lock, Sybil-Lena and D. E. G. In sending stories for a certain season send them about a month ahead of the date it should be in print. Thus Valentine stories or Lincoln stories must not be mailed later than January 12, or Washington stories later than January 20.

Letters From the Cousins.

We raised an okra stalk that was nine feet high and ten inches around, and it had 160 pods on it.—Irma, age 11.

Our teacher had us work for prizes and five in the school got them. The prize for the girls was a pink satin rose. The only boy who got a prize got a gold necktie clasp.—Thekla, Ill., age 12.

How many of the cousins think they cannot enter the Kingdom of Heaven unless they belong to a church? I think it is a much worse sin to belong and not live as God intends us to than not belong at all. —Country Cat, age 12.

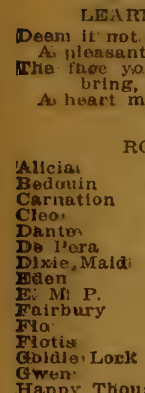
Last Christmas I stayed at home, and my brother came and took us riding Christmas morning, and stopped at the village and bought candy, nuts, gum, cocoanuts, apples and oranges. We came back to a neighbor's house for dinner, and the boys went hunting.—Campbell Kid, age 14.

To remove plum, grape and berry stains, pour boiling water through the stains and leave the cloth in the water until cold. To remove mud splashes from soft material, leave until dry, then rub gently with a dry corn cob. It will not roughen the goods as a brush does.—Mishy, age 13.

Last Christmas we had a Christmas tree down in an old house we had moved out of, and we invited some of our friends in. We had a short program and Bible reading, and then Santa Claus came and distributed the presents. My sister was afraid of him.—Rose, age 12.

Our superintendent got up a large spelling match for the children of Iowa and Illinois. Not more than three could come from any one school. One of my schoolmates and I went up, and I won a pair of shoes for being the best speller in our township.—Bernette, age 11.

Where has our beloved cousin Hiawatha gone? Shipmate is a very high-minded girl (or is she a boy?) Cousins all, do you read Dickens extensively? I would if I could only get more of his books. In the "Tale of Two Cities," I think Miss Pross is the only overdrawn character.—Bawn, age 16.



It Will Pay You To Ship Us Your HIDES

The International Sunday School Lesson

FIRST QUARTER Lesson I. Genesis I., 1-2:III. January 5, 1913.

THE CREATION—THE STORY.

When Michael Angelo overlaid the ceiling of the Sistine Chapel with frescoes that make its common plaster more precious than gold, he dipped his pencils into the first chapter of Genesis. Each successive panel matches its respective paragraph—The Separation of Light and Darkness; The Creation of the Sun and Moon; Of Trees and Plants; Of Adam; Of Eve; and so on. The frescoes are indescribably majestic; but they fall short of the narrative which inspired them. That is unapproachable in literature or art. It is divine. If the immortal Florentine had drawn his inspiration from any other cosmogony than that of Moses, that Vatican ceiling would have been marred with the incongruous shapes of man's wild fancy or wilder fear. Dualism would have been there—a devil as powerful as God; or Polytheism, gods many, and all in a wrangle, one pulling down what the other set up; or Pantheism—an eternal matter, insensate yet evolving itself in various shapes, the thing fashioned greater than that which made it; or such grotesque ideals of the universe, for example, as that of the Hindu, with its pryamid of snake, turtle, elephant, and triple disk. Instead of this, we see on that lustrous roof the ineffable Jehovah in the form of a man (anthropomorphized) as the Bible itself must needs present him to us—eternity upon his hoary brow, omniscience beaming in his eye, omnipotence in his outstretched arms, and infinite love in his whole mien. The Mosaic account of creation is a miracle in words. Not to this present, highly-cultured age, but back 3,000 years to the beginning of literature, must we look for the most satisfactory statement of the origin of things. There, through the mists of human speculations, through rising and falling systems of philosophy, Genesis shines like a star, ever ascendant. It is not attached to any system of geology, astronomy, or biology; so, as numbers of these in succession have sunk, it has never been submerged. The book may clash with an hypothesis, it never does with a fact. The narrative is elastic enough to take in all the modern discoveries of physical science, but presents a rim of steel to the vagaries of sciolists. Whence came this phenomenal writing? From the genius of man? Then why is not its equal found in the ancient literature of other nations?—nations better situated, humanly speaking, to produce such a book than the petty and oft-captive Israel. Inspiration is the only adequate explanation of Genesis. Holy men of old wrote it as they were moved by the Holy Ghost. The blessed intent of the book is seen by the most casual reader. It is a mirror reflecting the person and attributes of God. It answers, too, satisfactorily the imperative questions of the heart as to the origin of nature and of man. Parker's alliteration well describes it: "Simple, sublime, sufficient."

The Study Lantern.

The account of creation, popularly attributed to Moses, is a sublime panoramic ode to nature and to the God of nature. Orthodoxy has been in error in treating it as a technical, literal account of the origin of the universe. It is political, not scientific. But it is unscientific, not anti-scientific. It represents God as the Creator, but it says (as a poem, of course, would not) nothing as to the method of creation. Many scientists are disposed to concede that the method of creation may have been evolution, although Darwinism remains in its hypothetical stage. The majesty of the Mosaic account of creation may be well shown by using the crude heathen cosmogonies as a background. The orderly and glorious progress of creation should lead us to exclaim, "O Lord, how manifold are Thy works! in wisdom hast Thou made them all." Man's dominion over nature was never so great as at the present day. With retort, spectrum, telescope, miscroscope, etc., he is wresting her secrets from her, and subduing her forces to his use. A beginning only has been made. The universe affords a limitless area for man's skill and prowess. The dignity of man's position in nature, the variety, delicacy, and strength of his senses and faculties, the broad scope afforded for their employment: "O rich and varied man, thou palace of sight and sound!" Primary teachers have a fascinating task in discovering and banishing the crude and amusing notions about earth, air, sky, water, stars, etc., with which they will find little minds packed. A taking object lesson may be given by laying an orange on the table, and having an apple, suspended with a cord, revolve about the orange. Orange for sun; apple for earth. What makes day and night, the year and the seasons, may thus be illustrated. Earth may be described as a house, beautiful and comfortable, which God has built for His children—a cellar full of coal and other things we need. The carpet changes every season, so we shall not get tired looking at it—from green, sprinkled with flowers, to russet in the fall and white in the winter—a house hung with pretty pictures.

THE BEGINNER IN POULTRY.

The above is the title of a handsomely illustrated book by C. S. Valentine, that has just come from the press. It is a volume written for those people who want to make a success of the poultry business either on a large or small scale. Beginning with the initial step it discusses clearly and completely every factor which goes to make that success. This includes the choice of breeds, hatching and brooding with the mother hen and the incubator, the artificial brooder, feeding and food values, disease—its prevention and the various remedies—houses for poultry, the raising of ducks and geese and also the raising of guinea hens and quail. Those who have not been satisfied with their poultry ventures ought to be able to find a clue to improved methods in this volume. To those who are about to start in the business it will be found indispensable and in it the seasoned poultryman will find many new and valuable hints. The price of this book is $1.50, arrangements having been made by this paper whereby it will be furnished to our readers upon receipt of this sum.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5922 Lady's Three-Piece Skirt.—The splendid skirt model given in this design is one of the newest and cleverest styles of the season. It is not in the least difficult to make and the home dressmaker can handle it with great success. The garment closes at the front and is made with empire or regulation waist line. Serge or mohair can be used to make this skirt.

The pattern 5922 is cut in sizes 22 to 30 inches bust measure. Medium size requires 3⅞ yards of 36-inch material. Price of pattern, ten cents.

5957 Lady's Skirt.—This skirt can be worn with a separate shirt waist or it can be worn with a waist of the same material. It closes at the left side. It can be made with either the empire or the regulation waist line.

The pattern 5957 is cut in sizes 22 to 30 inches waist measure. Medium size requires 3⅛ yards of 36-inch material. Price of pattern, ten cents.

5904 Lady's Seven-Gored Skirt.—This model represents a charming skirt cut in seven gores and a design very simple to carry out. It can be made with the high or regulation waist line and with inverted plait or habit back.

The pattern 5904 is cut in sizes 22 to 30 inches waist measure. Medium size requires 4⅝ yards of 36-inch material. Price of pattern, ten cents.

5958 Miss' and Small Woman's Dress.—This dress is just the thing for the girl who attends school. It can be made with either the Empire or regulation waist line. The skirt is a six-gored model.

The pattern, No. 5958, is cut in sizes 14, 16 and 18 years. Medium size requires 6 yards of 36-inch material, ⅜ yard of 24-inch satin and ⅜ yard of 18-inch all-over. Price of pattern, ten cents.

6000 Boy's Russian Dress.—This pretty little Russian dress is for the small lad who has not yet worn the regulation bloomers. It is a cunning model and a very becoming one. The garment closes at the right side of the front. The collar, cuffs and belt are fashioned of contrasting material.

The pattern, No. 6000, is cut in sizes 1, 2 and 3 years. Medium size requires 3 yards of 27-inch material, with ½ yard of contrasting goods. Price of pattern, ten cents.

6012 Miss' and Small Woman's Dress.—This dress is just the thing for the young girl who attends school. The waist is made with the turn-down collar. The dress closes at the left side of the front and the skirt is a six-gored model. The dress can be developed in any of the woolen materials.

The pattern, No. 6012, is cut in sizes 14, 16 and 18 years. Medium size requires 6 yards of 36-inch material Price of pattern, ten cents.

Echoes From a Kansas Farm

BY HENRY HATCH

It is almost too nice outdoors today to stay within the house. The writing of these paragraphs becomes almost a task this week because of the bright sunshine, the crisp atmosphere and the dry footing outside. It must be tough to be cooped up in offices all day, such weather as this.

A farmer, after all, is enabled to live the most healthful life of all. Now and then a storm must be braved in order to get feed to the stock but most folks prepare for such emergencies better now than they did years ago

Thrashing machines are still at work with the kafir corn. Now and then a machine stands idle for a time, waiting for several to get their topping done and ready for thrashing. As good as the weather has been, it is surprising how many there are who will find their before winter work running over into the new year.

Continued advances in the price of crude oil is putting new life into the oil industry of this state. When the oil boom was at its height a few years ago there was much buying and selling of oil leases and oil stock. Many were sheared rather close by both fake and real oil companies, as prices dropped below the point of profitable production, so it made no real difference whether the company was a fake or a legitimate concern, it proved a losing proposition just the same. There is a likelihood that the oil fields will be prosperous from this on, because of the great use of oil products, particularly gasoline and coal oil.

No one knows now whether the hog outlook is good or bad. Some believe one way and some the other. Breeding for the spring crop will be about normal around here, although reports from other sections of the southwest, where cholera has been giving some trouble, tell of a great dropping off. Some breeders are complaining of slow sales of their male stock. Much of this, we think, comes from the fear of shipping any distance by purchasers, thinking cholera may be picked up somewhere along the way.

The ground would be in ideal condition to plow if it didn't freeze just about enough each night to forbid plowing most of the next day. Now and then a warmer southwest wind than usual puts the frost to route early in the day, but the past month has been remarkable for its even temperature, no day during this time being summer-like.

The party near here who bought a gasoline tractor, grain separator and block of five plows is anxious to give the plows a good trial, but has been too busy so far thrashing with the engine to use it on the plows. At first the engine was considered a failure because it apparently would not pull the separator under the belt, but it was proven that an "overshot" feeder on the separator was the fault. With the feeder changed, the engine makes the separator hum, with power to spare. Before condemning the tractor, a steam engine was used with the separator and it was found that it could not pull the separator under belt, so a change of feeders put everything right.

A custom plowing rig will be a new venture in this part of the country, and it remains to be seen whether or not it will be a profitable one for its owner. A charge of $1.50 an acre is to be made for plowing. At this price the soil is to be turned to a depth of five inches. If the farmer wishes deeper plowing done it will be more per acre, in proportion. The owner of the rig expects to plow from fifteen to twenty acres a day. If everything runs well and he doesn't have too much breakage, the machine owner should make a little money, providing he can find work enough to do and good weather in which to do it.

It has already been proven by the thrashing done by this gasoline tractor, that gasoline is cheaper than coal for fuel. A ten-hour run was made the other day, at the cost of twenty-two gallons of gasoline, which is now fifteen cents a gallon. Coal at $4 a ton would have cost more, and the hauling of the coal would be a greater item than hauling the gasoline. The tractor also saves the job of water-hauling, which is $2.50 to $3.00 a day for the man and his team.

THE LARGEST PRODUCERS ARE MOST ECONOMICAL.

To the Editor of The Homestead:

That the largest producers are generally the most economical and profitable cows was definitely shown by the Wisconsin Dairy Cow Competition, according to a recent bulletin of the Wisconsin station. In comparing cows from the main dairy breeds for economy of production, those with the greatest capacity for food, it was found, responded most readily. This, for the most part, was independent of breed characteristics for while the Holsteins led the Guernseys and the Guernseys led the Jerseys in amount of production, pound for pound the Jerseys led the Guernseys and the Guernseys the Holsteins in economy of production, pound for pound, the more a question of the size and capacity within a breed than a question of breed size and capacity that determines the final profit.

Perhaps not more than one-third of the cows on the average farm could show as profitable results as the lowest cow entered in the competition, yet it would take at least three of the lowest cows to produce as much butter fat as did the winner. The rations fed varied widely, but on the whole they were rather heavier than are usually given dairy herds. By reducing the feed to definite units it was found that the Holsteins consumed 7,913 units, the Guuernseys 6,420, and the Jerseys 5,514. Much of this feed was purchased at high prices, a practice which most farmers cannot follow with profit, it being better on the whole to feed heavily of homegrown material and sparingly of expensive concentrates.

Using the results of the competition the authors of the bulletin recommend the adoption of a new scale of points in test of dairy cows. The proposed schedule allows twenty-five points for each pound of butter fat produced per day; one point for each ten days in milk after the first thirty days (limit ten points). Heifers under two and one half years are to receive 30 per cent additional credit on the total number of points; heifers from two and one half to three years, 24 per cent additional credit; three to three and one half years, 18 per cent; three and one half years to four years, 15 per cent; four to four and one half years, eight per cent; and under five years, five per cent. If cows producing milk of greatly varying fat contents are competing, only twenty points are to be allowed per pound of butter fat, one point per pound of milk and four points per pound of solids, not fat. On the basis of value for cheese production the points should be distributed as follows: ten points for each pound of butter fat, ten points for each pound of casein, and two points for each pound of other solids.

A comparison between brief tests and those extending over a year was also made, with the result that little difference was discovered. A seven-day or a thirty-day test may be misleading, however, in that it is possible under abnormal conditions to produce an abnormal test and show the production of an unusual quantity of milk that cannot be duplicated later.

W. A. Freehoff.

FALL WORK FOR ORCHARD SETTING.

A Kansas subscriber writes as follows:

I am planning to set out next spring an orchard of 200 trees. I am puzzled to know just what to do in getting ready for work in the spring. Right in my community there are two men who have orchards set out five years ago. Both have been cultivated in corn, and they tell me that the trees were alike when bought—came from the same bunch, same nursery. And yet, one orchard is twice as thrifty as the other.

I have asked carefully about the way of planting, and the care at both places, and the only difference I can find is this: One man dug big holes, three feet across, so he says, and did it in the fall, setting the trees the following April. The other man took his trees in the wagon, in April also, and with a gang of men dug holes just big enough to set the trees in fairly, and shoveled in the dirt. He did the whole job in a half day. Now can this difference in the way of planting have caused the difference in thrift? If so, I would like to know it. I can hardly believe it possible.

We think that our Kansas reader is very fortunate in having such an object lesson as he describes, at hand. In our judgment there is not the least doubt that the present difference in thrift results from the difference in care in preparing to plant—and the planting.

The reason is clear to one who understands the principles of tree growth. A large hole filled when the tree is set with rich top soil makes an ideal condition for root growth. The physical condition of the soil will either retard or forward root growth, as it is compact and hard, or loose, and easily penetrated.

This fact is very noticeable in all those western mountain valleys, where the present soil is the result of recent washings—comparatively speaking. In such soils where the roots penetrate easily trees make double growth, which is usual in glacial drift soils. In fact the need of a loose, porous subsoil has become so apparent, that in many northwestern localities it has been found advantageous to loosen the subsoil with dynamite. This is done by firing a cartridge in each hole prepared for a tree. An excellent rule for digging tree holes, in your section, is this: Dig them three times as big as the tree seems to require. That after filling in furnishes the loose, friable coudition which the feeble roots need—in their first efforts—to sustain and strengthen tree life.

Again, doing all this work in the fall is a distinct advantage. The dirt thrown out is pulverized by the action of frost and sun. The holes also are partially filled with snow, or rain, so that the subsoil is completely saturated, and very often in sections where the average rainfall is only twenty inches or less, the subsoil fails to get thoroughly soaked for several years at a time. This will, or may account, in part, for the success of one neighbor, and the comparative failure of the other.

The wisest thing you can do is to place yourself in line with Nature's efforts, let your plans harmonize with her work, and the results of her efforts come to you as an unearned increment. By all means, we think you have struck the right idea. Get the holes dug this fall—hiring a man by the day, not by the job. Give him a yardstick, and tell him that the holes will be measured before he gets his pay. Insist upon having them dug one-third deeper than he thinks necessary. And after making this good beginning we would be willing to gaurantee your success—if you use corresponding care in your future operations.

BIRDS NEEDED TO KILL INSECTS.

Weather conditions, parasites, fungi, insect disease and mechanically applied poisons (most of which are both dangerous and expensive) together are insufficient to check the multiplication of insects without the assistance of insectivorous birds. Edward H. Forbush records see ng a pair of grosbeaks visit their nest 450 times in eleven hours, carrying to their young two or more larvae at a time. Sparrows, chickadees, vireos, martins and warblers made from forty to sixty trips an hour to their nests with all kinds of insects for their young. One of the reports of the biological survey records the finding of sixty grasshoppers in the crop of one night hawk and five hundred mosquitoes in another; thirty-eight cutworms in the crop of a blackbird and seventy canker worms in the crop of a cedar bird. Professor Tschudi estimates that a song sparrow devours 1,500 larvae a day, and Professor Forbush says that a single yellow throated warbler will consume ten thousand tree lice a day. A scarlet tanager has been seen to devour gypsy moths at the rate of thirty-five a minute for eighteen minutes at a time. It is known that more than fifty species of birds feed upon different kinds of caterpillars, while thirty-eight species live largely upon destructive plant lice.

"By far the most efficient aids to man in controling the codling moth are the birds," says the "Year Book" (1911) of the department of agriculture. A report of the bureau of entomology says that this insect does more damage to apples and pears than all of the other insect pests combined, this damage being estimated at from 12 million to 15 million dollars a year. Thirty-six species of birds attack this insect, these species representing thirteen families, of which the three most important are the woodpeckers, the titmice and the sparrows. In some localities these birds destroy from 66 per cent to 85 per cent of the hibernating larvae of this insect.—[Review of Reviews.

While the early buyer of rams pays what appears to some a prohibitive price for sires with which to head his flocks, he also secures the "cream" of the flock from which he buys, and by careful breeding, he will be selling sires of that quality from his own flock next season at a tremendous profit.

If a little more planning of field work were done in winter, there would be less actual labor in those fields after the season's work began.

3 Minutes Sharpens Dull Ax

14 Tools in One

"It took just 3 minutes to put very dull ax in perfect order", writes J. A. Sudan, of Newark, Del. Thousands more like this. DIMO-GRIT, the new artificial diamond sharpening wheels, quickly sharpens plow points, saws, discs, sickles, ensilage knives, and all farm tools at a saving of work, time and money.

LUTHER DIMO-GRIT GRINDER

has metal frame, enclosed shaft drive, dust-proof bearings, runs easy as sewing machine, 25 times faster than grindstone, 10 times better than emery, will not draw temper. Special attachments, such as forge, milk tester, jig saw, rip saw, lathe, drill, etc., furnished if desired; fully guaranteed. Write for free book on tool grinding and liberal free trial offer.

LUTHER GRINDER MFG. CO., 407 Stroh Bldg., Milwaukee, Wis.

WE SHIP ON APPROVAL *without a cent deposit*, prepay the freight and allow **10 DAYS FREE TRIAL.**

IT ONLY COSTS one cent to learn our *unheard of prices* and *marvelous offers* on highest grade 1913 model bicycles.

$250 Motorcycle Given Away

YOU SEE in this picture a boy riding one of the $250 Excelsior Motorcycles we are giving away. In other parts of the picture are the faces of several other boys. They are hard to find, but by turning the picture about you will be able to see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send me your name and address, for I will tell you all about the contest in which you can win the seven-horsepower motorcycle and many other prizes.

1500 Votes Free I will send you a special coupon good for 1,500 votes toward the motorcycle. All you have to do to get this coupon is to send your name and address at once.

PEOPLE'S CO., - 515 Popular Building - Des Moines, Iowa

Bumper Profits from Farm Eggs.

By George H. Dacy.

OUT of every twelve eggs that leave the farm but ten are fit to be delivered to the consumer. Practically one-sixth of our annual farm egg crop goes to waste because intensive poultry management regarding the production, grading, selecting, and marketing of eggs is not practiced on the average farm of the United States. In one of our prominent grain belt states the annual loss due to poor methods of marketing farm eggs amounts to more than $1,500,000. According to investigations conducted by the United States Department of Agriculture the detrimental changes in market eggs in the central West amounts to about seventeen per cent of the entire product each year. These changes include eggs that are dirty, broken, shrunken, rotten, moldy, or that contain chicks.

Were all farm flocks well-bred, well-fed, and well-housed such losses would be impossible where the owners pursued efficient methods of selecting, packing, and marketing the eggs. It is possible to produce eggs of the highest quality only from flocks that possess health and vigor and are maintained under sanitary surroundings and fed liberal allowances of wholesome food. It is up to the individual farmer to remedy the annual losses that occur in the marketing of farm eggs. The era of bartering any sort of eggs, from dirty, broken eggs to those that are rotten, at the crossroads store for flour, calico, or sugar is about over. The period during which eggs are to be sold on the quality basis is rapidly growing up.

In the marketing as well as the production of farm eggs there are many points of management that the countryman must heed. He must remember that a number one egg must weigh two ounces or over. He should maintain only such breeds of fowl as uniformly lay eggs of a good size; all eggs of light weight should be consumed on the farm rather than sold on the market at cut prices. Similarly all abnormally or misshaped eggs should be used on the farm, as they will grade as "seconds" on the market. Only such dual-purpose breeds of fowls as the Plymouth Rocks, Wyandottes, Orpingtons and Rhode Island Reds are adapted to general farm conditions and are capable of yielding desirable eggs as well as a good quality of meat.

About five per cent of all the farm eggs marketed have to be discarded because they are dirty, being stained, smeared, muddy, or covered with filth. This difficulty could be easily remedied were sufficient nests per farm flock maintained and were sanitary measures practiced in the poultry house and yard. One clean nest should be provided for every four or five fowls; the eggs should be gathered once or twice a day; eggs to be marketed should never be washed nor should they be packed in bran as this material sticks to the shells and causes them to be classed with the "dirties." Eggs should be marketed packed in cartons and cases only. About eight per cent of the eggs are broken in their trip from the producer to the consumer. By feeding a ration that contains plenty of shell-making material and by carefully packing market eggs in cases and cartoons this loss can be controlled.

Annually in the United States about $15,000,000 worth of market eggs are wasted, due to the growth of chicks in the fertile eggs. Eggs should be gathered often and kept in a cool, dry place until the first opportunity for marketing them. Every effort should be exerted on the farm to produce edible eggs that will be wholly dependable for use on the consumer's table. Shrunken eggs may be detected by "candling" or by gently shaking the egg while holding it to the ear. When the gurgle of the contents is very distinct, the egg is questionable. During the summer months eggs should be treated about the same as milk and cream and should be marketed daily if possible. The common practice of holding eggs for a higher market price in the fall of the year results in poor quality and a serious loss instead of gain. Eggs should always be marketed as soon as possible after being gathered.

A prominent egg authority recently said: "Rotten eggs are those which you would not eat under any circumstances. Moisture is the main cause of rotten eggs, as it weakens the shell and membranes, allowing bacteria to enter, whereupon the contents begin to decay. Nests on the ground or in wet straw, together with damp cellars and moist fillers in egg cases are mainly responsible for this condition. A fresh egg will readily absorb odors and will become tainted. Eggs should never be stored in musty cellars or in rooms with fruits, vegetables, or fish. The flock should never be allowed to drink filthy water; it should never be fed strong flavored grains or musty vegetables as onions and garlic, nor given access to decaying meats or substances that will flavor the product and impair its quality.

It is of maximum importance that the farmer utilize eggs on his home table that are in good condition as regards their suitability for human food but do not satisfy market requirements as to size, cleanliness, condition of the shell, and general uniformity of quality. In this way he is able to realize top price from the uniform quality eggs that he markets and he in no case receives cut prices on account of his eggs not satisfying all the market standards. The average egg consumer soon learns that the best is the cheapest in the long run and in consequence he buys only eggs of first class quality. The majority of the "seconds" are sold to restaurants, hotels, and bakeries.

The farm egg problem has been accorded special attention and investigation in Minnesota. Formerly the quality of the eggs marketed from the Gopher state farms was decidedly inferior and the state agricultural college began preaching the doctrine of selling eggs on the quality basis through the medium of co-operative marketing associations. After some test of the proposed methods of co-operative egg marketing the plan of selling the eggs through the local creameries and cheese factories was tried out. The factory method of co-operative marketing was particularly successful as the farmers were able to, daily or twice or thrice a week, bring in their eggs with their milk or cream. In some sections where cream gatheres were sent out by the factories these men also collected the farm eggs and in this way saved the countrymen needless trips to town.

One can best explain how one of these creameries handles the egg marketing proposition by referring to a concrete example of a factory engaged in this work. Such a creamery is located at Barnum, Minnesota, and it has two hundred patrons who daily bring in their eggs with their whole milk which they sell to the factory. All eggs are accepted at the factory that grade to standard, and any farmer may market his eggs at the creamery. One countryman finds that it pays him to drive fourteen miles in order to market his eggs at this factory. The farmer patrons agree to deliver eggs at the factory that are not over eight days old, the eggs to be gathered on each farm twice daily and those that are marketed to be of uniform size. They must be clean and must be stored in a cool, dry cellar. The brown eggs are to be packed in one carton, the white ones in another and each carton must be labeled. The factory supplies each patron with a rubber stamp so that he can stamp each egg with a serial number of his farm and the name of the creamery company through which he markets his eggs. This permits of readily tracing bad eggs to their producer. Any farmer who offends in this respect forfeits his right to longer market his eggs through the creamery.

Each farmer agrees to sell none of the eggs stamped with the creamery company's trade mark to any one but the creamery mentioned while he promises to return all the supplies such as stamps and cartons furnished to him by the creamery to this concern on the termination of his contract and patronage of the concern. The purpose of the creamery egg marketing plan is to place on the consuming market eggs of uniformity, that are clean, dependable, and strictly fresh. The brown eggs are separated from the white ones in order to promote uniformity and greater attractiveness of appearance and to encourage the maintenance of breeds of hens that lay none but white eggs as during the spring months the creamery pays a one cent premium per dozen for white eggs.

The creamery company supplies each patron with cartons as he needs them. These cartons feature the written guarantee of the company that the eggs are strictly fresh and all consumers that discover any inferior eggs under the creamery label are requested to report these cases giving the number found on the bad egg, so that it may be traced back to the farm that produced it. At this factory the cost of handling the eggs including the cost of the cartons is one cent per dozen. The eggs are shipped to a Duluth grocery firm which sells them to the consuming public. The excellent quality and uniformity of these eggs have developed a large patronage and consumers travel from the most distant part of the city in order to purchase these high quality eggs. During the last two years only two complaints have been registered at the creamery as to the quality of the eggs. An excellent reputation has been established for these eggs that are sold under brand. In fact the success of this creamery in the way of co-operative egg marketing has led twenty other creameries and egg associations in Minnesota to successfully institute and practice the same plan.

This plan of co-operative egg marketing possesses several advantages in so far as it increases the farm price that is paid for the eggs. The egg gatherer or the creameryman examines the eggs brought in by each patron and if they are up to requirements he immediately gives the farmer a check in payment for the eggs. Furthermore the plan compels the farmer to market eggs of improved quality that correspond to a uniform standard. A higher price is paid for the eggs as they are marketed directly with the consumer and sold under the brand of creamery. One of the most valuable features of this work has been that it has demonstrated to the farmers the profitable possibilities of hen farming as a sideline. It has induced the countrymen to practice approved methods of flock husbandry.

The general price received for eggs at the Barnum Creamery has been two to three cents a dozen above the general market price during the springtime when the supply of eggs was plentiful. During the winter when eggs were scarce as high as ten cents a dozen above the market quotation has been paid for the eggs marketed in this co-operative fashion with special trade. It is interesting to note that during the month of December of a recent year this creamery disposed of eight hundred and ten dozen farm eggs at forty cents a dozen. At the same time the price that was being paid for farm eggs at a neighboring grocery store was twenty-five cents a dozen. This indicates that through the medium of co-operative marketing farm eggs through the creamery these Minnesota farmers were able to realize fifteen cents more per dozen on their eggs. During this same year the average price per dozen paid by eggs at the creamery by months was: January 35.6 cents, February 25.9 cents, March 19 cents, April 18.2 cents, May 19.8 cents, June 20 cents, July 22.7 cents, August 24.5 cents, September 25.1 cent, October 27 cents, November 37.4 cents.

It is also worthy of note that the egg surplus of the Barnum community has immeasurably increased as a result of the efficient institution of an A Number 1 system of co-operative marketing. During the year preceding the establishment of the co-operative system only about enough farm eggs were marketed at the local grocery stores to satisfy the home demand. During that year only four hundred and fifty dozen eggs were shipped from the town. During the first year that the creamery handled eggs over $4,000 worth of eggs were sold to city consumers. There is no reason why Wisconsin farmers could not be reaping similar returns from their farm egg crop. Conditions in Wisconsin are quite similar to those that obtain in Minnesota. Numerous creameries and whole milk factories throughout the state provide excellent mediums for the marketing of the egg crop. The consuming public is willing and eager to pay an advanced price for guaranteed, fresh eggs. The average farmer can easily manage his flock so as to produce a quantity of eggs that will satisfy the requirements outlined under the Minnesota system. All that the proposition needs is a few courageous spirits to start the ball a rolling. The supply of eggs can be easily produced; the demand and market for the eggs is at hand. Wisconsin farmers, why do you not avail yourself of this splendid opportunity to increase the income from your farm flocks?

Just try giving one hundred laying hens as much care as you do some farm animal worth no more than the hens, and you will realize the immense profits to be derived from poultrying.

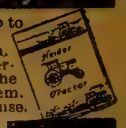
Never throw any grain on the open ground for the poultry, as they will get it with too little effort and eat it too fast. Give them their grain in the scratching shed, scattering it in about six inches of clean straw or hay, and see them work for it.

What earthly excuse is there for allowing the hog troughs to become so much more filthy during the winter than in summer? It must be simply another case of pure laziness, the frozen dirt, cobs and manure being more difficult to remove than in warmer weather.

The writer carefully brushes the cow's flanks, teats and udders well before beginning to milk, which prevents the dust, hair and other substances from dropping into the bucket when one starts to working the teats and udder in milking.

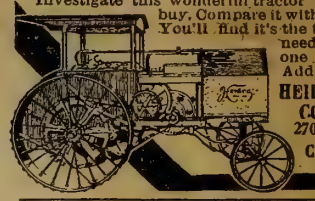
Toss several small, smooth rocks, cobs and sticks into the trough of the animal that eats too rapidly, so he will have to push these articles around and be slower in securing a mouthful of feed.

Heider Tractor
Makes Good on Every Farm



It's low in price, easy and cheap to operate. Built to last and has enough power to operate anything on the farm. It's the most perfect one man, all purpose tractor on the market. It's the right solution of your farming problem. It saves 50% of your farming expense.

Write for Free Catalog.



Investigate this wonderful tractor before you buy. Compare it with any other. You'll find it's the tractor you need and the one you want. Address

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

The coming of the new year invites thoughts on the subject of seeds for the approaching season. The advertisement of Sterling seeds on page 15 is a suggestive one and one which will bear the closest consideration by those who are obliged to make seed purchases soon. The big 1913 catalog contains 144 pages of illustrations and descriptions of seeds adapted to the use of our readers. It may be had without cost. Address Northrup, King & Co., Minneapolis, Minn.

M. A. McWilliams, Wall Lake, Iowa, is offering Scotch and Scotch-topped bulls for sale at reasonable prices in his advertisement appearing on page 41 of this issue.

If in the market for good Galloway cattle inspect the herd of James P. Milliken, Media, Ill. Some very desirable rugged young bulls are for sale at farmers' prices. See the advertisement on page 44.

Important information concerning the Belle City incubator is given in the advertisement on page 22. Other facts of value to buyers may be obtained by writing to Belle City Incubator Company, Box 52, Racine, Wis.

Thomas F. Kennedy, Boone, Iowa, has two Shire mares, one eight years old and the other coming three, which he is offering for sale at very reasonable prices in his advertisement that appears on page 45 of this issue.

J. T. Swearingen & Sons, Hedrick, Iowa, have four Short-horn bulls fifteen months old that they are offering for sale in their advertisement on page 44 of this issue. These bulls are reds and roans, good ones and grandsons of Cumberland's Last.

Immunized Hampshire swine are for sale by J. Crouch & Son, La Fayette, Ind. General Allen, grand champion of the 1911 International Live Stock Exposition, heads the herd, and they have nearly 200 head from which to make selections. See page 44.

One of the leading arguments presented by the Rayo incubator advertised on page 22 is that an entire successful hatch may be had by one filling of the lamp. Read the advertisement and send for catalog No. 11. Address Rayo Incubator Company, 942 So. 13th St., Omaha, Neb.

Miller of Rockford starts a new advertisement of his incubator on page 22. Freight on this incubator is prepaid. An absolute guarantee is made and other important features described in a big illustrated free poultry book. Write for it to J. W. Miller Company, Box 305, Rockford, Ill.

John E. Griffith, Washington, Iowa, has a bunch of good Aberdeen Angus bulls for sale and he can please the bull buyer, both in quality and price. Mr. Griffith is a high-class gentleman and a man in whom you can place confidence. See page 44 and write him, mentioning The Homestead.

The famous Brookmont Farms, Odebolt, Iowa, have about thirty-five choice young Hereford bulls for sale. These are well bred and are good individuals. They do not want to carry them over and consequently will price them right if taken soon. Kindly mention The Homestead when writing.

Preparation for farm work involves the consideration of the harness equipment for all kinds of work. Those who need harness should not make their selections before having obtained the descriptive catalog of the Western Harness & Supply Co., 613 Main St., Waterloo, Iowa, an advertisement of which will be found on page 18.

The Northern Light Milling Company, Owatonna, Minn., advertise Northern Light self-rising buckwheat flour on page 33. Our readers who wish to give this flour a trial may obtain a twenty-five cent package of it without cost by filling out the coupon in the advertisement and forwarding it to the Northern Light Milling Co., Owatonna, Minn.

The simplicity hatcher advertised on page 22 differs from most others from the fact that it is made of metal which gives it several important advantages over its competitors. Complete information with reference to these advantages may be obtained from circular for which address Indianapolis Corrugating Co., 1020 Drover St., Indianapolis, Ind.

The date of the Short-horn sale of A. J. Ryden, Abingdon, Ill.; Chas. T. Nelson, Blandinsville, Ill., and H. G. Bowers, Elmwood, Ill., has been changed from March 11th to March 25th. The sale will be held at the stock yards, Galesburg, Ill., and the day following, March 26th, Rigg & Glasgow, Mt. Sterling, Ill., will hold a sale of Short-horns at the same place.

James P. Milliken, Media, Ill., breeder of Galloway cattle, in remitting for advertising already done, writes: "My cattle are doing fine. I have the best lot of young bulls for sale that I have ever bred. I also have a fine herd bull, Netty's Follower (30286), that I can dispense with and also some fine females." See Mr. Milliken's advertisement on page 44 of this issue.

On page 10 the Richards-Wilcox Mfg. Co. invite the attention of our readers to their tubular steel frame grindstones. The frame of this stone is absolutely indestructible and the general construction such as to make the running of the grindstone a pleasure rather than a burden. Send for illustrated circulars. Address Richards-Wilcox Mfg. Co., 133 3d St., Aurora, Ill.

A number of very fine Chester White boars of April and May farrow for sale from the well-known herds of Vanderslice Bros., Cheney, Neb., should meet with ready sale. These gentlemen have sold an extra big crop of early boars and these later ones are just as choice. They are naming prices that should move them, and our readers that are interested should write at once. They also have a couple of early boars that they have used a little that they will sell very low. A great many of these boars are sired by the great breeder, All O. K., generally recognized as one of the great ones of the breed. Mention this paper and write for full particulars at once. See advertisement on page 43.

The manufacturers of Twenty-Mule Team borax advertised on page 33 insist that that preparation can be used in a hundred ways in any farm home. It is sold by dealers.

M. B. Weir, Grant, Iowa, is offering one June-bred coming two-year-old Jersey bull for sale in his advertisement on page 41 of this issue. This animal is not registered and the first $50 will get him.

The Queen incubator, advertised on page 22, claims twenty-eight points of superiority over others. It might be well to obtain the book which enumerates these points. It is free. Write to P. M. Wickstrum, Box 10, Lincoln, Neb.

The Progressive Incubator Company, Box 127, Racine, Wis., whose advertisement appears on page 22, have a lot of important information for our readers which they give in a big free book which may be secured by writing to the address named.

The new Mankato incubator, advertised on page 23, is sold at the remarkably low price of $4.95. Better learn all about this before making the purchase. Poultry catalog tells all about it. Address Mankato Incubator Company, Box 827, Mankato, Minn.

Farmers who contemplate the purchase of silos would do well to investigate the hinge door and Lansing silos advertised on page 21. These silos are well made and have improvements and conveniences not found in others. For information write to Woods Bros. Silo & Mfg. Co., Lincoln, Neb.

The kodak advertised on page 32 of this paper is one of the very latest and most highly improved picture taking machines. It is sold at the low price of $6. Catalogs giving full descriptions of this and other styles may be obtained by writing to Eastman Kodak Company, 392 State St., Rochester, N. Y.

In an advertisement on page 14 the Griswold Seed Company make an announcement with reference to sweet clover to which they invite the attention of our readers. They advise the use of sweet clover for the reinvigoration of worn out or sandy soil. They have seed for sale. Send for catalog. Address Griswold Seed Company, 191 So. 10th St., Lincoln, Neb.

Wm. Lentz, Ankeny, Iowa, claims February 26th as the date of his annual brood sow sale. Mr. Lentz has a lot of Poland Chinas on hand which are just about the right type and that have size enough, quality enough and finish enough for good breeders. He has just acquired a good Mouw-bred boar that he calls just his type and that will add interest to his sale.

It is not always the lowest-priced goods that are most effective. It is a fact when a purchaser pays a reasonable price he is more apt to be satisfied with his purchase. This applies particularly to the case of flour, where if the quality is good, the results are satisfactory. In the matter of flour, we must refer our readers to the advertisement of the Occident on page 30. It is made by the Russell Miller Milling Company, Minneapolis, Minn.

G. H. Burge, Mount Vernon, Iowa, writes that he has an extra lot of well-bred Short-horn bulls for sale. In fact he has never had their equal as individuals but once since he has been breeding Short-horns. Anyone wanting a herd header would do well to see these bulls before buying. Mr. Burge believes that he can suit the most exacting. His advertisement appears on page 41.

J. B. Heisel, Grinnell, Iowa, informs us he is sold out of boars except his two herd boars, Ex Wonder by Big Ex, and Iowa's Banker, a fall yearling. These he will sell after January 1st. They are good breeders and sires of big, even litters. Both are large, smooth hogs and will be sold reasonable considering their quality. Write for prices, mentioning The Homestead. See page 42.

A book which has been published for the express purpose of giving information on the subject of profitable hog feeding is described in the advertisement of Darling & Co. on page 13. A copy of it may be procured free and at the same time a circular giving complete information with reference to the value as a hog feed of Darling's digester tankage. Write for it today. Address Darling & Co., 4307 Ashland Ave., Chicago, Ill.

In an advertisement on page 38 the Feeders' Supply Company offer cottonseed meal and cake for sale. This firm make a specialty of dealing in cottonseed products and they have information of value to cattle feeders. Cottonseed meal properly fed is a most excellent ration for fattening steers. Full information concerning it together with prices may be obtained by writing to Feeders' Supply Company, Live Stock Exchange, Kansas City, Mo.

Herman Kuhl, Florence, Neb., writes us as follows: "Just a few lines to let you know that everything is coming along fine for my February 13th Poland China bred sow. Things have changed considerably since I saw Mr. White, as a change of location makes it necessary for me to close out my entire herd, including my great show and breeding boar, Big Tom, and also L.'s Quality, the $255 Blue Valley Quality boar. Everything I could I bred to Big Tom and the Big Tom stuff is bred to L.'s Quality and Big Omaha, the latter by Big Victor and out of Olin's Choice. In a year or so, as soon as I can get things straightened out on my new place, I expect to go right on again. I will sell about fifty head

of sows, and among them are as good sows and gilts as ever went through a sale ring."

Those who are adapted to the work find onion raising to be one of the most profitable branches of farm work. Of course the first essential is that good seed be procured. In the advertisement on page 14 the Henry Field Seed Company offer to send free sample of onion seeds to any reader of this paper. Send requests to Henry Field Seed Company, Box 25, Shenandoah, Iowa.

The advertisement of the Sure Hatch Incubator Company makes its appearance on page 22. The Sure Hatch people have reprinted a government bulletin on poultry which is of intense value to every farmer. This book may be had for twenty cents as noted in the advertisement. Big free catalog on the incubator may be had by writing to Sure Hatch Incubator Company, Box 16, Fremont, Neb.

The Des Moines Incubator Company, whose advertisement appears on page 22, give valuable assistance to patrons by furnishing free lessons in poultry raising. These lessons are valuable, enabling the farmer to make more money from his poultry. At the same time you obtain catalog and prices of Des Moines incubators. Address Des Moines Incubator Company, 50 Second St., Des Moines, Iowa.

The Dr. Hess stock tonic advertised on page 11 has valuable properties based on the results of medical experimentation which render it of greatest importance in promoting and maintaining thrift of cattle. The prospective prices of cattle justify care in their maintenance. Read the advertisement of the Dr. Hess stock tonic and for further information write to Dr. Hess & Clark, Ashland, Ohio.

In the matter of low cost coupled with durability and effectiveness, the claims of the Genasco ready roofing advertised on page 29 are not to be overlooked. Trinidad Lake asphalt, one of the greatest and most successful water proofers, is the proper element in this roofing. For prices or descriptions write to Barber Asphalt Company, Philadelphia, Pa., or either of the addresses named in the advertisement.

The Chicago House Wrecking Company again come to the front with a lot of extraordinary announcements in a big advertisement on page 48. They have quantities of roofing, fencing, lumber and other materials constantly in use on the farm that they are selling at bargain prices. Read the advertisement and send for catalogs referring to the materials you want. All are free. Address Chicago House Wrecking Comapny, Dept. AB 39, Chicago, Ill.

Some splendid big-type Poland China sows are advertised for sale by Wigstone Bros., Stanton, Iowa, on page 42. These gentlemen will not make a public sale this winter and they are offering their surplus at private treaty. Inasmuch as their herd has been one of the most prominent winners at the Iowa State Fair the past two years you can assume they have some good sows to offer. If you order right away you can get their very best. Kindly mention this paper when writing them.

An important hint to the farm dairyman is contained in the advertisement of the Indiana silo on page 20. This is that good butter is largely the result of proper feed and that the silo makes it possible to produce such feed all the year round. This hint is only one of hundreds contained in the free catalog and silo profit book published by the Indiana Silo Company. Send request for it to Indiana Silo Company, 321 Indiana Bldg., Des Moines, Iowa, or either of the addresses named in the advertisement.

Notwithstanding the increased interest in the subject of silos, the fact remains that only a small percentage of the more advanced farmers have as yet availed themselves of the advantages of this method of storing feed. Perhaps the condition exists because of lack of knowledge of the importance of the silos and silage in economical feeding. Our readers who are interested should obtain a copy of the 240-page book, "Modern Silage Methods," which is mentioned in the advertisement of the Silver Mfg. Co., Salem, Ohio. Ten cents in stamps accompanying a request addressed as above will secure it. See page 21.

In some respects a horse resembles a man to a remarkable degree. If he is in good condition and physically right, he is apt to feel like doing a good day's work and to do it well. The presence of galls, collar sores, bruises, strained ligaments or wire cuts detract from his working value. As a means of disposing of these difficulties, Absorbine which is advertised on page 26 has proven remarkably successful. As noted in the advertisement, it is sold by druggists at $2 per bottle and it may be had from the manufacturers at the same price. Horse book A1 containing descriptions of the diseases to which horses are subject may be had free by sending a request to W. F. Young, P. D. F., 391 Temple St., Springfield, Mass.

The economy of product that may be obtained by a concentration of manufacturing interests is illustrated in the advertisement of the Rock Island Plow Company on page 20 of this paper. The immense equipment of the Rock Inland Plow Company has been turned into new directions and one of the products is the Great Western cream separator illustrated in the advertisement. It is sold at a remarkably low price and has all the advantages of any other separator. A book which tells all about the Great Western and also shows how a farmer may gain from $5 to $15 on the product of each cow per year can be obtained without cost. Address Rock Island Plow Company, 1838 Second Avenue, Rock Island, Ill.

M. C. Cramer & Son, Monroe, Iowa, are prepared to furnish good early gilts of the big-type Durocs from the most popular breeding. These gilts have a great deal of size and bone. Something of the value of this herd may be judged from the fact that twenty-eight head sold at the state fair at an average of $147. They also have a number of August and September pigs, either sex, not akin, that are large and smooth and must suit the buyer, priced at $15 and $20. See advertisement on page 42.

It is the conviction of this paper that ultimately electric lights will be considered as a necessity on every farm. The low price at which they may be obtained and the insignificant cost of maintenance are worth investigation. We invite our readers to read the advertisement headed "City Lights on the Farm" which appears on page 30. Full details of information concerning the cost of farm plants may be had by writing to the Wood & Spencer Engineering Co., 5612 Euclid Ave., Cleveland, Ohio.

Taylor & Jones, Williamsville, Ill., write: "A few days ago Professor Edmonds, of the Illinois State University, came here and selected for use in the college there a very high-class imported Percheron stallion. We have also sold to our long-time customer, C. G. Decker, Champaign county, Illinois, another imported stallion. We have been selling Mr. Decker his stallions for several years and he is buying better ones each time. We predict for this horse a big season's business, for he is the type that people in that section will admire. We have many more of the high-class type and we will appreciate a visit from prospective buyers of any of the draft breeds." See advertisement on page 47.

On page 41 of this issue will be found the advertisement of Henry Schehl & Sons, Prophetstown, Ill., offering some extra choice Chester White gilts for sale. They write: "These gilts are the best we ever raised, long body, good bone, strong back, good enough to go in any breeder's or farmer's hands. We never pamper them, so that they go backward when you buy them. We always try and satisfy our customers. For the last three years we have sold a lot of our stock through The Homestead and must say that the paper has heard very little complaint. On our part we always tell the facts and never overrate our stock. Our hogs are in the best of health and always have been. We can supply anybody looking for the kind that are bred right and fed right."

CAKE SACKS CAKE

WE sell you our choice Equity brand cottonseed meal and cake, cold pressed cake, at lowest prices. We buy your empty sacks at highest cash prices. We handle all feeds for the feeder. Address
FEEDERS SUPPLY CO., - LIVE STOCK EXCHANGE, KANSAS CITY, MO.

CAKE——CAKE——CAKE

WRITE OR WIRE for delivery price. All Choice Cottonseed Products. Get sample of our Pea Size Cake, suitable for Sheep or Young Cattle. Address
HENSON COTTON OIL MILLS, - 610-11 Live Stock Exchange, Kansas City, Mo.

NEXT WEEK'S SALE PROGRAM

Tuesday, January 7 — Duroc Jerseys, F. Bieth & Son, Joliet, Ill.
Short-horns, Walpole Bros., Rock Valley, Iowa.

Thursday, January 9 — Duroc Jerseys, A. J. Russell, Crab Orchard, Neb.
Poland Chinas, Ben. M. Bell, Beattie, Kansas.

On this page our readers will find the announcement of the Henson Cottonseed Oil Mills which will be of interest to cattle feeders. These mills furnish cottonseed meal and cake of their own manufacture. Their goods are recognized as standard throughout the middle West, as well as many foreign countries. They are now making it a feature of selling to farmers in carload lots. Read the advertisement and for prices address Henson Cottonseed Oil Mills, Live Stock Exchange, Kansas City, Mo.

We are glad to call the attention of our readers to the big advertisement of Montgomery Ward & Co. on page 31 of this paper. A new mammoth catalog for 1913 is now ready for distribution. It describes and illustrates a world of goods suited to the use of farmers which are sold at prices which make each one of them a bargain. Copy of this catalog may be obtained without cost by filling out the coupon in the advertisement and forwarding to Montgomery Ward & Co., Dept. K-17, Chicago, Ill.

J. M. Peery, Alvord, Iowa, will hold his annual Poland China bred sow sale on Friday, February 14, 1913. He has a string of sows carrying the popular big breeding and possessing individual excellence that merits attention from breeders of the best of this breed. An illustration of his old herd boar, Peery's Long Orange by Big Orange, out of Long Kit by Beauty's Jumbo, appears on page 26 this week. This boar has stretch, bone and good feet and has always sired those characters in his get. Watch for further announcements of this sale in later issues of The Homestead.

A good many years ago when the corn planter was looked upon as being still in the experimental stage, the Hayes planter, advertised on page 10, stood as a sample of what the good planter should do. Of course, it has been improved since that, and today it is just as near perfection as any corn planter can be. It never misses a hill, it covers perfectly, plants at any depth and in just that manner which insures growth if conditions be favorable. It is also provided with attachments for planting fertilizer and cow peas. The manufacturers invite a full investigation of the merits of the Hayes. They will be glad to send their booklet P to any reader of this paper. Address Hayes Pump and Planter Company, Galva, Ill.

We again direct the attention of our readers to the announcement of Prof. Jesse Beery on page 8. The advertisement contains illustrations which are right to the point in showing the disastrous effects of permitting the use of vicious or incontrollable horses. Professor Beery has acquired the reputation of being able to train the most vicious horses. He not only possesses this faculty, but he is also able to instruct others as to his methods in such manner as to make them highly successful. Read the advertisement carefully and write for further particulars to Prof. Jesse Beery, Box 54, Pleasantville, Ohio.

O. S. West, of West & Henderson, Paullina, Iowa, writes that they are sold out of boars except one of that good December litter which was used for service in the herd. This pig will not be sold unless the intending buyer sees him. Mr. West has been intimately acquainted with the ancestry of this pig for the past twenty-five years and says he carries the leading prize-winning strains of that period throughout his pedigree. The foundations of his breeding were all state fair champions. Mr. West has over ninety sows bred, the larger portion being matured stock and the known blood lines they carry, mated almost entirely with boars of proven qualities, should produce some good pigs for next season.

The Ford Stock Farm.

The new advertisement of the Ford Stock Farm appears on page 45. This farm has a method of its own relative to the sale of imported draft horses of the Percheron and Belgian breeds and prospective buyers are invited to learn the particulars either by correspondence or by personal visits to the farm. The animals offered for sale were selected in person by Frank Ford, a London horse buyer, having a most extended experience and a wide knowledge of the countries in which these horses are produced. A handsome illustrated circular giving many details may be had by writing to Ford & Harrington, Parker, S. D.

B. B.'s Wonder for Sale.

On page 42 Ben Broughton, Lake View, Iowa, is offering a splendid Poland China herd boar for sale in B. B.'s Wonder. He is a grandson of old A Wonder and is a splendid breeder. He wants to sell him and will price him right. He is a good hog and is all right in every way. Write Mr. Broughton about him at once or go and see him.

A Chester White of Merit.

The engraving of the Chester White, Longfellow, which appears on page 43 in this paper, is the artist's representation of the Chester White hog now standing at the head of the herd of Earl Bloom, Bridgewater, Iowa. Longfellow has an excellent record as a champion at prominent shows. A number of the gilts offered for sale by Mr. Bloom have been bred to him. They also are of prize-winning strains of blood. For prices, write to Earl Bloom, Bridgewater, Iowa.

Leitch & Sons' New Clydesdale Importation.

John Leitch & Sons, the well-known Clydesdale importers and breeders at La Fayette, Ill., write: "We have received our new importation of Clydesdales and we think that we are safe in saying it is one of the best importations that has come to the United States in recent years. The stallions are all big, weighty fellows, possessing the bone and Clydesdale character. In age they range from two years up. The mares are also a choice lot, several of them prize winners in Scotland. This importation, added to what we had on hand, will give us without a doubt the largest and choicest collection of Clydesdales in the United States to pick from. We can safely say that we have on hand more big, weighty ton stallions than all our competitors combined. And our mares all reach the same standard. Sales continue good with us. We have just sold to the Ville Ridge Clydesdale Horse Co. a grand Clydesdale stallion, one of the best that ever stepped in Pulaski county. We also sold to Fred Meints, Danforth, Ill., a great Hackney stallion, a state fair winner and a son of the champion, Copper King. We wish to inform buyers that we have on hand the greatest collection of Clydesdales to be found anywhere and we are quoting them at the lowest possible prices. Parties on the market will do well by writing us for prices and terms." See advertisement on page 45.

YORKSHIRE SWINE.

LARGE YORKSHIRES

30 HEAD of pigs of 1912 farrow, all ages, either sex, not akin, $8 up. Service boars. Sows and gilts, bred or open. W. C. Cook, R. 42, Ada, Mich.

Mickle's Offer Still Good.

H. B. Mickle, president of the H. B. Mickle Fur Coat & Robe Co., 531 W. 7th St., Mason City, Iowa, is still advertising, as our readers will note by referring on page 16, to give a $3 pair of gloves or mittens free with each horse, cow, steer or bull hide which is sent him and ordered made into a coat or robe.

Fortunes in Fruit.

A great deal of money has been made in California by raising fruit. One of the best sections is the Santa Clara valley. E. D. Crawford & Company, 742 Market Street, San Francisco, have considerable land for sale in this valley. Literature and price lists can be gotten promptly by addressing them. See advertisement on page 29.

One Hundred Evergreens for $7.50.

Mr. Earl Ferris, proprietor of the Earl Ferris Nursery, Hampton, Iowa, again offers to ship, express prepaid, 100 twice transplanted and twice root-pruned evergreen trees for the small sum of $7.50. It is a very liberal offer and many of our readers in the past few years who have taken advantage of it have been well satisfied. See advertisement on page 15.

Moats' Duroc Jersey Sale.

M. S. Moats & Sons, Missouri Valley, Iowa, announce a public sale of Duroc Jersey bred sows to take place at their farm on January 11th as per advertisement on page 41. They are offering an excellent consignment of sows and gilts, fifty head in all, most of which are daughters of or bred to King the Col., their well-known herd boar. These sows are good ones, with quality, size and finish. They are bred for early litters.

Closing Out Poland China Boars.

Those of our readers who want a good boar will be able to buy a good one from James Cockerton, Whiting, Iowa. He has about ten for sale and they are sired by Big Wonder and Orange Jumbo. These are of the big-type, quality kind and they are well worth the price he is asking for them. They go at $25 and $30 if ordered soon and you can rely on his sending you a good one. When writing him kindly mention The Homestead. See page 42.

Bellows Bros. Sell Short-horns June 10th.

Bellows Bros., Maryville, Mo., will hold their annual sale of Short-horn cattle on June 10th and are prepared to offer breeders and those founding herds a great string of breeding cattle. Good Choice and Diamond Goods, their senior herd bulls, will be represented in the sale by several choice sons and daughters and a fine string of valuable breeding matrons in calf to them. Watch for future announcements and remember that the Bellows Bros. invite all lovers of good cattle to be their guests on June 10, 1913.

Freed's Duroc Jersey Sale.

We are pleased to call the attention of our readers to the sale announcement of S. P. Freed, Ames, Iowa, on page 41. Mr. Freed is this year offering a consignment of Duroc Jersey sows and gilts that are a little more valuable than any he has before driven into the sale. This is saying a good deal when it is remembered that on former occasions Mr. Freed has distributed among his patrons a good many brood sows and scarcely one of them has failed to be a good producer and a profitable investment for the buyer. This year there is an excellent proportion of tried brood sows and fall yearlings. Some of these are by Crimson Wonder 3d, B. & C.'s Col., Manley Orion, Model Chief To Be and Young Rupert. All these have been bred to Freed's Col., the grand champion Iowa State Fair winner that has developed into an animal of considerable size and extraordinary merit. There will also go into the sale five tried sows, four fall yearlings and a number of gilts, daughters of Freed's Col., and these will have been bred to Wonderful Crimson Again. The Freed's Col. sows are good ones with attractive form, finish and real breed merit. All of them have size enough. In later issues of this paper additional information will be given. In the meantime we wish to assure our readers that no more desirable Duroc Jerseys will go into any sale this year. They have been fed in a good, practical, common sense way on oats, wheat, shorts and oil meal. They have run on pasture all of the time and have plenty of exercise and as a result they are in perfect breeding form, thrifty and absolutely good health. The sale will be

held Monday, January 20th. For catalogs address S. P. Freed, Ames, Iowa.

Heavy Corn Hard on Mills.

The heavy corn raised this year is a severe test of grinding mills. The lighter mills are in some cases not standing up under the work. One mill that seems to be giving general satisfaction is the heavy Mogul Four Burr manufactured by the Bovee Grinder & Furnace Works, 100 8th St., Waterloo, Iowa. This mill is made in two sizes, one size handling twenty to fifty bushels per hour, operated by two horses, while another handles from forty to eighty and is operated by four horses. Prices and more particulars can be secured by looking up the advertisement on page 10.

Woulf's Sale of Percherons and Belgians.

Fifty head of imported Percheron and Belgian stallions and mares will be offered at public sale at Streator, Ill., Tuesday, January 14th, by Thomas and James Woulf. These horses are all good young ages, yearlings to four year olds, all acclimated and a strong, rugged lot of horses. The Belgian mares are all bred to the champion stallion, Mayor d' Hoorebeke, and the Percheron mares were all served in France by government-approved sires. The sale will be held on the farm, eight miles from Streator, which is on five lines of railroad, and four miles north of Blackstone on the C. & A. and four miles from Ransom on the Santa Fe. Look up the advertisement on page 41 and write for particulars to Thos. and James Woulf, Streator, Ill., mentioning The Homestead when you write.

Breeders' Horse Sale Will be January 22d and 23d.

The breeders' sale of Percheron, Belgian and other draft horses that will be held in Lincoln, Neb., on January 22d and 23d, is under the management of the well-known horsemen, C. F. Way, Lincoln, Neb., and H. K. Frantz, Havelock, Neb., and will be made up of a lot of choice horses, most of which have been personally inspected by these gentlemen and are consigned by many of the best breeders in Nebraska. The writer recently saw a part of the offering and it was made up of some of the best Percheron and Belgian mares that we have seen go in a Nebraska sale in the past few years. The dates formerly held for this sale were January 15th and 16th, but the dates that have now been decided upon are January 22d and 23d. Keep the date in mind and address either of the above named men for catalogs. When writing kindly mention The Homestead.

Walker & Son's Great Poland China Sale.

One of the great Poland China sales that will be made this winter will be made by Thos. F. Walker & Son, Alexandria, Neb., the sale to be held at Fairbury, Neb., on February 15th. In this sale will be offered some of the greatest sows ever bred by these well-known Poland China breeders. Many of the get of the famous Blue Valley will be listed, and most of these will be bred to a corking son of Big Orange. He is called Blue Valley Orange and that cross certainly should make good. Others that are the get of Mouw's Longfellow will be bred to Blue Valley. This cross is no experiment. Instead, it has been the one that produced some of the very best that this herd has raised for some time. Keep this great sale in mind and send for a catalog if your name is not already on the list, for Walker & Son do not want to miss anyone this year. Watch this paper for further announcements.

Walpole's Great Short-horn Offering.

The sale of Walpole Bros.' Short-horns, at Rock Valley, Iowa, on Wednesday, January 8th, is one of the best offerings of Scotch cattle these people have put out for several seasons. The lines of Scotch blood included are of the best and therefore are of the very same sort which are to be found in the greatest herds in the country. As a place to buy good herd bulls, this sale stands as far toward the front as any. Such bulls as Parkdale Goods, the herd bull being offered, with the testimony of his own get right in the herd to prove his excellence, makes it a strong herd bull sale, but with the other younger bulls, all rich in the best Scotch blood, gives the sale added importance. The females are all the sort that make good in breeding herds. All but a very few are pure Scotch and eight of them out of imported cows. One of these is No. 1 in the catalog, selling with a red heifer calf by Parkdale Goods at foot. She is Honey Flower by Gloster Valentine out of Imp. Honey Queen 2d, a cow that has gotten good calves and is the big, rugged sort, with lots of room, a good milker and capable of making a pretty beef block when fitted. The cow, Fair Maid 2d, also by Gloster Valentine, and out of Imp. Fair Maid, is a very richly bred Orange Blossom, and is valuable not only as the big roan she is, but because of the excellence of her offspring to be sold in the sale. There are eight of this family, including one young bull, all originating from Imp. Fair Maid, to be sold in the sale, and all are good ones. A number of the cows have calves at side and will be safe in calf, most of them to Parkdale Goods, by sale time. The entire lot of females is a breeding lot and all are in their prime of usefulness or with it before them yet. To say it is one of Walpole's strongest offerings is giving it a good character and we feel certain that it is an offering that contains something of value for anyone who can use more breeding stock in his herd. Write now for catalogs, kindly mentioning The Homestead when you do. Address Walpole Bros., Rock Valley, Iowa. Advertisement on page 43.

Stumps and Hedge Rows Quickly Pulled.

Some weeks ago the Hercules Mfg. Co., Centerville, Iowa, furnished this paper with a list of the names of its readers who had purchased their stump pullers during the past year with the request that the owners be written to and asked what success they had had with the machine. The idea was that the owners would reply much more readily and express themselves more freely to this paper than to the company. A large number of letters were sent out and most of the answers have now been received. Without an exception everyone so far answering has reported that they are well satisfied. Some few had a little trouble the first day or two before they thoroughly understood the machine, but afterwards secured good results. The Hercules Mfg. Co., 141 21st St., Centerville, Iowa, publish a very interesting book on pulling stumps which will be of interest to all of our readers who have either hedge rows, willow rows or stumps to pull. The book is filled with pictures and is very interesting. It may be obtained free by writing the company. See advertisement on page 10.

Butler's Percherons and Belgians.

A desirable lot of young stallions and mares, both Percherons and Belgians, are offered by W. J. Butler, Ottawa, Ill., whose advertisement will be found on page 45 in this paper. Mr. Butler is both an importer and a breeder, and the young stallions that he is offering are the get of imported horses and out of some very high-class imported mares that Mr. Butler secured in Europe a few years ago. Mr. Butler carries on his business at the minimum of expense, hence he is enabled to give buyers a very close price, backing his horses up with a guarantee that is ample in every way. These horses are all blacks and grays, the good-boned, heavy-muscled, strong-going kind, and are a thoroughly conditioned and acclimated lot of horses. The mares that Mr. Butler has for sale are an attractive lot and will be priced worth the money. Prospective buyers will make no mistake by inspecting this lot of horses. Ottawa is easy of access, being on the main line of the Rock Island railroad, as well as on the Aurora and Streator branch of the Burlington and on the Chicago, Ottawa and Peoria interurban.

Colonel Duncan to Prospective Missouri Auction School Students.

You want to be a business man, earning from $1,000 to $5,000 every year, enjoying the respect and confidence of every one, and working not more than 125 days out of each year. Read on—this is going to get mighty interesting. Would you think it worth while for you to make $40,000 or $50,000 in the next ten years, without investing more than $200? You can do this if you will. It's simply "up to you;" other men are doing it everywhere, "why not you?". Auctioneering is the greatest money-making profession known. There is "no limit." "Listen." The auctioneers who are making fortunes are men who had sense enough to stay in the game and fit themselves for the business. The average man puts in all of his life "dreaming" about getting into a paying business. We cannot dream ourselves into better things. Have you been "dreaming" about a big paying auction business? If so, let me suggest that you "wake up" and get busy. Did you ever stop to think that you have as good an opportunity to be earning $5,000 a year, five years hence, as any other man has? Why doubt your own ability? "Our doubts" are traitors which make us lose the good we oft might win by fearing to attempt. Are you going to "doubt" yourself into failure? Or are you going to pull yourself together and attend the Missouri Auction School at Kansas City, Mo., this coming January 6, 1913, so you will be earning from $1,000 to $5,000 a year within a short time? I will be at the school during the first week of the term and I want to meet "you" there. I want to help prove to you that "you" can make a "success" just as well as any other man. I want to meet you face to face and tell you the "secrets" of "success" in the auction business. Just a month's time and a few dollars. Who would not give as much for a great business "career?" The man who would not prefers to be a failure. I want to meet you at Kansas City, January 6, 1913. Start when the term starts. "Are you coming?" See advertisement on page 43.

Van Steenburg's New Importation.

A. Van Steenburg, Ogden, Ia., writes from Liverpool that he is just shipping another strong importation of heavy Belgian and Percheron stallions and mares to his barns at Ogden. The importation should be in New York now and consists of stock ranging in age from two to five years. It will be one of the best lots ever shipped by Mr. Van Steenburg. He has been careful to select horses which are in demand now, the kind which fill the needs of farmers and stallion owners who are seeking better horse flesh. These horses are described as good in body, with clean, flinty bone, plenty of substance and possessing excellent action and freedom of movement. With the fine crop of yearlings and sucklings reared at his home place this importation makes one of the good collections of Belgians west of the Mississippi. Mr. Van Steenburg will be glad to have buyers come to inspect this stuff as soon as they are ready and will be certain to please in both quality and price. Address A. Van Steenberg, Ogden, Iowa. See notice on page 45.

C. T. EGGERT'S FIRST SALE

DUROC JERSEY BRED SOWS

Will be Sold in Sale Pavilion

AURORA, NEBRASKA,

SATURDAY, JANUARY 18, 1913

THE sale offering will include thirty-five head of REALLY TOPPY SOWS. They are drawn from the very best that has been produced in Nebraska in recent years. Three fall sows, daughters of CRIMSON CRITIC are hard to duplicate. The great sow, ROYAL BLOSSOM 6TH, also her daughter, ROYAL BLOSSOM 8TH, a winner of note at Nebraska State Fair and sired by I Am A Crimson Wonder 2d are included. The remainder of the offering are gilts sired by GOLDEN MODEL V, WATT'S MODEL and my great breeding boar CRIMSON NIG by Crimson Clipper out of Royalty 3d by Ohio Chief. They are bred to COL. AGAIN by COL. CHIEF and out of CHIEF'S MAID, the Iowa champion this year and litter mate to the 1911 champion boar, VALLEY KING, also some are bred to CRIMSON NIG. His get in the sale will show how he breeds. Sows in this sale for the best breeders. We will appreciate your patronage. Try and be with us. Cols. N. G. Kraschel, Mason and Wood, auctioneers. J. C. Price, field man. Mention The Homestead and address for catalog

C. T. EGGERT, JR., AURORA, NEB.

U. S. 30079, ONE OF THE GREAT CHESTER WHITE BOARS OF THE COUNTRY. SEE FIELD NOTE PAGES.

Quelland's Hereford Dispersion.

Chas. Quelland, Williams, Iowa, will disperse his entire herd of Hereford cattle at public auction on January 21st. Twenty-three head comprise the offering, consisting of seven bulls and sixteen females. The great herd bull, Baldy, sells, and while he is nine years of age, yet he is a valuable proposition to some breeder. He is a massive, smooth bull with lots of character and excellent lines. He has a good spring of rib, deep quarters and, in fact, is good all through. In nice breeding condition he weighs 2,200 pounds and in high flesh would easily weigh 2,600 pounds. His calves show his ability to sire good cattle. He was bred by B. F. Clark, Albia, Iowa, and was in the Wheeler herd for a time. He is sired by Eureka and out of Eulala B. Any of our readers wanting a herd bull should keep this fellow in mind. There are also some good bull calves in the sale. Write for any information you want to Mr. Quelland as per his advertisement on page 43. When writing kindly mention The Homestead.

Choice Hereford Bulls for Sale.

On page 44 will be found the advertisement of Ben Broughton, Lake View, Iowa, who is offering seven head of very excellent young Hereford bulls for sale and these are strictly choice and good enough to head good herds. These bulls will range from thirteen to sixteen months, several will make splendid herd bulls and one of the very best is Dobson 386533, sire Beaumont Jr. 233039, a bull that Mr. Broughton has used several years on his Dudley heifers with excellent results. The dam of this bull, Dobson, is Dimple, one of his show herd in 1907 and a cow that never failed to drop a good one. This bull fills the eye and looks good from every point of view. Another one is Grover 386537, sire Lord Dudley, a son of the Iowa State Fair champion bull, Dudley, and out of Gertrude by Beaumont Jr. In this bull you will find the blood of old Dudley intensified and the result is a bull of magnificent type, low down, blocky, with plenty of bone and lots of quality. In other words, there is not a poor bull among the seven and Homestead readers who are in need of a bull to head their herd cannot afford to overlook this opportunity to get a herd header. One thing further we will say about these bulls, and that is that the man who is going to need one cannot afford to wait, as the good

bulls are not in the country and here is one of the opportunities to buy a herd header. The thing to do will be to get on the train and go and see these bulls just as soon as you can. If you write Mr. Broughton kindly mention The Homestead.

Holbert's Imported Horses.

One of the largest importers of registered draft horses in the states is A. B. Holbert, Greeley, Iowa. At the present time some 150 imported stallions and mares can be found at their barns. They have landed several importations this season and have enjoyed an excellent business. The demand has been so strong that Mr. Holbert realized he would not have enough horses to supply the trade and for this reason he returned to France and Belgium to arrange for several more importations to arrive at intervals during the next few months. Associated with Mr. Holbert are his four sons and the co-operation he receives from them is a big asset in such a large business. Belgians and Percherons are found here in largest numbers, but of course all the breeds are represented. There are some excellent specimens of the Percheron and Belgian breeds in a number of two-year-old colts weighing from 1,800 to 2,000 pounds. They are a heavy-boned, drafty lot and would suit any good judge. See page 45 and if interested in a good stallion or mare write Mr. Holbert, mentioning The Homestead.

Murray's Forthcoming Chester White Sale.

On page 39 of this paper we reproduce a likeness of the great Chester White boar, U. S. 30079, the sire of the greater part of the young things that will be offered in the grand annual Chester White sale that will be made by Chas. H. Murray, Friend, Neb., on February 7th. This will be without question the greatest lot of Chester Whites that will be offered in the West this winter. They are of splendid blood lines, of good conformation and are all cholera immune. They are the kind of hogs that the breeder or farmer who has been visited with the disease the past season may buy with safety, and they are likewise the only kind that the breeder or farmer who has escaped the disease the past season should buy. They should be safe property. Further announcement of the sale will appear in early issues of this paper, and in the meantime send in your name that you may receive the catalog as soon as out. A big lot of sows will be offered bred to the great breeding boar, Fairmont Chief, and he is one of the big kind. Keep the date in mind and when writing kindly mention this paper.

The Dietsch Short-horn Sale.

Among the top offerings of Short-horns that will be sold this winter the offering that will be put up by K. F. Dietsch, Orleans, Neb., sale at Scribner, Neb., for January 15th, will take high rank. They are all of good breeding, many pure Scotch, and of the best Scotch at that, while many of the others lack but a cross of being pure. They are good individuals and will be sold in good breeding condition. Those of our readers in search of a good bull to head their herd will be able to secure him in this sale, likewise the ranchman and the farmer will be able to fill their wants in this offering of bulls. The female offering is one of the best sold in this section of Nebraska for a long time. Some choice breeding matrons are offered, also some extra choice young things, including a few very fine show heifers. One of these last mentioned has already done well at the state fair. She is a two-year-old daughter of Victor's Roan Duke. Others by the great breeding bull, Morning Star, are of choice make-up and the breeding is excellent. Make it a point to attend this sale if possible. It will be a good place to do business. When writing for the catalog address K. F. Dietsch, Orleans, but remember that the sale will be held at Scribner, Neb. When you write mention The Homestead.

Pritchard's Duroc Jersey Bred Sows.

In this issue Robert Pritchard, Carroll, Neb., advertises some strictly choice Duroc Jersey bred sows and gilts that will be certain to suit discriminating buyers. There are not a great many of these to be sold and all are in good condition. The sows are all yearlings, nothing old offered. An early order will be certain of being filled with individuals worthy of consideration by good breeders who are looking for stock with which to raise the standard of their herds or to maintain an already high standard. There is a January sow by a son of old Frankfort K., a boar famous in this herd as a prize winner and sire of high-class hogs, and out of Gladness S. S. by Carl Scott Again, that is big, even, deep, a good type and a good brood sow. She is bred to King of Kings by Watt's Model, a boar Mr. Pritchard got of Wm. Moderow at his fall sale, paying the top price of the sale for him. This boar has been used on all the gilts. He is a big one for his age, has a good color, is even in his lines, stands well on his toes and has a good bone. His dam is Sweet Rose II. by Golden Model V. by Golden Model 2d, her dam being a Proud Advance sow. The gilts Mr. Pritchard offers bred to him ought to make the usual good cross that is generally seen in this herd. There are three gilts by a son of Golden Model 2d that, bred to the stretchy King of Kings, will produce some good pigs. Soo King, the sire of several of the gilts, will be remembered as one of the great under-six-months litters shown by Sol Frank at Sioux City in 1911. Write Mr. Pritchard for his prices and descriptions and get an early order in. Address Robert Pritchard, Carroll, Neb. See page 42.

Naiman's Expansion Fall Pigs for Sale.

With this issue of this paper, John L. Naiman, Alexandria, Neb., is starting, an advertisement offering a choice lot of Poland China fall pigs for sale that are all the get of his well-known herd boar, Naiman's Expansion, by the champion, Expansion Over by Expansion. This boar is doing a great work for Mr. Naiman and at the prices asked for the fall pigs it surely looks as though most anyone could afford to own a bunch of pure-bred Poland Chinas. They are being priced at $12.50 each or three head for $35. They are out of good sows, many of them coming from the well-known herd of Thos. F. Walker & Son, Alexandria, Neb., and such breeding as this certainly should meet with favor. Those living long distances will do well to order at once, as you will get the choice thereby, and the saving in express is a considerable item. Also, anyone can afford to grow these pigs for the difference in price asked for these at this age and the price the same hogs would command at the age of six or seven months. Mention this paper and order from Mr. Naiman at once. Mr. Naiman states that they are all out of litters ranging from eight to eleven pigs per litter and all about the same age. He states also that he will furnish pedigree with each pig and ship in neat, strong crates. See page 41 for Mr. Naiman's advertisement.

Thos. L. Leonard Offers Red Polls.

The writer recently visited the farm home of Thos. L. Leonard, Beaver Crossing, Neb., and spent a little time in looking over the herd of Red Polled cattle owned by him. We are frank to say that we thought them a great lot of stuff, taken as a whole from the excellent crop of calves sired by the champion, Luther, and Bill Taft, to the aged herd bull, Uno. Among the number are the splendid cattle shown by Mr. Leonard last fall and which won many of the best places, and in competition with some of the oldest established herds of the country. The herd takes, as a whole, the distinctly dual-purpose type, the sort that combine much milk with as much beef as possible. They are the sort that flesh easily, as was demonstrated by their neat, well-finished appearance at the fairs this fall, and that they are heavy milkers is shown by the splendid udder development that is characteristic of all the females of this herd. They look to the writer like the cattle one should buy who is looking for the greatest amount of milk possible to obtain, and at the same time secure cattle that will make carcasses that will market well. The noted bull, Uno, is for sale, and he is a bull that will do much for many herds. He is bred from a strong milking family and is a show bull of importance, having won first at five state fairs in 1911 and was second at Chicago. He is sired by Patriarch Jr. and comes from the well-known Hartline herd. The two-year-old bull, Breadwinner, is a pleasing animal and one possessing true merit. He was first at six of the principal western shows this fall, and is nicely bred. He was got by Chicago by Falstaff and out of the great breeding and show cow, Baby by Frank by Mart. Another choice bull is Walter by Bill Taft and out of Blush by Happy Jack. This young cow traces to Happy Jack on both sides, making her a line-bred Happy Jack cow and is one of the best producers in the Leonard herd. There is also one young bull by W. F. Schwab's noted young bull, Valentine, and he is a good one. Also one or two by the champion, Luther, and one by Bill Taft. One of the young bulls by Luther is out of the great show cow, Tulip, a cow that has been a persistent winner and of great scale, weighing easily 1,600 pounds. The females that are for sale are of much the same blood lines as the bulls mentioned and we believe that those of our readers who are looking for really choice cattle will be able to find them in the herd. The herd is located about two miles from Beaver Crossing and about seven miles from Friend. Beaver Crossing is on the C. & N. W. and Friend is on the main lines of the C., B. & Q. Mr. Leonard will meet interested parties at either place by appointment. When writing for further particulars kindly mention The Homestead. See advertisement on page 41.

BEN. M. BELL'S

SALE OF

POLAND CHINA BRED SOWS

TO BE HELD ON THE FARM NEAR

Beattie, Kan., Thursday, Jan. 9, 1913

50 Head of Richly Bred Yearling and Two-Year-Old Sows **50**

BRED for February and March farrow to five great boars, Bell Metal, the greatest Expansion Boar, What's Ex, the noted Nebraska Jumbo boar, B's Hercules, Bell's Long King, by Long King's Equal and a good son of A Wonder. The sows in this offering are sired by many noted boars and are out of the great line of matrons that have made this herd famous. The offering will be presented in the best of condition, not overloaded with fat, but in shape to go on and make good. John C. Haldermann will represent this paper at the sale, and look after all business intrusted to him.

Col. H. S. Duncan, Auctioneer. For catalog address

BEN M. BELL, - BEATTIE, KANSAS

Please mention The Homestead when writing.

Ben M. Bell's Sale January 9th—Last Call.

We are calling attention for the last time to the annual bred sow sale to be held at Beattie, Kan., Thursday, January 9th, by Ben M. Bell. Probably no breeder of the big-type Poland China is better or more favorably known throughout the corn belt than Ben Bell. Most every herd of big-type hogs in the West contains some of the breeding of his herd. For years past the get of the famous boars, Bell Metal and What Ex, have furnished the basis of the Bell sale offerings. The offering this year is no exception, as daughters of these noted boars bred to three as good young boars will predominate in the offering. A few head bred along different blood lines will be bred to Bell Metal. The offering will consist of upwards of fifty head and are mostly spring, summer and fall yearlings. They are a very growthy, smooth lot, having been grown with plenty of range and pasture and will be in prime condition to make good in the hands of the purchaser. While Mr. Bell's offering are never presented in high flesh, they are offered in good, healthy condition and the fact that the same breeders are present year after year at his sales and are repeated buyers is proof positive that the hogs go out and deliver the goods. It would be a thankless task to mention the lots in detail, as the entire bunch is good, and it would be hard to name any particular attractions. However, we might mention a Bell Metal sow out of a full sister to Hercules, bred to Bell's Long King for early March farrow; two summer yearlings by What Ex out of a Bell Metal dam, bred to Long King; two summer yearlings by What Ex out of Highland Lady, one bred to Bell Metal and one to Long King, and two growthy spring yearlings by the champion, Colossus and bred to Long King, as giving a fair idea of the breeding and class of the offering. The offering is bred to B.'s Hercules by Nebraska Jumbo, Bell's A Wonder by the great Fesenmeyer boar, A Wonder, and Bell's Long King by Long King's Equal. A few are also bred to Bell Metal. If you have not already received a catalog write for one at once and arrange to attend this sale. If unable to attend, any bids sent in care of Mr. Bell to John C. Halderman, who will represent this paper at the sale, will be carefully looked after. See this page and in writing for further information kindly mention The Homestead.

BEST FIVE CLYDESDALE STALLIONS AT 1912 ILLINOIS STATE FAIR. OWNED AND SHOWN BY JOHN LEITCH & SONS, LA FAYETTE, ILL.

Recent Sales at Pioneer Stud Farm.

J. G. Truman, of the Pioneer Stud Farm, Bushnell, Ill., writes: "We have sold to A. O. Crooks, O'Brien county, Iowa, an outstanding two-year-old Shire stallion, winner of first prize at the Bushnell Horse Show. We feel greatly interested in this sale for the reason that this is the third Shire horse that we have sold Mr. Crooks without his seeing any of them, and in each instance he has been highly pleased. To Schwake Bros., Goodhue county, Minnesota, we sold an imported Hackney stallion and a black Percheron stallion. To Orlin Kirk, Crawford county, Illinois, an imported Shire stallion and a pair of imported Shire mares. The Money Creek Horse Company, Houston county, Minnesota, selected an imported gray Percheron stallion. This is the second stallion we have sold this company. Our old customer, S. J. Huston, Louisa county, Iowa, purchased a pair of imported Percheron mares. To John H. Duis, Dawson county, Nebraska, we sold three imported Shire stallions. Mr. Duis has one of the best breeding barns in the state of Nebraska. To our old customer, Frank Stoddard, Coles county, Illinois, we sold an imported Shire stallion. This is the third stallion we have sold him. Dunham Bros., Louisa county, Iowa, purchased the noted Shire stallion, Jester. These gentlemen have a stud of pure-bred Shire mares and this is the second Shire stallion we have sold them." See advertisement on page 47.

C. T. Eggert, Jr., Offers Choice Durocs in Sale January 18th.

One of the first sales of Duroc Jerseys to be made in central Nebraska is the one that will be made by C. T. Eggert, Jr., Aurora, Neb., on January 18th. Mr. Eggert will offer in this, his first sale, a really choice line of sows, ones that any breeder in the country could use. They are all of good blood lines, having come from a foundation purchased from Briggs Bros., Seward, Neb.; J. S. Beem, Bethany, Neb.; Con McCarthy, York, Neb., and W. M. Putman & Sons, Tecumseh, Neb. These herds are herds of note and have really produced much of the good hogs of the state the past few years, and Mr. Eggert, in buying from these herds, has selected none but the very best. His present herd boars are Crimson Nig, a son of Mr. McCarthy's famous breeding boar, Crimson Clipper by C. W. Again, and he is out of Royalty 3d by Ohio Chief. The other herd boar is the sensational boar sold in Putman & Sons' fall sale. He is Col. Again and by Col. Chief by Ohio Col. His dam was the great show and breeding sow, Chief's Maid by Valley Chief and a litter mate to Valley King, the noted champion of the 1911 shows. Chief's Maid was the champion sow at Iowa this season. We consider Col. Chief a great proposition in the way of a herd boar and his ancestry could not be improved upon, as he is out of a champion sow, she out of a litter of champions. His sire was fifth-prize boar at Nebraska last fall and the writer attended some state fairs where he could have easily won first. Nebraska put up the best hog show seen in the United States last fall and a boar that could win fifth was some boar. His grandsire was a champion boar in 1910 and is being appreciated today as one of the great boars of the breed. We believe that these Crimson Critic, Golden Model 5th and Crimson Nig gilts bred to Col. Again will certainly make good. Royal Blossom 6th, a litter mate to the great Royal Critic and the dam of the great breeding and show boar, Crimson Critic, is to be sold in this sale. She is bred to Crimson Nig. Her daughter, sired by I Am A Crimson Wonder 2d, is also to be sold

and she is a great proposition. Keep this sale in mind and try and attend. If unable to be on hand send your bids to J. C. Price, Homestead representative, and you will be well taken care of. This should be a good place to buy, for there are included those that will show and all are choice breeding stuff. Not a bad back or a rough one in the whole lot. Send for catalog today and mention The Homestead when you write.

Union Stock Yards, Chicago, Ill., December 27th.—Christmas week in the live stock trade has been of even more restricted volume than usual for that holiday period, and the sharp reduction in the marketing has resulted in a materially improved condition of the market, especially for bovine and ovine stock. The improvement noted, however, is traceable to lightness of supply rather than to a broadened demand, and despite the gains recorded it is still evident that the outlet is of such narrowness at this time as not to invite a big movement for the coming week.

During the first five days this week Chicago receipts total only about 25,000 cattle, 84,000 hogs and 72,700 sheep, while six western markets report an aggregate five-day supply of 72,000 cattle, 190,000 hogs and 131,000 sheep, as against 162,000 cattle, 299,000 hogs and 217,000 sheep the like period last week, and 99,000 cattle, 256,000 hogs and 147,000 sheep a year ago.

In the cattle trade the Christmas holiday and recent declines combined to cause a marketing of far below normal volume, the week's receipts being decidedly the smallest of the year, and, in fact, about the smallest within the last decade, barring "strike time." Naturally, under a local supply 40,000 short of the week previous, there has been a fair rebound in prices, yet the attitude of buyers during the last half of the current week has been one of no great concern as to getting hold of cattle on foot and very suggestive of the fact that anything more than moderate receipts during the immediate future will give the buying side opportunity to mete out punishment to shippers.

A generous run at this time would surprise no one, as little as it is needed. The recent break in prices had the effect of impairing confidence, especially among holders of cattle that must be marketed within the next sixty days. Iowa feeders are still in possession of a good many cattle that they are anxious to unload before the assessors begin to make their rounds, and while dodging a tax bill in this manner has always proved expensive, the same stereotyped tactics are resorted to every year. Even present prices are high and with abundance of 35-cent corn feeders are hardly to be criticised for expecting further depreciation. It should be remembered, however, by those anxious to liquidate half to two-thirds fat cattle, that the replacing of such cattle in the feed lots will be attended with greater difficulty and at a higher cost than usual. There would seem to be ample reason for the prediction that those who have the feed, the hogs, good feed yards and shelter and who are yet pursuing the policy of marketing warmed-up and half-fat cattle of good quality will have cause later for red-eyed regret.

The volume of business in beef steers now above the $8.75 line is meager, bulk of the fair to good 1,200 to 1,400-pound weights selling here this week at $7.75 to $8.65, medium-weight cattle of more ordinary class going at $7 to $7.65 and common and plain light killers from $5.50 to $6.75.

Trade in butcher cattle has developed more animation and strength during the week than has the steer market. Closing prices are largely 30 to 50 cents higher on medium to best grades of cows and heifers than a week ago, while canners and cutters have advanced about 15 cents and the bull market has well recovered its slight decline of the previous week, bologna stock making the best prices of the season. Fancy heifers occasionally sell up to $8 to $8.75, but the volume of business at $6.50 or better is small and most of the fair to good killing heifers are selling on a $5.50 to $6.25 basis, a good to choice class of beef cows within the same range, ordinary to fairly good killers from stalk fields at $4.40 to $5.25, fair to good cutters from $3.90 to $4.25 and canners chiefly from $3.40 to $3.85, only thin old shells at $3 or lower. Butcher bulls are selling largely from $5.75 to $6.25, occasionally a fancy heavy beef bull up $7 or better and fair to good bolognas from $5.15 to $5.55, only common light bulls at $5 down. Calves have been in small receipt and have advanced about 50 cents during the week, a few fancy vealers touching $10.50 at week-end and bulk of the good to choice at $9.50 to $10, with big calves taking a range of from $4.25 to $7.50 for inferior to choice, bulk of the good fat 300-pound weights around $6 to $6.50.

Holiday conditions cut down the attendance of buyers in the stocker and feeder alleys very materially, business of the week being of less than one-fourth the volume of the week previous. Demand, however, was well up to normal for the Christmas season, and although prices have eased off about 15 cents during the week, values are still really about the highest in trade history for this time of the year, an abundance of corn and cheap feed inducing the taking on of many young cattle even at very high cost, as it is held that relatively cheap corn will pay out well converted into beef to sell at prices not so much higher than their cost as feeders, and then there is by no means an altogether remote chance for a very high spring market for beef again. Some fancy 793-pound Angus feeders sold this week up to $7.40 and a few loads of 875 to 1,000-pound feeders have sold at $7.25 to $7.35, but $6.35 to $7 has taken the bulk of the 700 to 900-pound weights of fair to good class and most of the stocker grades have sold from $5.25 to $6.25, only a light and inferior sort at $5 or lower.

A slight reaction in hog values today induced largely by the expectancy of a liberal run next Monday, was the first setback the market has experienced since December 18th last when prices touched the lowest level recorded since last March. By steady gains on this week's modest supplies the top on Thursday was pushed up to $7.70 and although sales today averaged a point lower, the market stands with top and average prices at $7.65 and $7.46, respectively, on a 22½c higher basis than a week ago. Much of the advance was due to the development last Monday of a good eastern shipping demanded, through which traders on the selling side begin to see the dawn of a broader outlet that will take care of the customary January increase in receipts without damage to prices. While the light supply of the past two weeks has been due in some measure to the 50c break early in December, which put many country shippers out of business and prompted growers to reject 6-cent bids at interior and loading points, the fact remains that disease has eliminated a lot of hogs from the winter supply prospect and that last year's cholera ravages have placed thousands of growers in a position where they have no hogs to sell. That the territory from which Chicago draws its hog crop will furnish a much smaller run in 1913 than in 1912 is certain. There is a well-grounded impression in market circles that cheap feed may hold many hogs back until late in the winter, although disease is still responsible for much enforced liquidation. At present growers are disposed to put hogs under lock and key whenever the Chicago market does not warrant country buyers bidding 7 cents at interior loading points. The bulk today sold from $7.40 to $7.55, pigs largely from $6.65 to $7.10.

Advances measuring from 35 to 65c on the bulk of the fat sheep and lambs, with the latter showing the most pronounced gain, have resulted this week from the arrival at the six leading western markets of a supply 86,000 short of the week previous and light runs East that were responsible for the development of a strong eastern shipping demand. Big weight in lambs and yearlings continues to encounter severe discrimination, especially when the 100-pound line is crossed. Scarcity of matured sheep has caused the discrimination against weight in that class to be less pronounced, but killers are using yearling product to atone for deficiency in lamb supply and want to get as near lamb weights on the hooks as possible. If the country merely refrains from filling the market hopper to overflowing the present healthy state of trade conditions can doubtless be maintained. In view of the discrimination against overweight, which will doubtless continue, the feeders' policy should be, in trade opinion, to put stock over the wheels about as rapidly as it gets fat, but market prospects and cheap feed do not appear to make the marketing of light half-fat stuff in thrifty condition savor of good judgment. Today's prices were up to the best of the week, and the highest since the boom market of last spring was in its collapse. Prime handyweight lambs sold up to $8.75, bulk of the good fat classes of tidy weight at $8.25 to $8.65, a fair class of light and good to choice heavy lambs from $7.75 to $8.15 with some good lambs of extremely heavy weight down to $7.25. Fancy 91-pound fed western yearlings touched $7.50, bulk of the fair to choice handy yearlings from $6.50 to $7.25 and right good 100-pound yearlings at $6.25. Best aged wethers sell up to $5.50, and $4.50 to $5 is taking fair to prime fat ewes. Feeder demand is still insatiable with very little in the run suitable for country outlet. A string of 5,500 little 44-pound Montana lambs has been here this week to sell at $6.90 to $7, highest prices of the season for their class, and some trade has been done in second-hand feeders from corn-belt territory up to $7.25 to $7.40.

WHEN WINDS HOWL AROUND SHEEP.

To the Editor of The Homestead:

To have them do well through the long, cold winters we have in the north, we must give sheep pretty good care. If we could know how many sheep lie down and die every winter, not simply away out on the bleak ranges, but right in the yards of those who have the means to give their flocks the best of attention, we would surely be surprised.

Sheep need the best care we can give them in winter. No farm creature we have is more quick to respond to good treatment than is the sheep; none goes down more suddenly or more surely than the sheep when neglected or illy treated.

What is good care in the case of sheep?

First and foremost a dry place to stay. Wet ground is the bane of the sheep business. If you want to kill sheep, force them to stay on damp, muddy ground. The man who cannot give his sheep dry ground at all times of the year, never should try to keep sheep. This should be thought of when first thinking of taking up the sheep business.

Again, some kind of shelter must be provided for sheep whe the storms come on. They do not need elaborate buildings, nor buildings which are closely shut upon. On the contrary, sheep love, and must have, plenty of fresh air. That is not what I mean when I speak of shelter. I do mean that when it storms they should have a shed or other building into which they may go and stay till the snow or rain is over. They will sometimes make little excursions out after a bite of something to eat or to get a drink, but they will not stay out in driving storms unless they are compelled to.

The food given sheep in winter must necessarily be different from that they get in summer. Now everything is dry and stale, but we ought to get as close to the summer ration as we can. Of all the grasses we have, none is better for winter feeding than good, well-cured clover. It is as near an all-round feed as anything we have. But some grain is needed to supplement even clover, though not as much as when clear timothy must be fed. Of the grains oats stands high in my estimation. Sheep like oats; they are rich in the elements sheep need. If to these feeds we add some vegetables, good pure water and salt from time to time we may be pretty sure that our sheep will come through all right and bring us a good lamb at weaning time.

E. L. Vincent.

FREED SELLS DUROC JERSEYS AMES, IOWA, MONDAY, JANUARY 20

BRED for early farrow, ready to ship. If you want bone and size and color we have them. We also have 100 bushels choice Reed's Yellow Dent seed corn. Write or come and see us. Address
D. NAUMAN - WEST LIBERTY, IOWA

BRED SOWS AND GILTS

A GOOD lot of Duroc Jersey gilts, large, lengthy, with good color and plenty of bone, bred to farrow in March; sired by Choice Goods, High Col. and Model Chief; bred to R. J.'s Chief, Harding's Model 5th and King Gano. J. C. Porter, Ogden, Iowa.

WE HAVE A DRAFT of bred gilts that are bred for M'ch and April farrow good enough for a breeder and cheap enough for the farmer. Bred from leading families, mated to best male we have ever owned. Col.-bred hog. For particulars and prices write, phone or come see them. Farm near town. J. W. Troy & Bros., Rose Hill, Ia.

DUROC JERSEY BOARS

WE are offering 20 Duroc Jersey boars for sale. Come and see them.
WHITE BROS., - Perry, Iowa.

WENDT'S DUROCS

BOARS that "have the goods." Watch for them at Sioux City. From such boars as C. Indicator and Long Hero. Boars with stretch, bone, backs and hams that everybody wants.
W. J. WENDT, - Remsen, Iowa.

DUROC BRED GILTS

I AM making special prices on 20 March and April gilts bred to farrow in March and April. These gilts are bred to Chief Col. and Prize Wonder. If you want some bred gilts write me at once as they will not last long at the price. Frank N. Crow, Oxford, Ia

DUROC Leading Bred gilts and yearlings. Good ones. Also September pigs. Blood lines represented. Address
Frank Kean, Mt. Pleasant, Ia.

Averydale Duroc Jersey boars and sows. 100 head. 2 yearling boars.
A. M. AVERY, - Mason City, Iowa.

20 GILTS and SOWS bred for March and April farrow. Good length and bone. Moderate prices to move them soon. S. J. Butts, Mason City, Iowa.

DUROC JERSEY sows, bred to Red Peach 105497, for Sept. and Oct. farrow. Good enough for anybody, and cheap. Fred Hanks, Winnebago, Minn.

POLAND CHINA SWINE.

B. B.'s WONDER FOR SALE

I AM offering my splendid bred boar, B. B.'s Wonder, a grandson of old A Wonder, for sale, and he is a good one. Address
BEN BROUGHTON, Lake View, Iowa.

50 HEAD POLAND CHINA SOWS FOR SALE 50

WE WILL not make a public sale and we are offering 50 of the best big-type sows ever listed at private treaty. Among these are prize-winning sows, yearlings, spring gilts and matured sows. These are bred to our 1,024-pound boar, Chief Price Again 2d, and W.'s Wonder. Bred for January, February, March and April farrow. Write us at once.
WIGSTONE BROS. - - - STANTON, IOWA

CLOSING OUT POLAND CHINA SOWS

I AM offering all my noted big-type brood sows for sale at private treaty. Forty head, daughters of Chief Price 2d, Monarch Chief and other noted boars. I am offering twenty head of brood sows that cannot be equaled in any one herd in the state. I am leaving the farm and they must be sold. Write or come and see me. Address
E. F. ESCHER - - - MANNING, IOWA

BIG WONDER, 2d Prize Iowa State Fair Boar

WEIGHS 1000 pounds and the greatest hog today of the breed. Sow sale March 1, 1913. Drop me a card for catalog. Address, mentioning The Homestead,
FRED SIEVERS, - - - - AUDUBON, IOWA.

BIG-TYPE POLAND BRED GILTS

THESE gilts are sired by Longfellow 2d 183143, and Giant Wonder 183147, and are bred to Giant Wonder, L.'s Wonder by Gritters' A Wonder Again and Orange Jumbo by Mouw's Tecumseh Jumbo. Gilts are out of sows by Longfellow, Long Wonder, Miller's Chief Price, Big Orange and Beauty's Jumbo. Write for price, mentioning The Homestead.
THOS. LIEN, ELGIN, IOWA

IMMUNED POLAND BOARS AND GILTS

THESE are the real Nebraska big-type Poland Chinas. They are from big litters and are now in fine breeding condition, having been immuned in early summer. I am pricing them very low as I need the room for my fall pigs. Order at once mentioning The Homestead.
G. A. WIEBE, - - - - BEATRICE, NEBRASKA.

$15 FOWLER'S GIANT POLANDS $15

ALL orders received before January 10th for fall pigs sired by my noted boar, Tom Sampson, and out of my choice cows will be filled at $15 per head. No more will be shipped on orders received after that date. I have the greatest lot of big, smooth sows for my Feb. 13th sale that I ever owned or saw. They are immense. Order a boar, a pair, or trio of these fall pigs at once and keep my sale date in mind, it is February 13th. Address **MORRIS FOWLER, - - ARCADIA, NEBRASKA.**

BAIRD'S POLAND CHINA BRED SOW SALE

ON Saturday, January 25th, I will sell a draft of 45 of my big-type Poland China sows, bred for spring litters. 30 head bred to the thousand-pound champion, Columbus. Send in your name for catalog. Entirely sold out of those fall pigs by Columbus. **R. B. BAIRD, Central City, Nebraska.**

ORDER A POLAND CHINA SOW OF US TODAY

WE are completely sold out of boars, and we have about 10 extra choice sows, daughters of Kokomo Lad by Long King's Equal and bred to the top son of Big Orange. These sows are extra choice, our very best and they go at farmers' prices if ordered at once. Get busy for they will sell fast at our prices.
ED H. MAGOWAN & SONS, - - - GIBBON, NEBRASKA.

MELBOURNE HERD BROOD SOWS FOR SALE. Having decided to close out my herd, am offering all the good brood sows that have proven their worth in my herd at private treaty. They include the well-known sow, Utility; the great Lady Jumbo sow, Phifecia; Leader Lady by Union Leader; the great What Ex sow, Louise Belle; Whiteface Beauty by Prince Yan Tell, and others. They are either bred or will be for spring litter to the great yearling boar, Melbourne Jumbo, a grandson of Wade's Jumbo. These sows can be seen on the farm near Burchard, Neb. For further information address Melbourne Farm, Burchard, Neb., or John C. Halderman, Inez Hotel, Kansas City, Mo.

THE

Greeley Horse Importing Co.

OUR FIRST IMPORTATIONS For THIS SEASON ARE HERE.

125 PERCHERONS and BELGIANS

Another shipment will arrive in November and later shipments during the winter months.

Percherons, Belgians, Shires,
German and French Coachers and Hackneys.

Call at our barns and see them. We have picked for the big, sound, drafty kind, with extra bone and weights—the type that is needed in this country and that will sell quickly.

You can buy of us cheaper than you can import them.

Some of our patrons sold as high as twenty stallions last year. You can do as well. Write us today and arrange to visit us at an early date.

A. B. HOLBERT, Proprietor, GREELEY, IOWA.

PERCHERONS SHIRES BELGIANS MAMMOTH JACKS AND JENNETTS

Some excellent young stock, big boned, rugged and of best blood lines for sale at attractive prices. Can furnish you as good stock as anyone; can save you some money. Mention Homestead. Address

HENRY BECK - - - LITCHFIELD, NEBRASKA

PARAMOUNT STOCK FARM

BREEDS AND IMPORTS

PERCHERONS, SHIRES, BELGIANS

SAY, Brother Horseman, if you want to buy a stallion go to **Hudson, Iowa,** and see **Crownover's** new importation of big, flashy, draft, ton type that are sound and right in every way, and a square deal is guaranteed. No hot air, but high-class horses at right prices. Send 10c stamps for large picture of horse parade.

WILLIAM CROWNOVER - - HUDSON, IOWA

150 STALLIONS

Home-bred draft stallions, $250 to $650. Guarantee to sell you imported stallions for less money than any firm in America. Come to a live stallion market and see all draft breeds.

A. LATIMER WILSON, Creston, Ia.

The POWER OF PERCHERONS

BIG crops emphasize the necessity for first-class horse power. Quicker trips to the elevator, with heavier loads, means **real money,** and during the approaching winter mares might just as well be carrying profitable Percheron foals instead of inferior, light weight young. Write me for free bulletin C. It tells all.

Purchase Percherons

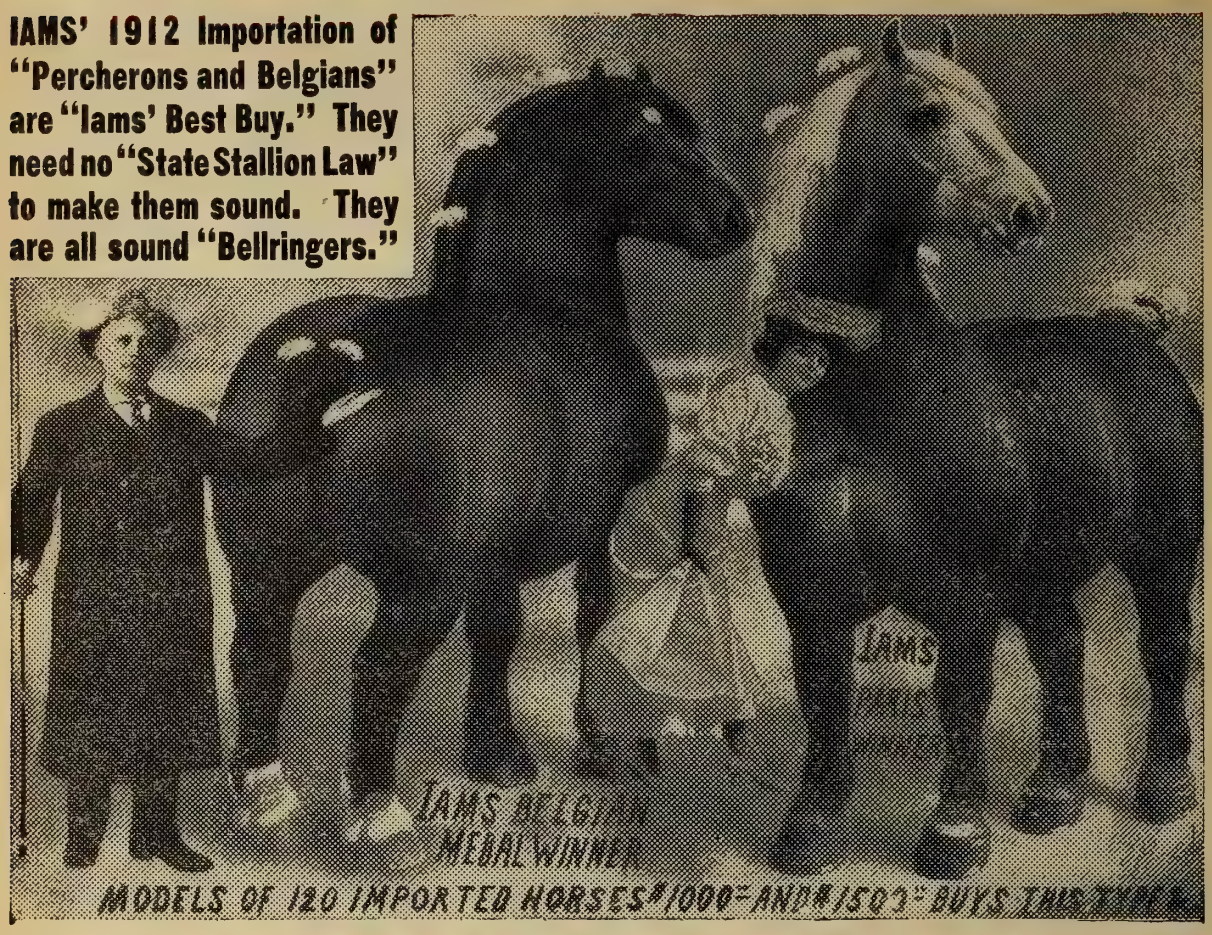
CLYDESDALES AND PERCHERONS—Imported and home bred. A select lot of stallions and some extra choice mares. Prices right. Address **R. O. MILLER, Route 1, LUCAS, IOWA.**

FRANK IAMS' XMAS STALLIONS

IAMS' 1912 Importation of "Percherons and Belgians" are "Iams' Best Buy." They need no "State Stallion Law" to make them sound. They are all sound "Bellringers."



and Mares are "Live Wire" "Business Propositions" and are "up-to-the-minute" and 10 years in advance. They are the "Drafty, big-boned tops"---Nifty, big, "Black Boys"—the real "medal winners"—sensational show and business horses of note, "ripe peaches" from the "select 400." Big, classy "Peaches and Cream"—"Black Boys." The "Iams Brand" of drafty "top notchers." Iams' 1912 importation of Percheron and Belgian stallions and mares are in the "Pink of Condition" and ready for a good selling. "Ikey Boy," smile sweetly, and hundreds of Iams' satisfied customers "will sit up and take notice" that Iams, the "King Pin" horse importer, is still "doing business" at the "old stand" (and good for 50 years). Iams is "pushing" his horses to the front. The big "Peaches and Cream" "Boys and Girls" are attractions that can't be overlooked. Iams mesmerizes buyers with "real drafters," at "bargain prices," and having the "horses as advertised." Iams' "competitors" and "hammer knockers" are "boosting Iams" by their "knocks," until now he is known as the "Millionaire Horseman," and on "Easy Street," and growing fast. Ikey, "Come on along," and sing Iams' song. He is selling these "aristocratic," fancy "Black Boys" cheaper than ever—or better horses for less money—$1,000 and $1,400 (few little higher).

100 PERCHERON AND BELGIAN STALLIONS AND MARES 100

They are "Models"—"Humdingers." They are two to five years old, weigh 1,700 to 2,500 lbs.; 80 per cent blacks, 50 per cent ton horses. All "approved and stamped" by European government. Many Paris "prize winners" and "gold medal horses." Big, drafty "top notchers," with big bone, quality, style, finish and action to burn. They are "Eye-openers." Larger and better horses than seen elsewhere. Big "business propositions" that make "the wheels work fast" under a "Buyer's hat." "Georgie, dear," Iams made a "big killing" by buying his horses in Europe in October and November, 1912. "Dry weather," "bad crops," war scare, "close money," and "Iams' cash" caused the "prize winners" and "tops" to be thrown on the market for a "good selling." Iams "cut the melon" and bought the "rippers" at "knockout prices." Iams will give his customers the benefit of his "good buy." "Ikey, boy," come on down town and see Iams and the nifty, big "Black Boys" and "Sensational" low, democratic prices. "Everybody's Doin' It."

Then get into Iams' "Get Rich Wagon" and save $1,000

on a "top stallion," (and you wear the diamonds). Iams is a "big fly in the ointment" in the horse world. "He keeps the gang guessing." Iams sells "imported horses only"—(They win 90 per cent of prizes at big horse shows). No "American-bred full-bloods"—No "auction stuff" or "peddlers' horses"—Only "choice drafters" of big size, bone, quality and finish. "Iams' Horse Show" makes you "sit up and take notice" and buy a $5,000 stallion at $1,000 or $1,500. Then your sweetheart wears the diamonds, and Dad builds a white house and red barn—From profits of "Iams' Horses." Iams' imported horses are "approved," "branded," "registered," "inspected" and "certificates stamped O. K." by Governments of "France and U. S. A." Iams has the "crack stallions and mares" you "read about."

Buy Horses of Iams and You won't "Get Stung"

in horse or price. "Dolly D," waltz me around once again, "Ikey;" land me at Iams' box office and importing barns. Full to "the roof" with "Black Boys" (all must be sold). Reduced prices. All the world knows Iams and his "Peaches and Cream" horses. 1912 was Iams' best business year. 1913 promises to be a bumper year to Iams and his customers. He saved $300,000 to stallion buyers in 1912. Watch "Iams' smoke." Iams' 30 years of successful business make him a safe man to do business with. Iams sells horses "on honor." A boy or a lady can buy as cheap as a man. "Ikey," be the "wise guy." Buy imported stallions of Iams. He is reliable and a "Live wire" for Big Bargains.

Iams' 1912 Horse Catalog is an "eye-opener."

It has "a laugh" and a $1,000 bargain in every line. A "bunch of gold," the "book of books," to stallion and mare buyers. It is full of "wide-as-a-wagon drafters"—the real "peaches and cream" stallions. It shows largest imported stallions and mares in the United States, "true to life," and truths, facts, "business propositions," and 100 illustrations of "top notchers" and the "tricks of stallion peddlers" and "auction block" salesmen. It is the finest, most elaborate, and original up-to-date book in the world. Iams, the "Square Deal" horseman, makes every statement in ad or catalog good— or you get the $500 he hangs up. Iams guarantees to sell you a

Better Imported Stallion at $1,000 and $1,400

(few higher) than is sold to stock companies for $2,500 to $5,000. Imported mares, $700 and $1,000. Iams gives 60 per cent breeding guarantee; pays freight on horse and fare of one buyer. He can furnish $1,000 insurance. IAMS buys and sells every stallion himself. Saves buyers $1,000 in commissions and middlemen's profits. He buys stallions by "trainload." He speaks the languages—(saving 20 per cent). He is not in the "Stallion Trust." He pays no "Slick Salesman" a commission to help "do you." He has no 2 to 10 partners—to share profits. He "pays cash" for his horses—and sells "top notchers" by "hot advertising" and having "the goods." "Big Ikey," leave your "happy" home and buy a "top" stallion or pair of imported mares (of Iams) that bring colts that sell at $500 each. "Papa," don't let those "auction men" "hand you a lemon" in one of those "so-called" "American full-bloods" of questionable breeding. Buy an imported horse of Iams, the "reliable horseman." Then we will "all wear diamonds." Iams' "selling clothes" fit all buyers. Write for Iams' million dollar horse catalog. Iams won't let you go without a Peaches and Cream stallion or mare. "He sells the tails off them." Iams' guarantees are backed by "half million dollars." References—1st National and Omaha National Banks, Omaha; Packers' National Bank, So. Omaha; Citizens' State, 1st State and St. Paul State Banks, St. Paul, Neb. Iams buys big ad-space because it is cheaper than flannel-mouthed horse salesmen.

ROOFING

SMASHING BARGAINS

FENCING

Corrugated Steel Roofing
1¼c Per Square Foot

Here is the chance of a lifetime to buy the best roofing in the world, at a mere fraction of it's real value. Our enormous buying power enabled us to pick up for spot cash a stock of this brand new, perfect corrugated, "V" crimped and Standing Seam Roofing and Brick Siding, at a tremendous sacrifice — 'way under what it is actually worth. Immediate cash needed made possible this purchase. Just another chapter added to the long list of our famous bargain sales.

Corrugated Steel Roofing
Practically Indestructible

There is nothing else that compares with corrugated steel roofing for real protection. It makes a long, lasting roof Is fire, rain, frost, wind, sun and lightning proof—warmer in winter—cooler in summer; and under ordinary circumstances does not leak, rot or warp, neither does it taint rain water. You can depend upon it that Corrugated Steel is the best material for roofing, siding and ceiling.

At 1¼c per square foot, we furnish our grade **AB-700** Steel Roofing, in sheets 22 x 24 inches x 1¼ inches. This price is delivered on board cars at Chicago.

Galvanized Steel Roofing
2¾c Per Square Foot

Another big Steel Roofing Bargain. Several thousand squares of the very highest grade specially coated, corrugated, galvanized roofing and siding, made of specially prepared steel, of superior quality. Best roofing, and will last indefinitely. We will furnish it in suitable lengths for any purpose. Only a limited quantity on hand, so we urge you to send us your order immediately. Don't wait to write us again—order today, while this stock exists. Price only 2¾c per square foot, and will outlast 4 to 1. Just drop us a line, and tell us the size of your studding and general facts, and we will help you to select proper sheets. If you are not ready to use the material now, we will reserve it for future delivery, if you will give us a small deposit on account. This price of 2¾c per square foot is for our Lot **AB-800** corrugated material, and is delivered on board cars at Chicago. If you prefer some other style, we will furnish it. We have this same grade in "V" crimped, Standing Seam and Brick Siding. Samples on application.

Ready Roofing With Supplies
62c Per 108 Square Feet

We have several thousand squares of a superior quality Ready Roofing, which we are offering in our AJAX BRAND, 1-ply, at a price of 62c per square of 108 square feet, including necessary cement and caps to lay it. This is undoubtedly the most remarkable bargain ever offered in Ready Roofing. This famous brand is put up 3 or 4 pieces to a roll.

The price of 62c per square of 108 square feet is loaded on board cars at Chicago. We will, however, make a freight prepaid price on this same grade of roofing, including nails and necessary cement of 75c per roll of 108 square feet, and at this remarkably low price

We Pay the Freight

in full to any point east of Kansas and Nebraska and North of the Ohio River.

We will also furnish 2-ply, at 90c; 3-ply, at $1.05.

This Ajax Roofing is guaranteed to wear as long, and give as good service as any Rubber Surface roofing on the market.

We have other grades of roofing which we offer 30 per cent lower than others quote. Samples free. Get our free Roofing Book before buying roofing of any kind. This is a chance to lay in your roofing. You must send in your reservations at once—use the coupon shown in this advertisement, or merely write us a letter and tell us where you saw this advertisement. While the stock we have on hand would be considered large for any other concern, remember we have hundreds of thousands of customers who are waiting and watching for these bargains, and who will quickly take advantage of our offer; therefore, we urge you to get in your order at once, even though you are not ready to have the material come forward today. Send us your order and tell us when you want it shipped, and we will ship it according to your requirements. Do not overlook this chance—take full advantage of this offer while it lasts.

Send for Special Roofing
Catalog and Samples

Write at once for our Special Roofing Catalog. Free samples and full instructions for laying roofing. No need to write a letter, simply use the free inquiry coupon shown in this advertisement. We will understand that you simply want full information, samples, prices and specifications, which will be sent you at once, prepaid. Just send your name and address. If you are in a big hurry, send in your order direct from this advertisement. We will fill it for you correctly, and will ship forward without any delay. In any event, write us today.

EXPLANATION

The Chicago House Wrecking Company known to the commercial world as the "Great Price Wreckers" is easily acknowledged **the bargain house of the earth.**

Our Mammoth plant covers 40 acres, and our list of customers are numbered by the hundreds of thousands, and include people from every walk in life. We sell practically everything under the sun at unbeatable prices. We buy our goods at Forced Sales, taking advantage of Sheriffs, Manufacturers' and Auction Sales. In this way we can sell brand new, clean high-grade goods at prices, in many instances even less than the cost of manufacture.

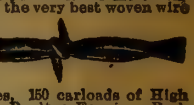
We Supply Everything Needed

Our stock includes everything for the farm, home and personal use, Building Material—Lumber, Roofing, Doors, Millwork, Fencing, Hardware, Plumbing, Heating Apparatus, Furniture, Household Goods, Clothing, Shoes, in fact, every single article needed to clothe a man, woman or child, Sporting Goods, Harness and Vehicles, Jewelry, Sewing Machines, Groceries, etc. You cannot think of a single manufactured article but what we can supply it to you at a saving in price.

OUR GUARANTEE

Our capital stock is $2,000,000. Any bank or Commercial Agency, or any publisher will confirm our responsibility. We have advertised in this paper for many years. Ask its publisher what he thinks of the Chicago House Wrecking Company; get his personal opinion of the values, and our square methods of doing business. We guarantee each and every article that we sell to be exactly as per our representations. Should you buy anything from us that fails to come up to our representations, or does not agree with your expectations, we will take back such unsatisfactory merchandise at our freight expense. We want satisfied patrons.

Brand New Wire Fencing Less Than
1c Per Running Foot



Biggest of all offers of the past. We come to you with the most wonderful proposition ever known, and offer you the very best woven wire fencing at a fraction of it's real value; lower in price than ever before, not withstanding that all other merchants and manufacturers have advanced their prices on fencing. We are determined to simply get all the business in sight, and with that in view, we bought up from manufacturer's sales, 150 carloads of High Grade Woven Wire Hog, Cattle, Field and Poultry Fencing. Barb Wire and Nails, in quantities sufficient to take care of our regular customers and those who will quickly respond to this advertisement.

Barb Wire Less Than 2c Per Rod

Galvanized, two-point Barb-Wire, full weight (not the light kind) put up regular on spools, containing about 100 lbs. to a spool. It is made of No. 12½ wire, with good weight barbs. Price per 100 lbs. during this sale, **only $1.95. Order by Lot No. AB-600.** Several thousand spools of this Barb Wire, Painted, price per 100 lbs. **$1.75. Order by Lot AB-500.** Also have in stock 1000 spools of light weight, new galvanized barb wire, put up 80 rods to the spool, made of No. 14 galvanized wire, No. 15 barbs, barbs 5 inches apart; price per spool of **80 rods $1.45. Lot AB-400.** We also have several other bargains. You never had a chance like this before, and we advise that you send us your order today. Don't wait until the material is sold—we can not hold this quotation open.

Galvanized Hog Fencing
At a Material Reduction in Price

100,000 rods of 26 in. Galvanized Steel Spring Wire, 26 in. high, hog fence, put up in 10, 20, 40 and 60 rod rolls, made with 7 bars, spaced 12 in. apart, with No. 9 top and bottom wires, No. 11 intermediate wires, heavier than the regular fencing offered. Price per rod, during this sale, **only 15c. Order by Lot AB-900.**

Same fencing spaced 6 in. apart, per rod during this sale, **only 21c. Order by Lot AB-1000.** Other heights at proportionately low prices.

LUMBER

Complete houses and barns at an enormous saving. Never before in the history of Building Material has such an opportunity existed. We offer high grade, brand new complete lumber and building material needed for the construction of houses and barns at lower prices than ever before.

20,000,000 Ft. of New Lumber at Our Yards and Warehouses Ready for Quick Delivery

We have upwards of twenty million feet of first-class, brand new lumber for the construction of buildings of every kind. A wonderful stock of the very finest millwork, interior trim, etc.—enough material to construct cities and villiages everywhere. It is our determination that 1913 will be the "Banner" year in the history of our Great Lumber and Millwork department, and the way we will accomplish this, is by quoting prices that will undersell any possible competition. The proof of this is in our catalog and literature.

Write today and tell us what you contemplate improving or building during this Spring — talk to us plainly, and we promise you the advice straight from the shoulder. No other concern in the world is equipped such as we are. Right in our main yard and warehouses, at Chicago, we can load you out complete, at one time, and in one carload, every single article required for the improvement of the building you have in mind. No where else can you go and get such service.

House No. 6A

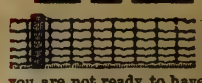
$725.00

Buys the material to build this 2-story modern, 8-room residence. Write for description.

Personal Service To You

You can get the kind of service that will give you absolute satisfaction — satisfaction from the word "go." If you have ideas of your own as to the kind of building that you want, we will give you the benefit of the Greatest Architectural Department in the world. Will furnish you with plans according to your own ideas, and will quote you a price on the material that will make you a wonderful saving. Dollars saved are dollars earned. Write today for our **Book of Plans** and Latest **Catalog of Building Material and Supplies.**

High Grade Poultry Fencing
48 in. High, Per Rod 27c



A complete stock of all heights of Woven Wire Fencing for every purpose. Do not delay your order, but send it in at once, even if you are not ready to have it shipped. We will hold the material ready to deliver when you want it.

Several Carloads of
Galvanized Wire Shorts

This is smooth wire, put up 100 lbs. to a coil, first-class for general use. Comes in sizes from 6 to 15 gauge. **Price for 9 gauge, $1.25 per 100 lbs. Lot AB-1200.** Other sizes in proportion.

Some Big Bargains In Nails

At last we have the bargain of bargains. 10,000 kegs of genuine galvanized wire nails; will outlast all other kinds. Put up in regular kegs. Price per keg of 100 lbs., as follows:—

10 pennyweight, $2.00
8 pennyweight, $2.10
6 pennyweight, $2.15
Shingle Nails $3.00

Also 5,000 kegs of Nails, mixed all kinds in a keg; good assortment, handy to have around your workshop. During this sale only, **per 100 lbs., $1.45. Order by Lot AB-1100.** We have other bargains in nails.

Also, in this same job, we have 5,000 kegs of Fence Staples, galvanized; **per keg, $2.00. Lot AB-1400.**

Crimped wire for reinforcing, cut to any desired length; **per 100 lbs., $2.25. Lot AB-1300.**

We have bargains in every line. Write us today for our Wire and Fence Catalog, but the best thing for you to do is NOT TO DELAY, BUT SEND IN YOUR ORDER, and WE WILL HOLD FOR SHIPPING INSTRUCTIONS.

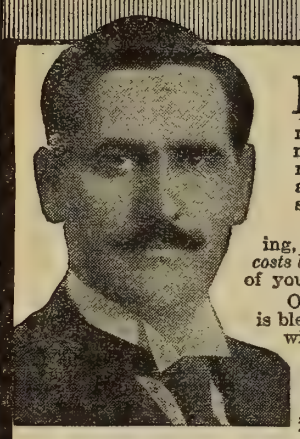
WHAT IS A BARGAIN?

(Written by Wm. Galloway, the Farmers' Manufacturer)



BARGAIN—"*an advantageous transaction*," says Webster. Just that and nothing more. It doesn't mean a "fall-in-price," doesn't mean a "come-down" from a former charge, doesn't mean something "cheap."

On one hand, in purchasing, you obtain an article that *costs little*, one that gives you *all* of your money's worth.

On the other hand, some one is bled and overcharged to begin with; then when the article becomes *unsalable, a-drug-on-the-market*, or *depreciates in value*, the price is lowered as a bait to catch the gullible that wouldn't bite before.

Real bargains are at a premium.

False bargains can be had in everything, everyday, everywhere.

No one can be too careful these days for there are a lot of articles masquerading as "bargains"—articles, while not *absolutely worthless*, give but poor service at best. If this is true, and you know there is a great deal of foundation for this statement, it would be wise—*no matter what you want to buy*—to deal *direct* with the manufacturer whenever possible.

One reason is this: The makers are *directly* responsible to consumers for the efficiency, dependability, durability of their product. There can be no evasion of responsibility, no shifting the blame—the manufacturer in *dealing direct* MUST stand by his product.

This direct responsibility of the maker results in his putting all the reliability and service possible into his goods. First, in order to protect his own market with consumers and, Second, to prevent losses on goods which would be returned to him on account of faulty construction or the product's not living up to his claims.

Quality Is the First Consideration of the Farmer!

He wants *the best* he can get. If it's a farm engine, a cream separator, a spreader, he wants one that will perform month after month, year after year, the same as the day he bought it. So, very often, he listens to a "quality talk" which covers a *high-price*—though called a "bargain"—and he has cause to regret it later on.

ONE OF THE MANY USES OF A GOOD FARM ENGINE

That word "*Quality*" is pretty much overworked. What does it mean? Perfect materials, best materials, superior construction? All essential, of course, but there is something else to consider. For no one can honestly claim *real* quality unless his product be modern, up-to-date, or have superior features of excellence or advantages not possessed by competing machines.

New Models—Fine Improvements In Machinery Are Also Most Desirable

These things mean better service for least cost of operation—greater strength and durability—long life without outlays for repairs.

It isn't hard to find up-to-date machinery if one only tries. Engines, separators, spreaders and other machinery about the farm have been vastly improved in the last few years and the man who buys an old model because the price has been "lowered" will get a "bargain" (?) that is dearly bought.

Last year I thought to myself that with Mandt's New Gear on my spreader that the height of perfection had been reached. But this year brings to you the greatest improvements, refinements, superiorities ever gathered together under a single trade-marked name.

My new spreader, with greater capacities, more liberal measurements, etc., reaches the very climax of spreader construction. I've improved on other models, too, in making my 1913 Model Farm Engines and Manure Spreaders. So when it comes to *real* quality, you can well be guided by the actual, provable superiorities of these three leaders of mine in determining that which is wisest and best to buy—and then you'll get a bargain.

Where Price Plays The Important Part

Many farm implements are made to sell through the dealer, mail order house, agents, etc., and carry such large profits to allow margins for manufacturer, salesmen, jobbers and dealers.

That's why I claim that it's impossible to obtain a *bargain*—"an advantageous transaction"—unless you do deal with the manufacturer of the article you purchase. For when you deal with the manufacturer *direct*, you're bound to save at least three margins of profits, bad debts and useless expenses in effecting a sale.

I, as a manufacturer, tell you this. You can be sure of quality, in buying from the maker, for reasons I stated before. You can be sure of paying only one profit above cost of production too, and, if the manufacturer's product is an improvement over those of his competitor—like my separator, spreader and engine—then you get

A Combination of All Three, Which Constitutes a Real Bargain

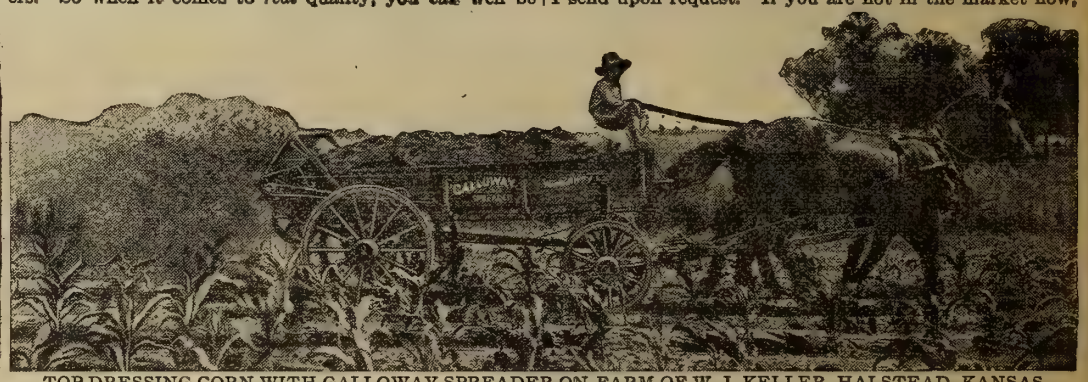
My customers—hundreds in every large neighborhood—will tell you that they are not surprised when I say I can save anybody anywhere from $20 to $45 on a Cream Separator (See Adv. No. 1), or $25 to $50 on a Spreader (See Adv. No. 2), or from $50 to $300 on a Farm Engine (See Adv. No. 3), they know it's the truth. They have saved that much money when dealing with me and you can be sure you can do the same.

The space allowed for these advertisements, does not permit the featuring of the exceptional features of superiority in these three new models of mine, nor explain my special low price, introductory offer, five-year guarantee, 30 to 90-day free trial, and what a *Real Bargain* you get. But you can secure all the information by writing me a post-card, stating in which of these machines you are most likely to be interested.

I Believe That 100% of All Farmers are Honest

and will trust you for anything you want. If you've never dealt with me, you can't understand how easy I make it for everyone to have a *real good, dependable, efficient* and *reliable engine, spreader* or *separator*—and at a price that anyone can well afford to pay.

My Easy-Payment Plan is covered in the Free Books, I send upon request. If you are not in the market now, it will pay you to get these books anyway, so when the time comes, you will know what I can do for you.



TOP DRESSING CORN WITH GALLOWAY SPREADER ON FARM OF W. J. KELLER, HALSTEAD, KANSAS

My New Selling Plan Allows Me To Cut Prices On Everything

Modern business methods in my factory—buying raw materials for cash—ready money for enormous purchases—taking advantage of all cash discounts—low markets—and the most economical system of manufacturing and selling—gives you all the benefits of manufacturer's cost, plus one small profit.

Everything that comes out of my factory is the best.
If you believe me, you'll buy from me.
If you buy from me, you'll believe.

My Books Are Not Mere Catalogs Or Price Lists

I've got the most remarkable "Business Library" for the farmer ever compiled. It consists of books on Farm Power and Engines—Farm Manure and Spreaders—The Farm Dairy and Separators—Farm and Home needs of all kinds—all of which tell how to buy the best for least money.

Tell me which you want most. Or you can have all of them free, postpaid, for the asking. Just state which thing you are likely to buy first so I can write you my proposition and quote prices that will put you on the inside at the start.

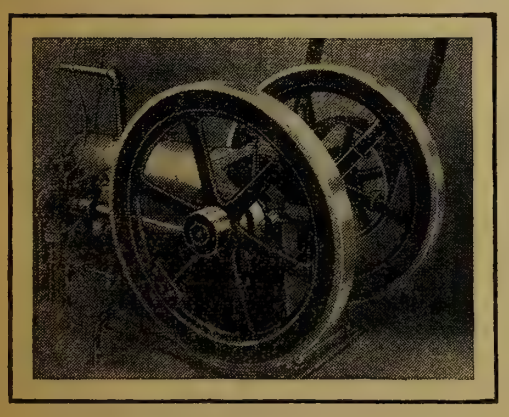
Farm Home and Barnyard Lighting

A Little Gasoline Pumping Engine and a Dynamo Make Electric Current Enough to Light a Farm House, Barn and Barnyard at an Insignificant Cost.

"I DECLARE, mother, Tom Leytham has a better light in his barnyard than we have in our house." Tom Leytham is an up-to-date farmer, not a wealthy one, but just an energetic and enterprising quarter section farmer who

AN ELECTRIC LIGHTED BARNYARD.

appreciates the comfort and convenience of modern appliances on the farm. The occasion for the remark, which was made by a neighbor who was driving past one evening after dark, was an electric light which illuminated the entire barnyard. The gentleman is a pioneer in the matter of lighting in his section of the country. Some-



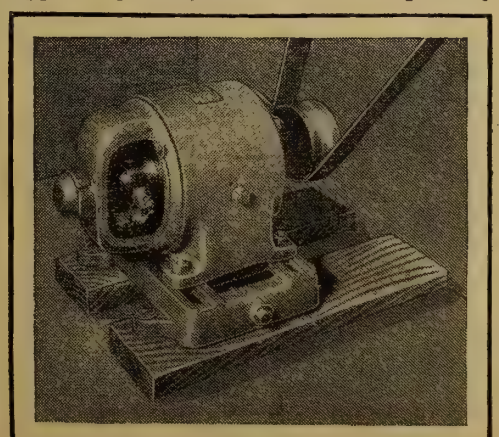
LITTLE ENGINE THAT DOES IT ALL.

thing like a year ago he installed on his farm an electric light plant with a capacity for thirty-two lights. His house, his barn, various outbuildings and the barnyard are equipped with lights. The light plant is installed in a neat little 12x16 building, not an expensive one, but one which serves all the purposes. The equipment consists of a four horsepower gasoline engine, a dynamo and a 16-cell battery. Really, the dynamo and battery are the only articles to be considered, as the engine is one which has been in use for pumping water, sawing wood and various other purposes. At the present time it has added to its work that of running the dynamo whenever necessary, but there is no added cost because at the same time the pump is operated. There is hardly anything in the way of farm machinery that is simpler or more easily run than an electric light

BUSY LITTLE BATTERY THAT RUNS THIRTY-TWO LIGHTS.

plant nor is there any which requires so small an amount of attention either in the way of care or repairs.

The sixteen cells of this battery are arranged on shelves at the end of the little building as shown in one of the accompanying engravings. In the beginning these were filled with a regular battery solution which came as a part of the original equipment. There is no wear or incidental expense about this battery. There is, it is true, some evaporation, but this is easily supplied by the addition of a small quantity



DYNAMO THAT MAKES IT ALL POSSIBLE.

of pure rain water. This water must be provided from a glass or earthenware vessel which is probably the only particular in which any special care must be exercised. The building is built of shiplap and lined with tarred paper. It has no artificial

PUMPS AS THE BATTERIES ARE CHARGED.

heat and during the coldest periods of last winter the battery suffered no ill effects from low temperature.

The dynamo is a tidy little affair not much bigger than a good sized milk pail, but it is thoroughly effective in charging the battery whenever the current runs low. During the summer time, the dynamo does not need to be operated oftener than

LEYTHAM FARM HOME, HARLAN, IOWA.

once in two or three weeks. Three gallons of gasoline is sufficient to run the engine for a full charging of the battery, and, as above stated, the pump is run at the same time. The engine is arranged so that a belt runs to the pump just outside the building on the north, and another to a wood saw on the south; while at the end of the building the shaft projects so that a pulley may be applied for any additional purpose. At times, when it has been

THE HOMESTEAD

A PRACTICAL JOURNAL for the FARMER, STOCKMAN, FRUIT GROWER, POULTRYMAN, GARDENER, and HOUSEKEEPER

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1855

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of fifty or more, 30 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.25; ten years in advance, $4.00. Subscription price in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address all letters to

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

THE FARM ADVISER.

According to the terms of the Lever bill which passed the house of representatives in congress last August each state in the Union is given an appropriation of $10,000 per year for the purpose of giving instruction and demonstrations in agriculture and home economics to persons who are not able to attend the agricultural college. In brief, according to the terms of this bill the federal department of agriculture proposes to take a hand in educating the farmers of the United States. The plan, which has already been undertaken by several states, involves the placing of an expert in a county whose duty it shall be to furnish farmers with expert advice on the various phases of farm problems which confront them.

Should the Lever bill become enacted into law by its passage in the senate the appropriation will annually be increased by the sum of $300,000, until in the year 1923 it will reach the total sum of $3,000,000. This would mean $60,000 for each state in the Union and this appropriation carries with it the condition that the state must raise an equal amount to be used for the same purpose. Seventy-five per cent of this money must be used for actual field demonstrations.

We believe that farmers are in the main favorable to the passage of the Lever bill. Their attitude is not due to the fact that they expect to get something for nothing, but rather that they are more and more coming to realize that we have not yet attained anything like our highest possibilities in the cultivation of our soil. They appreciate the fact that land is rising in value, but it is not proportionately increasing in productiveness. In many instances it is actually going back, in which case it no longer pays dividends on the capitalization involved. It is, therefore, a good business proposition to establish a connecting link between the farmer and educational institutions and this can be done admirably by the employment of the so-called county demonstrator. Wherever this plan has been tried out it has worked well and it would not be surprising if at the end of a five-year period those counties in the corn belt where these demonstrators are at work should show a material increase in production.

We regard the passage of the Lever bill in the United States senate as a very important matter and we hereby suggest to our readers that they establish communication with their senator and suggest to him that he give his support to this bill.

IMMUNITY IN OFFSPRING OF IMMUNE SOWS.

A Missouri s oscriber calls our attention to the fact that all the gilts that he is keeping over are from sows that passed through a siege of cholera last winter. It seems that only two sows out of twelve were saved and the gilts now on hand are from these two sows. He wishes to know if these gilts or their progeny are likely to be immune and would they, he asks, form the basis of a permanently immune herd of hogs.

In answering th's inquiry we have at hand the latest report prepared by Dr. A. D. Melvin, chief of the bureau of animal industry of the department of agriculture. According to Dr. Melvin tests made years ago resulted in showing that pigs two or three months old from immune sows show no more than a normal resistance to the disease. Recent experiments have seemed to indicate that at birth pigs from immunized sows do show an immunity. During the last year eleven litters were tested, eight of these litters being from immunized sows, one being from hyperimmune sows and two from non-immune sows. At the age of three weeks all these pigs were given an injection of disease-producing blood. The result of this injection showed that not a single pig from an immune or hyperimmune sow died from the injections or showed any ill effects therefrom, whereas all of the inoculated pigs from the two non-immune sows died of hog cholera as a result of the injection. Furthermore, it is pointed out to Dr. Melvin that the mothers of the two non-immune litters contracted hog cholera from their pigs and both died of the disease.

The result of these experiments would seem to indicate that young pigs from immune sows are themselves immune against hog cholera at birth and that this immunity lasts for at least a period of three weeks. It has not yet been determined when this passive immunity transmitted by the mother becomes reduced to such a point that the hogs are no longer able to resist infection. This is a matter that must be determined by future experimentations.

Coming back now to this subscriber's inquiry, it might be repeated that earlier experiments seem to indicate that the immunity, which mig t be said to be inherited, passes before the pig is three months old. In which case, of course, it will not be possible to build up a strain of hogs that through inheritance acquire a permanent immunity from disease.

IMPORTANT SESSIONS OF LEGISLATURES.

Unusual interest centers in the sessions of the legislatures of the various grain-belt states this winter. More matters directly and vitally affecting the interests and welfare of the farmers are up for discussion than for many years past.

It is probable that no one of the grain-belt states has as far-reaching a program already mapped as Wisconsin, where the campaign for social betterment is expected to make considerable progress. Efforts to establish a system of credits to aid farmers, a system of land colonizat'on that will make possible the "back to the land" movement for the men with little money, a mother's pension plan, a minimum wage bill and a recall bill for members of state commissions are only a few of the measures that are due for consideration at Madison.

In Iowa, good roads legislation looms large, while the action of the state board of education in ordering the abandonment of the domestic economy course for farm girls at the state college of agriculture and its transfer to the state university will no doubt be thrashed over by the general assembly, with a prospect of its being rescinded on account of formidable opposition from the agricultural interests. The recent conference of the good roads enthusiasts, with the unanimous adoption of resolutions providing for a state road tax levy of one mill, and the plan proposed to bond the roads for $25,000,000 (paying the interest on the bonds and retiring them, within twenty-five years, by the automobile tax and the one-mill state road levy) make it practically certain that no subject will be considered at greater length in Des Moines this winter than this all-important subject of improved highways. The good roads problem will also come in for extensive consideration before the legislatures of Minnesota and Missouri. In the former state the people at the last general election voted to amend the constitution and provided for a one-mill levy fo: permanent state roads, the state being given authority to antic'pate this levy for the ensuing ten years with a bond issue amounting to approximately $16,000,000. In Missouri, a bill is now being prepared to give county courts practically the same authority in building county roads as a city council has in building streets, tho county court on its own motion or on petition of the land owners to order a road paved, subject only to the remonstrances of the majority of the adjacent land owners.

Seven grain-belt states will elect United States senators this winter, the list being as follows: Illinois (where two are to be elected), Michigan, Iowa, Nebraska, South Dakota, Minnesota and Kansas. With this much of a legislative program already in sight it is a foregone conclusion that the sessions in practically every state will be highly important. It behooves farmers, therefore, to follow the sessions of the various state legislatures closely, keeping watch upon the action of their representatives to the end that their interests may be conserved and their welfare promoted.

GIRL WINS CORN PRIZE.

The success of a girl corn grower in Oklahoma should serve as an inspiration to her sisters throughout the entire grain belt. This girl, only seventeen years old, won the boys' corn-growing contest in competition with 500 farm boys of the state.

When it was announced by the Kansas City Weekly Star that a boys' corn-growing contest would be held in Oklahoma there was no idea that any girl would care to enter, but hardly had the plans been announced before girls wrote in, expressing their desire to grow acres in competition for the prize, more than a dozen being entered altogether. The first prize for Oklahoma was given to Esta Beaman, of Lincoln county, whose yield of ninety-five bushels and ten pounds was larger than that secured by any boy in the state and second only to the yield of a Kansas boy, living in Doniphan county, with a yield of 107 bushels and forty pounds.

The feat of the Oklahoma girl is all the more remarkable when it is known that she succeeded despite poor soil and climatic conditions. The story of her obstacles is told by the Weekly Star as follows:

The Oklahoma girl's acre of corn was grown in what is known there as blackjack upland—rough, hilly acres which wash easily and which rapidly decline in fertility unless wisely farmed. Her acre produced in corn nearly twice what Mr. Beaman paid for the acre six years ago. The ground on which the acre is forms a part of a hillside, and a ditch was constructed above the tract to keep the water from rushing down and washing it away. There are stumps and rocks on the contest acre. A pile of boulders just above it had been removed before the crop was put in.

With these difficulties and a season of drouth at a critical period the Oklahoma contestant exceeded the average Oklahoma state yield this year four and one-half times and has beaten the average state yield over a period of four years more than six times. And just to show that there was nothing accidental in her result the feminine corn grower produced nearly two more acres like the contest acre and grew half an acre of tomatoes on the side.

Miss Beaman did all the work herself, asked no favors over the boys, sent in samples of the corn she produced and announced that she had a crib full of the same kind that could be inspected at any time. Furthermore, she explained, two of her neighbors, one on one side of her acre and the other on the other side of her acre, watched her work all season and knew whereof they spoke when they made oaths that she had produced the acre of corn and that they had measured it and weighed the product.

The success of the girls enrolled in the tomato clubs of the South and of Miss Beaman with her acre of Oklahoma corn will go a long way to inspire other farm girls to earn their own money by cultivating their own tract of land and to take still more interest in the actual producing work of the home places. It is highly probable that the coming year will find the federal government carrying on a crusade to interest farm girls in its tomato club plans in the North, fully as extensively as it has in the South for some years past, with beneficial and far-reaching results.

This is the time of the year when the evergreen windbreak is a thing of beauty and when we are doing chores on the leeward side of it we are quite willing to believe that it is a joy forever. A Scotch pine windbreak is not of the best when evergreens are considered, but it is almost as easy as a willow to raise and very few will regret the planting of a couple of rows.

RAPE FOR HOG PASTURE.

A Missouri subscriber, Mr. James Price, writes for information concerning the value of dwarf Essex rape for pasturing purposes for hogs. He calls attention to the fact that he has had no experience with it and he therefore seeks information pertaining to the method of preparing the soil and the sowing of the seed.

Dwarf Essex rape is an excellent pasture for hogs. We say this in spite of the fact that it is possible to find men who have not had very good results from it. Where one example of this kind occurs it would be possible to find dozens where men have been well pleased with the results obtained from pasturing hogs on rape.

Ordinarily rape may be seeded quite early in the spring or any time until the middle of the summer. It is quite hardy and will stand rather severe freezes in the spring. However, we have found that when it is seeded very early growth is quite slow and there is really not much advantage in sowing it until after the period of sowing small grain. It will pay well to prepare a good seed bed because rape seed is small. If the land is plowed in the spring it should be harrowed several times so that it is worked down until it is thoroughly fine and firm. Where it is to be seeded on fall plowing two or three harrowings will usually put the land in good shape.

Rape is generally sown broadcast at the rate of five or six pounds per acre and ordinarily one good harrowing after the sowing will cover the seed sufficiently to give good results. The crop should not be pastured for a period of six or seven weeks after it is seeded because after that time elapses it will make considerable root and top growth and will then stand a great deal of pasturing. If it is eaten back while it is young a given area will not furnish nearly so much food as if it is allowed to make considerable growth before turning in the hogs. Furthermore the older rape is not quite so succulent as the young, tender plants and for that reason it is not so apt to scour the hogs.

We would like to call attention to this one fact, that in some cases hogs for a short time take to rape rather reluctantly. Where this occurs it is only necessary to cut off all other feed for a day or two and force them to it. After they are once obliged to make a start on the crop there will be no trouble because it is both palatable and healthful.

A WINTER OF STUDY.

We commend to farmers' neighborhood clubs, to rural lyceums, to short courses and institutes and, in fact, to all gatherings of country people where country topics are discussed, the study of the subjects which the recent industrial and agricultural congress of Kansas decided upon as the most important before the farmer today. The list may be briefly summarized in this manner:

Co-operation of town and country in the advancement of agriculture.
County farm advisers to increase crop production.
Organization of state-wide farmers' co-operative associations.
System of rural credits to enable farmers to borrow money at low interest to buy land or equipment.
Crop rotation.
Live stock farming and the general introduction of the silo.
Use of the country schools for entertainments, lecture courses and possibly the moving picture show.
Reduction of the number of churches to meet the natural needs of each community.
Adoption of the county unit system in the rural schools by which the schools of a county are controlled by a commission not to exceed seven.
Establishment of more factories to consume the raw products of the farm at the source of production.

Here, certainly, are matters of interest to every farmer, the study and discussion of which will make a full winter of profitable work. On many of the subjects valuable bulletins have been issued by the state and national departments of agriculture, while others are being widely discussed in the magazines and papers of the day. There is not a debating society or school or rural gathering of any kind in the grain belt but might well devote at least one meeting to each of the topics outlined above. Rural progress and development within the next few years will depend

largely upon the extent to which the farmer studies the live problems of the day and plays his part in their solution.

FATAL RESULTS OF VACCINATION.

A subscriber, Mr. John Clark, of Blackhawk county, Iowa, sends the following communication:

I have read lots in the papers about hog cholera and its treatment with serum or vaccination, and it sets me wondering if these articles were ever written by the man who had the real experience or whether they were written by the editor, the veterinarian or the man who makes the serum. Thinking that I have had the real experience which might benefit someone else, I will let you know just what I got out of it.

I had a bunch of fifty-seven nice, healthy pigs that weighed from thirty to sixty pounds. Fifty-five of these were vaccinated, one having got out when I shut them up and the other one having been hurt. Out of the fifty-five that got the dose two were dead the next morning and the rest were so stiff and sick they would not come out to eat. In four days two were dead with lockjaw. Now, after twenty-five days (when I am writing this) twenty-three are dead. After nine days they took the cholera and on the twenty-fourth day I killed one that could not walk. Its bones where the needle had struck it were all rotten when I cut into it. Now all but fifteen look as though they had been in a fire.

The veterinarian who did the vaccinating was very careful, washing the pig with antiseptic before inserting the serum and being careful with his tools, so it must have been a case of poisoning in either the blood or the serum. Vaccinating hogs before they are sick is being strongly advocated, but if it acts this way on well hogs, how must it work on sick ones? I do not think that half the hogs that have died around here have died with the cholera and to vaccinate them only weakens them for lung trouble.

It cost me $40 to have these pigs vaccinated, so you will see I had one-fifth of what the hogs were worth in them for treatment. What I vaccinated for was to keep them from getting the cholera, but got it in worse form, and I know of others that have had just such bad luck as I have had. Let us hear from others as to their experience.

It is difficult to say why these fatal results should come from vaccination in this case. Apparently the serum contained deadly germs of some description. One case of this kind is sufficient to emphasize the importance of placing all serum used for this purpose under some kind of sensible state or national supervision. At the present time some of our experiment station officials are advocating a plan allowing state officials only to administer serums. This conclusion has been reached because of the deadly results that have come from the introduction of the active hog cholera virus into communities. As it is necessary to use the virus as well as the serum, if permanent immunity is to result, it stands to reason that exceeding great care must be taken in the handling of this virus, otherwise real cholera may, in certain cases, be introduced where the disease has not previously existed in the herd treated or in the community.

MERIT OF THE GRAVEL ROAD.

There never has been a time in the past when so much willingness was expressed by taxpayers to bear the cost of constructing improved highways. It would appear in certain quarters that men were suddenly impressed by the wastefulness of the system which works over and over again the same old mud and if legislators acted as quickly as some of these road enthusiasts we would soon have permanent highways throughout the length and breadth of the corn belt.

Just at a time, therefore, when roads costing even as high as $10,000 make considerable appeal to a portion of our taxpayers it might not be amiss to properly consider the merit of the gravel road. We do not need to be told that in certain counties gravel is an unknown quantity, but this does not lessen our enthusiasm for a road that is in many respects superior to the macadam or the brick pavements.

It has been ascertained that where gravel is accessible without long hauls a coating of eight inches can be placed upon the surface at a cost of practically $500 per mile. This means, of course, that it will be spread sufficiently wide to answer traffic purposes, leaving, as it were, ample room on either side of a well-graded pike for travel on the soil surface.

A highway that is first properly graded and then graveled will carry any kind of a load at any season of the year. If a little attention is paid to maintenance it will be a good road for at least a generation, and there is this advantage over the macadam or the paved surface, that it is not so hard on horses and it may be maintained for about one-fifth the cost of the hard roads.

At this juncture in the discussion of the road problem we would like to hear from some of our readers on the merit of the gravel road, because we are convinced that the $10,000-a-mile road will answer experiment purposes only for many years to come. We make this appeal to supervisors, to township trustees or to any person who has had experience with this type of road.

CONTROLLING BUTTER AND EGG PRICES.

As a result of government investigation, with prosecution imminent, the Elgin board of trade, which for seventeen years past has fixed the market prices for butter and eggs, last week abolished this long-time practice. The action of the Elgin organization follows closely upon similar action by the Chicago butter and egg board and is looked upon as a big victory for the government in its nation-wide effort to remove all combines and market manipulations by means of which the consumer is forced to pay a large profit and the producer is obliged to accept whatever price the middleman chooses to pay. As a quick and direct result of last week's action the price of storage eggs has already declined five and one-half cents a dozen and the bottom is expected to drop out of the market before the year is many days old. Market manipulators who paid twenty-two and twenty-three cents for eggs last April and to whom the expense of keeping the eggs in storage the intervening eight months has been about $1.20 a case are now obliged to sell their eggs for sixteen and seventeen cents a dozen, which means a loss of $2.85 a case, with probabilities of the price dropping to ten cents for storage eggs before long. The loss is wholly the middleman's, as the farmer was long ago paid for the eggs and the consumer is now able to obtain his supply minus the exorbitant profit formerly demanded by the middleman. As the market was being manipulated for the sole purpose of adding to the profits of men standing between the consumer and the producer, men who do nothing to add to the productiveness of the country, it would appear as though last week's action by the Elgin and Chicago organizations were a long step forward in the campaign to reduce the price of living without cutting down the producer's well-earned and deserved profits.

IMPORTANCE OF GOOD CLOVER SEED.

A subscriber, C. J. Griffing, gives his views in regard to the importance of using the very best clover seed obtainable, in the following communication:

After several unsuccessful attempts to raise clover from seed which was selected indifferently, I came to learn that in order to be successful with this crop none but the very best seed should be used. I also learned that we cannot very often take the other fellow's word for the worth of his seed. I have paid the best prices and received very poor seed. I have found whenever the clover crop is short that the next season the dealers will put anything that will pass as clover seed upon the market and attach a good price to it. They do not catch me any more, however, as I now order a small quantity from several different firms as samples and test them before ordering what is needed for the fields. If these seeds do not show a germination test of at least 95 per cent I do not consider them good seed. Often seeds will sprout, but get no farther, since they lack stamina and do not have vitality enough to send out roots and establish themselves after reluctantly sprouting. By getting these samples and testing them I have been able to save many dollars which I would otherwise have lost and have succeeded in getting satisfactory stands of clover. The method of sowing must depend upon locality and very much upon soil conditions. When I am to sow on wheat I usually sow the seed during the first part of March. When sown at this time the alternate thawing and freezing along with the spring rains cause the seed to work far enough into the soil to insure proper germinating and rooting. If the seed is good I find eight pounds per acre enough to sow, but if it does not test a germination of 95 per cent, and such a test cannot be procured, I sometimes sow as high as twelve or fifteen pounds per acre. Clover should not be pastured the first fall unless a very good growth has been made and the soil dry and firm enough to prevent the plants being trampled in. When a crop of hay is desired the field should never be pastured in the spring.

As a practical proposition we believe that Mr. Griffing's policy in this case is sound and that the best seed is after all the cheapest. The main difference, of course, between select seed and what might be called "seconds" is due to the fact that the grading process has resulted in cleaning out the small and shrunken seed so that the higher germination test of the well-graded lot will result in a better stand even though a smaller proportion of seed is used.

No horse should stand a single day idle in the stable, and when there is no work for him to do the feed should be cut down and the bowels kept active by feeding bran and if necessary mixing a few ounces of Glauber's salt in the drinking water. Were this rule absolutely followed and exercise enforced at times of idleness there would be far less trouble from colic, deadly azoturia would be rare and lymphangitis (Monday morning disease) practically unknown.

It is not necessary to smash up the furniture when breaking the heifer to stand still while being milked. Training is a better word than breaking, because if the heifer is properly trained there will be nothing to break.

OUR RED LETTER SUBSCRIPTION OFFER

THE IOWA HOMESTEAD
KIMBALL'S DAIRY FARMER
WOMAN'S WORLD
KANSAS CITY WEEKLY STAR
PEOPLE'S POPULAR MONTHLY

All sent one year for only **$1.25**

The regular price of these five splendid papers is $2.25 a year. By taking advantage of this unparalleled offer you secure a whole year's good reading matter for the entire family at only a trifle more than one-half the regular price.

Each of these five papers is a leader in its respective field. The combination makes a library of current news, useful information, practical advice and entertaining literature. Kimball's Dairy Farmer is practical and up to date, full of dependable advice and information for the man who keeps cows. The Woman's World is a monthly household magazine of striking and particular interest to the housewife who wishes to make her home attractive and to keep posted with what woman is accomplishing the world over. The Kansas City Weekly Star is conceded to be the newsiest and most reliable weekly newspaper published in the country. It presents the news of the world in a clear and concise manner, without political bias or embellishment. The People's Popular Monthly combines the best fiction, poetry and feature articles dealing with economic development, in a monthly symposium of interest to every member of the household.

The publisher of The Iowa Homestead has elaborate plans which will make The Homestead better, larger, brighter and more practical in 1913 than ever before. Every department will be continued throughout the year and will be in charge of practical experts who practice what they preach and who allow no unsound doctrine to creep into their columns. The Homestead will continue under the management of the same editor-in-chief, who owns and operates his own farms and gives to subscribers the benefits of his own personal and successful farm experience.

No more liberal or attractive subscription offer was ever made by any publisher. The introduction of our Red Letter Offer created a sensation among farm readers because it presented the maximum of farm and home reading at a minimum of cost. The opportunity is so splendid that it should be taken advantage of at once. Five great papers will be sent one entire year for only $1.25, being a saving of a whole dollar on the regular subscription price. Make your remittance today, so as to insure you getting all the big winter numbers of all these five splendid papers. Do not delay, but remit $1.25 at once to

THE IOWA HOMESTEAD, DES MOINES, IA.

THIS NEW,—THRILLING,—ILLUSTRATED,—132 PAGE BOOK

FREE TO YOU

IT CONTAINS 165 VERY FINE ENGRAVINGS. ALSO A COMPLETE AND ACCURATE HISTORY AND THRILLING DESCRIPTION OF ALL THE SENSATIONAL RACING OF

DAN PATCH 1:55

The Large, Eight by Eleven, Front Cover of "The Racing Life of Dan Patch" is a Beautiful, 14 Colors Reproduction of M. W. Savage, driving Dan Patch at a Two minute clip. Above Engraving shows the Cover Page in one color and when Reproduced in 14 Colors it makes a picture of Great Artistic Merit, as it is Entirely Free of Advertising. This Painting is the Finest and Most Life Like "Speed" Painting ever made of the World Famous Champion of all Champions, Dan Patch 1:55,—the Fastest and Most Popular Harness Horse in all the World's History, over Two Million People having written for Dan's Picture. **This is the Only Painting ever made of M. W. Savage driving Dan Patch 1:55 and it was made from an actual photograph.** It is as Natural and True to Life as if you actually saw Dan in one of his Terrific Bursts of speed.

You Will Enjoy Reading the Thrilling Accounts of his **Wonderful Racing** Contests, during a long term of years. They were written by an eye witness and one of the most Vivid Writers of Horse Racing, whose descriptions are almost as **Interesting and Thrilling** as if you saw the actual racing. You cannot read this book without being filled with Pleasurable Excitement as you picture in your mind the True Greatness of Dan Patch 1:55 as he Repeatedly Won Great Racing Events. **You Will Enjoy Reading about Dan's Thrilling Finishes before the Cheering Multitudes of Enthusiastic Horse Lovers.** You Will Enjoy Reading about Dan's Sensational Racing, year after year, and about how he never lost a race. You Will Enjoy Reading about how plans were laid by drivers of other great race horses to beat him and how Dan always brought the very highest class race horses, and their drivers, to defeat.

You Will Enjoy Reading about the Greatest Race Horse in the World's History. You Will Enjoy Reading about his **Wonderful Speed Exhibitions,** after he developed such Tremendous Speed that horses would not start against him in races. As a noted horse writer wrote at that time, **"It was always Dan first and the competing field of horses nowhere."** You Will Enjoy Reading about how Dan kept on **Extreme Speed Edge** for Over 10 Years in all kinds of weather and over all kinds of tracks, a Great World Record in itself, no other horse having ever, even approached it. You Will Enjoy Reading about Dan's retiring to my **"International 1:55 Horse Farm."**—Strong, Vigorous and in Good Condition and still retaining his Sensational Speed and where he is proving to be one of the World's Greatest Sires of Extreme Speed and is the Leading 2:10 Sire of the World, for his age. You Will Enjoy Reading about the Thousands of People who visit My **"International 1:55 Horse Farm"** every year to see Dan Patch 1:55, the Mighty Hero and Harness Horse King. You Will Enjoy Reading about Dazzle Patch,—**Dan's Sensational Son,** that paced a half-mile in 59 seconds, a Quarter in 27¾ Seconds, a 1:51 Clip, and an eighth in 13 Seconds, a 1:44 Clip, when only 28 months old. This Book gives all of Dan's Official Racing by heats and the Names and Places of Finishing of all Competing Horses in each race. It shows his Wonderful Speed Development, from year to year, down to the time he was retired. **It is the Finest and Most Expensive Book of the kind, Ever Published for Free Distribution.**

"The Racing Life of Dan Patch 1:55"—is the Book that Millions of Farmers and Stockowners and Horsemen have been waiting for as a Library Official Reference Book, of the Fastest Harness Horse the World has ever seen and the **Most Beloved Harness Horse of all time.** If you Admire or Love a World Famous Champion Stallion, that has been the Leader in Great Events in making Harness Horse History then you should send for one of These Books at once Before the free offer is withdrawn. **It will probably cost me $150,000 Cash to furnish These Books Free but you are Perfectly Welcome to one while they last.** You will prize this Book Above money value. **MAILED FREE, —PROVIDING** you are a Farmer, Live Stock Owner or Horseman Over 21 Years of age but You Must Answer FIRST—In what paper did you read this Free Book Offer?

SECOND—How many Horses, Cattle, Sheep or Hogs do you own or how many do you take care of?

Write Letter or Postal Card and Answer These Two Questions and "The Racing Life of Dan Patch 1:55" will be Mailed To You at once Free, postage prepaid, and with My Best Wishes and Compliments.

WE PREPAY POSTAGE.

Write Today and You Will Receive the Most Thrilling and Sensational Horse Book Ever published. **Ask Your Dealer For This Book, OR—Address, M. W. Savage, OR—the International Stock Food Co., Minneapolis, Minn. Your Quick Request Brings the Book Free.**

I have Dan Patch Colts and Young Stallions, For Sale on Long Time Without Interest. Write Me. I Invite You to visit My Farm, with its 5 World Champion Stallions, Dan Patch 1:55, Minor Heir 1:58½, George Gano 2:02, Arion 2:07¾, Dazzle Patch and 250 Brood Mares and Colts.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

The only good rabbit is a dead rabbit, especially where there is an orchard of young apple trees near by. Older trees will also suffer if the snow piles up so that he can work among the branches.

The farmer who has never used a fanning mill should get one as soon as possible so as to get well acquainted with it before the busy season comes. Those who have never cleaned their seed grain would be surprised if they saw all the foul seed they have scattered over their fields.

Treating seed grain for smut is still regarded as book farming by some, but this is a mistake. It is as practical and necessary as the use of the fanning mill and the farmer who expects to ride in his own automobile, which means everyone, must see that his seed grain goes through both operations.

Those who have nothing much to worry about and are not satisfied unless they are worrying about something are taking on their woe-begone look and saying that our ice crop will be a total failure this winter. Here is hoping that the weather man keeps them on the anxious seat for some time.

Now is a good time to overhaul the work harness and put in rivets and stitches where they do the most good. A stitch in time will save nine, is a true saying, and with this work a stitch at this time will save a whole lot of time at a time when time is scarce.

In gathering pointers on the silo question it might be well as a starter to get a squint at the cream checks of those in your neighborhood who are feeding silage to their cows. If they look good to you it would be in order to visit their farms and see how the stock looks and size up the work of feeding and storing. It is unnecessary for those who build silos in the future to "go it blind" unless they choose to do so.

The work of laying the so-called rubber roofing is not finished until all the laps have been cemented after the nails are driven. If this is neglected the heads of the nails will soon rust and a storm will be liable to start some trouble that will put other troubles on the shelf for awhile.

Experience has taught me that nothing lighter than three-ply roofing should be used for the roof of any building, also that the boards under the roofing should be either flooring or shiplap carefully laid.

A farm is usually known by the quality of farming done upon it. I know of a great many good farms that are known as poor farms because the quality of the farming done thereon is poor.

For want of a good culvert, several rods of road is often converted into a mudhole and remains a mudhole until the sun and wind dry it up. It is poor policy to do a good piece of road grading, then spoil it all by neglecting the culverts.

There is not nearly the scramble to sell corn there was a few weeks ago. In some localities, where feeders are numerous, the scramble is quite the other way, and there is a decided upturn in the price of corn. The man who was going to have corn sell for a quarter before spring has another guess coming, and he may have to just about double the amount of his former estimate.

The latest hails from an Illinois corn breeder, who thinks he has increased the yield of his corn by always selecting seed from stalks having two ears. Now, so he claims, he has a corn that invariably grows two ears, and oftentimes three. His further plans are to still increase the yield by selecting hereafter from stalks bearing three ears.

It has been my experience that it is better to raise one good ear of corn on a stalk than two nubbins, and only when all conditions are exactly ideal do the two ears to the stalk amount to more than nubbins. For this reason I very much doubt if the yield of grain to the acre can be increased should it be possible to produce a corn always bearing two ears to the stalk.

The old saying has it that when the days begin to lengthen the cold begins to strengthen. Will those now attending school and well up in geography tell why this is the case? Why should not the weather become warmer as soon as the hours of sunlight become more, and the dead of winter come at or near the shortest day of the year?

I have heard many a person say they could skin a skunk without coming in contact with any of the odor, but I never knew it to happen. I once heard a man brag on having skinned a skunk a short time before, doing it with the odor left out, but he carried the scent with him all right, and it lasted for a long while, too.

The towns appear to be filling up with retired farmers, men who have past the middle age of life and who are able to take life easier. I am not sure whether this is a good thing for the man or not, but it invariably is for his wife. A man may often

Do you get top prices for your cured meats?

If not, there may be something wrong with the salt you have been using. It's the flavor of cured meats that sets the price — and the flavor is largely determined by the salt brine.

A pure, clean, sweet brine, free from slime and stringiness, is made only with a pure, clean, sweet salt. That is Worcester Salt, which is used and endorsed by the large meat packers.

WORCESTER SALT

The Salt with the Savor!

Worcester Salt is also the best salt made for butter-making. Its fine, even grains and its sweetness make it a perfect dairy salt.

For farm and dairy use, Worcester Salt is put up in 28 and 56-pound bags. The bags are made of the best quality Irish linen. Get a bag from your grocer.

Write for booklet "Curing Meats on the Farm." Sent free on request.

WORCESTER SALT COMPANY
Largest Producers of High-Grade Salt in the World
NEW YORK

keep on farming when age begins to tell on him by hiring much of his work done, but it is now practically impossible to hire help in the house, so the aged wife must keep on drudging if "the old man" keeps on farming.

Protect the bees well from the coming severe weather.

Why put off the buying of farm implements till the rush of spring buying?

Anything but a bunglesome mitten to wear when choring. I stick to cotton gloves as long as the weather will permit at all, then shift to cotton mittens, which are a shade warmer than the gloves of the same material, but the heaviest cotton mittens are not always enough, and when it is necessary to put on heavy mittens it seems to me that the chores last a fourth longer just because of those bunglesome mittens.

The block and tackle wire stretcher beats any other kind I ever tried. It is quick to put on a wire and quick to take off, and the leverage obtained is sufficient to make any wire "sing."

Be careful of every move around the corn shredder. Many men have done this—after they had lost an arm or leg.

The manure spreader and systematic crop rotation form the two strongest links in the chain for the maintenance of soil fertility and heavy crop production.

If you are allowing the sheep to run among burs and thistles, and burrowing in the straw stack this winter, don't expect their wool to return you first-class profits next spring.

Any animal does better to have water always in the yard. Driving cattle to water never did appeal to me, and I am sure it does not appeal to the cattle. Bringing water to the cattle yards through one-inch pipe is cheaper than driving the cattle to the water.

The automobile is no doubt a fine thing and it may bring all joys to the family that the salesman says it will, but it is doubtful if it brings the real joy to the grownups that a new sled brings to the healthy country boy who lives near a big hill.

It is useless to argue with the man who insists it is waste of time to haul manure. If you are unfortunate enough to have a neighbor of this kind it might do to buy his manure and spread it on your own fields, then invite him over to see the results when the crops are in the making. It might at least get him into the habit of seeing what his neighbors are doing and this has been the turning point of many a farmer.

The home-grown apple crop was so short this year in this vicinity that Santa Claus had some trouble in filling his orders, but the old fellow did not worry over a little thing like that. He just brought them anyway, because Christmas without apples would not seem like Christmas at all.

When butter is forty-two cents per pound it does not take a whole lot of cream to pay for a blanket to use for covering the cans while they are being hauled to the creamery.

The harness that is to be used for winter driving should be kept in perfect repair, because even the steady old horse is liable to "feel his oats" some crisp morning and a broken snap or strap might be the cause of an accident.

If you have a broken pane in one of the barn windows try this: Take the window out in order to do a good job of repairing and if nothing better is at hand tack an empty flour sack over the opening then fix the window and forget to put it back. The cloth covering is better, anyway.

A TRIBUTE TO SUGAR CANE.

Sugar cane is ripe for chewing in South Georgia, says the Savannah (Ga.) News. Down here the sugar cane is not the vulgar article of commerce which made the wealth of the Havemeyers, the Spreckelses and their associates. Here it furnishes the juice which, while it inebriates not, is the delight of the poor, the solace of the wealthy and the comforter of the troubled in heart.

It is at this season that the dinner horn has an added charm for the South Georgia boy. Its welcome sound calls him homeward, with his cotton sack slung across his shoulder, his throat dry from the rays of the sun, husky with the dust of the field and the lint of the staple which he has been gathering.

Hungry though he may be he veers from the homeward path when the "cane patch" fence is neared. With eager feet he climbs the barrier and with discerning eye selects from the waiting rows the stalk promising largest yield of treasured sweetness. From it the blades are stripped with careful attention to the irritating fuzz and a loud snap proclaims that the treasure is his.

Again to the rail fence, with careful selection of a panel with a flat rail on top. Then, with heels firmly braced in the cracks below, ignoring protesting stone bruise if any there be, the ready Barlow knife prepares the feast. Carefully the peel is removed and a "round" of juicy pulp is ready. Then while distended jaws and chin are uptilted to prevent waste of good cheer and eyes rolled heavenward in ecstasy, the willing teeth do their duty and Nature pays rich tribute to industry. Nimble Barchus never bore sweeter nectar to thirsty Jove, nor graceful slaves poured more delicious drink for Lucullus's guests.

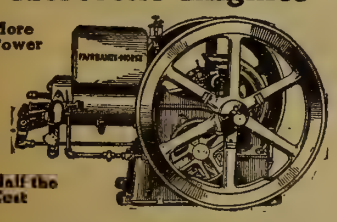
Just why the chewing of sugar cane is disappearing before modern customs it is hard to say. It affords health and pleasure alike to old and young, where the appetite has been cultivated and the condition of teeth will allow its indulgence. The juice, as obtained by chewing the cane, is a panacea for dyspepsia and kidney troubles and as a tonic and flesh builder for weak children it has no superior.

It is at this time of the year that in the land of the sugar cane the child who has grown sallow, thin and weak during the stress and heat of the summer acquires flesh, rosy cheeks and goatlike spirits, and all trace of "worms," that bane of Cracker children, disappears. The sugar cane does the work. No medicine could accomplish the wonder in so brief a period.

Perhaps we no longer chew cane because we are too busy doing something less useful. A large element of our population, too, has never known its delight. Part of this may be due to the fact that much of the sugar cane put on the market is not the best for chewing. The cane, dark red in color, or red with alternate stripes of yellow, while sweeter is not the most desirable variety for chewing. The best has a green peel, or a peel with alternate strips of green and yellow. This variety is soft and juicy, and once its taste is learned it is a souce of delight.

Jack of All Trades Kerosene Engines

More Power



Half the Cost

Kerosene (Coal Oil) can usually be bought for less than half the price of gasoline and a Jack of All Trades Engine will develop as much power on a gallon of kerosene as on a gallon of gasoline.

Why Buy Gasoline?

Besides their great economy these engines are easy to handle, safe, strong, durable. Always ready for service. Every one guaranteed. Sold at remarkably low prices for high grade engines.

2, 4 and 6 h. p. Horizontal; also 2, 3, 4 and 6 h. p. Vertical. Other types up to 500 h. p.

Campbell's Winter-Chaser

ARE you thoroughly posted about the heating question? Do you know what "Rotary Air Movement" means? Do you know who invented it, and why it is vitally necessary to the health and comfort of your family, the efficiency of your heating plant, and the good you get out of your coal?

Remember, this heating question is a mighty important one—you do not change your heating plants often, and when you do, it should be with a view to getting a *life time* service. To prove how and why this is possible with our *all steel* Campbell Winter-Chaser, we will send you, *free*

"TWICE-A-DAY"

A Book on Health and Heating

The story of the *guaranteed* heat to 70 degrees, and the longest wearing, strongest furnace made. In this book we explain why you should have the Campbell Winter-Chaser in your home—large or small, new or old. It tells about the need of *moist and clean* air as well as *warm*, and explains why the large reservoir and the ample air chamber with entrance door insure all the necessary moisture and cleanliness which mean health to the family and long life to the furniture.

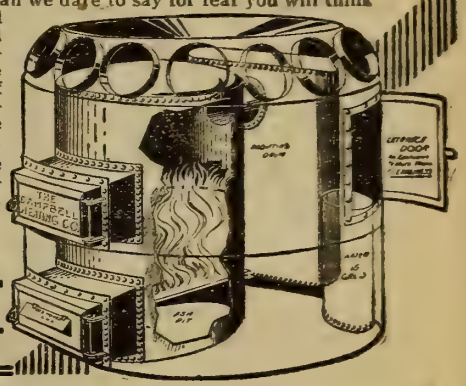
The Winter-Chaser Is Guaranteed To Give Most Heat With Least Fuel

And this statement is a calm fact which letters from happy owners prove,

And the Repairs Are Not Worth Mentioning

With ordinary care the Winter-Chaser will last a lifetime, and there is rarely a penny spent—for ten or twelve years.

The saving in coal is more than we dare to say for fear you will think we are exaggerating. So we would rather send you the booklet, and let you read these facts for yourself in black and white with the owner's name at the bottom of the letter. Those are the statements that count and there are plenty of them in the booklet.



Besides you ought to have the information and heating suggestions it gives. So write *today*. Address

The New Glide for 1913

ELECTRIC LIGHTED Center Control Engine Pumps Tire

THE GLIDE "36-42" is right up-to-the-minute.

Has all the new features that a car should have, regardless of cost. You'll be proud of a GLIDE in any company.

Electric Lighted throughout—simply "press the button."

Electric Side Lamps are *sunk in the dash*, eliminating all rattling.

Has a Self-Starter that *always works*—a wonderful advance in mechanics.

All moving parts are encased in dust-proof housings—eliminating trouble.

Left Side drive and center control make the car safe, sightly and easy to drive.

The Glide Motor-Driven Tire Pump does away with tiresome hand pumping.

Speed of 3 to 60 miles per hour on *direct drive*.

Demountable Rims. Goodyear No-Rim-Cut Tires. 118-inch wheel base.

The GLIDE pays a *bigger service dividend* on your investment than *any other car*.

Write Now for 1913 Bulletin

describing and illustrating the GLIDE "36-42" in detail, in both two and five-passenger styles. Get your pencil out *right now* and drop us a postal before you forget.

THE BARTHOLOMEW COMPANY, 71 Glide Street

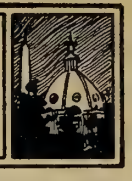
Peoria, Illinois

To the Dealer:

If the GLIDE agency is open in your territory you may have it NOW on advantageous terms. Later you'll not be able to get it on any terms. Once a GLIDE dealer, always a GLIDE dealer. It's an asset a man doesn't give up. Write today.

Fully equipped $1690
Less Top and Glass Front $1640

CURRENT EVENTS



THIRTY-EIGHT of the forty union labor leaders and officials who have been on trial at Indianapolis for the past three months, charged with carrying on a campaign of dynamiting in order to intimidate capital and force non-union employers to capitulate, were found guilty and thirty-three of them were sentenced to the federal prison at Leavenworth, Kansas. The sentences range from seven years to one year and a day and the entire bunch of prisoners was taken to Leavenworth, in a special train, immediately. The conviction is an immense blow to that element of union labor which believes that the end justifies any means and that capital must be intimidated, even by the destruction of property and the sacrifice of human lives, into recognizing the labor unions. Most of the unionists convicted are officials of the Iron Workers' International Union, the same organization to which the McNamara brothers (who pleaded guilty to murder as a result of the destruction, by dynamite, of the plant of the Los Angeles Times, with the attendant loss of twenty-one human lives) belonged. Among the prisoners was the president of this labor union. In sentencing them the federal judge before whom they were tried declared that several were guilty of murder. The entire crew of conspirators and lawbreakers, in the name of "justice" to the workingman, carried on a policy of shipping dynamite from one state to another and using it to blow up non-union establishments, loss of life frequently resulting. Never before has union labor suffered so severe a conviction and setback, not only at the hands of a court but before the bar of public opinion as well. That there must be organization with which to fight the battle of the weak and secure rights may be conceded, but there are few who will go so far as to contend that right justifies might, or that industrial freedom may ever be obtained by anarchy.

PRESIDENT-ELECT WILSON has come out directly opposed to President Taft on the question of Philippine independence. Governor Wilson states that he is in favor of a graduated plan of independence, by means of which the Philippines would be given complete freedom at end of eight years. The president-elect thus puts himself fairly and squarely upon the plank of the democratic platform. It will be recalled that the bill introduced in the last session of congress providing for this gradual self-government has met with the serious opposition of President Taft, who, speaking largely from experience secured while governor of the Philippines, declares that the people there have not progressed to that stage where they are capable of ruling themselves nor is this likely to be achieved in the near future. With democratic control of all branches of the government, however, it is extremely probable that the democratic platform and President-elect Wilson's plans will be consummated into law before many months have passed.

A SERIOUS split in the ranks of the Balkan allies seems imminent. Jealousy over the division of the territory which it is demanded that Turkey shall surrender as a result of her decisive defeats in the war is responsible for the break between Bulgaria, Greece, Servia and Montenegro. It is claimed that Bulgaria is secretly trying to get the lion's share of the territory, and while it is admitted that Bulgaria has borne the brunt of the fighting thus far, the allies have all done the work assigned to them effectively and it is believed by the other three states that they should play square with one another as much in peace as in war. To make matters worse, the crafty Turk is delaying the peace negotiations in London and trying to have the peace terms decided upon by the big European powers, instead of by the Balkan states which have been carrying on the war. This would mean that Turkey could keep much of the territory that the allies demand, for the big powers do not want to see the small Balkan states grow until they assume commercial and political power. The whole affair is most lamentable, for the Balkan states have waged a splendid campaign, winning victories most courageously and being about to drive the Mohammedan from Christian Europe. That they should fall out now and lose the good results of their crusade is regrettable in the extreme.

OSCAR UNDERWOOD, chairman of the house ways and means committee and one of the most prominent and talented democrats in congress, was called into conference with President-elect Wilson last week, following similar conferences with Wm. J. Bryan, of Nebraska; Champ Clark, of Missouri; Jerry Sullivan, of Iowa, and other notable democrats from the grain belt. Evidences multiply that President Wilson will align himself with the progressive element of his party and will use every energy to fulfil the progressive planks of the platform upon which he was elected. Representative Underwood is a conservative, but has shown himself liberal and broad minded to the extent of favoring a tariff revision which would reduce the profits of his own manufacturing establishment. His recommendations will carry considerable weight not only with the president-elect, but in the lower house of congress, in which he is a dominant figure. While President-elect Wilson has not yet issued any official statement, it is expected that the special session of congress, for the revision of the tariff, will be called shortly after his inauguration on the fourth of March.

JEFFERSONIAN simplicity marked the inaugural of Governor Sulzer, of New York, long a prominent member of the lower house of Congress. Governor Sulzer dispensed with the usual picturesque parade and social functions, walked to the capitol and after having taken the oath of office appeared upon the steps and talked to the people who were unable to get into the building. When President-elect Wilson was told of the affair he expressed great pleasure and admitted that he wished he himself might be inducted into office with the old-time Jeffersonian simplicity, but he feared that because of the great crowds he could not walk to the capitol at Washington, as had Jefferson when he took the oath of office. It is Governor Wilson's wish that the ceremonies be made as simple and inexpensive as possible. He cannot see any reason why vast sums of money should be spent in inducting a new man into office, no matter how high and dignified.

If the horse's shoulders should show signs of becoming sore, the skin being unbroken, a very good application is sulphate of zinc, one-half an ounce; sugar of lead, one-half an ounce, and water, one quart, and an excellent lotion for hardening the shoulders, even when they have not yet shown any disposition to become sore, is powdered alum, one ounce; sulphuric acid, one dram, and water, one quart.

One great advantage in keeping sheep in a dry season when the pastures are dried up and closely eaten off is that we can turn the sheep into the corn fields as soon as the corn is well silked out, and this without injury to the corn. The sheep eat any grass and weeds among the corn and also the lower leaves on the cornstalks without detriment to the earing of the corn.

Sharpen Tools Free!

I'll send this wonderful farm tool grinder on free trial without advance payment. Sharpens plow points, saws, discs, sickles, ensilage knives, all farm tools amazingly quick. Saves time, labor, money, tools. Has genuine Dimo-Grit (artificial diamond, sharpening wheels.

LUTHER DIMO-GRIT GRINDER

Has metal frame, enclosed shaft-drive, dust-proof bearings, runs easy as sewing machine. 25 times faster than grindstone, 10 times better than emery. Will not draw temper. Special attachments—forge, milk tester, jig saw, rip saw, lathe, drill, etc., furnished extra if desired. Fully guaranteed. Write for free book on tool grinding and liberal free trial offer.

Luther Grinder Co., 411 Stroh Bldg., Milwaukee, Wis.

Double grinding rings with saw-tooth grooves make the

SUPERIOR DUPLEX MILL

(WITH BAGGER ATTACHMENT)

do the work of two ordinary mills with less power. Grinds mixed feed, corn on cob or in shucks, sheaf oats, Kaffir corn, alfalfa, clover hay, grains and cotton seed. Will grind coarse or fine. Easily operated. Force feed never chokes. For gasoline or steam engine. Fully guaranteed. Catalog FREE. Write today.

The **Marlin** *Repeating Shotgun*

12 or 16 GAUGE

Made famous by its dependability. The solid top and side ejection keep gases and powder away from your eyes; help quick, effective repeat shots. Rain, sleet, snow and foreign matter can't get into the action. The mechanism is strong, simple, wear-resisting. The double extractors pull any shell instantly; two special safety devices prevent accidental discharge while action is unlocked, and an automatic recoil block makes hang fires harmless. All Marlins are strongly made, finely balanced, accurate, hard hitting guns, and are the quickest and easiest to take down and clean. Illustration shows Model 24 grade "A" 12 gauge; it has all the features that make for a perfect gun.

Send three stamps postage today for our 136 page catalog describing the full *Marlin* line.

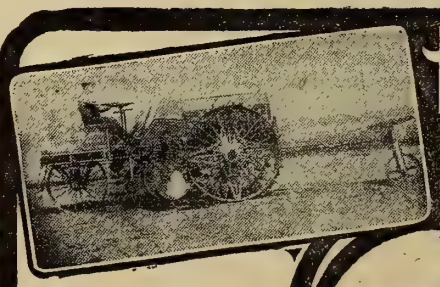
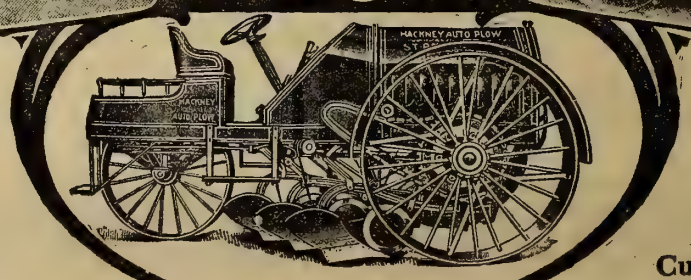
HACKNEY AUTO PLOW

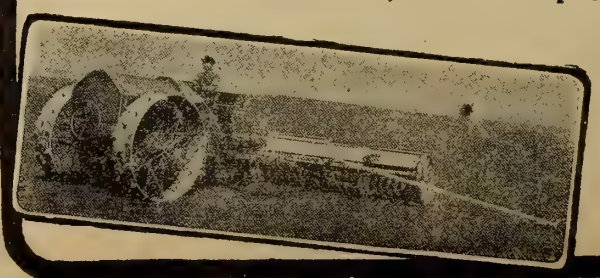




Plowing
Seeding
Discing
Harrowing
Harvesting
Thrashing

Wood Sawing
Orchard Work
Road Grading
Feed Grinding
Cutting Ensilage
Hauling Loads, Etc.

Do your Plowing, Seeding, and all other work on the farm where power is needed, with a *HACKNEY AUTO PLOW*—the great *One-Man* machine—universally known as the greatest labor-saving device for the farmer ever invented, the *only* tractor that can be worked *economically* on farms of average acreage. It eliminates drudgery, solves the vexatious labor problem, and enables you to do your work better and cheaper—when weather, soil and crop conditions are all in your favor.



The Hackney Auto Plow may be equipped with disc plow, disc harrow or road grader attachment—attached in same position as mold board plows shown above.

Before you buy a tractor we want you to investigate the Hackney Auto Plow—the one-man outfit. Our catalog, describing the machine in detail, photographs and testimonial letters from users will be mailed on request.

Hackney Manufacturing Company

Getting Away from Wheat.

By Elliott Flower.

WESTERN Canada is now trying to live down a reputation that many another country would be glad to build up. Sounds absurd, doesn't it? But it's a fact. Western Canada is known as a great wheat country. That's all right. Western Canada was, is, and for a long time will be a great wheat country. That is a good thing for any country to be, provided it doesn't overdo it. But the wise men of Canada—the men interested in its development as a whole—know that a one-crop country, like a one-crop farm, plays out quickly under the management of the average farmer. To keep it productive on the one-crop basis requires a considerable expenditure of labor and money. The man who raises the same thing on the same land year after year must return to it certain elements of fertility that he takes from it with his crops if he expects it to continue producing as generously as it does at first. Otherwise, the land grows annually less fertile and less valuable, and when the ignorant or improvident farmer is finally obliged to give it up or change his methods it takes a long time to nurse it back to its former productiveness.

That is why western Canada is trying to live down—to some extent, at least—its reputation as a great wheat country. A very great majority of the people who go there plan to raise wheat, with possibly some other grain as a side issue. That's all right, if a man is reasonably sensible about it. It's a good wheat country, and there is no reason why he should not get his share of the benefit of that fact. But very, very many of the new arrivals are not sensible in this matter. With the exception of a little garden patch and pasturage for such live stock as they keep for their own needs, they want to give up the whole farm to wheat, and they very often do it, too, in spite of the arguments and warnings of experts and others familiar with the country.

They are not so much to blame for this, either. They have heard of very little but wheat in connection with this country. True, the railroad folder and the colonization companies' pamphlets and the government publications have much to say—much more now than in years past—of cattle and hogs and horses and sheep and poultry and vegetables and fodder crops and the needs of the home market, but the wheat idea has been so dominant for so long a time that it is difficult to eradicate or even modify it. Canada's wheat crop is what looms largest in the statistics; Canada's wheat exportations affect markets everywhere; it is wheat, wheat, wheat that one hears always in connection with western Canada. Small wonder the arriving settler thinks only of wheat, or merely turns from that to some other grain crop.

So western Canada is trying to live down the idea that it is a country for nothing but wheat; to show the arriving settler that there are other things of almost, if not quite, equal importance; to convince him that he must give considerable attention to some of these other things if he would get the best results from his land.

F. T. Fisher, secretary of the Edmonton Board of Trade, is one of the most earnest advocates of mixed farming for the arriving settler, and he and the organization he represents have been earnestly striving to show that real progress and prosperity lie in devoting much of the land to something besides grain. Grass frequently shows a greater profit, the return coming through the live stock for which it affords pasturage. There is a large and growing home market for vegetables of all kinds. The local production often does not meet the local needs, and there is the extraordinary spectacle of a province or a district importing what it could raise itself to better advantage. Moreover, exclusive grain production frequently overtaxes the elevator facilities, sometimes resulting in trouble and loss, while what is raised for home consumption brings quick return and involves less trouble and risk. So, aside from the effect of the one-crop idea upon the land itself, there are most excellent business reasons for favoring mixed farming. The whole question is well summed up in an address prepared for the purpose of showing the work and purpose of the Central Alberta Developing League, of which the following is a summary:

The Central Alberta Development League maintains that the land in this country is too good to devote to the extensive growing of wheat. No country in the world, it claims, ever attained any considerable degree of permanent prosperity as a result of wheat development as a main industry. Wheat growing means big farms, sparse population and comparatively cheap land. It is grass rather than wheat that makes for permanent prosperity, promotes the highest degree of agricultural development and creates sound business conditions in the towns. The pasturage is rich and green throughout a long season, and the productiveness of the land in the way of hay and other fodder crops is great. It follows, therefore, that the wheat crop should be but one detail of the year's operations, and that much of the land and work should be devoted to other things.

In other words, the greatest success for the average man lies in mixed farming, and, as I shall show later, this is as true in Saskatchewan and Manitoba as in Alberta. All along the lines of the Canadian Northern railroad and elsewhere this has been demonstrated wherever it has been tried, and every effort is now made to encourage mixed farming as opposed to exclusive wheat farming. To a considerable extent this has proved effective, much besides wheat being planted and a good deal of attention given to stock raising and dairying, but it is still necessary to keep up a very active campaign for mixed farming to prevent people from going in for wheat raising exclusively where much of the land can be given over to other uses with greater profit to the farmer. And even then, it is complained, far too much attention is given to wheat.

The wise farmer, according to the secretary of the league, may have three kinds of grain instead of one, and two of these may take a course wholly different from that followed by the wheat. The oats and barley, if not marketable as such, can be turned into milk, beef and pork and sent to market in condensed form or on foot. And he concludes his plea for more mixed farming thus:

Let us produce the horses, beef, butter, cheese, hams and bacon, and I care not who grows the wheat.

Nor are he and his organization alone in this view. Almost everywhere I stopped along the line of the Canadian Northern the men of experience talked in this vein, and I heard much to the same effect at various places on the Canadian Pacific. From Saskatoon comes this statement, ending with the wail, please note, that wheat is still far too dominant in the public mind:

Any crop that may be grown anywhere under similar conditions may be as successfully grown here. Lands that will grow the finest wheat will also produce fine crops of any kind. With our soil fertility, our long summer months of steady sunshine, and our average moisture precipitation of about seventeen inches, could it well be otherwise? Root crops thrive especially and show remarkably heavy yields—a fact which stock and dairymen would do well to remember. Potatoes are a safe and exceedingly profitable crop. So far, however, our farmers confine their attention largely to grain crops, notwithstanding the fact that we have no potato bugs or similar scourges and that Saskatoon consumers have never yet paid less than ninety cents a bushel for potatoes.

This is sufficient proof that mixed farming is not for Alberta alone, but there is more. From a Manitoba settler comes this statement:

I had some knowledge of farming in the East, but I found Manitoba methods quite different. I strongly believe in diversified farming and attribute my success to the fact that I have given attention to all branches of farming. I have not developed the grain-growing side to the neglect of the live stock or the live stock to the neglect of the grain.

Incidentally, Manitoba calls attention to the fact that cattle raising is especially profitable, as there is a splendid market close by and at least 80,000 head of cattle are needed each year for home consumption. Manitoba has also suffered from that all-wheat reputation, even as Alberta and Saskatchewan have, and to assist in the effort to live down the provincial government has established a dairy school at Winnipeg, free to all residents of the province, that has done much to encourage dairying along the best and most profitable lines. For that matter, however, western Canada has a number of agricultural colleges in addition to the many demonstration farms. From Saskatchewan comes this voice of experience:

Cattle can be raised with very little care or expense, and I have always disposed of mine at a good profit. I am strongly in favor of mixed farming rather than grain raising only.

And also this:

I and my four boys have all taken homesteads, and we are now, after a little experience, all strong for mixed farming.

Such testimony as this to the advantage of mixed farming for the average settler can be secured almost anywhere in western Canada, and yet, so great and far reaching is its reputation as a wheat country, it requires constant and earnest agitation of the subject to turn the new arrival in the right direction.

The districts are not all alike, of course, and the successful mixed farming in one may differ materially from the successful mixed farming in another, but, so far as I could observe, mixed farming was profitable in near-

(Concluded on page 13.)

The World's Greatest Wagon Factory

Seventy years ago (in 1843) Peter Schuttler made the best farm wagon in the world—with his own hands—in a little shop in Chicago. From the little shop of 1843 the business has grown, until today it is the greatest wagon factory in the world, with a plant that covers over 20 acres, still owned and under the active personal management of Peter Schuttler's grandsons.

The Old Reliable Peter Schuttler Wagons are built as carefully—as honestly—and as substantially today as they were in 1843. They have stood the hard test of racking service on the plains and mountains for 70 years. During all that time they have sold at higher prices than any other wagon—yet the demand for them has steadily increased year after year—because they have always been built better and have given more satisfactory service.

No inferior materials ever enter our factory, and the Peter Schuttler Wagon is made in but "One Grade of the Highest Quality."

Our sole aim is to make the "Old Reliable" Peter Schuttler—the "One Best" wagon that can be built, regardless of expense—one that will stand the test of hard service on the roads—one that can be sold at a fair price and that we can positively guarantee to give absolute satisfaction.

Year after year we have added new improvements and perfected new inventions, and have invariably maintained the high standard of Peter Schuttler Wagons. Our latest and most remarkable invention is the

Peter Schuttler Roller Bearing

The Greatest Improvement of Farm Wagons in 50 Years

Every machine on the farm has been improved—except the farm wagon. Our latest invention will revolutionize farm wagon construction. Every good farm wagon will soon have roller bearings, because they run so much easier, and do at least one-third more work.

The Schuttler Patented Roller Bearing Construction has been perfected and made so practical that it gives absolutely satisfactory results, with but little increase in cost over the ordinary farm wagon.

Write for our Free Book which fully explains the Schuttler Patented Roller Bearing Construction, and gives official tests by U. S. Gov. Road Experts.

PETER SCHUTTLER CO.
2508 W. 22nd Street, CHICAGO, ILL.

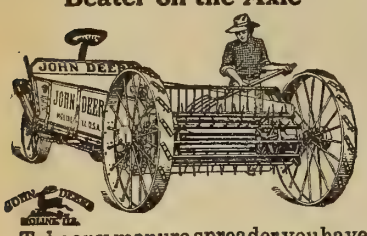
John Deere Spreader

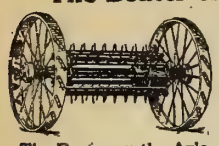
The Spreader with the Beater on the Axle



Take any manure spreader you have ever seen, remove all the clutches and chains, all the countershafts and stub axles, do away with all adjustments and mount the beater on the rear axle.

Rebuild the spreader so that the top of the box is only as high as your hips. Make it stronger. Remove some two hundred trouble-giving parts and throw them away. You will have some sort of an idea of what the John Deere Spreader, the Spreader with the Beater on the Axle, is like.

The Beater on the Axle



The Beater on the Axle

The beater and all its driving parts are mounted on the rear axle. This construction is patented. You cannot get it on any other spreader made.

Power to drive the beater is taken from the rear axle through a planetary transmission (like that on automobiles). It is positive, runs in oil, and does not get out of order.

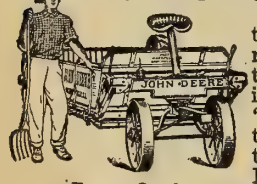
Few Working Parts

The John Deere Spreader is so simple that there are no adjustments. It has some two hundred less parts than the simplest spreader heretofore made.

Out of Gear

There are no clutches to throw it into gear. The lever at the driver's right is moved back until the finger, or dog, engages a large stop at the rear of the machine. All the chains and adjustments have been done away with.

Only "Hip-High"



Easy to Load

Because the beater is mounted on the rear axle, it is only "hip-high" to the top of the box. Each forkful of manure is put just where it is needed. You can always see into the spreader.

Roller bearings, few working parts, the center of the load comparatively near the horses, and the weight distributed over four wheels, make the John Deere Spreader light draft.

Spreader Book Free—*Tells about manure, when and how to use it, how to store it, and a description of the John Deere Spreader. Ask for this book as Package No. Y.27*

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

CONTRACTS IN GENERAL.

A contract always involves an offer made by one party and an acceptance of the offer by the other party. An offer which is not accepted by the party to whom it is made can be withdrawn by the party who made it; he can withdraw the offer at any time before acceptance. If A receives by mail a letter from B containing an offer and immediately mails a letter to B accepting his offer before he is notified that the offer is withdrawn it constitutes a contract, complete and binding on both parties, even if before the receipt of the acceptance by B he has mailed a letter to A withdrawing the offer. A letter containing a definite offer and a letter in answer thereto containing a definite acceptance of such offer constitute a written contract in all cases where such contract is required by law to be in writing.

As a general rule parties are free to contract about whatsoever they please, but the law will not uphold or enforce a contract which is illegal or immoral or against public policy or in cases where the consideration is impossible. Consideration means that which either of the parties does or promises to do, or to refrain from doing. It involves the idea of something valuable in a money sense which either party parts with and the other party accepts, as, for instance, the payment of money, the performance of labor, the delivery of property, and the like. A mere promise of one party to pay money, or to perform labor, or to deliver property, where the other party does nothing, and does not agree to anything, and is not under any moral obligation, is not a contract at all, because there is no mutuality in it, and the law does not recognize it and will not enforce it. It is called in law a "naked promise," because it is without consideration.

If I promise to do something for you, and you have neither done anything for me, nor promised to do anything for me, there is therefore no consideration for me, and my promise is a naked one, and cannot be enforced at law. But if my promise is based upon something you have done, or do, or promise to do for me, there is mutuality in the transaction, and the something which you have done, do, or promise to do, is the consideration moving to me and my promise is the consideration moving to you, and the contract thus made is binding on both of us. As between the contracting parties themselves, even a promissory note could not be collected by law if it were given without consideration. However, if such note be negotiable, that is, made payable to order or bearer, and it passes into the hands of an innocent purchaser for value, before it is due, such purchaser can enforce its payment by law, although it was given without consideration.

As a general rule, all persons are legally capable of making binding contracts. There are some exceptions to this rule, as for instance, persons under age, who are called minors; insane persons; idiots; persons so intoxicated at the time that they are deprived of their reason, and persons who are under duress, that is under restraint by reason of force or violence, or threatened violence. Formerly married women were legally incapable of making binding contracts, but the laws in relation to them have been radically changed, so that in many of the states, especially in the middle West, married women are as free to contract as men are.

LAW QUESTIONS CONSIDERED.

PARTITION FENCE—TIMBER LAND.

An Iowa Subscriber.—I have recently bought a piece of land upon which I intend to build and make my home. The land adjoining is timber land and the owner does not use it for any purpose whatever. I want to put in a hog-tight fence around my land. The owner of the timber land claims that he is not required by law to make or keep up any part of the partition fence because his land is of no use to him. Can I compel him to make half of the partition fence?

Answer.—You cannot. The owner of timber land, which is not used otherwise than for the timber thereon, is not required by law to build, or contribute to the building or keeping up of a partition fence between his land and adjoining land.

CIVIL SERVICE EMPLOYE—HOMESTEAD.

A Civil Service Employe, Brighton, Iowa.—Is there any law whereby an employe in the United States civil service can secure a homestead from the government without residing on the land and giving up his position?

Answer.—There is no such law. Every homesteader must reside on his claim and cultivate it according to law. No exception is made in favor of civil service employes of the government.

ALTERATION OF PROMISSORY NOTE.

A Subscriber, Clear Lake, Iowa.—On September 5, 1912, A gave his promissory note to B, in settlement of a book account dated July 11, 1912. When the note was presented for payment, its date, September 5, 1912, had a line drawn through it, and July 11th was written above it. What is the legal effect of said alteration?

Answer.—The law is that any alteration of a material part of a note will make it void and unenforcible, and if such alteration be fraudulently made the debt it represents cannot be recovered by law, but if such alteration was not fraudulently made the debt it represents can be recovered. In this case it is doubtful whether there be such a material alteration as to defeat a suit on the note, and in any event, if no fraud was intended by such alteration the money represented by the book account could be recovered, even if the note could not be sued upon.

MARRIAGE OF UNCLE AND NIECE—PUNISHMENT.

A Subscriber, Blair, Neb.—(1) What punishment does the law prescribe for a man who marries his niece? (2) In such a case where the parties have lived together as husband and wife for several years can the law separate them?

Answer.—(1) Imprisonment in the penitentiary not exceeding ten years. (2) They are liable to the punishment above mentioned for living together as husband and wife and their marriage can be annulled by law.

TAXATION OF CREDITS.

An Iowa Subscriber.—(1) A sold his farm to B for $7,000. B paid $1,000 cash and got a deed, and entered into a contract to pay the balance of the purchase price in five years, during which time B is to pay taxes on the farm. Is this contract a credit, and as such taxable against A, or can he avoid paying taxes thereon? (2) A, who lives in Iowa, holds a promissory note against a party in another state. Is the note subject to taxation in Iowa?

Answer.—(1) The contract is a credit, and as such taxable against A. (2) The note is subject to taxation in Iowa.

APPOINTMENT OF POSTMASTERS—BONDS.

A Subscriber, Atwater, Minn.—(1) Will the postmasters be changed in the next administration, and if so, to whom should an application for appointment as postmaster be made? (2) What bonds are required to be given by postmasters?

Answer.—(1) Postmasters whose annual compensation are more than $1,000 are appointed and may be removed by the president by and with the advice of the senate, and hold their offices for four years unless sooner removed or suspended according to law. This includes postmasters of the first, second, and third classes. Postmasters of the fourth class are those whose annual compensation amounts to less than $1,000 and are appointed and removed by the postmaster general. A large number of postmasters will be changed by the

Answer These 3 Questions First

before you buy a rod of fence.

KIND OF WIRE? You want a wire that is **springy**, but not **brittle**. We make the wire for Square Deal Fence in our own wire mills right next to our fence factory. We make it hard enough to be springy, but not brittle—then we galvanize it heavily and evenly.

SIZE OF WIRE? Be careful about the comparative size and weight of the stay and strand wires. Compare

SQUARE DEAL FENCE

with any other, strand for strand, stay for stay, and see why fencing we made 22 years ago is still giving good service.

HOW IS IT WOVEN? See the Square Deal Lock—"the knot with a grip that will not slip." See the wavy strand wires that spring Square Deal fencing back into place after sudden heavy strains and keep it tight and trim the whole year round. See the one-piece stay wires that prevent sagging, bagging and buckling to let the pigs under—requires fewer posts, saving money, time and labor.

Get Square Deal Prices Before You Buy

We'll send you our latest fence catalog, price list, local dealer's name and a high grade, four-section, 2 ft. folding rule, all FREE. A postal will do.

BOX 17 MARION, ILLINOIS.

next administration. An application for postmaster in the first, second or third class should be made to the president. An application for fourth class should be made to the postmaster-general. (3) Every postmaster must give a bond in such amount as the postmaster-general shall deem sufficient.

ASSISTANT STATE VETERINARIAN.

A Subscriber, Floris, Iowa.—What fees does an assistant state veterinarian charge for testing cattle for tuberculosis in Iowa, and are such fees fixed by law?

Answer.—An assistant state veterinary surgeon is allowed $5 per day and actual expenses when engaged in the discharge of his duties, which compensation and expenses are paid from the state treasury, upon itemized, verified accounts, audited and approved by the executive council.

LEASE OF LAND MORE OR LESS.

A Subscriber, Pella, Iowa.—B rented a farm from A, not by the acre, but the entire farm. A had the contract made representing the farm to contain 106 acres more or less. A pays taxes on the land as less than ninety-eight acres. (1) Is the contract legal? (2) Does the law require a lease to land to be made by a notary public or a lawyer and a seal attached in order to be valid?

Answer.—(1) The payment of taxes by A has nothing to do with the matter. The real question is, how many acres does the farm actually contain? Where a deed or lease calls for so many acres more or less, the words "more or less" are qualifying, and if the area falls short of or exceeds the number of acres mentioned, but the actual difference is not of much importance, such words will cover it, and no complaint can be sustained. In this case we think the contract is legal. (2) The law does not require a lease to be made by a notary public or a lawyer, nor to have a seal attached.

STALLION SERVICE—LIEN ON COLT.

Mr. E. C. Ward, Brandon, Iowa.—A sold a mare in foal, to B, but the fact of the mare being in foal was doubtful at the time of sale. Nothing was said about payment for the services of the stallion to which the mare has been bred. In due season the colt was foaled. (1) Who is liable for the services of the stallion?(2) Does the owner of the stallion have a lien on either mare or colt for said services?

Answer.—(1) The man who bred the mare is liable for the services of the stallion. (2) If the owner of the stallion complied with the law in relation to keeping stallions for public service he has a prior lien on the colt for the service fee, and such lien remains in force for six months after the birth of the colt. The stallion owner may enforce such lien by placing in the hands of a constable an affidavit describing the stallion and the mare, and the time and terms of service, whereupon the constable will take the colt, and after ten days' notice sell it to pay the service fee.

DESTRUCTION OF QUACK GRASS.

Mr. Paul D. Goff, Ruthven, Iowa.—A and B live on adjoining farms. B's farm is being taken by quack grass and A, whose farm is on the east and north, finds it impossible to prevent the quack grass from spreading over his land. Can A compel B to rid his farm from quack grass, or recover damages on account of its spreading over his land?

Answer.—A can make complaint to the township trustees that his land has been, or is likely to be, infested by quack grass from the land of B, and thereupon the law requires the trustees to make investigation of said complaint, and if the same is well founded to make an order fixing the time within which such quack grass shall be prevented from maturing seed, and an order that within one year the same shall be destroyed permanently, and if B neglects or refuses to do so the trustees shall cause the same to be done at B's expense, to be recovered from him by a special tax to be certified by the township clerk.

ILLEGAL COUNTY DEBT—TAXATION.

An Iowa Subscriber.—(1) The board of county supervisors have contracted an illegal debt. Some payments thereon have been made by the board and auditor in the shape of warrants, no bonds having been voted or sold. What steps, if any, can be taken by a citizen or citizens of the county to have the debt annulled? (2) A has incurred the enmity of B and C, who are members of the board of trustees of his township. Can they, in connection with the other member of the board, while acting as reviewers, have A's taxes excessively raised, and what remedy would A have in such a case? (3) Has the board of supervisors any authority over the township trustees in regard to tax valuations?

Answer.—(1) Citizens and taxpayers of the county can bring a suit in equity in the district court to have the contract annulled and set aside, and the debt declared void. (2) Such board of review have no lawful right to excessively raise A's taxes, and if they do so, he can take an appeal to the district court within twenty days after the adjournment of the board of review. (3) It has not.

ENFORCING TERMS OF A WILL.

A Subscriber, Springville, Iowa.—A man died owning land on both sides of a road. He had built his barn across the road from the homestead on an eighty-acre tract where a spring was. He willed this eighty-acre tract to A, except two acres where the barn and spring were. He willed to B said two acres and the homestead, providing that B was to pay A $100, which B did. The will further provided that if B should sell the homestead he is to let A have an acre lot, A to pay him therefor $50 and allow B to take off the barn. B has sold the homestead for $200 per acre and wants A to pay him $200 for the barn lot, or he will build a house on it. Can A compel B to convey him the barn lot for $50, according to the terms of the will?

Answer.—He can by proceedings in the district court brought for that purpose.

ROAD CULVERT—FARM RAILROAD CROSSING.

Mr. A. H. Mitchell, Weatherby, Mo.—My farm lies partly on one side of the road and partly on the other. The house is on the south side and the barn on the north side. There has been a small box culvert on the north side of the road, but it is filled up, so as to stop the drainage water, forcing it across the road. I told the road overseer that I would furnish rock and sand if the township would furnish cement to put in a concrete culvert, and he agreed to it, and brought it before the board, but the board flatly refused, saying it would not fix any private crossing. (1) Must I fix this crossing at my own expense? (2) The railroad which has been operated for twenty-five years, runs through my farm for 120 rods, and has a grade in one place twenty feet high with a large tube through it to carry off drainage water, and the company does not furnish me any crossing at all, and I have to change my stock from one field to another by chasing them through the public road. Can I compel the railroad company to furnish me a private crossing under the track or above it?

Answer.—(1) You will have to fix the crossing at your own expense. (2) The law of Missouri requires the railroad company to furnish you with a farm crossing affording a reasonable means of going across the railroad from one part of your farm to the other. This law contemplates a grade crossing, and generally an underground or overhead crossing would not be ordered by the court, but if the situation is such that no grade crossing would be adequate a court would, in proceedings for a mandatory injunction, order an underground or overhead crossing to be made.

TENANT HOLDING OVER—DOUBLE RENT.

An Iowa Subscriber.—A owns a farm which has been leased to B. This lease is not good for another year, but B has done some fall plowing and put in some rye corn. A wants B to go off the place. Can B hold it for another year?

Answer.—He cannot hold the place for another year without A's consent. If B holds the place after his term expires and after A gives him notice to quit, he will be liable to pay A double the rental value during the time he holds over.

FARM HOME AND BARNYARD LIGHTING.

(Continued from page 3.).

necessary to use a large proportion of the lights for long periods, it has been found necessary to charge the batteries two times a week, but, in any event, this involves no extra cost.

The lights are strong and even, with no wavering action. That which is placed in the barnyard is an extra strong candlepower light and sheds its rays to practically every part of the barnyard, so that if it is necessary to hitch or unhitch a team, the work may be done just as conveniently as in daylight. One strong light in the cow barn more than answers every purpose of a number of lanterns. The safety of this light is a strong feature. There is not the slightest chance of danger from fire as is the case when lanterns are used about the barns and stables. In the house there is the added convenience over kerosene lamps that there is no greasy oil to handle, no lamps to fill, no wicks to provide, nor chimneys to break. During the entire year in which this plant has been operated, there has been no need to supply even a single new lamp.

This little lighting plant was procured at a cost of $300, exclusive of the engine. The wiring and lamps cost approximately $200 more. From the standpoint of economy it will readily be seen that the interest on this investment and cost of operation is less than the cost of the plainest kerosene lamp illumination, while the superior light and its convenience cannot otherwise be equaled.

Save the Price of a Horse

By Buying the

Moline Low Down Spreader

How do You figure the Cost of your farm machinery—the price of the machine alone, or what it takes to run it?

This splendid Low Down Spreader is not only easy to load, being but 42 inches in height at the rear wheels, but it is also

"The Lightest Draft Low Down Spreader Ever Built."

We have seen the large size Moline Spreader in use in a field with other makes, under exactly the same conditions, when it required one horse less to operate the Moline Spreader than was necessary to operate the others.

In figuring the cost, then, there is a saving in buying the **Moline Spreader** equal to the price of one horse.

Correct Mechanical Construction—Steel Frame—Steel Wheels—Steel Beater—Chain Drive—Roller Bearings.

The Moline is easy on the Man and Easy on the Team.

E.N.P. Bowsher Co., South Bend, Ind.

A New Deal In Farm Tractors

M. F. BATES

I have given the farmers of this country and Canada their first and only tractor that is really practical for farms of 160, 200 and 300 acres.

I did this 3 years ago, after 17 years' experience designing gas engines.

Although this is my 4th season as a Tractor maker, it is the first season I have ever done any advertising to speak of.

But now, after 3 years of remarkable success and with a modern factory to handle a nation-wide demand, I publicly announce the Bates All-Steel Tractor.

My Specialty—Building Tractors for Medium-Sized Farms

Other Tractor manufacturers have used their money and brains to build big, heavy tractors for large farms. That alone has kept them busy. None have ever made a serious attempt to build a tractor light enough, simple enough and inexpensive enough for men on farms of 160, 200, 240, 320 and 640 acres.

I have done just the opposite. I have specialized on the smaller tractor, leaving the large ones alone.

With the result that I have perfected a tractor that pulls as much as 16 big horses, yet weighs 6,000 to 8,000 pounds less than any other of the same power. I did this by using high-grade steel, instead of common iron.

Think what a saving of power and fuel to have 3 to 4 tons less dead weight to pull!

And this tractor will work any place that a horse can. With its light weight and wide drivers, it does not pack the soil. You can harrow with it, do your discing, seeding and rolling. Plowing is only one of its many useful features.

You Can Get Into The Fence Corners

With my direct-connected plowing outfit, you can turn square corners. Can get right up into the corners of your field. You don't have to use horses to finish up the job.

Nor do you need a plowman. The driver handles the plows without getting off. For the plow platform is parallel with and connected with the engine platform. There's no heavy lifting. All operating levers are within a radius of 12 inches.

No matter how rough or smooth or what kind of soil, or what condition the soil is in, you can plow it with a Bates tractor if it can be plowed at all!

Eight to twelve acres is the usual day's plowing with the Bates. And no man ever saw cleaner, better work.

The plow carriage can be instantly detached and the tractor can be put to work at any of the hundred and one jobs that a powerful engine does on the farm.

As to the Price

Even though I use first quality steel at 11c per lb. as against others who use common iron at 3c per lb., my price is very reasonable. In fact, it is low.

That's because I make tractors only, and only tractors of one size. This gives me utmost economy in factory operation.

My profit per machine is less, too, than others.

I regard popular price as very important in the selling of any product. Hence, my decision to maintain a low price.

Get My Free Catalog

It is neither fair to you nor to me to judge a machine of such importance entirely by these brief facts. I want you to see some large pictures of it and read what men now using the Bates say about it. Then, when you have seen what a wonderful tractor it is, I will tell you the price, and that, I promise you, will prove mighty attractive.

So send at once for my latest catalog. It is free. Write today and you'll get it by next mail.

M. F. BATES
BATES TRACTOR CO.
117 Bates Street, LANSING, MICH.

The Bates All-Steel Tractor

Weight 8,000 pounds—25 and 30 H. P. on the belt (equal to 16 big horses at the draw bar), doubly-opposed engine, doubly-protected motor, all working parts enclosed, enclosed cab, removable cab and hood, force-feed oiling system, fuel tank conveniently located, doubly-efficient cooling arrangement, gear driven from both sides; sliding, positive clutch transmission, gears always in mesh, stripping of gears impossible, external contracting friction clutch, no slipping, controlling levers in radius of 12 inches, only one adjustment. Send postal for low price and further particulars.

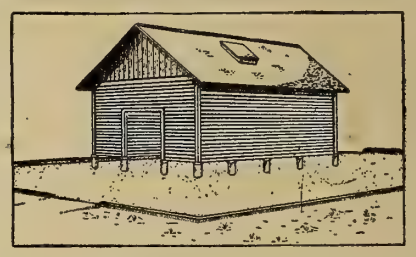
HINTS·SUGGESTIONS·DEVICES

WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

A RAT-PROOF CORN CRIB.

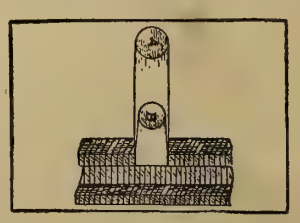
The combination corn crib and feeding floor herewith illustrated is an idea well worth studying if the reader raises any great number of hogs. The idea first was to build a corn crib that was as near rat and mice proof as possible, and while it is impossible for rats or mice to enter this crib it must be remembered that one often allows them to get into a crib through carelessness. For instance, a board is left leaning against the crib, the mice may be shoveled in with the corn, etc., but mice and rats must have water, and the few that enter cribs in this manner will soon leave. This crib is thirty-six feet wide, with a twelve-foot driveway, and is forty-eight feet long. The walls are twenty feet to the eaves, and the crib is filled with a corn elevator. The crib has a cubic capacity of about 30,000 feet, and will easily store 7,000 bushels of corn. The sills are 8x8 timbers. The studs are



2x8, and the center over the drive has 2x10 joists. The roof is covered with composition roofing, and a trap door in the roof is provided for the elevator. The feeding floor extends twelve feet in each direction beyond the crib, also under the entire crib. Fourteen-inch glazed tile are used for foundation posts, and these have bolts extending down into the sub-foundation, and up through the sills, and the tile are filled with concrete. This makes an everlasting foundation and one that rats and mice cannot climb. The feed floor is placed over gravel and stone, which keeps the rodents from burrowing under the crib. The crib provides shade for a number of hogs in hot weather, and as the floor is easily cleaned it provides an ideal feeding place for hogs. The crib being directly over the floor, much labor and time is saved caring for the hogs. Rods are run through the crib in the center every twelve feet. If desired, bins could be arranged over the drive for small grain, but in this crib the space over the drive, also the main floor below, was floored with 2x6 timbers, with one-quarter-inch spaces between each timber to drain out any moisture, and to provide extra ventilation for the corn. The hogs eat any grain that falls through the cracks. The crib was well built and painted with three coats of good paint.

Remedy for Excessive Draft.

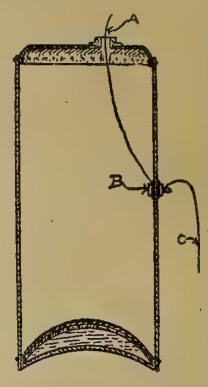
A furnace that was installed last winter for a Missouri farmer had such a strong draft that it was hardly possible to supply same with coal. After trying several devices with no benefit the idea herewith illustrated was used and the furnace gave no further trouble. The furnace pipe was ten inches in diameter as shown at A. This pipe was removed and



a cone-shaped pipe B inserted inside and the pipe was replaced. The pipe B was ten inches at the outer end, in the brick flue, and eight inches in diameter at the opposite end, and two feet long. The space between the pipes created an eddy, thus stopping the draft.

How to Mend a Boiler.

A range boiler which had developed a large leak in one side was easily mended as shown in the illustration. The hole being rather large, solder proved of no use, for as soon as the boiler became thoroughly heated it sprung loose. The hole was mended as shown by first drilling the hole out with a one-quarter-inch drill, then passing a small three-sixteenth-inch stove bolt through as illustrated. To do this a cord was fastened to the head of the bolt. The cold water pipe on top was unscrewed and the bolt was lowered to about where the hole was supposed to be. The first cord A was also tied around a lead washer, and behind this lead washer an iron one was placed. To the end of the bolt was tied a second string as at C, this being also lowered inside the boiler. The next thing was to make a hook of baling wire and fish out the string C. This being easily done, a lead washer was placed over the bolt which had been drawn easily through the hole with the string C and over the lead washer was placed another of iron. Then the tap was screwed in place, making not only a neat job, but one that could not be broken. This idea could be used in various boilers, tanks, etc., that find a place in and around the home.



Keeping Meat.

In many parts of Texas fresh meat is kept for quite awhile with the device shown in the accompanying illustration. Two hoops from a small keg or barrel are covered with cheese cloth, and the meat hung inside fastened to a stout cord that passes through the top, and is made fast to some timber or limb of a tree. The meat is placed in the shade and the cloth, while it will admit plenty of air, keeps out the insects, dust and dirt. Pork, beef, venison, etc., is many times kept for days in one of these meat preservers.

GETTING AWAY FROM WHEAT.

(Continued from page 9.)

ly all of them and much safer than the single crop plan. True, one may gain the impression in one district that mixed farming would not be profitable in some other, but when he moves on to the other he discovers that the farmers who have tried it there have been as successful as elsewhere. Winnipeg, Saskatoon, Prince Alberta and Edmonton—not to mention various places in British Columbia—all had much to say, often with urgent emphasis, upon this subject, so it seems safe to assent that the statements herein made apply to pretty much all of western Canada.

VALUE OF DOMESTIC ANIMALS.

Iowa, Missouri, Illinois, Kansas and Nebraska in the order named ranked highest among the states in 1909 in gross value of domestic animals sold, each reporting more than $100,000,000. Texas reported the sale of the largest number of cattle, excluding calves, Iowa ranking second, but New York ranked first in number of calves sold, with Wisconsin second.

While Iowa reported the sale of more horses than any other state, Missouri ranked first in the combined number of horses, mules and asses and burros sold, the number of mules sold by Missouri farmers being nearly twice as great as the number sold by the farmers of any other state. Iowa ranked first with respect to number of swine sold, and Missouri second. Montana and Ohio ranked first and second respectively in sales of sheep.

The census bulletin issued recently containing these facts puts the total of all domestic animals sold in the entire country during 1909 at $1,562,937,000 and that of animals slaughtered on the farm at $270,239,000, making a total of $1,833,175,000. To the total value of animals sold, cattle, including calves, contributed $710,015,000, or 45.4 per cent; horses, mules, asses and burros together $306,457,000, or 19.6 per cent; swine, $463,011,000, or 29.6 per cent, and sheep and goats, $83,433,000, or 5.3 per cent.

FULLER & JOHNSON FARM POWER

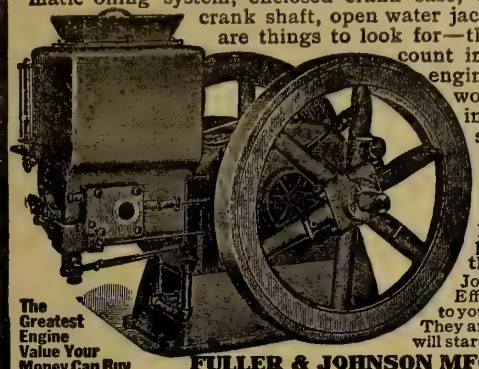
Farm Power at Lowest Cost Per Year

The engine best suited to do your work is the engine you can depend upon to go with fewest repairs, to use less gasoline, and to last the longest in actual hard, every-day service.

Fuller & Johnson Gasoline Engines are built in sizes from 1 to 20 h. p. Stationary and Portable, for general work, pumping and other special requirements. Their great durability, economy in fuel, high quality and constant performance give you the utmost in farm power at lowest cost per year.

Fuller & Johnson Double-Efficiency Engines

are mechanical masterpieces, built by engine specialists. We guarantee them to do the work for which they are designed with supreme satisfaction, ease and economy. They are massive, powerful, reliable and yet amazingly simple. See the heavier castings, larger bearings, automatic oiling system, enclosed crank case, extra heavy crank shaft, open water jacket. These are things to look for—things which count in buying an engine for your work, whether inside or outside. Comparison with any other engine, point by point, will prove the superiority of the Fuller & Johnson Double Efficiency Engine to your satisfaction. They are frost-proof—will start when wanted.



The Greatest Engine Value Your Money Can Buy

The Famous Fuller & Johnson Farm Pump Engine

The little labor-saving giant that does more work than a team on the farm. Pumps water, runs the corn sheller, fanning mill, washing machine, separator, churn—any and every kind of small machinery. Will pump 400 to 1,000 gallons an hour. Yet costs little. Gives certain and positive water supply, regardless of conditions.

"People's Price" Engines

Here is an engine built with the same care and embodying the principal superior features and quality of our famous Double-Efficiency line, which we have been able to make to sell at a **popular price.**

It has all the newest improvements—strictly up-to-date. You get a wonderful money's worth in the Fuller & Johnson People's Price Engine. No other engine concern in America can give you the high-standard Fuller & Johnson quality at such prices.

It will pay you to get in touch with Fuller & Johnson and learn how they can save you money on your farm power requirements. The coupon is for your convenience, or a postal will bring full information.

More About the "American Cow."

By B. O. Cowan.

IN A RECENT issue of the London Live Stock Journal an English writer expresses his doubt of the correctness of the generally accepted history of the cow known in Short-horn history as the "American Cow." This cow is mentioned in Vol. 1 of the English Herd Book in the pedigree of her daughter Red Rose, and her breeder was Robert Colling. Her daughter, Red Rose, by Yarborough, was bred by Mr. Hustler and recorded as owned by Thomas Bates. In both Allen's and Sander's histories or Short-horns it is stated that a son of Mr. Hustler came to America about the year 1801 and located in New York City. Among the cattle he brought over was this heifer that was afterward called the "American Cow." Both historians say that young Hustler afterward returned to England and took this cow back to his father's herd, where she was bred to Yarborough and produced Red Rose, calved in 1811. This record is supported by the opinion of William Warfield and a circular issued by John Thornton, England, and the English historian says this heifer was bred by Robert Colling and sold to go to America. If she came to America and was returned later to England, as these two historians assert, it is not difficult to understand why she was called the "American Cow."

In spite of these statements this writer in the London Live Stock Journal seems very skeptical and says: "This all seems to be conjecture; there is not one definite fact with which to support it. It is not even certain that Mr. Hustler's son went to America. If he did where did he reside?" This writer quotes from both Allen and Sanders about this cow, yet refuses to accept their statement that young Hustler did come to America and settle in New York City and that he sent the cattle he brought over into the county of West Chester. He seems to think it rather remarkable that a cow should have been imported to America and then exported to England without some record of the transaction. At that time there were no herd books in either England or America and no record of cattle sales was made except the imperfect private records of a few breeders of Short-horns. The fact as late as 1817 pure-bred Short-horns were imported to America without pedigrees shows that the importance of accurate records was not fully appreciated.

Because of the descendants of this "American Cow"—the Cambridge Rose and Red Rose tribes, and particularly a branch of this family known as the Rose of Sharons—this critic of accepted opinions thinks it possible that some data or letter may exist in the archives of the Renick family that will furnish exact information about this disputed question. This supposition is not likely to be realized and has not sufficient foundation to make it even a probability. The first importation made by Felix Renick for the Ohio company was in the summer of 1834. In this importation was Rose of Sharon, bred by Thomas Bates, a descendant in the fourth generation of the "American Cow." Rose of Sharon afterward became the property of Abe Renick, Kentucky, and in his herd, and under his skilful management she produced a family of cattle that for many years was exceedingly popular. So far as printed records indicate, this purchase of Short-horns made by Felix Renick in 1834 was his first transaction with Thomas Bates and the buying of Rose of Sharon was certainly the first produce of the "American Cow" the Renick family had ever owned. Whether or not he had any dealings or correspondence with Thomas Bates prior to the year 1834, I have had the privilege of looking over the letters received by Felix Renick from Thomas Bates from 1834 to 1841, now in possession of Abram Renick, manager of the American Short-horn Breeders' Association, and these letters furnish no information about the "American Cow." As the purchase and importation of Rose of Sharon occurred thirty-three years after the reputed importation of the "American Cow" by Mr. Hustler it is not likely that Mr. Bates would have referred to that circumstance in his letters to Felix Renick, especially since the transaction took place before this family of cattle came into Mr. Bates' possession, Red Rose by Yarborough being the first one he ever owned.

While the question may never be settled beyond the possibility of doubt, the evidence at hand warrants the statement and belief that the "American Cow" was brought to America and afterward returned to England. To disprove this belief will require much stronger evidence than has been furnished by the writer in the London Live Stock Journal.

A tractor won with five bushels of wheat grown by the men whose pictures are also shown, along the line of the Northern Pacific in the Shields Valley of Montana. See field note entitled "High-Yielding Wheat Wins Tractor."

Charles L. Hill, president of the American Guernsey Cattle Club, is fathering a plan which will permit of the registering of well-bred grade Guernsey cows and heifers of high production in the regular herd books of the breed. He proposes to grant full recognition to grades which have five top crosses of Guernsey blood and whose dams in a single year have produced an amount of butter fat equal to that required for their age by the Advanced Register. The proposal is entirely radical, but as it places the emphasis on production, it is believed that breeders and dairymen in general will approve of the plan.

Keep a pair of shears around the barn to clip the horses' foretops and fetlocks, and to keep all of the long hairs trimmed from the dairy cow's teats and udders.

Cleaner Corn —Higher Prices

Shell your own Corn and your neighbor's too

Take in what you've been *paying out* for corn shelling—and *much more*—by shelling your own and your neighbor's corn. Get 1 to 3 cents more per bushel for your corn by shelling it *cleaner* and grading it one or two grades higher. Shell your corn any day you have the time—days when you have no other pressing work.

The REEVES Power Corn Sheller

will soon pay for itself and return you handsome yearly profits. *Makes quick work*, shells over 1,000 bushels per hour. *Shells cleaner*, because it has the most advanced type of suction fan. Will stand many years of the hardest use. Built on the cone cylinder type—has long ribs, chilled to stand hardest wear. The cob carrier swings to right or left or out ahead, throwing cobs clear of the machine and wagons. Let us prove to you how you can make big money this year, and also get higher prices for your own corn by shelling it *clean*.

HORTICULTURE

SOME GUIDING IDEAS IN PRUNING FRUIT TREES.

To the Editor of The Homestead:

The chief object in pruning is to induce the tree to yield crops of fruit and grow healthy wood for future crops of fruit. Every branch produced draws upon the resources of the tree and soil. It is the branches most favorably located that perform the chief functions of carrying on the work of the tree. Those less favorably located do not produce high-class fruit and become an unnecessary drain upon the rest of the tree. The object of pruning, therefore, is to throw the energies of the tree into the most productive parts. The other parts must be removed. Tillage methods have a great influence upon the strength and vitality of the tree and to a large extent govern the necessities of pruning. A poorly nourished tree cannot support a large bearing surface, while a vigorous, well-fed tree can support a correspondingly large number of branches. The strength of the tree and its available supply of food should be carefuly considered before any extensive system of pruning is to be undertaken.

To properly prune a tree one must know on what wood and under what conditions fruit spurs grow. Apples, pears, quinces, most plums and cherries are borne on wood two or three years old, so as to take out all such wood would result in no fruit. With these fruits it is not necessary to practice heading in, except as a special resort. All peaches and some plums bear fruit on the wood of the past season, and must be headed in more or less to keep the bearing wood near the trunk. One should have a definite purpose in pruning a tree. A young tree should be trained, so that in later years it will have a vigorous and productive head. By directing its growth is forced to grow in the desired directions. By having a definite purpose the skilful pruner removes branches before they form, that is, he destroys the buds and twigs that would grow out of place and not be wanted. A sharp knife is the most valuable tool. No large branches that are not wanted are allowed to grow and all his efforts are toward encouraging the tree to grow toward the ideal he has in mind after a careful study of the form of tree best adapted to his special line of fruit production.

The real problem in pruning begins with the setting of the young tree. If a one-year-old tree is planted the branches should all be removed and the stalk cut back to about the height desired for heading. This may vary according to the kind of fruit and the ideals of the grower. The head cannot be formed until the next year brings out the branches that must be thinned out and those retained for the framework of the tree. If two-year-old trees are selected from the nursery row, the work of heading can be begun by cutting back all the branches about five inches from the head and leaving the ones that will be wanted to form the head and possibly a few more to enlarge the leaf area. These can be cut off later. For the first few years the main object is to train the tree in the direction it should grow. The peach tree is the only exception to this rule. It should be cut back as little as possible to avoid danger of stimulating the tree and causing a too heavy growth of immature wood.

At regular intervals during the growing season it pays to prune out or rub off all undersirable shoots that are likely to need cutting out in future years. The next spring a strong branch with an upright tendency should be selected as a leading shoot, the side shoots may be cut back two-thirds, the leader being left somewhat longer so that other branches will be given off from it, but not in such quantities as to prevent the sunlight from shining all through the tree. After the tree comes into full bearing, the chief object is to secure first-class fruit in moderate quantity, and if the mistake of leaving too much wood has been made in the past, it will be necessary to resort to severe pruning, not only of the present year's growth, but many times much more.

In cutting back a large branch remember to cut back to the trunk, to avoid leaving an unsightly stub. The best time to perform this work is after the severe winter weather has passed and before bloom commences. In the large commercial orchard it is not always possible to do everything in season, so it may be done in mild winter weather without seriously injuring the trees. Only common sense can tell a man how much wood to remove during the period of the tree's development. If a mistake is made it should be on the side of light pruning. Much depends upon the variety, the soil and the climate. One must decide at the time of planting whether he is to practice high or low heading. Modern growers favor low-headed trees, because it saves work in spraying, pruning and harvesting, the fruit and the trees are less injured by winds and the trunk is less liable to sun-scald or winter kill, besides the low-headed trees come into bearing at an earlier age.

The two general types of head are the open-centered tree, and the close-centered tree. In the first the framework consists of the short trunk surrounded by four or five main branches ascending obliquely. In the second the trunk continues up beyond to main side branches and form the center of the tree. As a rule the latter is preferable in many localities. Which ever the form, care should be taken that the lowest branches will be exposed to the light and sun.

W. M. Kelly.

BREEDING NEW FRUITS.

The systematic breeding of new fruits is really a twentieth century venture. It was agitated seriously in the nineties, but the efforts made at our various experiment grounds at that time, were, compared to what is now done, hasty and ill-considered. The most of the work done in the past was in the primitive way of planting all sorts of seeds, indiscriminately. In that plan, nature was depended upon to do the crossing, and man's work was expected to be chiefly the growing of enormous numbers of seedlings and selecting from them the very rare individual of some value over well-established varieties.

But, largely through the experiments of C. G. Patten, the Iowa Burbank, there came to be known certain laws of tree breeding, and modern work is very largely along the line of those established facts. The prepotency of the mother tree was known. And the fact that trees like animals were likely to take back, the value of a hardy ancestry, running back for several generations was established.

The fact that color and form are possibly under control became known, and other facts which showed the importance of hand fertilization. So there was realized, in this new field, the importance of the axiom, that a principle of science is a law of art.

Modern work in tree breeding consists in crossing certain varieties

Certainty Seeds

Cost No More Than Common Seeds.

Forty-eight years' continuous experience has taught us how to produce the best seeds, what varieties are best to plant and how to give the best service to our customers. with a definite purpose in view. There are four definite points to reach; size, color, quality, and hardiness of tree. The last named is the most important for the Northwest, for without that all the other good qualities combined were utterly useless.

The work of hand fertilization is not extremely difficult. It only requires a good eye, and a fine touch. The blooms which contain the pollen to use may be kept in good condition for some days. They have been packed and shipped across the continent and then used with good results. After the pollen is applied, it is customary to bag the twig, holding the blossom treated. A thin paper sack is put over it and securely fastened. This not only prevents any other pollen settling upon stamens, but it usually prevents any one of the dozen accidents likely to happen, the destruction by bugs, or worms, storms or frosts.

From the fruit so grown, the seeds are carefully saved, and labeled, for scientific breeding is not only a matter of careful field labor, it is also a matter of bookkeeping. The seeds, buried in sand are put through the freezing process and planted in the early spring. In case they germinate well we are past the first critical stage.

Properly tended we have at the end of six months, some thrifty seedlings. And then comes the transplanting, for they must be set in the orchard with room enough given each tree to make a vigorous growth. And now comes the long waiting season, for it usually takes ten years to test the fruiting capacity of a new apple. And in some cases you must add five years more to make sure. In common practice fruit is obtained three years earlier by grafting the new sort into a bearing tree of some old variety. This is a help, but the fruitfulness of the original tree is one of the elements which must always enter into the final estimate of value.

From all this it will be seen that it is no light matter to enter the realm of fruit breeding. No returns can be expected, but care and labor must be given for at least one fourth of an ordinary lifetime. And in the end the experimenter finds that perhaps one tree of a thousand under test has some value, enough so that it will pay to introduce it.

This business will not be done by the ordinary man. Only the extraordinary man will undertake it. He must have the spirit of the philanthropist with a bank account.

GROWING SPINACH AND KALE FOR GREENS.

To the Editor of The Homestead:

I very rarely have a failure with spinach and kale, and also it is very rare to have a failure of a crop on land where they have grown previously, as spinach seems to improve the texture of the soil and is beneficial to the crop following it. Besides being one of the most profitable of crops, spinach is a fine green crop to turn under.

Kale also is a very profitable crop for greens, but does not seem to have as much value as green manure plowed under as does spinach. I do not grow mustard for market as there is very little demand for it with me.

My spinach season starts about September 15th and closes about June 1st. My kale season is from about February to June. In my experience spinach does best on gravelly clay that has had a good coat of manure applied before the previous crop, while kale seems to thrive best on sandy loam. For fall spinach I plow the ground as soon as possible after the previous crop is harvested; no manure is applied. After plowing, the ground is disked thoroughly, then floated down. After each shower the ground is disked and floated again, every effort being made to get moisture and hold it.

When the time comes to plant the seed is drilled rather thickly in rows eight inches apart. If the ground threatens to crust after a shower I have it gone over with rakes. When the spinach comes it is cultivated with the wheel hoe until time to cut. For spinach and kale that is to be wintered through, the ground is prepared as for fall spinach, the seed sown thickly and late enough so that when cold weather comes it is just about big enough to be cut.

No artificial covering or protection is necessary in this climate for this size spinach, provided special care is given to two points—the seed bed must be well packed and the seed sown thickly. This last fall I tried the experiment of giving a small patch of fall-sown kale a light covering with wheat straw. Results on this cannot be had till spring. For spring sown spinach and kale the ground is given a heavy coat of manure and plowed in the fall; then in the spring it is disked, harrowed and floated down; the seed is either broadcasted or drilled. Drilling is preferred, but sometimes it is impossible because of the ground being too wet at sowing time.

For cutting, my hands seem to prefer just a sharp knife. Greens are cut direct into bushel crates which are then emptied into sacks. These are then taken to the bunching house and washed in the wash tank. The greens are then resacked and are ready for the market. I sell considerable spinach and kale, as well as much other produce direct by telephone before they are put up. Very little is taken to my home market unsold, as I am able to reach all my home customers by phone. However, considerable of my stuff goes to a good mining town to which I have to ship twenty miles by rail. I usually send a load through the country to the town at the same time I send stuff by rail and have the team meet me at the depot.

One of the most important things to observe in growing spinach and kale is to get reliable seed. This lesson was brought home to several of the gardeners in my neighborhood very forcibly this last fall. Myself and several others near me bought our seed of a reliable seedsman, while many other growers here bought theirs of a local grocer. All planted about the same time. No rain fell for any of us for some time, about four weeks; then we had a light shower. Our seed came up at once, but not one seed of the other gardeners' planting sprouted.

By the time the other gardeners could grow a second planting I had sold over fifty bushels at $1 per bushel; then the price dropped to fifty cents per bushel; a very good price, of course, but they failed to get the cream which was at the top, as is always the case. Prices for fall spinach range from fifty cents to $1 per bushel, spring spinach from forty cents to $1 per bushel, kale from forty to eighty-five cents per bushel. It is the first on the market that brings the best price and it is up to us gardeners to put it on the market in time. One thing sure; it don't pay to fool time away with poor seeds, for market gardening, nor general farming. The best seeds in the best prepared land is far the cheapest and most profitable. R. B. Rushing.

THE FAMILY APPLE ORCHARD.

To the Editor of The Homestead:

A family orchard is very valuable as there is nothing that can take the place of good apples either in the summer or winter. Children that have plenty of apples to eat during the fall and winter generally keep free from biliousness and fevers. To have the privilege of enjoying a plate of apples before bed time is not only a pleasure, but health giving. This means fewer doctor bills.

There are quite a number of varities of apples, but when putting out a home orchard the farmer should select those varieties best suited to his locality. For the middle West there are a number of varieties that do well. The farmer should aim to have some trees of the summer, fall and winter varieties. For summer the Red June and Early Harvest are excellent varieties. The trees do well and are healthy and hardy. They are splendid cooking apples and also very palatable when eaten raw.

A good early fall variety is the Maiden's Blush. It matures well, has a delicious flavor and is first class for eating or cooking. It also brings good prices on the market. The

Famous New Superior GRAIN GRADER Unheard-of Offer!

$2.50 sliced right off the price of the great New Superior Grain Grader—if you'll present the coupon below to your dealer *at once!*

Think of it! The genuine New Superior—the grader and cleaner that is in use in thousands of American farms—the machine that has piled up hundreds of thousands of dollars profits for the owners—now offered at a lower price than ever. We want every farmer to know the New Superior. We want to give this machine more publicity than it has ever had before. To make farmers and dealers talk about it and investigate it, we're offering this $2.50 coupon.

This is only the beginning of your saving and earning by the use of this machine.

You'll get the best seed you ever had—sifted right out of your own crop and cleaned all ready for use. Wheat or oats, flax, barley, rye, timothy, clover—all cleaned and graded by one machine at one operation. *Big crops at low cost for seed.*

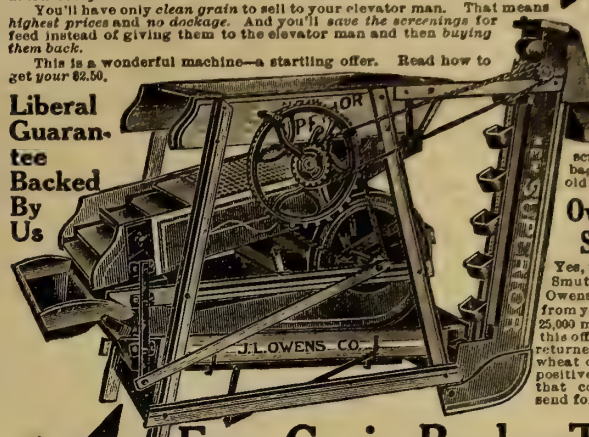
You'll have only *clean grain* to sell to your elevator man. That means *highest prices* and *no dockage.* And you'll *save the screenings* for feed instead of giving them to the elevator man and then *buying them back.*

This is a wonderful machine—a startling offer. Read how to get *your* $2.50.

$2.50 At Your Dealer's for Coupon

The coupon below is good for $2.50 at your dealer's on a purchase of a New Superior Grain Grader and Cleaner. Cut out that coupon *this minute* It's just that much money—better than money because it starts you on the road to extra profits of hundreds—even thousands—of dollars yearly.

Remember this is the genuine New Superior—the machine you've heard of so often. The machine with the automatic, adjustable feed, 12 sieves and screens, big capacity hopper, double bagger—the machine a twelve-year-old boy can run.



Liberal Guarantee Backed By Us

Owen's Smut Cleaners Sold on Same Offer

Yes, the coupon is good on the Owens Smut Cleaner too. We guarantee the Owens Smut Cleaner to eliminate smut from your crops or your money back. 25,000 machines have been sold on this offer and not one has been returned. Stinking smut in wheat or loose smut in oats positively ended. Cut out that coupon *now*—and send for

Free Grain Books, Too

INVESTIGATE—Best and Cheapest Seeding Known.

Alsike Clover and Timothy mixed. Fully 1-3 alsike, a big bargain. Greatest hay and pasture combination grown. Write for Free Sample and 76-page catalog and circulars describing this wonderful grass mixture. Beats anything you can sow and ridiculously cheap. We handle only best tested recleaned seed guaranteed. Write before advance.

A. A. BERRY SEED CO., Box 503, Clarinda, Iowa

Northern Spy is a good fall apple, especially for the northern sections. It grows large, is juicy and crisp. It ripens in September.

For winter use the Ben Davis is the best keeper, although as an eating apple it is below par. It is a splendid cooker. The variety is so well known that it is useless to commend it. There is no apple that will come so near producing a crop every year. The Gano is similar to the Ben Davis in character and quality and is also worthy of consideration when setting a new orchard.

While the Jonathan is not quite so good a keeper as either the Ben Davis or Gano, the fruit is more highly flavored. It does not keep so well as either of the other varieties, but it cannot be excelled for eating and cooking purposes. The Grimes Golden is a most excellent apple, but it requires good, rich soil and the land must be high and dry and well drained. Its fruit is even more delicious than the Jonathan. Two of the latest varieties are the Ingram and Geniton. Where late frosts prevail they should be planted, especially if the soil is heavy and rich. Their excellent keeping qualities especially commend them for the home orchard. If one will carefully consider these varieties when ordering trees for the home orchard he will have in a few years a nice little orchard that will supply him all the fruit he needs for his family.

W. D. Neale.

The Importance of Seed Testing.

By A. A. Coult.

MISSOURI is one of the states which does not have an adequate law prohibiting the offering for sale of impure and adulterated seeds, and has become the dumping ground by unresponsible seed dealers for large quantities of trashy and weed-mixed grains and grass seeds.

Very few farmers can tell whether they are getting pure alfalfa, or timothy or half a dozen other important seeds for sowing. Since S. M. Jordan has become manager of the Pettis County Bureau of Agriculture he has requested that all seeds purchased by the farmers be submitted to him for a purity test. One lot of alfalfa seed, bought in a neighboring state, was so bad that he sent a large sample to Washington for inspection, which was reported as having 4,000 weed seeds to the square rod, based on sowing sixteen pounds of seed to the acre. Some clover seed purchased by another farmer showed eighteen dodder seeds to the square rod, based on the regular amount of seed sown per acre. Missourians do not need to pay out their hard-earned money for weed seeds, when they raise more than they want at home.

With a few such cases of bad seed called to their attention, the Pettis county farmers are all turning to Mr. Jordan for information as to where they can buy pure seeds, and after they get same bring him samples to be tested before planting. The work has become so heavy that he has made seed testing a part of the regular laboratory work at the Sedalia High School, where he gives two lectures a week. All samples are submitted to the high school classes for purity tests. The particularly bad looking samples are divided into three equal portions. One lot is sent to the seed testing laboratory at Washington, one lot to the seed testing class at the high school and Mr. Jordan personally tests one lot. After the reports are completed he compares the three tests. Prof. C. A. Philpott, principal of the high school, also gives considerable of his time to directing the seed testing in the laboratory. The desire to know the various kinds of seeds has become so great that some of the teachers of the rural schools are making a special study of it at the high school laboratory so that they can be able to show the scholars in their schools the most common varieties of seeds.

In connection with the pure seed campaign Mr. Jordan invites all of his farmers who have seed for sale to submit samples to him for testing and upon the purity and cleanliness of the seed he sets a fair price for both seller and buyer. C. E. Messerly, Sedalia, had 800 bushels of machine-run wheat last summer, which he recleaned thoroughly, getting 600 bushels of extra fine seed wheat. He sold the entire lot at $1.25 per bushel, which netted him $750 and he had 200 bushels of wheat left. The best he could have obtained for the machine-run wheat was ninety cents per bushel, or $720. He sold 100 bushels of the poor wheat at ninety-cents per bushel and the remainder, which was mostly cracked wheat was sold for chicken feed. The cost of recleaning his wheat was $50 for a new machine and $12 for labor. He made $58 cash profit, 100 bushels of good chicken feed and a cleaning machine as good as new on the recleaning. W. L. Brown, Sweet Springs, recleaned his timothy seed and showed a sample to Mr. Jordan who sold the entire lot of 100 bushels at $2 per bushel, while the regular quotation was only $1.20 per bushel. Some samples of seed brought in for Mr. Jordan's inspection are so bad that he advises against trying to sell it for seed. He shows the farmer just what the mixture contains and that it is better to lose a little money on the lot than to get a bad reputation for growing poor seed.

As a result of Mr. Jordan's guarantee of tested local-grown seeds his office has become headquarters for buyers and sellers and he could sell at advanced prices over regular seed quotations, much larger quantities of various seeds than his farmers grew last year. He does not make any charge for testing the seeds, nor for any of the sales which he is able to make for his Pettis county farmers.

THE GLASS MILK ROOM.

To the Editor of The Homestead:

Recently the writer visited a farm of a dairyman who furnished special pure, clean milk for babies in one of the large western cities. One of the most striking and impres ve features of the place was the glass sun room connected with the milk house. There was the ordinary boiler room and separator and bottling room much the same as is seen in all good dairies with the sun room attached on the south side.

About fifteen feet in length and ten in width and about the same in height the room was entirely of glass panels on the east, the south and the west and the roof. All the utensils of the dairy pails, cans, strainers, separator bowl, and fixtures, bottles, cases, bottler and all other essentials were arranged on racks within the glass room so that the sun would have access to it during the day. Needless to say the glass room has a cement floor and is kept perfectly clean. Nothing but the dairy utensils are put into it.

Why all this trouble? Why all this expense? It is all done for the purpose of assisting in producing milk that is pure, clean and not contaminated with disease germs of any kind. Sunlight the owner knows to be the greatest disinfectant and destroyer of disease germs in all the world if it is only given a chance. The glass room gives it the best opportunity possible. Then the glass walls and roof protect against contamination from the exterior. No dirt or filth of any kind can blow upon the utensils. No insects can get to them. Especially is this commendable when the dread fly is thought of. No fly ever touches anything in that glass room to leave the germs of typhoid or other disease upon the pails, bottles or other equipment. The glass room is the acme in the production of clean milk. The cows are tested and known to be free from disease. They live in the open and are healthy. They are kept clean and are milked in a clean barn. Everything is clean. After using everything concerned in the work is scalded. After scalding the sun completes the cleansing and the glass keeps out contamination. Truly the owner's ideal, "clean milk for babies," is a noble one. The glass room is one big factor in his approaching that ideal.

DAIRY

ARE DAIRY ANIMALS TOO CLOSELY HOUSED?

Realizing that performance is the ultimate purpose of the dairy cow and bending every effort to develop this characteristic, breeders of dairy cattle have sometimes allowed themselves to become somewhat one sided in the direction of milk and butter fat production.

This, at any rate, is the opinion of Dr. Henry Favill, of Chicago, who is recognized as one of the leading physicians of the middle West and who owns and operates a large dairy farm in Jefferson county, Wisconsin.

While granting that performance is the ultimate purpose of a dairy cow he is convinced that there is a type which carries with it not only the best performance, but the best physique as well. A moral obligation, he believes, rests upon breeders of pure-blood cattle to steadfastly fight for type, not as a mere esthetic achievement, but as having a fundamental relationship to performance.

Admitting, as we must, the menace to the dairy industry of tuberculosis, to say nothing of other infectious diseases; halting along unsatisfactorily as we do with the tuberculin test and its weeding-out method, can we close our eyes to the fact that safety in this situation lies in the development of a vital resistance and that particularly in the earliest months of life?

So far as concerns tuberculosis, it is beyond question that the strong, well-developed animal with large lung power, habitually used, is more resistant to tuberculosis than the feeble and delicate. Tnere is, however, no such thing as absolute immunity and any animal too constantly subjected to infection is liable to become tuberculous.

There is no question that there is less infectious material outside the barn than within it. When we stop to consider, therefore, the highly stimulated resistance on the one hand and the less exposure to infection that there is in the open air on the other, can we avoid the conclusion that our animals, and particularly our young animals, are safer in the open air than they are in the barn?

If we adopt that as a fundamental principle, there remains for us the problem of fitting this principle into our scheme of operation. There is no doubt, for example, that calves can be kept looking better in the stable than in the open air during certain seasons of the year. There is no doubt that the attack of flies upon young stock hampers its development. There is no doubt that exposure to cold roughens their general condition and appearance. It takes more food to keep them in condition in open air than in stable life.

Have we not to accept these disadvantages immediately obvious and regard them as far more than offset by the advantage not so immediate nor so obvious, but none the less possible as to development, constitution, and resistance to disease, which our intelligence teaches us really pertains?

As farmers we are altogether too prone to follow the line of least resistance, and the line of least resistance is the old plan of a six to twelve months' sentence to more or less solitary confinement.

Have we not to use our ingenuity and our liberality in dealing with this problem before we can have reasonable assurance of the vitality of our stock to come?

It has been suggested that continued breeding from tuberculous cattle, avoiding infection of the calves, would produce a race of animals immune from tuberculosis. It certainly, however, is as likely to be true as the reverse, namely: the production of more susceptible animals. There is no reason, therefore, so far as we know, why we should not judiciously breed from tuberculous cattle.

In spite of the fact that in the case of the modern highly developed dairy cow we are dealing with a most unnatural product, there is no reason to suppose that the factors determining life and constitution have not a true and fundamental relation to natural conditions of existence. The question then always is, to what extent the unnatural development of the milk function and the industry built upon it necessitates unnatural conditions or living for the animals? And the principle should be to draw the line as close to natural conditions as the industry will permit. In so doing there is opportunity for exercise of

$15.95 AND UPWARD

DE LAVAL CREAM SEPARATORS

Don't Delay Buying One a Single Day Longer

If you are selling cream or making butter and have no separator or are using an inferior machine, you are wasting cream every day you delay the purchase of a De Laval.

There can only be two real reasons why you should put off buying a De Laval; either you do not really appreciate how great your loss in dollars and cents actually is or else you do not believe the De Laval Cream Separator will make the saving claimed for it.

In either case there is one conclusive answer: "Let the De Laval agent in your locality set up a machine for you on your place and see for yourself what the De Laval will do."

You have nothing to risk and a million other cow owners who have made this test have found they had much to gain.

Don't wait till Spring. Even if you have only two or three cows in milk you can buy a De Laval now and save half its cost by Spring, and you can buy a De Laval machine for cash or on such liberal terms that it will actually pay for itself.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

HOLSTEIN-FRIESIAN CATTLE.

Pure-Bred Registered Holstein Cattle.

Choose Holsteins and you have cattle worth owning. They hold all milk and butter records. Their milk is of excellent quality. The small and uniform size of the fat globules makes it exceptionally digestible and prevents the rapid rising of cream. No other milk ships so well. As the milk is of more even quality throughout, it appears less rich than milk upon which the cream quickly rises.

Holsteins are the largest, strongest and most profitable of dairy cattle.

Send for Free Illustrated Descriptive Booklets.

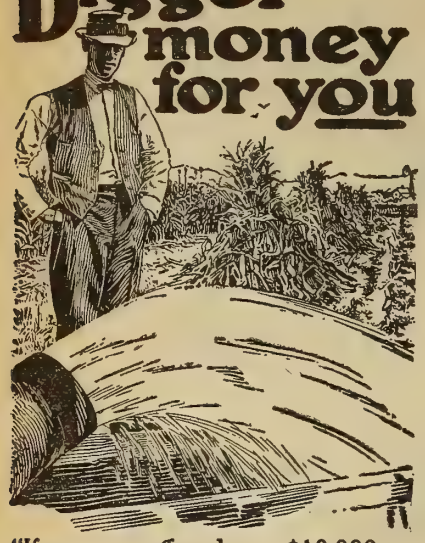
AYRSHIRE Cattle for sale. Bred for good dairy results. Breeders and Shippers. Prices reasonable. F. TSCHUDY & SONS, Monroe, Wis.

Bigger money for you



"If a man offered me $10,000 to give up this valley, I'd laugh at him—it can't be beat" says J. L. Hougland, from Nebraska. That's just what you, too, would say about

Mimbres Valley
of New Mexico

—if you were out there making twice as much money from less land; controlling your own water supply and making crops sure; and living in a valley so famous for health that hundreds go there each year to get well.

Here's a proposition that's 'way above the ordinary "irrigation project." The soil is rich, easily worked (silt and no stones) and level. Water supply is absolutely pure, and inexhaustible.

No ditch system in the Mimbres Valley. Each farmer here is master of his own irrigation pumping plant; has water just when he wants it and just as much as he can use.

With rich soil, a pure, unfailing water supply and nine months of wonderful crop-growing weather, it's no wonder that farmers here make 50 bushels of wheat per acre, $90 per acre from alfalfa, $75 per acre from beans, $85 from milo maize, etc.—and still more wonderful profits from truck and fruit. But the biggest part of this opportunity is that here, in a fully developed section, a complete farm, equipped with your own private irrigation plant, costs less than half the price asked by irrigation projects in undeveloped out of the way places. Why? Because this section was founded and built up by mining and railroad industries; and it was only three years ago that its agricultural wealth was known.

In those three years thousands of acres have been farmed and irrigation plants are being installed at the rate of 25 per month. No man can take time about grasping this opportunity.

Deming, New Mexico

is the metropolis of this rich valley; a splendid city of 3,000, with fine buildings, grammar and high schools, electric light, water and sewer system, paved streets, etc.—as fine a town as you'd want to see; and a good local market. The nearby mining towns offer high prices for farm products.

The health-bringing climate alone has attracted thousands to this section. Being so high (4,300 feet), the summer days are pleasant and the nights very cool; and being so far South, the winters are very short and mild.

Get our free book!

—telling you in plain farm talk all about the Mimbres Valley; why folks are gaining wealth and health there; with scores of actual photo farm scenes, some in *full color;* and actual statements from men who have lived in all parts of America but say that "this valley *can't be beat.*"

Sec'y, 101 Chamber of Commerce, Deming, N. M.

the best judgment, but the tendency of dairying is to draw the line at convenience rather than at the point of highest health advantage.

AGREEMENT UPON GOOD ROADS LAW.

The Tice good roads committee appointed by the last general session of the Illinois legislature finished its investigation recently and agreed upon a bill which will be offered to the new general assembly.

The committee recommends a revolutionary change in the Illinois system of caring for roads and bridges; abolition of the present 4,800 separate taxing and administrative units, and a uniform system of state aid, through a new highway department.

The chief points in the recommendations of the committee follow

Creation of a state highway department, the executive of which to be a state highway commissioner, appointed by the governor.

Appointment of a chief highway engineer and one assistant engineer, and of county highway engineers.

State civil service to apply to all highway officers except commissioner, engineer, and assistant engineer.

State to have full authority in construction of all highways and bridges builded by state aid, and after completing the highways and bridges to be under control and management of state highway department and wholly maintained by the state.

Uniform system of constructing and maintaining public highway.

Uniform system of accounting and auditing expenditures of all highway funds.

Payment in cash of all taxes levied and collected for highway purposes.

Forty feet to be standard width of all public highways subject to topographical conditions.

County board to grant the right and fix the compensation for use of any part of state and roads by public utilities, subject to approval by state highway department.

Abolition of the three highway commissioner system and election of one highway commissioner in each highway district or township.

All convicts in state prisons physically able to be employed in preparation of road construction material, and if found expedient, may be employed upon highways.

County aid for construction of permament highways, other than state aid roads, may be given to an amount not exceeding 15 per cent of actual cost of such improvements.

If county board determines that it is expedient to build a bridge it may defray the entire cost and the bridge shall be built under supervision of the county engineer.

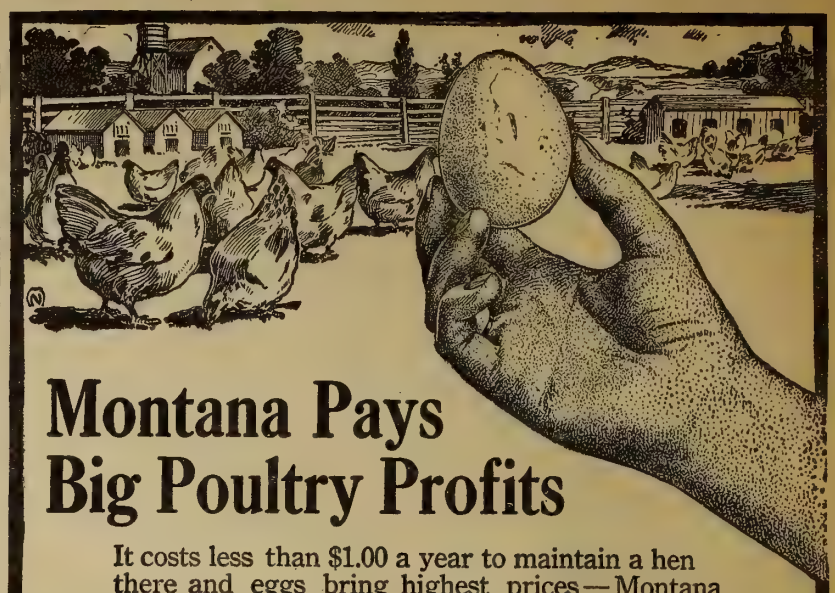
State automobile license fees shall be payable to the highway commissioner, who shall collect from justices of the peace fines for offenses committed on state aid roads. All license fees collected under automobile laws shall be used for constructing and maintaining state aid roads.

All other highways, than state aid roads, shall be under control of proper local authorities, in conjunction with the county highway engineer.

Uniformity of taxes for road purposes to be established by annual certification in September by the local highway commissioner of amount necessary to be raised for county roads and bridges, the same, if found proper, to be certified by clerk as taxes against taxable property by order of the county board.

The policy the members of the committee will be to push the measure to the front as one of the main items of legislation to be enacted. The indications are that the so-called "farmer" members will insist that the road bill be given precedence of all proposed progressive legislation.

The farmers of this country can raise as good horses as do the breeders of France. They have, in the opinion of James G. Boyd, a Milwaukee county breeder of Percherons, and one of Wisconsin's most noted horsemen, but to select the proper breeding animals and then give the colts they raise the proper care. Mr. Boyd believes that by offering liberal premiums for the exhibition of foals and yearlings, the fair associations could and would greatly encourage the production of more and better horses. In some sections of Wisconsin and other states in the middle West breeders hold community colt shows which will do and are doing much to develop the draft horse industry in these respective districts. Horsemen should have in the respective fair associations the necessary administrative force for the development of superior exhibits of homebred hroses and other stock.



Montana Pays Big Poultry Profits

It costs less than $1.00 a year to maintain a hen there and eggs bring highest prices—Montana needs more eggs. The climate is favorable—feed cheap—market always good.

Grasp the Opportunity Montana Offers You

Within the next decade this wonderful state will make thousands of people independently wealthy. There are millions of acres of rich land that can be homesteaded or purchased at low prices. This land, as the country develops, will more than treble in value.

Spend a few weeks in Montana, see the land, meet the people and realize just how big the opportunities are that await you there. On the first and third Tuesdays of every month low round trip homeseekers' tickets are on sale via the

CLUB RAISERS WANTED

I want a local subscription representative in each town in Iowa, Illinois and Nebraska, where I do not have a solicitor at present, to take subscriptions for The Homestead during the winter months. An energetic person can make excellent money working for me.

A Justice of Peace and farmer made $347.00 during December, January, February and March last year with practically no effort on his part. Just as he happened to meet his friends he asked them to subscribe.

An old soldier has earned $386.00 in the last year and has not been away from his blacksmith shop to solicit subscriptions.

A lady who had sold extracts all her life took up our work last winter and has made over $300.00 this year without leaving her home town.

It requires no particular ability to become a subscription representative. There is no reason why you should not make from $300.00 to $600.00 this winter, looking after my subscription interests in your locality.

If you prefer premiums to cash commissions, write us for a list of the nice presents we can make you for raising a club in your neighborhood. We have everything useful to give away from egg beaters to sewing machines and gold watches. Address

James M. Pierce, Publisher Homestead, Des Moines, Ia.

Takes possession of a fertile quarter section in

Southwest Kansas

There's not much vacant land left in Kansas. The five southwestern counties have remained unsettled and undeveloped because of inadequate transportation. The Santa Fe is building new lines to serve this territory, and thousands of farms next season will be put to creating wealth. This is your opportunity to get a good Kansas farm cheap. The terms are advantageous, the results certain.

If you had taken a Kansas farm ten years ago and developed it with intelligence and vigor, you, too, would now be lending money to Wall Street, as other Kansas farmers are doing. You, too, would have a piano in your parlor and an automobile in your barn.

The next best thing is not to lose this opportunity of securing a quarter section of this splendid wheat land.

Besides wheat, oats and barley, you can get good profits out of spelz, milo-maize and kaffir-corn fed to your own stock. Hogs thrive on milo and kaffir, and disease is unknown. Western Kansas farmers find peanuts a splendid hog feed, easily grown and easily fed. Broom corn brings fancy prices, and potatoes, garden truck, fruit and alfalfa will all do well for you.

There are some flowing artesian wells in this territory, and everywhere that wells have been put down water comes to within thirty to sixty feet of the surface. Irrigation by pumping will doubtless be commonly practiced, and the tremendously increased yields will pay big dividends on the small investment required for gasoline or oil driven pumps.

The climate is pleasant and healthful. Your boys and girls will find good schools. Churches, social clubs and farmers' institutes are being organized. Rural telephones and free delivery are coming in. In every way development is rapid, and only a few years will give you every advantage that older communities have.

You can secure a quarter section (160 acres) for only $200 down. The price is $10 to $15 an acre. The terms are astonishingly liberal. Only one-eighth down and one-eighth each year after the second year, with interest at only 6 per cent. You see you have two full seasons before a second payment on the principal is required.

For further information write for illustrated descriptive folder containing map and full details.

Echoes From a Kansas Farm

BY HENRY HATCH

Hog feeders have been watching the market reports of the past few weeks with considerable interest, an interest that is mixed with both fear and hope, according to the man who is expressing his feelings. One man will say that he expects to see top hogs sell for six cents at the river markets, while the next man predicts an advance rather than a reduction in price.

It is a shame that a farmer cannot know what he is to get for his stock when he begins feeding for the market. A manufacturer knows what he is to get for his product before the machine is built.

A long-range forecast of a white Christmas proved the worst guess possible. With the Dakotas buried in snow and snow to the southwest of us, it likely seemed probable to the weather sharps that snow would close in on us, but Kansas has hardly seen a snowflake since last spring.

Again the corn shocks are too dry to permit of husking without a waste of fodder. When dry the waste in husking shocked corn is in the most valuable portion of the fodder—the leaves. Corn fodder stripped of leaves is next to broomsticks in feeding value.

A trip will be made this afternoon after tankage, which we will use in finishing thirty head of shoats for market. This will be our first experience with tankage, and we'll tell you more about it a little later. More and more is being used around here, and all who have used it so far think it the best and cheapest balancer to use in connection with corn.

The roads are now fine for any kind of traveling. It is possible to drive an auto for miles without a shift of gears. We do a great deal of truck work with ours, often hauling 700 and 800 pounds. We are going twelve miles after the tankage this afternoon, being able to get it cheaper where it is shipped in carload lots.

The Grange in a portion of this county is going to put in a poultry, egg and produce buyer of their own. This is a good move, and one that should be followed everywhere. A few years ago eggs were bought by buyers here on a margin of two cents a dozen above Kansas City price, but now they are demanding and getting from four to five and oftentimes six cents on the dozen, and the eggs are subject to candling during the summer months now, in addition.

Everywhere, and in all lines, the middleman is asking more for the small part he plays in the distribution of the products of this earth. It is hoped that parcel post may open a way that will lead direct from the producer to consumer, but rates will have to be reduced before any great benefit can be expected along this line.

It has proven a good fall for any kind of building, some of which is still under way. Every year sees some building being done in almost every Kansas neighborhood, and it is usually better and more substantial building than has been done heretofore. People have learned that it does not pay to put up a mere skeleton for a frame, to cover with a costly roof.

In grandfather's time building was done with great timbers, usually hewn out of nearby trees. It took a strong frame then to carry the weight of the massive framing used. This was the extreme of using too heavy farming material. When the prairies were settled, far from a lumber supply, the opposite extreme ruled, but the later building of the more prosperous farmer has been along more substantial lines, yet not up to the building done in grandfather's day, simply because that is too substantial to be economical in these days of high-priced lumber.

It seems a hard matter to get good tongues in farm machinery and vehicles these days. A variety of yellow pine is used in most machine tongues, called long leaf yellow pine. When a piece of this material that is straight grained and absolutely sound is found it is all right for the purpose intended, but if, perchance, it checks it soon rots. We do not get any of the old-time hickory tongues that could be wrapped around a fence post by a runaway team, to come out of the ordeal as straight and strong as ever. Such material is reserved for more costly things than cultivator and plow tongues these days.

Try not to let the water troughs and tanks run over and get a glare of ice started around them when the water freezes, as such spots are dangerous to both man and beast. Where any already have formed, scatter old hay, straw, manure or brush over them some day when the ice is thawing slightly, about noon. When it again freezes that night, this material will adhere to the ice and form a rougher surface for the stock to stop on, thus making it safe for them to walk up and drink.

A farmer wrote these books!

—a man who knows farming from A to Z. He traveled through thousands of square miles of the *best* sections in Arkansas and Texas, along the Cotton Belt Route; and found out where the *real* farm opportunities were—the kind that *he*, knew *you* would like to hear about.

He doesn't generalize. He comes right down to brass tacks and tells you what Farmer Tull is raising—shows you actual pictures of Farmer Tull's crops, etc.; and tells you what the same kind of land, near Tull's place, would cost you *now*. He got the personal experiences of scores of farmers in this way; and took actual photos of their places. He points out the best sections for wheat growing, for corn, fruit, truck, etc.—in plain words he sifts the whole situation down to a point where you can say to yourself: "*There* is the most likely locality for *my* line of farming—I'll go and investigate." (And with low round trip fares via Cotton Belt Route twice each month your trip will cost mighty little.) Send a postal *today* for

Your free copies

of these books—115 farm pictures and 100 pages of farm facts! I know you'll be glad to get them. Write *now*.

LAND AND HOMES FOR SALE

FARMERS' OPPORTUNITY IN WESTERN CANADA

We have the best of land in the best of districts and in the best of law abiding countries. Those lands in many cases are improved and can be had for "a song," comparatively speaking, often with buildings and fencing of considerable value not being put in the reckoning. Other lands are unimproved, but close to church, school and elevator and on terms that are attractive, fourth to fifth cash and balance spread over a number of years. All are controlled by us as trustees, executors or administrators, and as such, we insure absolutely safe titles. For lists and other particulars apply to **The Standard Trusts Co., Winnipeg, Man.**

FLORIDA FARMERS are NOW shipping fruits and vegetables and enjoying the most ideal outdoor life. What are you doing at this season of the year? The winter months are not the only profitable farming months in Florida, because we grow at least three crops a year on the same field—besides many varieties of summer fruits. Intensive cultivation on 20 acres in Florida pays a much bigger profit than the single crop on 100 acres in the North. Come, see and be convinced before buying. Our book, **"FACTS ABOUT FLORIDA,"** tells the truth. A postal card or letter will bring it to you. Address Dept. E,

FLORIDA EAST COAST RAILWAY

CHEAP ICE-HOUSE, HOW TO BUILD AND FILL IT.

To the Editor of The Homestead:

We will give some general directions for cutting ice, building a cheap, simple, but useful ice-house, and storing ice in such a way that it may be preserved without waste during the hottest weather. Ice should be cut with a saw into blocks of regular size so that they will pack into the ice-house solidly and without leaving spaces between them. If cut in this manner ice will keep perfectly well if not more than three inches in thickness; a thickness of six inches at least is preferable. It should be cut and packed in cold, freezing weather, and if, as it is packed, a bucketful of water is thrown over each layer to fill the spaces between the blocks and exclude the air it will keep very much better than otherwise. For a day or two previous to filling the house the doors should be thrown open so that the ground beneath it is filled if the weather continues cold. The house should be finally closed during cold dry weather.

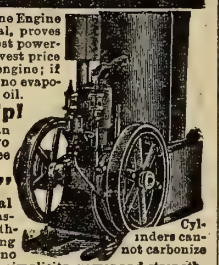
A cheap ice-house is as effective, if properly constructed, as the most costly one. There are some general principles to be observed in the proper construction of any kind of ice-houses and all else is of secondary importance. There must be perfect drainage and no admission of air beneath; ample ventilation and perfect dryness above; and sufficient non-conducting material for packing below, above and around the ice, by which its low temperature may be preserved. The best packing consists of saw-dust, oat, wheat or buckwheat chaff and cut straw, which is the least serviceable.

In building a cheap ice-house, first the foundation should be dug about eighteen inches or two feet deep in a dry, gravelly or sandy soil. If the soil is clay the foundation should be dug two feet deeper and filled to that extent with broken bricks, coarse gravel, or clean, sharp sand. To make a drain beneath the ice of any other kind would be risky, and if not made with the greatest care to prevent access of air the drain would cause great loss of the ice in a few weeks of warm weather. Around the inside of the fountain are laid sills of two by six plank, and upon this are "toe nailed' studs of the same size, ten feet long, at distances of four feet apart. Around these matched boards are then nailed horizontally. A door frame is made at one end, or if the building is over twenty feet long one may be made at each end for convenience in filling. When the outside boarding reaches the top of the frame, plates of a two by six timber are spiked on to the studs. Rafters of two by four scantlings are spiked on to the frame over the studs, a quarter pitch being sufficient. The roof may be of common boards or shingles, but it must be perfectly water-proof and should have broad eaves to shade the walls as much as possible from the sun's heat. The outside of the building, roof included, should be white-washed so as to reflect heat. The inside of the building should be lined with good boards placed horizontally, and the space between the two boardings should be filled closely with the packing. The packing around the ice should be a foot thick at the bottom and the sides and two feet at the top. There should be a capacious ventilator at the top of the house and the spaces above the plates and between the rafters at the eaves will permit a constant current of air to pass over the upper packing and remove the collected vapor. Boards are placed across the inside of the door as the ice is packed until the top is reached. Rye or wheat straw may be tied into bundles and these bundles are packed tightly into the space between the boards and the door. The door is then closed. We have found these straw bundles to seal up the door space of an ice house as well as the door of a root cellar in winter very effectively. When the house is opened in the summer and the upper packing is disturbed to reach the ice, it should always be carefully replaced and the door closed up again with the straw packing. The bundles of straw may be fastened together by means of two or three cross laths, and they can be removed and replaced very readily. The material required for building an ice-house twenty feet long, sixteen feet wide and ten feet high, and which will hold over sixty tons of ice, is as follows: 342 feet 2 by 6 studding; 12 rafters 2 by 4, 12 feet long; 576 feet matched boards; 720 feet boards for lining; 480 feet roofing boards; 3,000 shingles or 480 feet of roofing; one batten door, hinges and nails; about 25 wagon loads of sawdust or other non-conductor would be needed for such a house.

Johnson county, Ill. J. T. McCoy.

Use KEROSENE Engine Free!

Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing. No waste, no evaporation, no explosion from coal oil.



Gasoline Going Up!

Gasoline is 9c to 15c higher than coal oil. Still going up. Two pints of coal oil do work of three pints gasoline.

Amazing "DETROIT"

—only engine running on coal oil successfully, uses alcohol, gasoline and benzine, too. Starts without cranking. Only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Mounted on skids. All sizes, 2 to 20 h. p., in stock ready to ship. Engine tested before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric lighting plant. Prices (stripped), $29.50 up. Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate the money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, you get Special Extra-Low Introductory price. Write! (138)

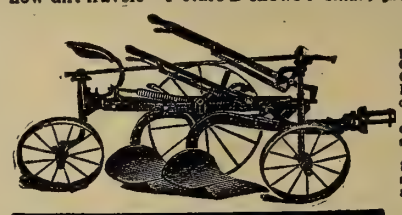
Plow Right and Protect Your Crops

The coming season may be *dry* and *hot*. Better be prepared for *drought* in case it does come. Better see that no air spaces are left between topsoil and subsoil, whoever does your plowing. For those air spaces *cut off* the moisture from below and rob you of half your crop.

You'll have no air spaces if you use a Rock Island "C.T.X." Universal Plow. It turns each slice clear over, *flat and smooth*. Buries all trash. Pulverizes dirt—saves one harrowing—leaves the topsoil in close contact with subsoil. In dry weather moisture comes right up from below, like kerosene comes up your lamp wick. This feeds and saves your crops.

All due to the peculiar *corkscrew-like* bottom on the Rock Island "C.T.X." Universal. This patented mouldboard carries the dirt *backward* and *DOWNWARD* not backward and UPWARD, like all other plows. A very simple invention, but one that is revolutionizing all plowing methods. (Picture A shows *Rock Island Universal* bottom, and the arrow shows how dirt travels. Picture B shows *ordinary* plow bottom and arrow shows how dirt travels.)



A Genuine UNIVERSAL Plow

And the beauty of it is, with *this* plow you can plow up any field on your farm. Tame Sod, Heavy Clay, Sandy Loam, Mixed Soil, Stubble Fields, Old Cornfields, Meadows, etc., all look alike to the Rock Island "C.T.X." Universal. Saves buying a new plow or bottom for sod.

It's a *Universal* plow that does perfect work in all cases and *leaves no air spaces*. That's why this plow so quickly became the sensation of the farm world.

That's why you'll *want* it the minute you see it. Send a postal now, and we will tell you where you can see a "C.T.X." and price it. You can judge yourself and will realize why it's so much better.

Rock Island (C.T.X.) Universal Plow

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, Ill., January 3d.—With about twice as many cattle received locally and at six western markets as the light Christmas week run, but still a crop of moderate proportions and in the aggregate about 13,000 less than the corresponding week last year, the opening week's trade of the new year has given a fairly good account of itself. Heavy beef steers have continued to show a downward trend and the stocker and feeder market is hardly as gay as during the latter half of December, but theree has been no perceptible weakening of values on the light and medium beef steers of fair to good class and butcher stock shows advances of 10 to 25 cents over a week ago.

Relative weakness of the market for big-weight cattle this week to the much larger proportion of such steers around mid week than had been here any time since Christmas cattle supplies were being marketed. The best heavy steers here this week sold on Monday's market at $9.60, but not many have crossed the $9 line and all such have been of very smooth, fat class, although such as claimed $11 and better before Christmas are now entirely lacking. Bulk of t he beef steers ranging in weight from 1,250 to 1,400 pounds have sold lately at $8.20 to $8.85, and the lighter killers, aside from yearlings of some class, mainly at $7.25 t o $8.15, $7 and lower stuff going for slaughter being very common and light and a few prime yearlings selling as high as $8.50 to $9. A broader outlet for beef is expected to develop, now that the influx of poultry is out of the way, and the outlook for a good class of handy and fair-weight beef steers and useful cows and heifers is regarded as very favorable by most experienced traders. Packers, commission interests and railroads have pledged themselves to support a revived attempt to establish a five-day market plan, and with this e nd in view the trade here is advising the holding down of Monday and Wednesday from this time and increasing the movement of cattle to market on Tuesday, Thursday and Friday.

For the year 1913 a cattle shortage seems inevitable. There may be no $11 cattle this year because of feed abundance, but unless the country quits eating beef or a panic engulfs the country high prices for the rank and file of the steers is assured. For years, while liquidation was running its course, forecasters of impending scarcity were ridiculed, but they have abundantly made good. During 1912 cattle scarcity emerged from the theoretical to the fact stags and unless many recognized authorities are guessing wrong, 1913 will make impending scarcity even more emphatic.

Some stock and feeding cattle have sold 10 to 15 cents lower since the first of the new year, but selected lots are about as high as ever. An Iowa feeder took out two loads of 1,038-pound Short-horn feeders Thursday at a cost of $7.75 and some 934-pound Angus feeders cost a Michigan feeder $7.65. Some breedy Angus stockers averaging shortly under 700 pounds went out at a cost of $7.30. Nothing of much class or breeding, regardless of weight, is to be had below $6.25 and the trashy little stuff that can be bought from $5.50 down is such as few stock farmers would care to rough through the winter and give pasture room next spring. A factor in the broad and well-sustained country demand for feeders during the past month or six weeks has been the very mild and open winter in which all classes of live stock have made most excellent gains on less feed than is usually required at this time of the year. It is probable that the first big storm of winter or shut down to severe weather will contract the outlets and that some feeders will then be available at prices more favorable to the buyer.

Bologna bulls are selling close to record prices, best big-weight bulls of that class up to $5.85 and $5.25 bologna material being very plain and light. Most of the good to choice beef bulls are selling at $6.50 to $7.25. Calves are $1 to $1.50 higher than at this time last year, with big fat calves salable up to $7.50 and choice to fancy vealers up to $10.50 to $10.75. Good cutter cows reach $4.40, only emaciated old shells as low as $3 to $3.25. Bulk of the beef cows now making $5.25 to $6.50 and beef heifers largely from $5.75 to $7.25, and prime fat cows and heifers ranging upward to $8 and $8.50, respectively.

A perceptible weakening in the ranks of the allied bears in the hog trade is noted. Local packers are inclined to lag in the bidding from day to day, but are being compelled to admit their needs at regular intervals and are succeeding in putting up no 7-cent droves at this juncture, as they had contemplated. Growers have as much incentive to hold back healthy hogs to make weight now as they had to cash in a year ago when the market was low and the outlook discouraging. Eastern demand, as predicted, is now the stout prop under the market. Shipping orders have absorbed over 31,000 hogs here the first five days this week and as eastern hogs are already well run demand from that source is more likely to expand than to contract as the winter advances. Quality is running good and the spread in prices is narrow. Slight fluctuations have been noted this week, with prices today in the best notches of the period, and the average cost, standing at $7.53, showing a 7-cent rise over a week ago. A top of $7.65 was made and $7.45 to $7.60 took the bulk. Very little save pigs and rough stuff had to sell below $7.40, and there was a good demand for good pigs at $7 to $7.40.

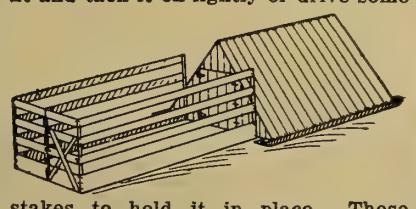
The prospects lend scant encouragement to the packer or pork consumer as regards 1913 hog prices. Disease has ravaged corn-belt herds for two successive years and outside that area the hog scarcity exists in a commercial sense. The heavy impost laid on the 1912 pig crop by the hand of disease must tell on the 1913 supply and any other theory is erroneous. With an actual shortage of beef and an impending shortage of mutton more pork must be provided unless the nation is to go meat hungry. Europe may have quit eating our beef largely, but still requires thousands of tons of hog product and lard annually and will, provided the stuff is available at reasonable price.

Live mutton trade closed the old and opened the new year with lambs fetching the highest December and January prices on record, but the edge of the trade was dulled chiefly by reason of an open market on New Year's day when Packingtown was closed as regards live stock slaughter. Packers' purchases on that day, amounting to about 25,000 head, were at lower rates and as they had all of their New Year day buy on hand Thursday for slaughter, easily succeeded in forcing further concessions. Closing prices were from 25 to 40c lower on lambs and 35 to 60c lower on fat ewes than at high point touched on the closing day of December, and 10 to 15c lower on lambs and 25 to 50c lower on fat ewes than a week ago. Wethers of good class held fairly steady with last week's closing, but heavy yearlings lacking choice quality declined toward the week end. The week was featured by the arrival of the first Colorados of the season, ten doubles from the San Luis valley selling at week's high time at $8.75 to $8.90. At the close fat lambs are selling largely at $8.25 to $8.60, with an $8.65 top, fancy light yearlings to $7.75, bulk from $6.50 to $7.25, wethers of good to choice class from $5.10 to $5.50 and good to best fat ewes from $4.25 to $4.75, big weights at the low end of the range.

That there are no more sheep and lambs in feeders' hands than will, if conservatively marketed and properly distributed, be needed, is the general opinion of the trade. That fat stock should be marketed as ready and others held for a finish, wherever possible, is the consensus of opinion. This policy, if followed, will practically assure a very remunerative market all winter for feeders. The season has been one thus far of feed plentitude, excellent feeding weather, a good market and bright market prospects, but regardless of these conditions much of the supply that has been sent to the shambles has lacked finish, holders being either afraid of storms, too anxious to pocket profit and sidestep a feed bill, or who have had a mistaken idea that their stock was fat. Discrimination against big weight, which now amounts to fully 75c to $1 on heavy lambs and yearlings and about 50c on big ewes, has also doubtless caused some premature shipping of half-fat light stuff. Feeders are easier sold than anything else, but few are coming that country buyers can get to. Some warmed up lambs have gone back to the country this week at $7.50 to $7.65, the highest feeder prices of the season.

THE INDIVIDUAL HOG HOUSE.

I. D. Shuman, Sedgwick county, Kansas, furnishes us with a description and sketch of the individual hog house which he has found to be the best and most satisfactory of all if made right. According to Mr. Shuman the house should be about eight by ten feet and the sides six or seven feet, preferably seven feet. The runners for sills should be about twelve feet long with a hole bored in each end to put the clevis pin in when it is desired to move either forward or backward, letting the boards on the sides drop down about half the width of the runner. The end pieces should be two by fours laid flat on the runner to make a fender for the little fellows, the front one at the doorway being cut out and spliced on the under side that it may not be too high for the sow to walk over easily else it might do great damage. The ends will be up from the ground four or five inches. Cut a six-inch board to fit and tack it on lightly or drive some



stakes to hold it in place. These should be taken off before moving. For the door in front end put on two pairs of hinges and cut into two parts, for two reasons. Some time you may want to make your exit in a hurry if granny objects to your company and then too it is well to leave the top part open to let the sunshine in, giving fresh air to the family without letting them come out. The sow should be kept up a few days before farrowing and also for some time after and then she with her brood should be by themselves nights for some weeks until the danger of robbing is past.

Make three sides of a pen for each house using eight-foot lumber, the bottom board at least ten inches wide and the crack above it not more than two inches. The other boards may be narrow and the spaces wide. The open side of this pen may be narrowed or pressed together and fastened to the house on either side of the door. Nail pieces at one corner of the outer end of the pen, cut out and put on hinges for a door after which drive some stakes in the ground at the outer corners and nail the pen to them. In moving be sure to place them on well-drained ground her the water will not stand in case of a hard rain and it is a good plan to move them quite frequently as it is only a few minutes' work and the little fellows will be much better off if they have a clean bed. Mr. Shuman advocates as many of these houses as there are sows to farrow within three or four weeks of each other.

PULLING 100 STUMPS A DAY. SEE ITEM ON FIELD NOTE PAGE.

R. B. Steele's Hampshire Sale.

On December 7th, R. B. Steele, Maloy, Iowa, made a sale of Hampshires at Blockton, Iowa, and disposed of eighteen head at an average of $26.50. This was his first sale and while the average was not as large as it should be, it was due to the fact that the cholera scare in that part of the state kept a few from buying. Below we list those selling for $25 and above:

My Great Offer Still Good

A Pair of $3.00 Gloves or Mittens Free

I AM the man who startled the tanning trade last season by offering a free pair of mittens or gloves with each horse, cow, steer or bull hide which was sent to me to be tanned or to be made into a coat or robe. This offer was the best that was ever made by a tanning manufacturer. I was able to make it because I have reduced tanning to a science, having had 35 years' practical experience. Other tanning companies said that I would go broke if I kept it up. Before they got through talking, I made another big sensation in the tanning business. I not only gave my customers free mittens or gloves but I gave them greatly reduced prices, yet I haven't gone broke. On the other hand, my business is bigger than ever and I can handle goods cheaper than before. My modern plant can turn out more business than I believed was possible.

Free Gloves or Mittens.

H. B. MICKLE, President.

You Will Have to Hurry

I don't want to disappoint one of the many friends who want to do business with me this year yet I am liable to have to because my factories are rapidly filling up with work. I want you to write today for my best prices. I will quote you low prices on high-class work that cannot be gotten elsewhere. This I can prove to your full and complete satisfaction by a trial order. You take no risk in sending me a trial order as I guarantee everything. After you have received the goods back tanned and finished according to the Mickle process, you are not going to be satisfied but you are going to be delighted with the quality of my work. Mickle work is all hand work. No clumsy machines mangle your hides in our plant. That is why I can guarantee my work.

Get in on my Combination Mitten and Reduced Price Offer

If you have a hide ready, ship it to me today. You don't have to write in first to get the offer. It goes on everything received.

I am sure this offer is going to fill my factory clear full of work and that I will have to refuse some people. I do not want to refuse you, so please write today.

Mickle Fur Coat & Robe Company,

531 West 7th St., H. B. MICKLE, Pres. Mason City, Iowa.

Is Your Home Sheltered?

A Few Dollars Will Protect Your Home and Live Stock From the Wintry Blasts.

Save dollars by saving heat. A wind-swept home is a cold home. Shivering cattle take on no fat. Cold hogs make the smallest gains. Wind-tossed chickens lay no eggs. Protected gardens get the earliest start.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

EARLY CHICKS.

Viewed from every standpoint, for commercial purposes the early chick is the profitable chick. If hatched early enough to weigh two pounds while the price is yet 20 to 22 cents a pound they will bring as much money as if kept until nearly grown with comparatively small expense, and the danger from loss is reduced to a minimum. If capons are desired it is better to get them hatched early, that they may be ready for market at the holidays. For winter egg production it is absolutely necessary that our pullets be hatched early.

To be successful in raising chicks at any time it is necessary that they be well born. If our breeding stock is huddled in cramped quarters with insufficient ventilation and no means of exercise, we are inviting failure. We have found it better to permit the breeders to have the freedom of the range so long as the weather will permit. This precludes the winter egg supply and that is just what we wish. After the first few eggs a hen lays we get the eggs that produce the most vigorous offspring. Somewhat later the chicks will not grow into such big rough-and-ready fellows, but will be better marked; while the later hatches are neither so vigorous or so well marked. Just why they are better marked I do not know, but it is a fact that we study and wonder about each season. Without exception do we find the hen to be less and less able to give the chick vigor as the laying period advances, and no eggs can be relied upon for good results after a hen has laid continuously for three months.

Give the stock an outside run, in all excepting the very severe weather. A temporary yard is easily placed on the sheltered side. Shovel away the snow and throw in some litter, alfalfa if you have it. Clover is good and straw will do in which to scatter the grain. Equal parts of corn, wheat and oats supplemented by skim milk and succulent feed is a good ration. A couple of weeks before you desire eggs for hatching give bran seven parts to one part beef meal, fed dry. There is small danger of hens becoming too fat if they have adequate exercise. It is the flabby, lazy hen that gives the weak chicks. For breeding purposes we are producing eggs under difficulties that the producer of commercial eggs are not subject to. To produce strong youngsters certain conditions must be met, and unless we keep our flock in the best of health we need not count on success.

If depending on hens for incubation, it is not when you please but when she will that you may begin to save eggs for hatching. We prefer the incubator for hatching at any time, and the brooder, through the early season, only.

Eggs should be gathered well. If you want to be sure of it, better go every time the hen cackles. There has been a good deal of discussion about how much cold an egg can stand without impairing it for hatching. The danger lies mostly in keeping them in a varying temperature. Eggs will lie out where a hen has stolen her nest when the temperature is near freezing and a goodly number of chicks will come from them.

Few farmers have elaborate quarters for newly hatched chicks. If the weather is yet cold it is advisable to place the hen in a box in a corner of some of the outbuildings until the wee babies gain some strength. We once knew a woman who kept two hens that had hatched twenty chicks in the wash house and it was an incredibly short time until they were scampering all over the floor and trying to eat everything in sight. It required much care, of course, but eighteen of the twenty lived and brought fifty cents each when other people were beginning to set hens.

A friend not long since declared that five incubator generations would run any chicken out. We have a flock that is the result of hatching in an incubator for ten successive years, and they are a big, lusty, vigorous lot, many of which are two pounds above the standard weight.

The trouble lies not so much in incubators as in getting them from hatcher to brooder. Particular business that, taking the youngsters from warm, moist trays out into the cold, bleak world. And cold and bleak it usually is in March. The foundation for a lot of future trouble is based on this hardening process. We line baskets with flannel, place flannel over the squirming mass, and set the baskets in a warm place. If they get too cold, you will soon know about it; it is when they get too hot that they just wilt down and don't say a word about it.

The chicks are kept warm and quiet until they in no uncertain terms demand something to eat. They were next transferred to boxes, the bottoms of which had been covered with sand, and chaff from the horses' mangers. A little dry chick feed is scattered over the litter and a small water fountain was placed so they could dip their bills in to drink. We heave read a lot about not giving them much water, and there is nothing to it. All the water they wish is admissible so long as it is on the inside. Getting the down and feet wet is what does the mischief.

It is only a question of a short time when they will be holding their cramped quarters in supreme contempt. They can be transferred from the house to brooder, but must be carefully watched for a few days. If they seem cold the heating pipe is not equal to the task.

Now we have gone over this routine many years, but it seems new each time to fill a big jug with hot water, dress it up in a flannel shirt of a small boy and place it in the brooder. They will huddle up to the foster mother to get warm and contented twitter tells us that all is well; and soon they will come and go at will, scurrying here and there, then back to the brooder to get warm.

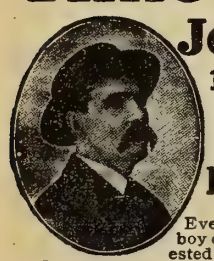
Almost everyone has a system of their own in regard to feeding. We use the prepared chick food until the youngsters are from four to six weeks old. A trifle higher perhaps, but you see it is scientifically prepared and no guess work creeps in. This is especially important when chicks are hatched before there are green grasses and insects. They must be supplied much in the same manner as the winter layers. If it is preferred to use the grains grown on the farm, equal parts

HOW TO PREVENT ROUP.

Dear Sir: Last winter I had 150 hens with the Roup and had lost 27 when I saw Walker's Walko Remedy recommended for this disease. I sent 50c (M. O.) to the Walker Remedy Co., U. 22, Lamoni, Iowa, for a box, postpaid, and will say that it cured all that had the Roup and has kept the disease away ever since. I never had hens do better than last winter, and everyone knows what an awful hard winter it was on chickens. They have been healthier and have laid better ever since using this medicine.

Mrs. Henry Farmer, Jerseyville, Ill.

Now is the Time to Get Johnson's 1913 Book About the Old Trusty Incubator



M. M. Johnson

Every man, woman, boy or girl who is interested in chicken raising can have a copy of the 1913 Old Trusty Book free by writing a postal for it. It's the best book ever written by the Johnsons—"home made" and home printed—full of real helpful facts gleaned by the Johnsons from their own practical experience and the experience of over 400,000 Old Trusty customers.

There are over 400,000 good reasons for you to read this book. They are the 400,000 Old Trusty customers who we've started to biggest poultry raising success by reading the *Johnson books* issued in years past.

Send a Postal The Old Trusty is a triple cased machine—inner case of high grade ½ inch powder-dry clear California Redwood—(not a knot in a mile)—then a case of highest-grade asbestos, fire proof insulation—and then the outer case, covering legs and all, of galvanized metal in hand some mottled finish. Johnson's machine is equipped with guaranteed not-to-leak cold-rolled copper tank and heater—direct acting regulator. Price, still less than $10 for 1913, freight prepaid east of Rockies and allowed that far to points beyond. Write postal *now*.

Bigger Hatches With Only 1 Gal. Oil To Hatch—One Filling of Lamp!— Get our new Free Book No. 41 on X-Ray Incubators and Brooders. Shipped direct from factory to you. No agents—no dealers. Guaranteed to please. Freight prepaid anywhere! The X-Ray is the one incubator today that's built on the right principle with the lamp underneath, in the center, and not on the side. This means perfect distribution of heat in the egg-chamber and no outside cold. We use a large oil tank holding four to eight quarts of oil—making only one filling of the lamp, but just four quarts are all that's needed for hatch. Old style machines have to be filled every day. The X-Ray saves both work and money! Heat is regulated by our patented automatic trip which cuts down flame at burner when egg chamber gets too hot—this is a big saving of oil. The ever successful

X-RAY INCUBATOR

has other exclusive and proven features that you will like. It opens from the top—has *two* double glass panels so you can see the thermometer at any time without letting in outside air on eggs. Ventilate or turn eggs by simply raising the lid. There are no sliding heavy drawers to break the eggs. X-Ray is heated to hatching temperature in just 15 minutes—others take 4 to 8 hours because of their *old style* principle. X-Ray is made of all genuine California redwood, covered completely with enameled steel, beautiful rosewood finish, legs galvanized, strongly braced. Every X-Ray incubator fully guaranteed. X-Ray results are the *biggest* results.

Write Today For Free Book No. 41

Learn *all* about X-Ray construction—why X-Ray is entirely different and wonderfully better than any other. Read why women and all mere beginners have such *big* success *every time with the X-Ray!* Write today—this is very important news—*worth money!*

of coarsely ground corn and oats is good. To this, though, must be added either milk, or meat in some form, together with green feed of some sort.

The eggs usually do not prove to be as largely fertile this early in the season, but barring accident almost every chick lives.

MOST PROBABLY TUBERCULOSIS.

To the Editor of The Homestead:

A correspondent, Mrs. E. E. S., of Waukon, Iowa, sends in a query in regard to a disease that has appeared in her poultry yard. Her inquiry is worthy of special, note, as she made a post-mortem examination before sending in her inquiry. If all who desire information would do this, the answers could be much more intelligent and satisfactory. In this case it would have been impossible to make a correct diagnosis without this knowledge of internal conditions.

The only external symptom given by our correspondent is that the combs of the ailing birds turn pale. But the post-mortem reveals a most significant condition—the presence of yellow spots upon the liver. Doubtless there was a loss of flesh and weakness accompanying the pale combs. All these taken in conjunction with the nodules upon the liver, point very strongly toward tuberculosis. This disease, as most know, is caused by the presence of a special germ. The only way in which tuberculosis can be positively affirmed is by having expert examination of the case. The microscope in skilled hands, can determine just the kind of germ that is doing the mischief. If it is the germ of tuberculosis, the expert microscopist recognizes it. But so well are the other symptoms understood that in such cases as the one now under consideration we may strongly suspect tuberculosis.

Tuberculosis is a germ disease, produced by a specific bacillus, highly contagious, taking root most readily upon constitutionally weak or rundown stock, or weakened in any way. In mature fowls it often develops from persistent colds which do not run into roup or kindred diseases.

Fowls in vigorous health and condition may escape contagion, but where the germ is present there is always danger of contagion for any fowl that is "under the weather" in any way. The larger the proportion of the flock affected, the greater danger of a general infection. This is one of the gravest troubles the poultry keeper has to face, Hence some detailed information regarding it may be helpful.

Young chicks are sometimes attacked by this disease. In their case, however, the tubercles are most commonly found in the lungs. In adult fowls the disease is more apt to be general, and the liver and abdominal organs show a large percentage of tubercles. To quote from Dr. P. T. Woods on this subject:

With adult fowls the disease may show itself in many ways, or may be present unsuspected. On general principles suspect cases of coughs and colds which do not yield to treatment, and diarrhea which is not checked by the ordinary methods of treatment. Tubercular fowls, when well advanced, usually have a persistent diarrhea, pale combs, listless, sleepy expression, and lose weight. Suspect all tumors and ulcers containng "cheesy matter."

Another physician—Dr. W. R. Fisher—has given so clear a description of a tubercular bird, that we place it here for the benefit of your readers:

The first thing to be noticed about a bird that is sick in this way is diminished activity. It moves about with less energy than usual, and if you pick up the bird you will notice probably a loss in weight. As the diseases progresses the emaciation advances rapidly, there is diarrhea, the bird becomes listless, sluggish, and finally stupid, and death takes place from exhaustion. Two noticeable features remain to be mentioned. One is the persistent thirst which results from the fever that always accompanies tuberculosis of the internal organs, and the other is the desire for food which, in some cases, continues to the last. When you meet with this sequence of symptoms you may be pretty sure about the nature of the ailment that you have to deal with, and yet there is no one of them alone that will unmistakably point out the disease. It is the picture that they present which must guide up in deciding in a doubtful case.

Having decided that the trouble in hand is tuberculosis, what is the remedy? There is no cure for the malady. As quickly as possible put the bird out of its misery, and, if possible, burn the carcass. Burying, however deeply, is too often disturbed by investigating canines to be safe. There may be cases of tuberculosis where the recuperative power of the bird is such that it may overcome the germ. But even in this case the fact that the tendency to the disease will develop the offspring, renders the recovered bird a menace. The only way is to get rid by means of the hatchet of every fowl that is at all suspicious. A tuberculous bird, even in the early stages is unfit for food, and the eggs are also under ban.

What then should be done in a case where what may be strongly suspected as tuberculosis has become implanted in a flock? The best answer to this question, and one which comes with authority, is given by J. R. Mohler, chief of the pathological division of the bureau of animal industry, was written in regard to a case similar to the one we have under consideration. It may seem hard advice to follow, but it is the only way to get rid of this malignant malady:

The eradication of tuberculosis from your premises can only be attempted when all the birds have been killed. Any fowls that may be left are liable to have tubercular ulcers from which the bacilli may be constantly scattered. There should subsequently be no attempt to save any birds from a tuberculous flock, as there is no way of diagnosing early cases of the disease except after death. When all the birds have been killed and burned or buried deeply, the premises should be thoroughly disinfected. The manure should be collected and saturated with a 5 per cent solution of carbolic acid mixed with quick lime or spread on fields and plowed under. The floors and woodwork of the poultry houses should be washed with boiling water, or with a hot 5 per cent solution of carbolic acid. All feeding or watering troughs and all nests should be treated in the same way. Yards that have been used for penning fowls should be sprinkled with the carbolic acid solution.

The premises should be exposed to air and sunlight for a month after they have been cleaned and disinfected before new poultry is purchased. Covering the roosts and walls with lime wash, to a gallon of which four ounces of crude carbolic acid have been added, just before fresh birds are introduced to the houses, will be found very advantageous.

Not very encouraging, is it? Yet there is a bright side to the picture. Supposing this expert knowledge had not been placed at the disposal of poultry folk by a beneficient government, we might struggle along with our epidemics and perplexing problems without having the way of escape placed at our disposal.

Mrs. S. B. Titterington.

EARLY CHICKS.

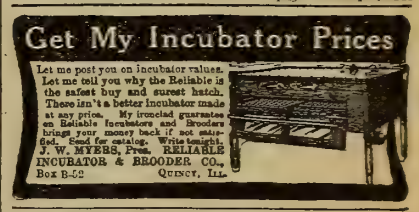
To the Editor of The Homestead:

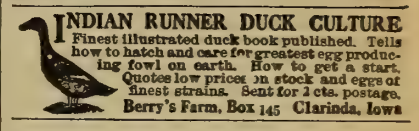
There is a lot of things that can be done now that will be a great help to the one whose intentions are to raise chickens the coming season. The old brood coops and feeding pens can be repaired or new ones built these wintry days while we are idle. Some wait until the rush of spring to attend to these things and find themselves with more work on hand than can be well done. Especially this is often the case where one lives on a farm.

There are so many other things that must be done that many neglect the most vital points in raising the early-hatched brood successfully. Good, clean, roomy brood coops and good, substantial feeding pens are necessary to insure success with the early chick. If one does the hatching with hens there will be need of a great many brood coops in which to keep the mother hen and little chicks. These coops can easily be made now and be ready when the hatching chick season arrives.

When making coops for our early chicks, we make a floor of plank, just a little larger than the coop. The coop is placed upon this platform, which can be removed and cleaned when necessary, besides when using floored coops there is no danger of the chicks being eaten by rats. The coop can be lifted off and the floor aired on sunny days. When warm weather arrives we remove the coops from this floor and allow the chicks to roost upon the cool earth. We think this is better for the brood on hot nights, besides the coops can be moved to a clean place every few days.

If the hens and chicks must be kept in the same yard with the other fowls a feeding pen for the little ones is a necessity, for the older ones will get the bigger part of the food if they be fed together. Our feeding pens are made of wire, which is nailed to a wooden frame made with four corner posts, with strips nailed at top and bottom posts. The wire is tacked securely to these wooden strips at top and bottom of pen. The chicks, with such a feeding pen, can be fed without being trampled by the older fowls. Later in the season when these early chicks are larger, and we have other young broods coming off, we

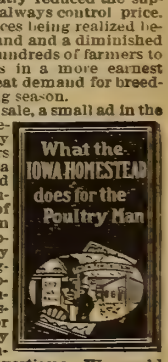




Good Prices for Your Poultry

THE shortage and high price of meats have led to a greater consumption of poultry. This and the cold weather last spring which cut down the spring hatch have greatly reduced the supply. Demand and supply always control price. Consequently, the high prices being realized because of an increased demand and a diminished supply are encouraging hundreds of farmers to go into the poultry business in a more earnest manner. One result is a great demand for breeding stock during the coming season.

If you have anything for sale, a small ad in the columns of The Iowa Homestead will find you ready buyers. The 140,000 farmers of Iowa, Illinois, Nebraska and sister states who read The Iowa Homestead regularly have, on account of their increasing interest in poultry, grown to greatly appreciate its regular poultry department which is recognized as the reliable, progressive and practical authority on farm poultry raising of this territory. For years, hundreds of poultry breeders have been patronizing The Homestead as advertisers. We would like to send you a little booklet of testimonials telling about the results these advertisers have received. No obligation attached. It is free to all our friends and every poultry raising farmer is our friend.



Poultry Advertising Department,
IOWA HOMESTEAD, Des Moines, Iowa

PLYMOUTH ROCKS.

EVERGREEN LAWN FARM
M. HUMMEL, Proprietor, MONROE, IOWA,
Has for sale 200 Barred Plymouth Rocks with large bone, finely barred, from high-scoring, first-prize-winning stock. We won 37 prizes at our last showings.

just raise the front side of pen, propping it up high enough for the chicks to get under, but not high enough for the hens to enter, after feeding the larger-sized chicks we lower the pen and feed the younger ones. We keep the feeding pens in as shady a place as possible, with fresh water in shallow troughs so that the chicks can get a cool drink at any time when the weather is hot. All preparations which are made now will greatly diminish the labor of chicken raising when spring approaches. The busy season will soon be upon us and we should be ready. S. E. M.

POINTERS.

—White Winged Buff or Bourbon Red turkeys are offered for sale by Wm. Oakland, Blairsburg, Iowa, in his advertisement on page 25.

—C. H. Drake, Hazleton, Iowa, is quoting prices per dozen on Single Comb White Leghorns in his advertisement that appears on page 25.

—J. F. Wilson, Downey, Iowa, can furnish White Wyandottes in pens not akin. Prices on pullets and cockerels will be found quoted in the advertisement on page 23.

—Pure White Plymouth Rock cockerels, farm raised, are advertised for sale by Mrs. Lorenz Peterson, Tama, Iowa, in her advertisement that appears elsewhere on this page.

—Prices on choice Rose Comb Brown Leghorn cockerels will be found stated in the advertisement of Mrs. Nelson Hyde, Manson, Iowa, that appears on page 25 of The Homestead.

—The advertisement of J. F. Davidson, Lamont, Iowa, offering for sale Barred Plymouth Rock cockerels and pullets from utility strains with size and color will be found on this page.

—Large, heavy-boned Mammoth Bronze turkeys with perfect markings are advertised for sale by Mrs. J. C. Cannon, Crawfordsville, Iowa, in her advertisement that appears on page 25 of The Homestead.

—"I have the best lot of Light Brahma cockerels that I have ever raised, being larger and more matured at this time of the year," writes Frank A. John, Bedford, Iowa, whose new advertisement appears on page 25.

—E. B. Foster, Caldwell, Ohio, is offering 1912 hatched turkeys for sale in his advertisement that appears on page 25. Mr. Foster's old gobbler weighs fifty pounds and his old hens weigh from twenty-seven to thirty-three.

—Mrs. J. A. Campbell, Manning, Iowa, is offering Mammoth Bronze turkeys, Single Comb White Orpington and Barred Plymouth Rock cockerels for sale in her advertisement on page 25. She writes that her turkeys are early hatched and large.

—Chas. L. Berry, Iowa City, Iowa, has White Plymouth Rock cockerels weighing six to nine pounds, with good color, nice yellow legs, good combs and eyes that he is offering for sale to Homestead readers at prices named in his advertisement on this page.

—Fine-looking pure-bred Rose Comb Rhode Island Red cockerels are offered for sale by Miss Maggie Henning, Ira, Iowa, in her advertisement that appears on this page. These birds are large boned, heavy weight and are scored. Reasonable prices will be quoted.

—Mrs. Myrtle Carter, Panora, Iowa, is offering White Plymouth Rock cockerels for sale in her advertisement on this page. She writes: "These cockerels are from an excellent laying strain and I do not think they can be duplicated at the prices I am quoting on them."

—Speaking of her White Wyandotte cockerels, Mrs. T. W. Glass, Sac City, Iowa, in furnishing copy for her advertisement on page 23, writes: "I have a fine flock this year, the best I have ever raised. My birds are healthy, big and of fine color. I have a few Muscovy ducks yet for sale."

—We would like to call attention to the card of C. G. Good, Ogden, Iowa, who is advertising about 200 of the choicest Barred Plymouth Rock cockerels that his excellent flock has ever produced. These are from the very best stock and from the foundation stock most rigid selection has continually mated the very best birds until the flock now stands high indeed. People dealing here will be assured of securing every cent of worth for their money.

—S. M. Compton, Newton, Iowa, in furnishing copy for advertisement appearing on this page, writes: "I have a limited number of birds named in the advertisement which I will offer at prices that should make quick sales. The turkeys are sired by a twenty-eight-pound tom and are from hens that weigh from fourteen to sixteen pounds. I have about twenty-five nice White Plymouth Rock cockerels, but no hens or pullets for sale. Write me your wants and I will try to please."

—Mrs. P. L. Carroll, Hampton, Iowa, in furnishing copy for her advertisement offering her entire flock of Barred Plymouth Rocks and Mammoth Bronze turkeys for sale, writes: "I have some very choice birds, both in Barred Rocks and Mammoth Bronze turkeys of both sexes for sale. I have been a breeder of Barred Plymouth Rocks for sixteen years. The Homestead has sold all the stock I could produce and almost every year I have had to return money, as I received more orders than I had stock to fill."

—Mammoth Bronze turkey toms and hens are advertised for sale by Mrs. J. C. Martin, Manning, Iowa, in her advertisement on page 25.

—Scored and unscored Barred Plymouth Rock cockerels are advertised for sale by Mrs. S. W. Miller, Truro, Iowa, in her advertisement on this page.

—Peter M. Sullivan, Brandon, Iowa, has some big-boned, strong, vigorous Bourbon Red turkeys that he is offering for sale in his advertisement on page 25.

—Herm C. Ransom, Ionia, Iowa, can supply Homestead readers with Silver Laced Wyandotte cockerels, hens and pullets as per advertisement on page 23 of The Homestead.

—Fine young Mammoth Bronze toms from scored hens are offered for sale by the Clover Hill Stock Farm, Kellerton, Iowa, in their advertisement on page 25.

—High-scoring and prize-winning Rose Comb Rhode Island Red cockerels are offered for sale in the advertisement of T. H. Thompson, Kanawha, Ia., that appears on this page.

—A few nice Bourbon Red turkey toms of good color, large bone and healthy are offered for sale by W. M. Peterson, Route 3, Corning, Iowa, in his advertisement on page 25.

—W. W. Forbes, Jefferson, Iowa, has Rose Comb Rhode Island Red cockerels from prize-winning, good laying strains that he can furnish Homestead readers as per advertisement on this page.

—"My White Wyandotte cockerels are of good shape, big bone, fine color, yellow legs, bright eyes and strong, healthy birds," writes Mrs. George F. Pierce, Sac City, Iowa, in instructing us to insert her advertisement which will be found on page 23.

—Mrs. J. H. Richardson, Bristow, Ia., in furnishing copy for her White Holland turkey advertisement appearing on page 25, writes: "I have the finest flock of turkeys that I have ever raised. They are of the large-boned type and are perfectly healthy."

—In furnishing copy for her advertisement offering Barred Plymouth Rock cockerels for sale, which appears on this page, Mrs. W. F. Bohlander, Avoca, Iowa, writes: "We entered four birds at the Pottawattamie County Fair and were awarded first on hen, second on cock, first on cockerel and second on pullet."

—Homestead readers who wish to purchase good Single Comb Rhode Island Reds should read the advertisement of L. G. Johnson, Box H, Steamboat Rock, Iowa, that appears on this page. Mr. Johnson has a few fine breeders left on which he is quoting a very liberal price in the advertisement referred to.

—"My turkeys are large, vigorous birds, well marked, fine carriage and all around good ones," writes Samuel Locke, Selma, Iowa, in furnishing copy for his advertisement on page 25. "Old stock scores from 95 to 97. The tom that heads the flock is sired by a prize winner and there are two prize-winning hens in the flock. Prompt shipment at reasonable prices will be made."

—Mrs. L. H. Davidson, Algona, Iowa, is offering Buff Wyandotte cockerels for sale at very low prices in her advertisement on page 23. Some of these fowls are nearly clear buff and will make excellent breeders. As she only has about twenty for sale Homestead readers had better write her soon in regard to them. Address Mrs. L. H. Davidson, Algona, Iowa, and mention The Homestead.

—Readers of The Homestead will find it to their advantage to look up the advertisement of Fred Post, Moulton, Iowa, proprietor of the Hillsdale Stock Farm, that appears on page 25. He is offering for sale White Holland turkeys, Barred Plymouth Rock chickens and Pekin ducks. Parties wanting extra large, high-scoring, prize-winning stock of heavy weight should write Mr. Post for further information.

—Ethel H. Shaw, Monroe, Iowa, is offering White Wyandotte cockerels, White guineas, White Holland turkeys and Toulouse geese in her advertisements, one of which is found in the Wyandotte and the other in the miscellaneous column of this department. She has won premiums at the leading Iowa shows, including the state show and the Iowa State Fair. Write her, as she states her prices will be right.

—John W. Houselog, Bellevue, Iowa, writes that he still has a choice lot of White Plymouth Rock cockerels for sale, but is completely sold out of pullets and hens and could have sold 200 more. He has had eight years' experience with White Plymouth Rocks and will guarantee to please or refund the money. These birds are being priced well worth the money and to hesitate may lose you a bargain, so better order now. See advertisement on this page.

—Barred Plymouth Rock cockerels that have the quality, also some Golden Wyandottes are offered for sale by Judge J. L. Todd on page 25. Mr. Todd has been a breeder of Barred Plymouth Rocks for thirty-five years and has been judging poultry shows and fairs for over twenty-three years, so knows a good bird when he sees it. He has some very choice Barred Plymouth Rock cockerels with extra good narrow barring. Readers of The Homestead need not hesitate to send to him if in need of birds, as he will treat you right. If you want any private scoring write him and he can do it for

SCOTCH Collies—Bred females and young stock from imported and trained parents for sale. Also Airedale Terriers. Sunnyvale Kennels, Cumming, Ia.

you. Address J. L. Todd, R. 3, Des Moines, Iowa.

—M. E. Edwards, Walnut, Iowa, whose advertisement of Single Comb Rhode Island Red cockerels appears on page 24, writes: "I have the finest flock of Reds I have ever raised. I do not show them for fancy points, but breed for eggs and hardiness and I surely have a fine laying bunch of Rhode Island Reds."

—Mr. Longworth, Polk City, Iowa, whose advertisement appears on this page, writes that his Mammoth White Holland turkeys are the finest he has ever had. They are large, vigorous and healthy. He won first on cockerel and pullet at the state fair, as he has done several times before. The sire of his turkeys was a first premium winner.

—The advertisements of Mrs. G. W. Shaw, Monroe, Iowa, will be found under the Plymouth Rock and Indian Runner duck heads in this department. Mrs. Shaw writes that she has an extra fine lot for Homestead readers this year and that she has won at a number of the leading shows and is making prices on White Plymouth Rock cockerels and pullets and Indian Runner ducks that will move them.

—Mrs. Sarah F. McKeen, Sac City, Iowa, writes: "I have never seen as beautiful a flock of Langshans as I now have. I have kept no others for ten years. My birds are from the very best high-scoring stock that I could find. I select my hens with care, choosing heavy, large ones with the best points I can find. They are extra layers and the flock is strictly healthy." See advertisement on this page.

—J. D. Smith, Montezuma, Iowa, in sending in new advertisement which appears on this page, says: "I have some fine Bronze turkeys and Pekin ducks for sale. The turkeys are of a rich, bronze color throughout, of big frame and in the best of health. The ducks are of the big, creamy white stock and sure to please. I have shipped to several states this winter and every bird makes a satisfied customer. If in need write at once, mentioning The Homestead."

—Mrs. H. J. Hess, Waterloo, Iowa, whose new advertisement appears on this page of The Homestead, writes: "The Mammoth Bronze turkeys I am offering are large, heavy-boned birds with splendid plumage. My stock in former years won many premiums for both my customers and myself, and the birds I am now offering are the same strain and of splendid quality. In Barred Plymouth Rock cockerels I have some well-marked birds, narrow, even barring. They are large, heavy-boned and heavy-weight birds. I am making prices on this stock that are low, quality considered."

—"We have as good a flock of cockerel mating Barred Plymouth Rocks as there is," writes Mason C. Ogg, Monroe, Iowa, in furnishing copy for advertisement found on page 24. "They never fail to attract favorable comment. We have furnished customers with prize winners from both our stock and eggs. At Des Moines shows in the last few years we won first, second, third, fourth and fifth on males. At the recent Des Moines show we won third on cockerel mating pen, fourth on cock and fifth on cockerel, winning a place with every entry made. Our winners were bred and raised by us. We have always pleased our customers. Patrons will save time by sending money and stating just the sort of birds desired. We will send the very best we have for the price and ship subject to approval. We never send out anything but first-class breeding stock, both as regards size and color."

—Carmichael & Crouse, proprietors of the White Wing Poultry Farm, Perry, Iowa, in sending advertisement found on page 23, write: "We have been quietly developing our White Wing strain of White Orpingtons and White Wyandottes for years. The Orpingtons are from a $350 pen of Kellerstrass birds and a $100 Lawrence Jackson cock. The Wyandottes are from a heavy-laying strain and possess exceptional show qualities as well. We only took time this winter to show two cock birds, but we won first premium for best White Orpington cock in the great Mid-West Poultry Show in Des Moines. We have a number of his cockerels for sale as well as many from other pens equally as good and at reasonable prices. We have a 3,000-egg incubator and a 4,000 chick brooder and we will be able to supply the demand for day-old chicks, eggs for hatching and breeding stock the coming season."

—J. W. Wagner, Monroe, Iowa, in furnishing copy for his advertisement that appears on page 24, writes: "I have a fine lot of Barred Plymouth Rocks and Mammoth Bronze turkeys to furnish Homestead readers now. I am going to sell them at reduced prices for two weeks. Here are a few of my last winnings at Monroe: I won first, third, fourth and fifth on pullet; first on cock; second on hen; third on cockerel; first on pen; special for best ten; silver cup for best pen, and silver cup for best colored female. At Newton I got first and second on cockerel, first and second on pullet, first and second on pen, second on cock, special for largest exhibit, one breed and special for best exhibit over all breeds. At Mitchellville I won first on cockerel, second on cock, second and fourth on pullet, second on pen, special for best colored cockerel and special for best shaped cockerel. Every one of these winnings are birds of my raising. I have already won several prizes for my customers in shows this last fall and winter."

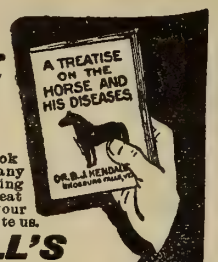
A TREATISE on the Horse—FREE!



We offer free this book that tells you about many of the diseases afflicting horses and how to treat them. Call for it at your local druggist's or write us.

KENDALL'S SPAVIN CURE

is a safe and reliable remedy. It will cure Ringbone, Splint and other bony enlargements. It is also a reliable remedy for Curbs, Sprains, Bruises, Cuts and Lameness. It does the work safely at small expense.

Read what James M. Thompson, Fraser Mills, B. C., writes: "Would you kindly send me one of your horse books? I have a Veterinary book which I paid $5.00 for, but I believe I can get more satisfaction out of Kendall's Treatise on the Horse. I gave the book you sent me before to another barn boss,"

And Mr. Wm. Booth, of Gravette, Ark., writes: "Your book is worth $5.00 if only used as an aid in locating lameness. Shoulder lameness is the most difficult for an inexperienced man to locate. It is easy, however, with the help of your book."

Kendall's Spavin Cure is sold at the uniform price of $1.00 a bottle, or 6 bottles for $5.00. If you cannot get it or our free book at your local druggist, write us.

KENDALL'S IS HORSE INSURANCE

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

LAMENESS.

I have a gray horse, ten years old, weighing 1,200 pounds. The man I got him from says he was lamed from pulling a load on a slippery hill without shoes, about five months ago. In the right hind leg the muscles from the hock to the ankle and the ankle are some swelled. In the morning he is quite lame, steps cocked ankled for a short time and does not bring the leg forward, but seemingly steps very short for a little while. It hurts him worse to go down hill and is hard for him to step over anything, but he rests on the lame leg about as much as the others. When in pasture he does not run around much, but when driven about fifteen minutes he seems to get over it and when left to stand about an hour and started up again doesn't seem much lame. He has had little to do since I got him, but was worked steady for about sixty days after being hurt. Nothing has been done for him and he gets no better.

We suspect from your description that the horse has a bone spavin and if that is so we would advise firing and blistering the hock joint and spavin and then tying the horse up short in stall for six weeks' rest. A hidden or "occult" spavin causes similar symptoms, but is less likely to prove curable.

CHOLERA.

I have a bunch of hogs that are dying in a peculiar way. They get stiff in their hind legs and swell up so that they can hardly get about; their eyes get sore and swell up; some are bound up in their bowels where others are just the opposite; some appear weak in the back, and it seems to be affecting the young hogs altogether. They live along for about three weeks or from two to four weeks before they die. I have been unable to save any yet.

We suspect that this is a form of cholera, which takes several forms, and if so the remaining well hogs should be vaccinated with preventive serum. Have a veterinarian make a post-mortem examination. Meanwhile move the hogs onto new ground and feed light, laxative rations.

WORMS.

I have a bunch of sows that I would like to keep for brood sows, but they are simply alive with worms. I would like to start breeding these sows soon. What remedy would you advise?

Dissolve dried sulphate of iron (copperas) in the slop for five successive mornings, at rate of one dram for each hundred pounds of body weight of sows and repeat in ten days. Do not have the sows bred while taking the medicine. Divide the sows into small lots, so that each may get the right proportion of drugged feed.

ECZEMA.

I have an eight-year-old mare in foal that is out of condition. She has little scabs on her hide. This seems like a discharge of water that comes out through the pores of the skin and then becomes dry, and is accompanied by itching, as she rubs a good deal. Last July she had the gland removed from her throat, as it became enlarged and she could not breathe. When I got her she was very poor, but is gaining in flesh all right. Can you tell me what to do to improve her condition?

Clip and blanket the mare. Wash affected parts of skin with a 1-100 solution of coal-tar dip, as required. Give her half an ounce of Fowler's solution of arsenic night and morning until a quart has been used; then gradually discontinue the medicine. Feed her roots, as well as grain and hay. Let her take abundant exercise every day.

FOUNDER.

I have a twelve-year-old bay gelding about sixteen hands high. He is a very strong puller, but walks along stiffly, especially when led or given his own way about going along, and is worse after a long trip on a hard road. When standing still he stands with his fore feet stretched out forward and when backed up he scarcely lifts his fore feet off the ground. If he stumbles while going he seems to throw his whole body forward. He is slightly sweenied in the left shoulder and is a very poor roadster. When standing in the field, where the ground is soft so that he can work his toes in it, he stands as much on his toes as possible, as though he does not want to stretch the leaders that run to the toe. This leads me to believe that the trouble lies more in the front feet than in the shoulder where the sweeny is. I do not know when or how this trouble came to him, as I just purchased him lately.

The horse is suffering from chronic laminitis (founder) and it is incurable; but he may be able to work on the land if you cover soles of fore feet with pine tar and oakum, then with thick leather pads and then with flat bar shoes. After shoeing in this way clip the hair from the hoof heads of both fore feet and blister repeatedly with cerate of cantharides, until he goes fairly sound. Blister one foot at a time.

RUPTURE.

Please advise me if there is any successful way of castrating a pig that is ruptured in the scrotum.

An expert can castrate such a pig by cutting through the skin of scrotum, but not the envelopes of the testicle; then, after manipulating the intestine back into the abdomen, the testicle is pulled down and a ligature tied around the cords and envelope above the testicle, or wooden clamps put at same place. Afterward the testicle is cut away, or some leave it to slough off. Hogs do not well stand shock of operations, so the operator has to be an expert and quick in his work.

STIFF SOWS.

I have some sows and shoats that are very stiff in their legs. The sows are coming two years old and the shoats are eight months. The stiffness seems to be from the knee down. I am feeding ear corn, ground corn, oats and wheat soaked in milk, also Baum's hog tonic, all they can eat, and pure well water to drink. They sleep in warm quarters with hay for bedding. This hay was cut after it was all dead, so it is dry and no greenness in it whatever. Please tell me whether this bedding is as good as oats straw. Also tell me what is wrong with these hogs and what can be done to relieve them. The sows have pigs two months old nursing. Should I wean the pigs? The hogs come out to eat, but can hardly walk.

Overfeeding and lack of exercise is the cause and the feed also is unsuitable. Stop feeding corn and for the present substitute light slop of milk, middlings, a little corn meal and a little flaxseed meal. Add limewater freely, but do not give medicine of any kind. Make the sows run out daily. Keep their bowels acting freely. Change the bedding to straw, if you find that the sows are eating the hay; for ripe hay may contain ergot which is highly injurious. Oat straw is apt to be dusty, but otherwise is good bedding material. Wean the pigs.

ECZEMA.

I have a bay mare, 1,300 to 1,400 pounds in weight, that has a kind of breaking out in splotches over a great part of her body from which a sort of yellowish fluid exudes, matting the hair and making the hide quite rough to curry over. They do not seem to be very sore, but look bad and do not seem to go away. She has had more or less of them for six weeks or two months and had about the same thing for two or three months about a year ago. She has been running on pasture, blue grass and timothy a good part of the time, being used occasionally to drive and work, when she was fed a little corn, three or four ears at a feed. She eats well and does not seem to feel bad, but seems a little stiff occasionally.

Clip the mare at once and wash affected parts with a 1-100 solution of coal-tar dip, to be repeated as often as found necessary. Keep her off pasture and blanket, if necessary, while hair is growing. If you do not care to clip her entire body at least clip the hair from her belly and to a line with straps of breeching and breast collar and from legs above knees and hocks. Feed lightly on oats, bran and roots along with mixed hay.

BARRENNESS.

A Jersey cow three years old has had one calf, which came about a year ago. She was hard to get with calf the first time, but since then we have been unable to get her with calf at all, though we have bred her to four different bulls a number of times. Is there any way to get her with calf?

There is no specific for barrenness, as the trouble may be due to one of a large number of different causes. If she comes in heat regularly she possibly may conceive after a time, if you treat her as follows: Twice a week inject into her vagina a gallon of lukewarm water containing half an ounce of pure phosphate of soda. When she comes in heat have the mouth of her womb slightly opened by an expert; then repeat the vaginal injection and have her bred an hour afterwards. Persist in this treatment if she fails to conceive the first time.

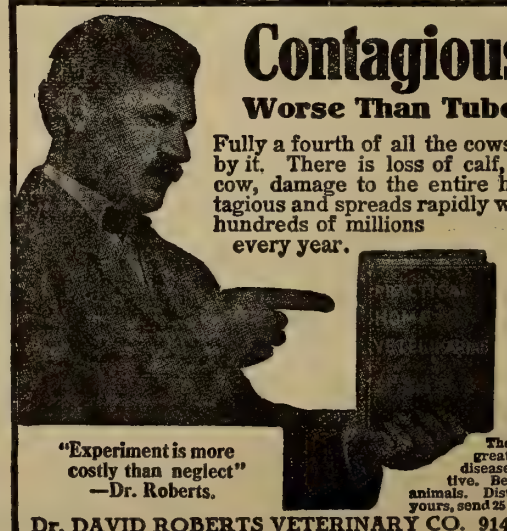
Contagious Abortion
Worse Than Tuberculosis in Cows



Fully a fourth of all the cows of the country are affected by it. There is loss of calf, loss of milk, damage to the cow, damage to the entire herd. Disease is highly contagious and spreads rapidly when started. Losses run into hundreds of millions every year.

"Experiment is more costly than neglect" —Dr. Roberts.

Dr. David Roberts' Anti-Abortion Treatment Stamps Out the Disease

because it meets the germ at every turn.
ANTI-ABORTION medicine overcomes the germ in the mother's blood.
ANTISEPTO overcomes the germ in the genital organs.
DISINFECTALL overcomes the germs in the stables.
No one medicine can possibly overcome the disease.
Dr. Roberts' treatment, applied by yourself, makes it impossible for abortion to exist in your herd.

The Practical Home Veterinarian, Dr. Roberts' great book, gives particulars on all animal diseases. 184 pages. Practical, plain, authoritative. Best book published for posting up on your animals. Distributed free at drug stores. If not at yours, send 25 cents and receive a copy direct, postpaid.

Dr. DAVID ROBERTS VETERINARY CO. 914 Broadway, Waukesha, Wis.

OUR SHEEP DEPARTMENT

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep to this office.

SILAGE FOR BREEDING EWES.

To the Editor of The Homestead:

At the Missouri Experiment Station in the winter of 1911-1912 one lot of ewes were fed on corn silage and grain; one on corn silage, grain and clover hay; and one on corn silage and clover hay. The grain consisted of corn, six parts; bran, three parts, and oil cake one part by weight. The ewes were put on feed December 9th, and kept on these rations until lambing.

The grain and silage lot ate on the average per day .39 pounds of grain and 4.07 pounds of silage per 100 pounds live weight. In this lot of twelve ewes eleven were with lamb and produced eleven lambs. So, of the ewes that lambed there was 100 per cent lambs, ten or 91 per cent of which were strong and vigorous. The lot receiving grain, hay and silage ate on an average per day .34 pounds of grain, 2.05 pounds of clover hay and 1.85 pounds of corn silage per 100 pounds live weight. In this lot, ten of the eleven ewes were with lamb and produced fourteen lambs or 140 per cent, of which thirteen or 92.8 per cent were strong and thrifty. In the lot receiving clover hay and silage, fifteen of the sixteen ewes lambed and produced nineteen lambs in all or 126.66 per cent. Fifteen or 78.9 per cent were strong and four or 21 per cent weak. The average amount of feed eaten each day by these ewes was 2.29 pounds of clover hay and 2.38 pounds of silage, for each 100 pounds live weight.

From the results obtained with the lot receiving only silage and hay it would seem that unless the ewes are in extraordinarily good condition the addition of grain during part of the winter, at least, would be advisable. Silage alone for this one year proved to be satisfactory roughness for pregnant ewes when fed with grain. Considering, however, that no twin lambs were born in this lot, the silage and grain ration must be considered inferior to the ration composed of silage, hay and grain. The experience of practical feeders and the results at other experiment stations bear out these conclusions.

It should be further stated that in the three lots receiving silage, eleven were lost during the last week in December, and as far as could be determined the loss was caused by moldy silage. From the first week in January to the first of April the ewes were fed silage without further ill effects.

A few cautions must be observed in feeding silage to pregnant ewes. The silage must be of good quality. Moldy or sour silage is very dangerous. Two or three inches should be used off the top of the silage daily, otherwise it will ferment and mold. Frozen silage is dangerous to feed, as it chills the digestive tract and may cause abortion. H. Hackedorn.

While it seems ridiculous for one to state that most dairy cows on the farm are but half fed during the winter months, it is neverthless absolutely true. Give the matter a thorough test in your own herd, and you will find that almost every cow you feed would comfortably consume twice as much clean grain and roughage as she now receives. This being the state of affairs, how can you expect the cows to keep up the maximum flow of milk?

The writer carefully brushes the cow's flanks, teats and udders well before beginning to milk, which prevents the dust, hair and other substances from dropping into the bucket when one starts to working the teats and udder in milking.

ADDITIONAL FIELD NOTES.

Catalog and Seed Premiums.

The announcement of the Salzer Seed Company which will be found on page 15 presents some information with reference to the 1913 seed catalog and premium list of the John A. Salzer Seed Company. Our readers do not need to be told that this is one of the old-time reliable and favorite seed selling institutions. For more than a quarter of a century it has supplied farmers and gardeners with seeds of all kinds and has built up a reputation which is an assurance of the qualities and merits that go with good seeds. Notice that samples of various seeds are sent on receipt of ten cents. The catalog, however, is free. Address John A. Salzer Seed Company, 124 So. 8th St., La Crosse, Wis.

Swanson's Duroc Sow Sale.

On January 23d, at Stanton, Iowa, S. W. Swanson will make a public sale of forty head of well-bred Duroc Jersey sows. Thirty of these will be yearling and matured sows and ten will be spring gilts. Mr. Swanson has drawn upon the very best sows he has in his herd for this sale. The ten gilts that he is selling are the pick of his 1912 crop. Mr. Swanson is one of those breeders of Durocs who has rather kept his light under a bushel, inasmuch as he has never made much noise, but when he went to a sale he invariably bought the very best. In the Harding sale last winter he bought the two best sows he offered and paid close up to $200 apiece or them. In many other sales he has done likewise and in this way he has built up a good herd. He has selected thirty head of his very best yearling and matured sows and these are the pick of his herd. They will be sired by the well-known boars, King The Col., Model Prince and Model King. The entire offering will be bred to King Willetta, a son of the prize-winning boar, Col. Willetta, and also Model King. Mr. Swanson's sale should be particularly attractive to those who want Duroc sows at reasonable prices. Here is where you are going to be able to buy well-bred sows at figures that could not be thought of at some of the later sales this winter. A word to the wise is sufficient and the man who wants sows this winter should buy them early and avoid the rush. We therefore advise our Homestead readers to write S. W. Swanson for a catalog and then attend his sale. Kindly mention The Homestead when writing for it. See page 44 for advertisement.

Marts' Duroc Sale.

It is a pleasure for us to call the attention of our readers to the Duroc Jersey bred sow sale of B. C. Marts, Hampton, Iowa, to be held in town, January 22d. Homestead readers have known Mr. Marts through our advertising columns for many years and to those with whom he has done business he needs no introduction. Mr. Marts' dealings with his customers have been such that they are walking advertisements of his straightforward, honest way of transacting business. He has been an exhibitor at the Iowa State Fair for a number of years and the class of Durocs he breeds has always received much favorable comment from visitors at the fair. In his sale he will sell forty sows bred to his great herd boars, Chief's Model, a son of Model Chief and out of City Queen by Advancer; Wonder Again by Crimson Wonder I Am, and Hampton King by Model Junior. Edna Model is a daughter of I Am Model and Mr. Marts considers her one of the best brood sows he ever owned. She is thin in flesh, having been in the habit of raising two litters of pigs each year, and they are always good ones. She has produced eighty-five pigs in three years and is now safe in pig to Chief's Model, the boar from which she has raised several good litters. Golden Nellie by Golden Chief, big Lady by Chief's Model and Maid's Lady, a granddaughter of Crimson Wonder Again, are also included in the sale. Mr. Marts is selling a high-class lot of Durocs, as would be expected by those who know something about his breeding operations. Make your arrangements to attend the sale. Write for a catalog, mentioning The Homestead. See advertisement on page 37.

Good's New Importation.

On page 39 of this issue will be found the advertisement of C. G. Good, Ogden, Iowa, who is offering as choice a lot of newly imported Percheron and Belgian stallions and mares as he has ever brought to this country in his quite extended experience as an importer of horses. This importation, which arrived at Ogden early in November, was selected from the best breeders in the old country and includes some of the top stuff from the herds there. One of the Belgian stallions that is now in the stables is the winner of a first prize medal at one of the famous district shows which are so noted for bringing out the very best horses in the kingdom. To secure a winning horse for importation to any country requires a much larger sum of money than a great deal of the stock which is good, but not in the prize winning class. The point of this remark is that Mr. Good has not spared himself to secure the very best that he could find for sale. This particular colt is a grandson of the great Ben D' Or, the champion stallion of the Paris Exposition in 1900. There is in this colt the future of one of the best sort of breeding stallions that one could wish for, and is well worth the money that Mr. Good will ask for him. There is also a light gray Percheron stallion that has a lot of size and quality, is well coupled and a very drafty animal all through. He has a good flat, flinty bone and is worth looking up if one is in search of size and quality of the good sort in a Percheron. There are several other horses in this stable that are good looking prospects for hard and satisfactory service, and are at least worth a visit to the place to see. Mr. Good has not confined himself to the purchase of stallions, but has thought that the need for good mares at moderate prices is strong enough to warrant bringing over a few good things in this line. As a result he can show several nicely matched pairs of mares that are only ready to go out on some up-to-date farm and grow into nice profits for their buyers. For people who prefer to look over something in the American-bred line Mr. Good has a select lot. Customers of this firm can always get their money's worth here, and may be certain that the stuff is exactly as represented. The big feature of the business done here is the low price set on the horses, which insures to the proprietor quick sales, and to the buyer plenty of value for the money paid out. The farm is only a mile from town and visitors will be met at the train if notice is given of their coming. Address C. G. Good, Ogden, Iowa.

James Williams' Duroc Sale.

On Wednesday, January 22d, James Williams, Marcus, Iowa, will hold his winter sale of Duroc Jersey bred gilts and sows. There is one thing that is very much in favor of anything that Mr. Williams offers, namely, that he has never bought anything but the best stuff that he could obtain, and as a result he can offer the most popular lines of breeding, and along with this there are individuals of a great deal of merit in themselves. He has, for instance, boars like the following: Col. Scott Jr. by Col. Scott, he by Carl's Col., dam by Kant Top Notcher; Model Chief VII. by Model Chief by Ohio Chief, dam by Proud Advance; Golden Col. by Protection Col., dam by Golden Model 2d. There is not much better sort of breeding than can be seen in this array of herd boars, and the sows that are to be sold bred to them are not far behind in the same kind of blood. One of the very best things in this sale is the old sow, Golden Queen 8th, a two year old and one of the very few tried sows that will be sold this year out of old Golden Model 2d. In addition to this fact the sow is bred to a boar of the fast becoming popular Model Chief blood, the sort that is noted for a lot of stretch and bone, and this sort of a cross should produce a lot of good breeding stuff for anyone who is desirous of obtaining good stock for their own herd. Another pretty good prospect is a yearling out of the sow just mentioned and by Ohio Blossom's Col. by Prince of Cols. 2d. All told there will be about a dozen of the best kind of tried sow stuff and several more yearlings, and the rest will be spring gilts which include some litters of merit, especially one of nine gilts by Model Chief VII. and out of a sow by a big boar that was as big as most boars of the breed ever get. The litter is even all through and a mighty typey lot they are, too. No. 3 in the catalog is also a big, roomy sort of a brood sow, being sired by Iowa Notcher and out of Lady Tolstoi 3d. In addition this sale includes a Model Chief VII. litter of sows, two two year olds out of Beauty Sensation that are good types of brood sows, worth investigation on the part of breeders who want the good stuff in their herds. The present season will find good sow stuff in big demand and the man who buys his stock early will find later in the season that his early purchases will be bargains. Write now for the catalog, mentioning The Homestead when you do. Address James Williams, Marcus, Iowa. See advertisement on page 38.

Grooters' Sale of Big Poland China Sows.

William Grooters, Boyden, Iowa, sells his bred sows, that are a strictly high-class lot all through, on Thursday, January 23, 1913. This offering is characterized throughout by a great deal of size and the entire cataloged lot is in good condition to go out to anyone's herd and make good. There has been no scarcity of good feed this year and Mr. Grooters will have every sow in the right sort of shape to sell at the time of his sale. The offering includes twenty-five head of tried sows, all but two of which have had fall litters, showing them to be the real breeding sort, not kept open to make them in good shape to sell, and even after this sort of work they will be seen at the sale in first-class condition. There will be fifteen head of spring gilts which for the real size that has made the big type so much sought for are hard to get ahead of. The older stuff is by the good old boar, Long Surprise, by Big Prospect, one of the few 1,000-pound boars that have actually tipped the scales at this figure. The dam of the boar is Surprise A, a Chief Price sow that had a lot of both size and quality. Last year Mr. Grooters bought of Peter Mouw a young boar by the world-famous Big Jumbo, and this pig has grown into a real prospect for a worthy successor of his sire. He has a lot of that great size already and carries also a wide back, even width all through, is good on his feet, has a nine and one-half-inch bone, measures seventy-one inches in length, sixty-one inches in heart and the same in flank. He was thin when the measurements were taken. The spring gilts that he sired the past season are all big, growthy ones, and have much early maturity about them. The show stuff is all considerably ahead of last year's offering and we would like to call especial attention to some of them that are out of a great sow that Mr. Grooters has, Mollie Wonder. The best things in the sale are her daughters or her granddaughters, and it will be hard to find a better lot any place. They are all big, wide-backed sows, with stretch, full hams and good on their feet. It will be worth while to look these over if you are in search of size and smoothness in a Poland China brood sow. The sale will be held at the farm just a mile east of the town of Boyden and the sale follows directly after the sales of Gritters and Ellerbroek. Write for catalog of the sale and plan on being there. This is really one of the good offering of this section. J. A. Benson will have charge of the sale. Mention The Homestead when you send for your catalog. See advertisement on page 37. Address Wm. Grooters, Boyden, Iowa.

Herring's Dispersion Sale of Durocs.

F. H. Herring, Kalona, Iowa, is a man who has been breeding Duroc Jerseys for over a quarter of a century and we might say that while he has never made any sensational sales, he has been breeding a class of hogs that in the hands of their purchasers always made money. He has been very careful regarding his blood lines and a catalog of this, his closing-out sale, will reveal as fashionably bred a lot of Durocs as can be found in any catalog. Daughters and sons of the most noted boars of the breed will sell in this sale. It is really hard to tell which is the top sow of the sale, as there are some half dozen equally well bred, good individuals, that have made good as producers. Mabel C. W. is by Crimson Wonder Again and out of the noted sow, H. A.'s Queen. She is one of the very best sows in the herd and a regular producer. Model Queen by Model Chief, dam by Advancer, is an extra good sow and a very good breeder. Chief's Queen is a litter mate to Model Queen and Superba is another good Model Chief sow. May Crimson is a good daughter of Crimson Wonder Again. Lucy Model is an extra good sow by Model Chief 2d. Jewel's Choice is by Model Wonder and out of Chief's Jewel, the 1909 Iowa grand champion sow. Three of her yearling daughters by Proud Col. are in the sale and we want to say they are about as good as anything you can find in the sale. The offering consists of fifteen brood sows and fifteen gilts by The Wonder, Controller and Convincer. The herd boar, Golden 30th, also sells. He is by Golden Model 2d and out of Fancy Wonder by Crimson W. Golden Model 30th was third at Des Moines, first at Minnesota, defeating the first-prize boar at Iowa; first at Huron, and third at Sioux City. He has proven very sure and is in nice condition. The man who buys him will get a bargain, no matter what price he pays. Mr. Herring's sale will be held in Graham & Sons' livery barn, Iowa City, Iowa, January 21st. Parties who cannot attend the sale should send bids to Carlos C. Palmer, Homestead field man, in care of Mr. Herring. See page 38.

Duroc Jersey Sale Extraordinary.

A public sale of Duroc Jersey hogs announced to take place at Louisville, Ky., on Thursday, January 16th, is one of such unusual excellence as to be worthy of the attention of every admirer of red hogs. Sixty bred sows have been cataloged and it is the belief of the gentlemen making the sale that no more attractive or no more valuable lot have been driven into the sale ring this season nor will there be a lot of equal merit. Harris & Daniels have made up their mind not to make a show next year and for that reason they are putting up a consignment of bred sows including not only their show herd of 1912, but some splendid prospects that have even as much merit for consideration. Besides that, they are making a sacrifice when they catalog the great bred sow, Zelina 26th. This is a brood sow of national reputation, being the dam of Zelina 35th, a sow that won championship honors in 1910 at the state fairs of Illinois, Kentucky and Tennessee and they sold at public sale for $427. She is the dam of Zelina 36th, a sow of prominence as a prize winner and that also sold for the neat figure of $355. She is also the dam of Zelina 45th, one of the greatest of breeders. This sow goes into the sale bred to Kentucky Col. for an early litter. The prospects of this litter are of a sort to improve any herd in the land and it is hoped that breeders will be appreciative enough to send bids at figures near her known value. The great show boar, Kentucky Col., is strongly represented in this sale. Twenty-five of the best sows are bred to him. There will also be twenty-five of his daughters and these will have been bred to Maple Grove Col. Cherry Col. 6th or Ringmaster. There you have about all there is to good blood. Our Mr. Browning will be in attendance at this sale and will be glad to represent the interests of any bidders who may delegate their purchases to him. The consignment will bear out all promises made for it. For catalogs address Harris & Daniels, Morganfield, Ky., but keep in mind that the sale is to be held at Louisville, Ky. See advertisement on page 37.

We positively give FREE a STEM WIND, STEM SET, BEAUTIFULLY ENGRAVED, Plated WATCH, equal in appearance to Solid Gold Watch, American made, guaranteed 5 years, and a beautiful Ring set with an Im. Diamond, for selling only 20 packages of beautiful high grade art post cards at 10c a package. Order 20 packages, and when sold, send us $2, and we will positively send you the Watch, Ring & Chain.

GRIT MFG. CO., Dept. 132 CHICAGO

This Great Rifle

is over 30 inches in length. The barrel is bronze, 16 inches long and finely rifled. It has a built up steel jacket, giving it great strength and durability. The rear sight is open and adjustable and the front is a knife sight. The stock is made of fine walnut with pistol grip as shown. The gun has the hammer action and the shell is automatically thrown out when the barrel is "broken down" for reloading. The gun shoots 22 caliber long or short cartridges.

22 CALIBER HUNTING RIFLE FOR EVERY BOY

This is one of the finest rifles made. I want you to have one. All I ask is a little easy work. Write today and I will tell you about the gun and how to get it.

A. M. Piper, 133 Popular Bldg., Des Moines, Ia.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 639, Aurora, Missouri.

WITH THE EDITOR.

When after a ten-day visit at the home of her brother, whom she had not seen in fifteen years, Aunt Ellen Cross went away taking with her her namesake niece a great quiet settled down upon the Ellis place.

It was not only that Aunt Ellen had brought a rush of life with her breezy ways and her jolly laugh or that Ellen Ellis who went with her had something of her aunt's lively disposition and temperament and that her going left a blank in the house. That might account for father and mother having little to say and Marian moping a little, but did not explain the tenseness with which Harriet, the eldest of the family, had been going about the house. Perhaps Harriet thought so at first, but she came to know better in the quiet of her own room one night a week later. It was upon that night that Harriet made what, afterwards, she always called "the great decision."

Aunt Ellen had become friends with her nieces from the first. "I have lots of room in my heart now my own girls are married and in homes of their own—as every woman ought to be by the time she is twenty-five," she had said one day. It was the day of this remark of Aunt Ellen's that Harriet Ellis began to think about things. She was helped by the frankness with which Aunt Ellen looked things square in the face.

After she had been with them a few days, one morning Aunt Ellen had said suddenly, as if the thought had but just occurred to her, "What are you girls proposing to do with yourselves as the years go by? Here's Harriet nearly twenty-seven, Ellen past twenty-five, Marian coming twenty-three—and not a man in sight for any of you. You are not trained to support yourselves and I suppose the farm will go to Tom since he has stayed by it and is your father's standby. Oh, of course, I know it is not fair, and that you girls should have and share, but if you did what would it amount to? Anyhow, your father is devoted to Tom. Take my word for it, Tom will get the farm, he'll marry and bring his wife here and there won't be room for you. Then what? I dare say you've never thought that far ahead, and you may not like my 'butting in,' but I like you well enough to risk vexing you by asking impertinent questions when it is for your good."

The girls, too startled to reply for the moment, just looked at each other, but their mother murmured that the girls had a good home, that there was no hurry. "Yes, there is hurry, Maria," had spoken up Aunt Ellen. "As far as I can find out there are not many marrying men in this neighborhood and the few there are do not come here. The fact is you and Peter have not made it your business, as good parents should, to look about and cultivate the acquaintance of men who might make husbands for your girls. What's the use of bringing up girls to be homemakers if you don't see to it that they find husbands? My theory is that parents owe it to their daughters to do one of two things for them, provide for their future in case they do not marry—by settling an income upon them, or by training them to earn their living—or by doing everything they can to help them find suitable life partners. I wanted my girls to marry. So did their father. They are married, and though they don't know it, we helped. I would not have let them settle down as you girls are without social life or men friends. No, indeed. If I had seen that they were not likely to marry I'd have packed them off out into the world to get ready for self support."

Harriet Ellis was plain looking as a young girl. Had she gone away to school, learned to dress becomingly and to overcome her natural shyness she would have been a fairly attractive young woman, for she had an amiable disposition. As it was, feeling that she lacked the charm of other girls, she shrank into herself and soon gave up all thought of a sweetheart and a good time such as she read of other girls having. That her sister Ellen had chafed against the monotony of their life and had declared she could not stand it much longer had not seemed to make an impression upon Harriet, but after Aunt Ellen was gone and her words came back to Harriet she knew that for a long time deep down in her heart there had been a stifled hunger, discontent and a craving for the joy of life which seemed to be passing her by.

Alone in her room that night Harriet compelled herself to face things. Love was seemingly not for her. She had met but few eligible men and not one of the few had ever looked into her eyes as she had seen them look at other girls. And yet she could love—was worth loving too. Well, if love was not for her, if she were never to have a husband and a home of her own, there were other good things in life. The question was, should she set about trying to secure her share of them? And if so, how?

Hour after hour, all through the night, she wrestled with the problem which confronted her, a problem whose constituents were, finally, a determination to make life fuller for herself somehow, somewhere, and a resolute listing of her abilities, disabilities and possible opportunities.

The solution was found when she suddenly remembered that her happiest moments for several years had been those when she had gone to help in homes where there was sickness. She would become a trained nurse. There would be difficulties of course, but she had splendid health and strong nerves, tact and patience also, and she was not afraid of hard work.

She had been lying on her back staring at the wall as if the answer to the problem were written there; as she made her decision—"the great decision"—she rose and went to the window; dawn was just breaking; she opened the window wide, she drank in deep breaths of the frosty air and lifted her face to the East, where shafts of rose and gold were ushering in the new day; then with a look of exultation which glorified her plain face she said solemnly, "Where there's a will there's a way—so help me God I will do it!"

HOME AND HOMEMAKING.

NEW YEAR SUPERSTITIONS.

It is considered a sure sign of death to see one's own shadow in the moonlight on New Year's eve.

You court misfortune by leaving the house on New Year before someone has entered it. You must hope for the luck, moreover, of having the first to enter a dark-haired man.

Seeking to know what good or evil the New Year would bring, superstitious people in the long ago girt themselves with swords and sat on the roof of their houses on New Year's eve. They also knelt at the crossroads (on a cowhide) for the same purpose. The first thing brought, one might think, would be pneumonia.

It is bad luck to carry anything out of the house on the New Year before something has been brought in.

But the best luck of all, which even those most scornful of portents may not despise, is to begin the New Year owing no man a cent.

1. A consonant in "cream." 2. A beverage. 3. Bright. 4. A part of the body. 5. A consonant in "cream."

1470 Word Square—1. A form of medicine. 2. Opinion. 3. A church season. 4. Tardy.

1471 Additions—1. I am a pronoun; put a letter before and one after me and I turn into a session of a judicial assembly. 2. I am a number; put a letter before me and I turn into altitude. 3. I am an animal; put a letter before and one after me and I turn into a dark aspect.

1472 Charade—My first is a boy's name; my second is an exclamation; my third is part of a chain, and my whole is a bird.

1473 Behead—1. An act and leave to consume. 2. A flat-bodied fish and leave a girl's name; again and leave devoured. 3. To roam and leave a waiter; again and leave a beam.

HANGING BASKETS OF CARROTS.

The above unique use of carrots has been suggested as follows: Scoop a hollow in the root and insert a small sponge; sow a few mustard seeds in this and hang in window. Keep the sponge moist and both mustard and carrot top will grow.

EDUCATING BOYS FOR THE FARM.

"Agricultural colleges are not educating boys away from the farm," said Prof. Alfred Vivian, acting dean of the college of agriculture, Ohio State University, when asked about the oft-heard criticism that an agricultural education unfits a boy for practical farm life. "Instead, they are fitting young men to more intelligently till the soil and to make country life more desirable," continued the professor. "To show the influence of an agricultural education on the future life of a boy, take our own college of agriculture, for instance. All the winter course and two-year-course students and 50 per cent of the four-year-course students go back to the farm. Forty-five per cent of those who do not go into practical agriculture are in agricultural work in colleges, experiment stations, United States Department of Agriculture, etc. Only about 5 per cent get into occupations foreign to agriculture.

POTATO SPLIT BISCUIT.

Bake two large potatoes; while hot mash through a strainer into a stone jar. Into the hot potatoes stir a teacupful of lard and butter mixed, salt and two well-beaten eggs. Add a teacupful of sweet milk in which has been dissolved one-half a cake of compressed yeast (or yeast foam) and one tablespoonful of sugar. Stir in a quart of sifted flour. Mix this at nine o'clock in the morning, cover and leave anywhere in the kitchen in winter. At twelve o'clock add to the dough one pint of sifted flour, set away for a second rising. At five in the afternoon turn out the dough on the biscuit board and with just sufficient flour to handle it roll out and cut with a biscuit cutter, placing them in a baking pan one on top of the other, with just a little butter between. Throw a towel over them and let rise two hours, baking them in a quick oven.

AFTER CHRISTMAS.

Ballad of after Christmas,
Song of the vanished pies,
Lay of the well-swept platter,
Carol of unused ties;
Tale of the day-old slipper,
Gone with the other trash;
Sonnet of empty pockets,
Epic of far-flung cash.

Ballad of after Christmas,
Sonnet of broken men,
All of their substance wasted,
Facing the world again;
Song of the silk suspenders,
Precious too far for wear;
Lay of the long-sought trousers,
Needed to fasten there.

Ballad of after Christmas,
Lay of the purse so lean;
Song of the slaughtered savings,
Tale of the slate wiped clean;
Story of things embroidered,
Heaped in a gaudy pile,
Waiting to fill the attic
Just a little while.

Ballad of after Christmas,
Song of the turkey hash;
Tale of the red ink balance,
Story of wasted cash.
Yet, what of woe? Let's share it,
Brother, I bid you cheer;
Christmas—let's grin and bear it—
Comes only once a year!

—J. W. Foley.

THE OLD YEAR.

The old year goes
Upon its way.
It brought some woes,
Yet we can say
It brought a lot
Of real cheer,
And it was not
A bad old year.

Although some days
It gave were blue,
A world of praise
Is but its due.
We owe it much;
'Tis very clear
It wasn't such
A bad old year.

AMONG OURSELVES.

Santa Claus has made us another one of his annual journeys, and Father Time has bowed out Old Year on one side of the stage of life while he was introducing New Year on the other. Standing at the threshold of Nineteen-thirteen let us, with Ambrosia L Nixon, take a last look at the departing year:

THE SIGNIFICANCE OF CHRISTMAS.

The birthday of Christ, besides being a day of festivities and amusements, has a higher and nobler significance. The beneficent results of his labors stand as guide posts to the present and future civilization. Neither the mightiness of Rome nor the fame of Greece nor the pomp of Persia have produced the effect upon the world that this simple and pious life has produced. Empires have risen and fallen. Nations have made entrance and exit upon the stage of existence, kings have been

throned and dethroned, and yet, great as these may seem, they were developments of the material world and have been swept into oblivion. But as time speeds on its ceaseless way the admirers and exemplars of this perfect life increase in numbers. This life teaches that which is spiritual is eternal. That which is temporal fades as the dew before the morning sun. The triumphant advance of Christianity is sufficient to prove that His life is worthy of emulation. No reasoning is more cogent, no evidence proves more conclusively a nation's position in the scale of civilization than its reverence and fidelity to God. As we are about to enter upon the threshold of a new year, let us decide to make it one of unprecedented moral growth, individually and as communities. Let us realize more fully that to prepare for heavenly attainments by earthly existence is the reason we live in the natural world. Let us more deeply appreciate the bonds of divine love which knit the soul of man and man together. By doing these things we will rise in the estimation of those about us, thus hastening the great millennium of peace and fraternal love.

We live so peacefully, so quietly in our America that the troubles along the Bosphorus, the turmoils in other parts of the globe, the ever-threatening war-cloud that hangs over Europe are but as the buzz of an insect that makes a sleeper turn his head on the pillow. Yet, we do well to help in every way to bring on that day when real peace backed by Christian amity shall permeate mankind in thought, word and deed.

Something of the same thought has been in the mind of E. V. S., who has this to say:

LET ALL WISH AND WORK.

One year with its sorrow, suffering, heartaches and pain have passed. One year with its gladness, joy and exhilarating thoughts and moods. We have turned the pages of our great book, a year, revealing new thoughts, ideas, wiser doings and things both gay and sad. Many words spoken have been harsh, actions too, but though we cannot recall them, let's all forgive and forget. Strife and peace are running races with each other. Sometimes hard times are in with good. Scanty living and hard labor intermingle with luxurious living and easy work for some. But the bright side is the best of life if only we look upon it. If only good deeds, kind words and grateful hearts are done and said, not only to people, but to the Creator, it is worth while to live. Let us be thankful that He is yet near us, listen-

ing to our prayers, knows our needs and is guiding our faltering steps. Though we fail, He won't. So let's extend our thanks to Him, both for the year gone and year coming, that it may be with but few sorrows, and that we endeavor to put our trust in Him and take greater steps to lift the burdens of our followers.

As a nation, this year, we indeed find it good to "count our mercies," and as farmer folk we hold out our hands to welcome tiny Nineteen-Thirteen. What squally times these baby people do bring us when they appear on the scene! So during January and February and on into March we have our hands full of "weather." How shall we occupy it? Hear what Mrs. F. G. Porter has to say about spending winter evenings:

READING AS A DUTY.

We are about ready, I guess, to sit down for a little enjoyment and occasionally to read and meditate or study. I have been reading the book lists, but I feel that we busy housewives should be quite discriminating in the books we read. To read a book because it is good or popular reminds me of what my children sometimes say, "Cause is no reason." In choosing our friends we choose them because they are congenial and uplifting. A book may be a very beneficial companion for an hour or so, or it may be the opposite. Idle entertainment should not be considered. There are books that meet the requirements of individual tastes or demands. There are interesting books upon practical lines—religion, economics, travel, politics, etc. The preface is a guide to what the book contains, though where convenient the consultation of a good librarian is very helpful. Books that portray life, sketches or stories that are true to human nature and natural surroundings are sometimes helpful, but shun the book with false ideals. Many a girl has gone to destruction through their influence. My boy and several of his friends are especially disgusted with that popular set of books that invariably finish with the hero a faultless man with great wealth. How silly! as though wealth were the common reward for all the heroes in life. No one enjoys a "dry" book. Let us remember all these points with our gift books. If you cannot learn the receiver's favorite author you can try at least to consider the individual tastes and present him or her with a congenial companion. If we cannot consult a reliable librarian, we can write, enclosing stamp, to any literary friend and get the advice we need concerning any particular book or books. We mothers and wives should not neglect our text (?) books on child culture, household economics, current events, etc. The honor of our nation depends greatly just now upon the women becoming posted intelligently on affairs of state. Of course, we timid, sensitive ones regret the publicity of "votes for women," but since the necessity that arises from impure nature of matter demands it let us do our duty. I love my country and I certainly love my boys and girls, so I intend this winter to read such matter as will fit me for my duties.

Another good friend of ours recommends the following line of reading as well worth while. This reading is for financial profit in our own occupation. Everyone should read the best proven things in the occupation in which she makes her living, as well as reading for mental and moral growth. Dora Grant has evidently been so doing and profiting therefrom:

BULLETIN EVENINGS.

Now that the long winter evenings are approaching and many of us will have more time to read and study, I wish to call your attention to the long and varied list of farmers' bulletins. Send a card to the secretary of agriculture at Washington, D. C., with the numbers of the bulletins desired or for a list of those available and they will be sent by return mail without a cent of cost to you. I will name some which I consider worthy of a place with valuable reading: No. 389, "Bread and Bread Making," in which is explained all about grains and flours of different kinds, yeast and other leavening agencies, preparation of the dough, baking and cooling, imperfections in bread, nutritive value and cost, etc. No. 413, "The Care of Milk and its Use in the Home." No. 128, "Eggs and Their Uses as Food," including cooking and serving, description and composition, flavor and color, digestibility, place of eggs in the diet, marketing and preserving eggs, possible danger from eating eggs and importance and growth of the egg industry. No. 182, "Poultry as Food." No. 234, "The Guinea Fowl and its Use as Food." No. 183, "Meat on the Farm." This includes the selection of animals, preparation for slaughter, killing and dressing for cattle, sheep, hogs and poultry, curing and recipes for curing and smoking, also thirty-five useful figures and illustrations. No. 391, "Economical Use of Meat in the Home," and No. 34, "Meats: Composition and Cooking" are good companions for the above number. No. 85, "Fish as Food." No. 93, "Sugar as Food." No. 293, "Use of Fruit as Food," under which comes wild and cultivated fruits, market conditions and supply, color and flavor, composition, ripening, ways of serving, place of fruit in the diet, digestibility, cooking, handling, storing, etc. No. 203, "Canned Fruit, Preserves and Jellies," giving household methods of preparation and several illustrations. No. 175, "Home Manufacture and Use of Unfermented Grape Juice." This gives explicit directions for preparing and bottling, also a number of illustrations and recipes. Note.—Grape juice can be taken into the stomach in some cases of illness when no other food can be retained and is a cooling and refreshing drink at all times. It might be well before the holidays to read No. 332, "Nuts and Their Uses as Food." Then there is No. 256, "Preparation of Vegetables for the Table;" No. 359, "Canning Vegetables in the Home;" No. 154, "The Home Fruit Garden," and No. 255, "The Home Vegetable Garden." No. 62, "Marketing Farm Produce." Many of the products are dealt with separately, as: No. 198, "Strawberries;" No. 220, "Tomatoes;" No. 282, "Celery;" No. 324, "Sweet Potatoes;" No. 447, "Bees, Etc;" No. 196, "Usefulness of the American Toad;" No. 54, "Some Common Birds in Their Relation to Agriculture," with twenty-two illustrations would be especially instructive to the boys and girls and interesting to all. Those interested in poultry would be interested and benefited by No. 51, "Standard Varieties of Chickens" and No. 64, "Ducks and Geese," both illustrations; No. 200, "Turkeys;" No. 177, "Squab Raising," and No. 287, "Poultry Management." "John" may be interested in No. 106, "Breeds of Dairy Cattle;" No. 206, "Milk Fever and its Treatment;' No. 351, "Tuberculin Test of Cattle for Tuberculosis; No. 205, "Pig Management;' No. 379, "Hog Cholera;" No. 32, "Silos and Silage;" No. 22, "The Feeding of Farm Animals;" No. 239, "The Corrosion of Fence Wire;" No. 194, "Alfalfa Seed;" No. 179, "Horseshoeing;" No. 415, "Seed Corn," etc. The whole family should be interested in No. 126, "Practical Suggestions for Farm Buildings;' No. 270, "Modern Conveniences for the Farm Home;' No. 185, "Beautifying the Home Grounds;" No. 248, "The Lawn," and No. 195, "Annual Flowering Plants." Others that might be of general interest are No. 188, "Weeds Used in Medicine;" No. 86, "Thirty Poisonous Plants;" No. 28, "Weeds and How to Kill Them;" No. 173, "A Primer of Forestry;" No. 367, "Lightning and Lightning Conductors." You cannot secure many of these at one time, so choose the ones of most interest or value to you. By getting a list of all those available for distribution, many will be suggested to individuals which I have not mentioned. I have most of those named in my possession and think many are of general interest as well as instructive.

In these bulletins, either the state agricultural or the United States, you will find the very best thought on any particular line of farm life industry. There is so much of it that a person must wisely choose that fitted to her locality. Like medicines, it needs adaptation to your system. Different woods and different coals give out different degrees of heat and if you don't watch you are apt to scorch your bread; so it is well to learn how to handle new ideas by going a little slow at the first.

Talking of baking, here are a number of housewifely things that call for your attention. Help the inquirers with your knowledge, and file away the recipes till you have time to test them out:

I must write just a line or two and let you know that I find much help and enjoyment in reading our home page. I am afraid Aunt Mary would not allow as big a girl as myself to write to her, but I am glad she cannot keep me from reading it anyway, and so I enjoy that also. Here is a recipe for making bran bread that one of the ladies asked for: Two cupfuls of bran, one cupful of white flour, one-half cupful of New Orleans molasses, one-fourth of a cupful of sweet milk, one teaspoonful of saleratus (not baking powder), one teaspoonful of salt and one-half of a cupful of raisins. This is fine, although graham bread is healthy as well. If any of the ladies can send in a good catsup (tomato) recipe I shall think this a fair exchange.

My neighbors and myself have been bothered a great deal with our lard not keeping. We never lost any until about five years ago. We thought at first it was not cooked enough, so we cooked it better next time, but some of that spoiled. I have two jars now. One smells musty and is nice and white; the other has brown streaks through it and has a spoiled smell. We cannot account for the trouble. We know that it isn't uncleanliness, as we take great care to have everything clean. We wish to know if you could tell us the cause.

Would one of the readers be kind enough to let me know through the Department what to do to prevent worms from getting in sun-dried fruit?

"Miss Stewart" asked for some way to keep shoes from running over. This is what I do and find it a very good way: When I buy a new pair of shoes I take them to a shoe maker and have him put a small metal "tap" on the side of the heel that I run over. You can get these taps in different sizes, but I find the small ones give the best satisfaction. Now, can any of the mother readers tell me which is the best way to dress a five-months-old baby for bed that has to sleep in a room where there is no fire these cold winter nights? The baby sleeps in the same bed with his mother.

Like "Stella Stewart," I, too, am wondering what work the ladies of our circle have planned for the cold winter days. Won't they please tell us? And will Miss Stewart please tell us what use she makes of those pieces. I used to run my shoes over until I learned to put heel plates on the heels and soles when they were thick enough. "Anne of Green Gables;" "Anne of Avonlea," by L. M. Montgomery; "The Lamplighter," by Cummins, and "Quincy Adams Sawyer," by Chas. Felton Pidgin, are good books for young people, as also are Ralph Connor's writings. I enjoy our book talks.

This is in answer to Mrs. Ferryville's inquiry as to how to pickle pork. Your editor believes this to be a valuable piece of information. We thank Mrs. Clara S. Everts for it:

To pickle pork cut fresh sides of pork into strips four inches wide and as long as the sides. Completely cover bottom of keg or ten-gallon jar with salt. Place strip of meat on edge with skin side next to jar or keg and fill in in a circle until there is a layer of meat. Fill all spaces between meat with salt and completely cover meat with salt. Add another layer of meat, cover with salt, and so on until jar is nearly full. Too much salt cannot be used. Take boiling water to cover meat, dissolve in it all the salt it will contain and when cold pour over meat until it is covered at least two inches deep. Put plate or other weight to keep under brine and set in cellar. Add more brine as needed to keep completely covered. Next fall, when all meat is gone, take out a strip at a time, slice, soak in clear water or sweet milk and cook like fresh pork. Have used this recipe in our family for two generations. It cannot be excelled. Meat is sweet and tender and as good as fresh, but remember that too much salt cannot be used.

Mrs. Alice M. sends the following which was asked for:

Bran Bread.—Two cupfuls of sweet

You Save Money

Here's Proof

The United States Government Laboratory test shows Ceresota to be worth from 14 to 79 cents per barrel more than other well known and extensively advertised flours.

This is the best reason in the world why you should use

Ceresota Flour

The prize bread flour of the world

GET A CERESOTA COOK BOOK. It contains valuable suggestions and over a hundred recipes that are unusually excellent. This book delights every housekeeper. It will interest you. Limited Edition FREE. Send a post card today.

Save the coupons in every sack. They tell how to get a splendid little story book of intense interest to every child. Let your children color the many lovely pictures with the harmless water-colors that you get, too. Children love this story of wonderful adventure—it's just the kind your child wants to hear "all over again."

Young man, learn the Automobile Business. This Book is Free and it is full of money making information. Tells how to learn all about an automobile so you can repair any make of automobile and drive any car on the market. Lots of good positions open as repairmen, salesmen or drivers. Pay $75.00 a month up. Only 6 weeks time required. Send Your Name Today, and we will mail you this big free illustrated book which will tell you how to qualify in a few weeks' time for a good job or business. Automobile Training School, 1200 Locust St., Kansas City, Mo.

milk, two and one-half cupfuls of bran, one and one-half cupfuls of graham flour, one cupful of white flour, three tablespoonfuls of brown sugar, one scant teaspoonful of salt, two teaspoonfuls of baking powder, one tablespoonful of melted lard. Mix all together and stir and beat well to make a fine-grained dough. Steam it for two hours and set in a hot oven to brown. I tried several recipes for bran bread, but they all seemed so dry and hard that we did not like them. I experimented until I got this right. It will remain moist until the last bit is used up and tastes more like graham than like bran bread. The quantities given here make a large loaf. I steam in a two-quart granite basin. It is fine.

Here is a letter from an old friend of ours who has begun the New Year well. She has moved from Kansas to Montana, but Mrs. David Wisheart is still a member of our Home Department:

I have not written to the Home Department for several years, but I do enjoy the letters. I think it the best I have ever read. We are living in Montana on the Flathead reservation. We moved from Kansas two years ago last May. Holding a number brought us to our present location. This is a fine climate which, with the beautiful scenery, makes it a pleasant place to live. We are blessed with a church in this new country, for which we are truly thankful. I keep busy in Sabbath school work. I have a class of boys and girls, fifteen in number—aged from eight to thirteen—a very interesting class. The reservation is quite well supplied with schools; ours is located three-quarters of a mile from our home. The church is four miles. The country has made rapid progress in the two years of settlement.

THE YOUNG FOLKS

Letters and Articles for this Department Should be Addressed to Aunt Mary, Hawley, Minnesota.

MOTTO FOR THE WEEK.

If you are tempted to do something naughty,
Look in the glass, and count up to forty.
—From Iowa, age 12.

COPY THESE IN YOUR DIARY.

Do today's work today.

Honor and shame from no condition rise;
Act well your part—there all the honor lies.

If wisdom's ways you'd wisely seek,
Five things observe with care:
Of whom you speak, to whom you speak,
And how, and when, and where.
—Sent by Iowa.

The thing that goes the farthest
Toward making life worth while,
That does the most, and costs the least,
Is just a pleasant smile.
A smile that bubbles from the heart
And loves its fellow men,
Will drive away the cloud of gloom
And coax the sun again.
It's full of joy and comfort, too,
With manly kindness blent;
It's worth a million dollars
And doesn't cost a cent.
—Sent by Ruth, age 17.

SOME INTERESTING RIDDLES.

Why are some newspapers like a man with cold feet? Because they suffer from poor circulation.

Why are gossips like parrots? Because they are forever repeating what they hear.

When are spices noisy? When the ginger snaps.—Sent by Wild Rose, age 10.

Name me, and you destroy me.—Silence.

When is a boat like a heap of snow? When it is adrift.

What comes after cheese? Mice.

When are volunteers not volunteers? When they are mustered.—Sent by Iowa, age 12.

When is a door not a door? When it is ajar.—Sent by Mamelte, age 15.

When is your pocket empty and yet has something in it? When it has a hole in it.

What turns all over and yet doesn't move? Milk, when it turns sour.

When is the best time to make hay? When it is raining pitchforks.—Sent by Dolly.

When is a man not a man? When he is a-shaving.

What is the difference between a black-haired man and a bald-headed man? One is crow shade (crocheted) and the other is not (knit).—Sent by Wilna, age 13.

What is the difference between live fish and fish alive. "A" difference.

An old woman in a red cloak was crossing a field in which a goat was feeding. What strange transformation took place? The goat turned to butt her (butter).—Sent by Eleanor Schneider, age 11.

ROLL OF HONOR.

Blooming Violet	Ocheyedan Girl
Dane	Waterlily
Fairy Love	Wee Lou
Marion	White Rose
Milkmaid	

Those who won pansy badges for three publications on the roll of honor are Belle, Happy Brown-eyed Maiden, Morning Glory, Washingtonia.

Those who made mistakes and do not get on the roll of honor are Kala and Wilna, who wrote on both sides of their paper. Garda sent conundrums. Doria Hulse answered the "old verse" puzzle correctly.

ABOUT SCHOOL.

We had a program and tree at our schoolhouse, Friday, December, 20th, Our program consisted of recitations, songs, and a play, "The Crying Family." We decorated our tree with pop-corn and candles, which was very pretty. Our teacher gave us candy and bananas and a pennant; the name of the school is Union Valley School. The pennant was made of purple felt with letters of yellow, U. V. S. What do you cousins think of a normal course? Which do you prefer a normal course or a high school education and then go to normal and get your certificate? I am in the eighth grade, and would like to go to Maryville (our county seat) next summer and review the eighth grade, but if I don't do that I will take it again in the country school, because I believe the eighth grade to be the most practical and I think the better you have it the easier the higher studies will be. Do you agree with me? I believe most people will tell you the same.—Milkmaid, age 13.

To Begin the New Year.

Many thanks for the pansy badge, I was very glad to get it and hope to earn a silver badge in the near future. Have you evere seen the play "The Blue Bird," by Maeterlinck? It was given as a special Thanksgiving matinee in the Twin Cities this year, and we went there especially to see it. It is very deep, and is worth seeing ten times over. We also visited a hospital for crippled children, and it is truly marvelous how happy they are in spite of their misfortunes. Little crutches go tapping down the long halls, laughter and snatches of song are heard on every side. When I came out again into the fresh air and able to see, hear, feel and know everything about me, a silent prayer of thanksgiving and remorse rose from my heart, for my selfishness in not being thankful for all my mercies, and thanks for all things henceforth.

But Christmas time will soon be here, and then the new year, when we feel we want to start anew. Oh, that we could keep the spirit throughout the year!

I am always glad to see such a number of names on the "Roll of Honor." I hope A. E. S. has every success in his electrical education. I am especially interested in it, as I have a brother taking a course in this special line of work at the university. I am sure Fat Dolly Baby is a dear little girl, and has my heartiest of good wishes. I correspond quite regularly with Indiana Lass, and find her a very agreeable girl, who also has my good wishes. In all I wish each, and every one of you the very happiest Christmas possible and the brightest New Year ever.—Bedouin.

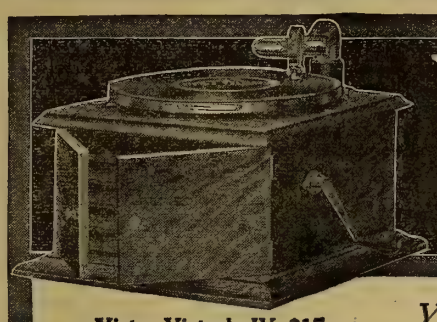
Bright but Brief.

I am a little black dog with brown eyes. My name is Fluffy. I will tell you of a little adventure I have had. One morning I was very hungry. I went into the pantry. I saw some cheese lying on a mouse trap. I put my head down to get the cheese, and I sprung the trap. It hit me on the nose. I squealed very loud, and got out of the pantry as quick as I could. —Peggy, age 10.

Two days ago there was a wreck about one mile from my father's farm, and about one and one-half miles from Willard, Colo. Two coaches and two box cars were thrown down an embankment. When the cars jumped the track they slid and tumbled for about 150 feet or more. It tore out about 600 feet of track. One old lady was hurt very badly, and the conductor was hurt in the back, and most everybody was scratched and had black eyes. The train was just about on the bridge when it was wrecked.—Western Lad.

Once there were two little girls named Fan and Flora. One summer their mother gave them a garden, and said if they worked well they could have it for their own. Fan went to work and soon had her garden all dug up ready to plant. But Flora was not so industrious. She started in when Fan did, but soon complained of being tired. All through the summer, Fan kept her garden clean, and had many beautiful flowers to show as a result. But Flora neglected hers, and let the weeds grow up and choke her flowers. She was very sad because she had no flowers, and promised to do better the next summer.—Cleo, age 12.

I am going to be a farmer because I love the farm and farm stock, especially horses. Every person should be kind to horses, because if it were not for horses the farmer would not know what to do. A farmer is the happiest man, as a general rule, singing while at work and at play. I believe in raising good stock and not scrubby stock. For a boy of fifteen I have a good start, because I am my



What kind of music do you like best?

Victor-Victrola IV, $15

Your kind of music is yours to enjoy in all its beauty with a Victor-Victrola in your home.

Your kind of music—the kind *you* like best—sung and played as you have probably never heard it before.

father's only helper who is at home. I have fifteen fattening hogs, four brood cows, twenty-five young pigs, seven ponies and six head of cattle. I hope to succeed in my work, after my father has given me a start. But when at first I don't succeed I will try again until I do.—Partner, S. D.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5964 Girl's Dress—The blouse of this dress closes at the left side of the front. The skirt is a three-gored model joined to an underwaist. Serge or broadcloth can be used to make this dress.

The pattern, No. 5964, is cut in sizes 6 to 12 years. Medium size requires 2¾ yards of 44-inch material with ½ yard of 27-inch contrasting goods. Price of pattern, ten cents.

5906 Miss' and Small Woman's Dress—This charming frock is designed for the miss and small woman. It has the fashionable front closing and is made with revers at bottom. The collar is a pretty feature and it and the revers and turned-back cuffs are trimmed with braid. Serge, mohair or broadcloth can be used to make this dress.

The pattern, No. 5906, is cut in sizes 14, 16 and 18 years. Medium size requires 6½ yards of 27-inch material with 2½ yards of braid. Price of pattern, ten cents.

5083 Lady's Princess Apron—This apron is made in the princess style. It is just the thing to wear around the kitchen. It can be developed in gingham or muslin.

The pattern, No. 5083, is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size requires 5¾ yards of 27-inch material or 4⅜ yards of 36-inch goods. Price of pattern, ten cents.

4361 Neat Dressing Sack—The shirtwaist dressing sack is excellent for the fall and winter wear, the long sleeves and big neck being very acceptable. Any of the crepe materials can be used to make this sack.

The pattern, No. 4361, is cut in sizes 32 to 44 inches bust measure. Medium size requires 2½ yards of 36-inch material. Price of pattern, ten cents.

5808 Lady's Waist—In this model we have a plain shirtwaist with an uncommon feature—the sleeves extending to the neck edge. This is a new idea and one that has made a pronounced hit. Every woman requires a number of plain shirtwaists for general wear and she likes these models to be different in some degrees one from the other.

The pattern, No. 5808, is cut in sizes 32 to 42 inches bust measure. Medium size requires 2½ yards of 36-inch material. Price of pattern, ten cents.

5995 Lady's Shirtwaist—This is a splendid type of a tailored shirtwaist and is just the thing for general wear with the coat suit. It can be made with or without the box plaits, can have either long or short sleeves and either standing or rolling collar.

The pattern, No. 5995, is cut in sizes 32 to 42 inches bust measure. Medium size requires 3½ yards of 27-inch material. Price of pattern, ten cents.

FARM ADVANCE OF SIXTEEN YEARS.

The most effective move toward reduced cost of living is the production of greater crops. This is attributable to the work of the Department of Agriculture, the agricultural colleges and experiment stations, and the help of the press in publishing every movement to help the farmers.

One hundred and sixty-three thousand square miles have been cleared of the fever tick in the Southern States, equal to the area of three states. The farmers there are bringing in improved stock and will soon contribute materially to the meat supply.

Our dry land problems will be measurably solved through alfalfas from Siberia and non-saccharine sorghums from Africa.

The town does not need the retired farmer, while the farm needs his experience and his capital. A retired farmer is capital going to waste.

Taking care of the soil is the first consideration in conservation of our resources.

Bookkeeping will soon be as common on the farm as in the factory. It is just as important for a farmer to know what it has cost to produce a given crop as for the manufacturer to know the cost of making the article he sells.

During the last sixteen years the farmer has steadily increased his wealth production year by year, with the exception of 1911, when the value declined from that of the preceding year. If the wealth produced on farms in 1899 be regarded as 100, the wealth produced sixteen years ago, or in 1897, is represented by 84, and the wealth produced in 1912 by 202.1. During the sixteen years the farmers' wealth production increased 141 per cent.

A field half as large again as Italy or nearly as large as either France or Germany is the area of this country's cornfield. This year's corn crop is the largest ever produced in this country, and reaches the staggering amount of 3,169 million bushels. In value, too, the corn crop this year is the highest on record and reaches the fabulous amount of 1,759 million dollars. This crop is worth to the farmer 20 per cent more than the average corn crop of the previous five years.

An egg may be worth only a cent and three-quarters and yet 1,700 million dozen eggs are worth 350 million dollars, and these are the estimates for 1912. If to the value mentioned is added the value of the fowls raised, the products of the poultry industry on farms amounts to about 570 million dollars. This is nearly equal to the value of the wheat crop and is more than three-fourths of the value of the cotton lint produced this year.

The animals sold from the farm and the animals slaughtered on it together number about 111 millions and the farm value of these animals is estimated at 1,930 million dollars.—[Secretary Wilson's Annual Report.

PLEASANT FIELDS OF HOLY WRIT

SAVE for my daily range
Among the pleasant fields of Holy Writ
I might despair. Tennyson.

The International Sunday School Lesson

FIRST QUARTER Lesson II. Genesis I., 26-27: II., 4-25 January 12, 1913

MAN, THE CROWN OF CREATION—THE STORY.

The majestic Father of the world, in this marvelous moving picture of the eldest literature, is next portrayed as proceeding with the complacency of infinity to make His jewelry in the sky and hang His lustrous lanterns there; to separate air, land, and water, and people each with all their myriad forms of life, beautiful and curious. Now He pauses in the last and long epoch and, as if in contemplation of the climax, the crown of sentient life with which he intended to adorn and beautify it all. It is as if He was announcing to Himself His purpose to create a vicar like Himself in ability to think and do—a being who, by his intelligence and will, shall bring everything animate and inanimate to its best estate. The change of the creative formula from "Let be!" (used seven times) to "Let us make!" in its very self indicates man's difference from and superiority to all the rest of creation. His place, also last in the order, is token also of his pre-eminence. This conclusion is further strengthened by the similitude in which it is proposed he shall be made, namely in God's likeness and image. This can not be a corporeal similarity, for God is without body or parts. Man's original likeness to God consisted in his mental powers to think, reason, imagine, remember, conclude, and resolve. The observer of the image was the moral qualities of the soul by which he believed and loved. It pleased God to create man in a holy dualism. Male and female created He them. He also ordained their multiplication. They were to fructify and replenish the earth. With the solicitude of a father he now points to the abundant table of nature from which they are to replenish the wasted powers and refresh and delight their physical natures. Now the Creator brings man to the throne and gives him a coronation in the words, "Have dominion!" It is as if the Infinite was writing a quit-claim deed to the material world, the terms of which read, "Take it!" "Dress it!" "Keep it!" Now, for the seventh time, He spreads His hands in benediction over all His works and pronounces them "Good!" In this seventh epoch there is cessation from creative activity. The beneficent "Former of the skies" gives an exemplary lesson in breaking off from toil. He makes the Sabbath a golden clasp to bind the volume of the creative week together—a clasp graven deep with divine injunctions and studded richly with divine promises.

The Teacher's Lantern.

The difficulty here is to know what not to teach. The paragraph is fairly packed with seed thoughts. A selection is imperative. Matters of comparative unimportance, but which, if once mooted, might lead to time-wasting debate, should be omitted. For example: (1) The nature of man's food before the fall; (2) Whether any animals were carnivorous before that event; (3) Whether God spoke to the angels or the other persons of the Trinity when He said, "Let us make man;" (4) The method of Eve's creation; (5) Whether the creative days were literal days or aeons. The majesty and unimpeached correctness of the Mosaic account of creation makes an apt introduction in teaching the lesson. This can be well shown by using the crude heathen cosmogonies as a background. The orderly and glorious progress of creation should be so reverently described as to lead the scholar to exclaim, "O Lord, how manifold are Thy works! in wisdom hast Thou made them all." Man's dominion over nature was never so great as at the present day. With retort, spectrum, telescope, microscope, etc., he is wresting her secrets from her, and subduing her forces to his use. A beginning only has been made. The universe affords a limitless arena for man's skill and prowess. The dignity of man's position in nature, the variety, delicacy, and strength of his senses and faculties, the broad scope afforded for their employment, should be dwelt upon until the scholar is ready to exclaim in the language of another, "O rich and varied man, thou palace of sight and mind!" The primeval institution of the family and the Sabbath furnishes a practical teaching point. Infidelity to the marriage vow and desecration of the Sabbath are sins against God. Senior class teachers should be ready for emergencies in this lesson. Questions of a captious nature may be sprung. For example: "How could there be light before the sun?" Moses distinguishes between light and luminaries. He justly attaches great importance to that "luminous ether to which we owe all the great vivifying powers of nature." (Principal Dawson.) "That there may be light without the visible sun is now admitted." (Wm. Fraser.) "The whole earth was inclosed in an expanse of aerial fluid from which, through the agency of the electro-magnetic forces, streamed forth a light accompanied with animating warmth." (Von Schubert.) "How could there be vegetable life before the sun?" The germs, embyros, seeds of vegetation in its infinite varieties, were all placed in the earth on the third day. "They brought forth;" i. e., sprouted and germinated. They did not need the sunlight for this, as the potato does not in the cellar. The next day God steeped the earth in sunshine, and the hills were clothed in verdure. "How about Eve and the rib story?" No one acquainted with the biological fact and process of fission would raise such a question. The separation of Eve from Adam's side has a physiological analogy which may be observed as the animalcule divides into two living parts. This will suffice for examples of captious questions. Do not provoke or encourage, but be ready for them. When squarely answered, quickly and firmly turn to some practical point in the paragraph.

Country-Cured Hams and Bacon.

By Isaac Motes.

A SIMPLE and practical method of stimulating farmers to kill their hogs and cure their meat at home is being pursued by the Missouri State Board of Agriculture, and it is a work which needs to be done in the states of the upper Mississippi valley, where farmers are close to the great packing centers, and where it is much easier simply to load live hogs into cars and ship them to market, sell them to the packing houses, and let the packers do the killing and curing of meat. The Missouri board is going to have a farmers' ham and bacon show to be held at the college of agriculture at Columbia during Farmers' Week, January 13-17th, when prizes of $25, $15 and $10 will be given as premiums for the three best samples of home-cured country hams and the same amounts for the three best samples of home-cured country bacon.

Perhaps no other movement as simple as this, and started in such a modest way, is as important to the farmer, or could have such a good effect upon the meat packing industry, or could mean so much to discriminating judges of meat, and other people who appreciate good eating. The rapid increase of the meat packing industry by great packing houses has tended to relieve farmers of the disagreeable work connected with hog killing, but it has lowered the quality of meat sold in the markets. It is seldom now that you can buy country-cured bacon and hams in towns, and never in large cities, and packing house meats are not put up with that care and nicety that the painstaking farmer uses with his home-cured meat.

The packing houses use no sugar in the curing of meat as they once did. That is, they may use a little sugar in the curing of fancy grades of breakfast bacon and hams which they sell to wealthy families and great hotels, but not in the curing of the meat you buy in the average grocery store. As a rule a careful farmer uses more sugar in curing meat than the big packing house, and even if he doesn't use any sugar he doesn't use as much saltpeter and other strong preservatives as the packing houses seem to use in curing their average grades of meat.

A packing house, slaughtering perhaps 700 or 800 hogs a day, has so much money at stake that it cannot afford to experiment. It cannot take any chances on losing any of the meat, and consequently uses enough strong preservatives to make sure of saving the meat, even at the expense of some of the fine flavor, while the farmer killing ten, twenty, thirty or forty hogs at a time doesn't have so much at stake, and can therefore take more chances in losing a little meat occasionally by curing it without the use of so much strong preservative, and thereby he retains more of the natural flavor and sweetness of the meat.

You might possibly be more apt to find a ham slightly spoiled among country-cured meat than among the packing house product, but on the other hand all the country-cured meat which you found to be good would be very good. The packing house process is more scientific and sure, though the means used by the careful farmer gives the meat a better and sweeter flavor. But where a farmer is skilful and careful he should be able to cure his bacon and hams perfectly without using so much saltpeter as to destroy the natural meat taste.

It is to be hoped that the Missouri Ham and Bacon Show may be a success, and may do something to cause farmers to reestablish the fine old-fashioned custom of curing their meat at home, pickling it in brine containing a small proportion of sugar, and smoking it in the old-time, tightly closed smokehouse with hickory wood or corn cobs. We would then have better meat, and doubtless it would sell at as good a price. Besides the packing houses might pay more for what hogs they did buy if the number shipped to market on the hoof began to show a sharp slump on account of the number that were being killed at home.

In the largest corn-growing contest ever held in the Northwest, Harper Brush, a 12-year-old boy, has been declared the winner. More than five hundred North Dakota farmers contested for the honor carried off by this boy, who grew more than seventy-one bushels of corn to the acre on a four-acre plot. The state was divided into two contest divisions, and scattered all over this territory were 513 contestants. Among the winning contestants the average yield of corn was 52.2 bushels an acre. The highest yield, grown by Harper Brush, was 71.7 bushels of corn.

If you let the layers out to wade around in the snow, you had as well hang up the egg basket till spring opens up.

FIELD MEN.

M. T. White, western Iowa and Nebraska (north of the Platte river). Address 4015 Izard St., Omaha, Neb.

Carlos C. Palmer, eastern half of Iowa and Minnesota. Address 2714 High St., Des Moines, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

Ray L. Gribben, northwestern Iowa, South Dakota and southwestern Minnesota. Address West Hotel, Sioux City, Iowa.

A. T. Cole, Missouri, Kansas and Oklahoma. Address 3900 Holmes St., Kansas City, Mo.

H. E. Browning (swine division), Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address Hersman, Ill.

John C. Halderman, Kansas. Address Inez Hotel, 9th & Troost Sts., Kansas City, Mo.

A. W. Hopkins, Wisconsin. Address 201-202 Washington Blk., Madison, Wis.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

U. G. Davidson, Algona, Iowa, writes us that he has for sale two Duroc Jersey spring boars that are of extraordinary merit. They weigh better than 200 pounds, although they have never been crowded. They are of unusually excellent lines of popular blood and are herd boar prospects that will justify good readers in investigating. Address inquiries as above.

Davenport & Mack, Belmond, Iowa, have seven good yearling Scotch and Scotch-topped Short-horn bulls for sale. Their advertisement appears on page 45.

W. E. Prichard & Sons, the importers and breeders of Percherons at Ottawa, Ill., report a brisk trade. They have the big-boned, rugged kind of young stallions and sell them at the right price.

Some very interesting information appears in the advertisement of the Cownie Tanning Company on page 28. This tannery is prepared to do work as cheaply and as perfectly as any other concern and also gives an absolute assurance of satisfaction to the patron. Write for full particulars to the Cownie Tanning Company, 508 Market St., Des Moines, Iowa.

An advertisement of the low-down, easy loading Great Western manure spreader occupies a place on page 12. This advertisement contains a brief paragraph referring to the special features of rare merit of this spreader. Additional facts may be obtained in a free catalog for which address Rock Island Plow Company, 183 B. Second Ave., Rock Island, Ill.

An advertisement of the Superior drill on page 14 presents the claims of that drill to our readers. Everyone knows the need of greater care at seeding time and that a good seeder is an essential, while a poor one is a damage. The Superior is made in every size and style. The catalog describes it in full. Write to American Seeding Machine Company, Springfield, Ohio.

The advertisement of the Victor Talking Machine Company on page 31 presents some of the merits of the Victor Victrola and the uses which those machines have in adding to the home enjoyment where the admiration of music is a feature. Catalogs or other information may be obtained by writing to Victor Talking Machine Company, 25th & Cooper, Camden, N. J.

On page 45 you will find the advertisement of Chas. Escher & Son, Botna, Iowa, who are offering some splendid young Aberdeen Angus bulls and heifers for sale. Among these young bulls are some that are individually good enough to head any herd in this country and as for breeding you cannot find any better no matter where you go. They also offer a grand lot of good young heifers for sale. When writing them kindly mention The Homestead.

John E. Wallace, Weldon, Iowa, is advertising a registered Percheron stallion, coming seven years old, weighing 2,110 pounds, on page 39. This stallion is sound, has proven a sure breeder and Mr. Wallace is sending him for no fault, but for the reason that he has a younger stallion coming on that he prefers to keep in place of the older horse. A reasonable price will be made on this stallion and anyone interested should correspond with Mr. Wallace at once, mentioning The Homestead.

W. H. Miller & Son, Independence, Iowa, offer for sale a very choice two-year-old Percheron stallion. They have used this colt some this season, but on account of being akin to several of the mares in their herd they wish to sell him and get another. He has plenty of bone and is a sure breeder. His sire is the great imported horse, Fusain. They also offer for sale a Short-horn bull of extra quality. He is a nice roan and they will price him very low if taken in the next few days. See page 39 and mention The Homestead when writing.

An engraving showing the first start of the world's greatest wagon factory will be found on page 9 of this paper. It is a part of the advertisement of the Peter Schuttler Company. The announcement also contains a view of the present immense factory that turns out thousands of wagons yearly and that produces vehicles that fulfill every farm requirement. A catalog which fully explains the latest device in wagons, the Peter Schuttler roller bearing, may be obtained by writing to Peter Schuttler Company, 2508 Twenty-second St., Chicago, Ill.

The X-Ray incubator illustrated in the advertisement on page 22 has claims not advanced for other makes. One of the biggest of these is that it requires only one gallon of oil and one filling of the lamp for an entire hatch. The other points are left to the judgment of buyers. As this incubator is shipped direct from the factory, the freight prepaid and under a guarantee that it will fulfill every promise made for it. A complete description and the terms of this trial offer may be obtained by writing for book No. 41. Address X-Ray Incubator Co., Wayne, Neb.

While farmers generally recognize the profit of the dairy division of the farm, not all of them have learned that attention to details and perfection of equipment may add so much as to even double the profits of the dairy as ordinarily conducted. In an advertisement on page 17 many facts relative to the profitable use of the Owatonna Home Creamery are given. This home creamery reduces the work to the minimum, while at the same time it gets every available profit out of the business. The manufacturers have gone to a great deal of expense in the publication of a book entitled "Dairy Dollars" which treats of farm dairying in all of its phases and contains an unusual amount of information which every farmer ought to have. This book may be obtained without cost by readers of this paper who write for it to Home Creamery Mfg. Co., Dept. 10, Owatonna, Minn.

Taylor & Jones, draft horse importers, Williamsville, Ill., advise us, under recent date, that they have received a late importation of stallions and mares that came through in excellent condition and are now ready for the investigation of purchasers. Reasonable prices will be quoted on these animals. See advertisement o page 47 and address inquiries to Taylor & Jones, Williamsville, Ill.

An advertisement of Campbell's Winter-Chaser furnace occupies a prominent place on page 7 of this paper. The Campbell furnace has been in use many years. It is an all-steel furnace built for durability, as well as service, and along plans of approved scientific principles. Aside from the information given in the advertisement a book of description and prices may be obtained by writing to Campbell Heating Company, 1213 Walnut St., Des Moines, Iowa.

On page 43 of this issue will be found the advertisement of G. H. Dodds, Kenton, Ohio, in which he announces a public sale of Hampshire bred sows, the same to take place on Saturday, February 1st, at Canton, Ohio. The offering will contain animals of the best of breeding, all healthy, and the sale will give Homestead readers an opportunity to purchase improved Hampshires at their own price. Catalogs are ready and in writing for same please mention The Homestead.

The advertisement of A. M. Avery, Mason City, Iowa, offering Duroc Jersey boars and bred sows for sale, appears on page 44 of this issue.. In furnishing copy for advertisement he writes: "We still have several good boars, the long, heavy-boned kind, that we are pricing worth the money. We are also offering the strongest line of bred gilts that it has ever been our privilege to produce. We also have a very nice lot of Silver King seed corn for sale."

Fifty head of Scotch-bred Short-horns are to be sold at Chicago, February 12th, by White & Smith, St. Cloud, Minn. Included in the list is the International grand champion cow, Roan Queen, several young bulls by the undefeated champion, Ringmaster, several cows with calves at foot by Ringmaster and a large number bred to him. It will be one of the big events of the year in Short-horn circles and full particulars will appear in later issues. File your applications now for a catalog with White & Smith, St. Cloud, Minn., and mention The Homestead when you write.

A new candidate for farm favor is the Bates all-steel tractor, an announcement of which will be found on page 12. The Bates people make a business of building tractors of medium size, suited to the wants of the average quarter section farmer. This means a great deal. It reduces the cost so that any farmer can afford to own one and it is so much of a convenience and of so much value in many directions that really no quarter section farmer can afford not to have one. Complete information concerning this tractor may be obtained by writing to the Bates Tractor Company, 117 Bates St., Lansing, Mich.

Growing grain profitably demands that the farmer know all about the grains he is growing, the best methods of seeding, cultivating and harvesting. It is a fact that a great many farmers make no effort whatever to obtain this information beyond that gained in their own experience. In the advertisement of J. L. Owens Company on page 15 our readers are advised that a number of free grain books which give valuable information may be obtained by our readers without any cost. The only condition is that they fill out the coupon in the advertisement and forward it to J. L. Owens Co., 22 Chamber of Commerce Bldg., Minneapolis, Minn.

George D. Harrah, Newton, Iowa, advertises Short-horn bulls on page 45. Mr. Harrah's herd is one which produces annually a large number of calves. As the blood lines are of the most approved pure Scotch strains, it follows that buyers would necessarily find on the farm oattle of both sexes suited to their purposes. A great deal of care has been maintained in the selection of breeding animals for size and true Short-horn character. Some of the bulls offered for sale are good enough to fit for the show ring, while many others are entitled to places at the head of pure-bred herds. Mr. Harrah invites the personal inspection of these cattle. Inquiries, however, may be addressed to George D. Harrah, Newton, Iowa.

An advertisement of the Fuller & Johnson Manufacturing Co. will be found on page 13. This company manufacture an extended line of goods and machines needed on the farm. Some of the leading ones are corn shellers, saws, thrashers, cream separators, pumps, grinders, silo fillers, gasoline engines, etc. The advertisement deals in particular with the Fuller & Johnson double efficiency engine and tells why that machine is of unusual service in every department of farm work which requires power. The little farm pump engine is of intense value because it is not only useful in pumping, but other small work such as running an electric light plant, cream separator, etc., where the requirements of power are not great. Note that catalogs for each of the different machines may be obtained by putting a check mark in the coupon opposite in the catalog re-

quired and forwarding it to Fuller & Johnson Mfg. Co., No. 1 Ironton St., Madison, Wis.

T. A. Stevenson, Shannon City, Iowa, is offering a fine lot of Collie puppies of the very best of breeding. In the lot are a fine lot of fancy bred females by Imp. Southport Successor 141339, A. K. C., and out of Beatrice Lassie 161967, A. K. C. Beatrice Lassie's sire is the great breeding Collie, Cannon 137787, A. K. C., he by Champion Squire by Tytton by Champion Balgreggie Baronet. Beatrice Lassie has for her dam the noted Collie female, Imp. Veroli, by Champion Seedly Superior and out of Southport Vixen by Hartwood Bruce. If you want one of the finest bred Collies in the United States, do not fail to get one of these female puppies. See advertisement on page 25 and write him for prices, mentioning The Homestead.

M. G. Arnold & Son, Strawberry Point, Iowa, write concerning their herd of Poland China hogs as follows: "Our hogs are in fine condition. There is no disease in this part of the state. We have some mighty good values in bred sows sired by our 1,000-pound Orange Boy and bred to Arnold's Expansion for March and April farrow. We invite inspection, for we know if customers can see the sires and dams of sows we will make quick sales. We have used Orange Boy for two years and, as we cannot use him longer, we would let him go at $100. He is a son of Big Orange, has a perfect disposition and is a wonderfully smooth hog. He really ought to be worth $300. See advertisement on page 42 and write to M. G. Arnold & Son, Strawberry Point, Iowa.

Snapshot at Chester Kennels, showing some of the best fox terriers in the

state, T. H. Kaldenberg, Pella, Iowa, proprietor. He has stock for sale of all ages. See advertisement on page 25.

Taylor & Jones, Williamsville, Ill., write: "Our sales continue to be quite good, notwithstanding the holiday season is on and people do not favor going from home on business of any kind. Included in our recent sales we are glad to report the selling of two valuable Percherons to Jas. R. Graham & Sons, Menard county, Illinois. These gentlemen have been buying horses of us for many years and we are glad to know the stock we have been selling them has proved very satisfactory. Chas. Weber, Livingston county, Illinois, is one of our new customers. He came and selected a high-class Percheron that his neighbors all pronounced a good one. We have never had horses do better than ours are doing this winter and we extend to all interested parties an invitation to come and inspect our stallions and mares." See page 47.

Without question one of the greatest lots of Percherons of home breeding to be sold in the West this season are the ones that will be sold by D. D. Case, Giltner, Neb., and L. M. Phelps, Trumbull, Neb., sale to be held at Hastings, Neb., on February 5th. This sale will be a complete dispersion of the studs owned by both the above horsemen, and will contain all their valuable foundation material, horses that have cost them much money. They are all of desirable ages, and they are big and smooth. Everything of working age is broke to work, and there are several teams of big mares that are matched teams. A few stallions are offered that are choice horses. The remainder are colts that have every indication of making such. Send in your name at once that you may receive the catalog as soon as out. A postal card will do, but send it in now before you forget, and if you are interested in this breed you will want this week. Mention this paper when you write, and address for full information or catalog, D. D. Case, Giltner, Neb.

Chas. Irvine, Ankeny, Iowa, advises us that he would now offer to an appreciative buyer the imported Belgian stallion, Robert 2d de Rum. This horse is one of unusual size, character and form. These statements are borne out by the fact that he was winner of first and junior championship of the International Exposition as a two year old and first as reserve champion at Des Moines the same year. As a three year old he took third at the Iowa State Fair and captured the same honors as a four year old. He was first at Sioux City as a four year old, sixth at the Internaaional as a four year old and second as a five year old at both Sioux City and Des Moines. He has never gone into a show ring without carrying away a ribbon. As a breeder this horse has proven his merit, as anyone who visits the Irvinedale Farm may learn. Mr. Irvine also has for sale good stallion colts on which he will quote quite reasonable prices. Address Charles Irvine, Ankeny, Iowa, or call and inspect the stock. Visitors will be met at Ankeny on the Des Moines branch of the Northwestern and on the Fort Dodge, Des Moines & Southern if notice of their coming be given. See advertisement on page 46.

Hackney Auto Plow.

One of the most useful machines found on the modern farm is the Hackney Auto Plow manufactured at St. Paul. This plow is attracting wide attention because it is a one-man machine, the operator being able to handle it from the seat. It is also good for sawing wood, road grading, feed grinding, ensilage cutting, and all sorts of field work. See advertisement on page 8.

Pulling 100 Stumps a Day.

On almost every farm there is more or less space being wasted by stumps, hedge rows, willows or other trees that are really doing no good whatever. These can be pulled at a small expense and the land made to return a good profit. One of the best machines for work of this kind is the Hercules all-steel, triple-power stump puller, manufactured by the Hercules Manufacturing Company, 941 21st St., Centerville, Iowa. As many as 100 stumps a day can be pulled by a man after a few days' experience with this machine. An advertisement of the company appears on page 12.

Quelland's Hereford Sale.

Chas. Quelland, Williams, Iowa, will hold a dispersion sale of his herd of Hereford cattle on January 21st. The offering consists of twenty-two head, seven of which are bulls, the balance females. His great herd bull, Baldy, a son of Eureka, is one of the attractions of the sale. Among the good cows in the offering might be mentioned Alvira 10th, a nine-year-old cow by Alva. Ella A. is a good four-year-old cow by Wait A Minute 2d. Rose is a six-year-old daughter of the same sire. Alvira 13th is a good five-year-old cow that is a full sister to Rose. Grace is a daughter of Duke of Silver Valley and out of Rosebud. The cattle Mr. Quelland is selling are a useful lot in nice breeding condition and should make their purchaser money. Write him for any information you want as per his advertisement on page 43.

High-Yielding Wheat Wins Tractor.

On another page of this issue is shown a picture of a Big Four tractor and a set of Emerson-Brantingham lift gang plows which were won by Nash & Bridgeman, ranching partners on the Northern Pacific Railroad in the Sheilds Valley of Montana. This prize which was the big trophy of the recent land show held in Minneapolis, is worth $5,000 and was keenly competed for, there being more than fifty entries. The wheat produced by these ranchmen went nearly sixty bushels per acre. This is a strong testimonial for the fertility of the Sheilds Valley which was opened to the world in 1909 when the Northern Pacific railroad constructed its branch line through the valley. The valley is one of the best-watered valleys in the West and contains almost a million acres of good land. Further information about the country can be secured by addressing the General Passenger Agent, Northern Pacific Railway, St. Paul, Minn.

Farm Fence Bargains.

The advertisement of the Brown fence which will be found on page 10 of this paper presents bargains that may be obtained by dealing with the manufacturers of that fence. A new fence book has been prepared which describes and illustrates all kinds of farm fences, as well as lawn fence and gates. These are sold at remarkably low prices which are quoted in the catalog. For a copy of this book address Brown Fence and Wire Co., Dept. 34, Cleveland, Ohio.

Smith's Duroc Sale.

On January 25th, J. E. Smith, the well-known Duroc Jersey breeder of Victor, Iowa, will hold his annual sale of bred sows. The sale will occur at his farm, three miles southeast of town. Mr. Smith will sell fifty head of the best sows he has ever put up at public auction. Five tried brood sows, twenty fall yearling sows and twenty-five spring gilts make up the offering. The fall sows are sired by Smith's Crimson Wonder, a son of Crimson Wonder 3d, and Royal Col., the noted son of King of Cols. that Mr. Smith has been using in his herd. The gilts are sired by Royal Col., Victor Col., a son of Premier Col.; Professor Model, a son of Model Wonder, and a few by Crimson Wonder I Am, the noted Iowa grand champion of 1905. Mr. Smith is particularly well fixed when it comes to herd boars and parties who want to buy sows may rest assured that Mr. Smith's offering is bred to excellent boars. Four boars are being used in this herd: Smith's Crimson Wonder, Victor Col., Crimson I Am and Golden Prince. Smith's Crimson Wonder is a son of the Nebraska grand champion, Crimson Wonder 3d. Victor Col. is a son of Mr. Morton's great Premier Col. and out of an Ohio Chief-bred sow. Crimson I Am is by Crimson Wonder I Am and out of a daughter of Proud Col., that topped the Droz sale last winter, and Golden Prince is by Advancer 1st and out of Miss Hope, the dam of Golden Model 2d. Carlos C. Palmer will represent The Homestead at this sale. Write for a catalog, mentioning The Homestead. See this page.

J. E. SMITH'S ANNUAL SALE

OF

DUROC JERSEY BRED SOWS

To be Held at His Farm 3 Miles Southeast of

VICTOR, IOWA,

SATURDAY, JANUARY 25, 1913

50 HEAD will be sold, consisting of 20 fall yearling sows, 5 tried brood sows and 25 of the top spring gilts I raised this year. The fall sows are a grand lot, being sired by Smith's Crimson Wonder, my great herd boar, he a son of the Nebraska champion, Crimson Wonder 3d, and Royal Col., the great son of King of Cols. that I used in my herd so successfully. The gilts are sired by Royal Col., Victor Col., a good son of the noted Premier Col.; Professor Model, a son of Model Wonder and out of a Professor dam, and the noted Iowa grand champion, Crimson Wonder I Am. The sows will be bred to my four great herd boars, Smith's Crimson Wonder, Victor Col., Crimson I Am by Crimson Wonder I Am and Golden Prince by Advancer 1st and out of Miss Hope, the dam of Golden Model 2d. It is my ambition to offer the public better sows each succeeding year and I feel that I have a much better offering this year than I have had at any time in the past. If you want to buy some good Duroc sows this sale will afford you an opportunity to do so at reasonable prices and I will do my part to accord you courteous treatment in our business transactions. Write me for catalog, mentioning The Homestead. Send bids to Carlos C. Palmer, in my care. Auctioneers, N. G. Kraschel and J. L. McIlrath.

J. E. SMITH - VICTOR, IOWA.

NEXT WEEK'S SALE PROGRAM

Tuesday, January 14	Percherons, Thos. and James Woulf, Streator, Ill.
	Belgians, Thos. and James Woulf, Streator, Ill.
Wednesday, January 15	Short-horns, K. F. Dietsch, Scribner, Neb.
Thursday, January 16	Harris & Daniels, Louisville, Ky.
Saturday, January 18	Duroc Jerseys, C. J. Eggert, Jr., Aurora, Neb.

Woulfs' Percheron and Belgian Sale.

Fifty head of imported Percheron and Belgian stallions and mares will be sold Tuesday of next week, January 14th, by Thos. and James Woulf, Streator, Ill. Among them are a choice lot of young stallions and mares, yearlings to four years old, personally selected in Europe by Mr. Woulf and possessing size, bone, quality and breeding. All mares of breeding age have been served by high-class registered stallions. The advertisement appears on page 45. Look it up and arrange to attend the sale.

Geo. Kissinger's Forthcoming Poland China Sale.

The writer recently visited the progressive young stockman, Geo. Kissinger, Milford, Neb., and spent a little time in looking over the sale offering of bred sows that will be offered from this good Poland China herd of January 30th. This is the home of Hillcroft Model, one of the great boars of Nebraska. Also the young boar, Big Martin, the second high priced boar of the Lonergan sale last fall. Hillcroft Model is certainly one of the good sires of the breed in Nebraska and he is as active with his great size as any boar we ever saw. He is a wonderfully good hog, considered from every point. Big Martin is a fine young boar, and looks like a good show proposition for the big-type shows. He is smooth from end to end and has plenty of size. The sale offering is largely the get of Hillcroft Model and bred to Big Martin, and everything in the sale is either sired by Hillcroft Model or bred to him. Send in your name at once for the catalog and watch this paper for further announcements. Mention The Homestead when you write.

Huckstep's Mammoth Jacks.

The sixty head of Missouri and Kentucky Mammoth-bred jacks and jennets J. C. Huckstep, Eolia, Pike county, Mo., has at his Fairview Jack and Jennet Farm are a superior lot and are priced right and guaranteed right. Note page 46 for Mr. Huckstep's advertisement and when writing him kindly mention The Farmer and Stockman.

Krebs Offers Duroc Bred Gilts.

John Krebs, Riverside, Iowa, former owner of Wonder's Model, the second-prize junior yearling boar at the Iowa State Fair, 1912, is offering some fine gilts sired by this grand young boar that will weigh from 200 to 225 pounds. These are good gilts and largely of April farrow. They are bred for March and April litters to Col. J. 99573, one of the best sons of the noted Proud Col., now at the head of the Hanks & Bishop and Droz herds. The dam of Col. J. is a daughter of the noted Model Wonder, he a son of the Iowa State Fair champion, Crimson Wonder I Am. Any of our readers wanting Duroc Jersey bred gilts should write to Mr. Krebs, mentioning The Homestead. See page 39.

Wendt's Duroc Jersey Sows.

W. J. Wendt, Remsen, Iowa, would like to call attention to his change of advertisement in this week's paper, in which he offers to breeders looking for a good class of brood sows some well-bred females, safe in pig for early farrow. The boars which have been used this season are of as good blood as is obtainable, and Mr. Wendt's judgment as to individuals has secured him a very serviceable trio of mares of high quality. The sows offered are by Long Hero and C. Indicator, both boars that are breeding well. Sows by Long Hero have been to a considerable extent bred to C. Indicator and his work supplemented by a young boar, Grand King, by Crimson Climax out of West's Princess by West's Indicator. Crimson Climax, a successfully used boar in O. S. West's herd at Paullina, is a grandson of West's Hero and is out of a sow by Crimson Indicator. Grand King was secured from the herd of O. S. West, of Paullina, and his pedigree for generations shows the names of some of the best animals produced in that herd, as well as animals with enviable records in show. In this offering are some strictly first-class sows and it would be well to get an order in early this year if one is after that sort of stock.

FRANK IAMS' 1912 IMPORTED HORSES

Ikey Buyer:—Get Into **"Iams' Money Saving Game."** See **Iams** and his **"Peaches and Cream"** Imported Stallions, "Prize Winners," that he sells at **$1,000** and **$1,400** (few higher). Imported mares—**"Topnotchers"**—at **$700** and **$1,000.**

"Ikey," Be a **"Wise Guy"**—Buy **"Show Horses" of Iams**—who has crossed the Ocean **50 times** for horses and **sold 4,444 Registered Horses. "Iams' 30 years of Success"** make him a safe man to buy from at **Special Low Democratic Prices.** "Everybody Is Doing It."

Iams and Peaches and Cream Percheron Paris Winners.

Of big, classy, wide-as-a-wagon **"Peaches and Cream"** imported stallions and mares have arrived at St. Paul, Neb., by **"special train."** **"Ikey Boy,"** smile, and **Iams'** hundreds of satisfied customers **"will sit up and take notice"** that **Iams,** the **"King Bee"** horseman, is still in **"horse business,"** and **good** for 50 years, as the **"Peaches and Cream"** horseman. Iams **hypnotizes buyers with "real drafters"** at **bargain prices,** and having **"the goods"** as advertised. Iams' **"competitors"** and **"hammer knockers"** are **"boosting Iams"** by their **"knocks"** and making him on **"Easy street"** and known as the **"millionaire horseman."** Iams is selling these **big, fancy "Black Boys and Girls" cheaper** than ever before. Of more and better horses for the money—**$1,000 and $1,400** (few higher). Iams has

"100 PERCHERON AND BELGIAN STALLIONS AND MARES"

They are two to five years old, weight 1,700 to 2,500 pounds, 80 per cent blacks, 60 per cent **"ton horses." All "registered," approved** and **inspected** by **Governments** of **France** and U. S. and **certificates "stamped O. K."** All **sound," "bell-ringers" ("Iams' kind**—need no **"State Law"** to make **"them sound").** Many paris prize winners, **big flash actors.** They are **"eye openers"**—larger and better horses than you see elsewhere—big **"business propositions"** that make **"the wheels" work fast** under a **"live buyer's hat." "Georgie, dear," Iams,** the business horseman of 30 years' experience, made a **"big killing"** by buying his **100** stallions and mares in **France** and **Belgium** in October and November, 1912. **"War scare," "bad crops," "close money"** and **Iams' "cash"** caused the **"topnotchers"** and **prize winners"** to be thrown on **the market** (as the **best horses and prize winners** are not sold in Europe until the last part of the season). Iams will give his buyers the **benefit** of his **"good luck"** in buying. "Ikey Boy," come on down town—sing **Iams'** song—**"Everybody Is Doing It."**

BUY "TOPNOTCHERS of IAMS AND SAVE $1,000"

Iams is a **"big fly in the ointment"** in the **horse world.** He keeps the **"gang guessing."** His daily **"horse show"** will be a day of **"pleasure and profit"** and worth going 2,000 miles to see. Iams sells only **"topnotchers"** and **"crack business stallions"** and **"mares."** He handles no International **"tail ends," no "auction stuff"** or peddlers' stallions—no **American-bred** full bloods of **questionable breeding—(only imported horses). Iams** has the **"real pure drafters"** and makes every **statement good.** Buy of Iams and you won't get **"stung" in horse or price. "Dollie D.,"** waltz me around once again, **"Ikey,"** and land me at Iams' four importing barns and box office filled to the roof with **"Big Black Boys and Girls" at "reduced prices."** All the world knows Iams, the **big horseman,** who sells Iams' "Peaches and Cream" **"brand" of draft horses.** 1912 was Iams' **best business year.** 1913 promises to be a **"bumper year"** to Iams and his customers. He saved $300,000 to his customers in 1912. **"Watch his smoke"** in 1913. **Iams' 30 years of successful** horse business makes him a safe man to do business with.

HE SELLS HORSES "ON HONOR"--A BOY OR LADY

Can buy as cheap as a man. Iams is the **"square deal"** horseman. Buyers will find every statement in his **advertisement** or **catalog** as represented or you get the $500 **Iams** hang up. **Iams** guarantees to

SELL YOU A BETTER STALLION at $1,000 and $1,400

(few higher) than are sold to **"stock companies"** at $2,500 and $5,000. Imported mares $700 and 1,000. Iams gives 60 per cent breeding guarantee, pays freight on horse and **fare of one buyer.** He can furnish $1,500 insurance at **cost.** Iams **buys** and **sells** every stallion himself—saves buyers **all middlemen's profits.** He buys stallions by **"train load." He speaks the languages** (saving 20 per cent). He is not in **"stallion trust."** He pays no "slick salesman" commissions. He has no two to ten partners to share profits. He **pays cash** for horses and sells **"topnotchers"** by **"hot"** advertising and having **"the goods."** "Big Ikey," leave your happy home, December 20, 1912, or after, and buy a **"top stallion"** and pair of imported mares that bring colts that sell at $500. **"Papa,"** don't let those **"auction men" "hand you a lemon"** in one of those **"so-called" "American Full Bloods"** with questionable breeding. Buy an imported stallion or mare of **Iams** that is **"branded"** and you will **"wear diamonds." Iams' "selling clothes"** fit all buyers—you won't leave Iams without a horse. **He sells horses to all.** Write for Iams' million-dollar horse catalog. **Iams' guarantees** are backed by **"half million dollars."** References: **First National** and **Omaha National Banks,** Omaha; Citizens State, St. Paul, Neb. Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

ST. PAUL - NEBRASKA

You will be given a good deal here. Write W. J. Wendt, Remsen, Iowa. See advertisement on page 39.

The Breeders' Horse Sale at Lincoln.

The sale of Percheron and Belgian horses that will be held at Lincoln, Neb., on January 22d and 23d under the management of C. F. Way, 419 First National Bank Bldg., Lincoln, and N. K. Frantz, Havelock, Neb., bids fair to be one of the great sales of the season, in that they are securing a great line of stuff from some of the very best studs of the state, and they will have them in nice form for this sale. Some of the very best Belgians and Percherons that we have seen listed for sale this winter will go in this sale. Get the catalog at once. It is a book that all horsemen should have and will be sent to all who apply. Mention The Homestead and address either of the above. See page 45.

Great Brood Sows at Private Treaty.

On page 42 you will find the advertisement of E. F. Escher, Manning, Iowa, who is offering his entire herd of brood sows for sale at private treaty. These will include thirteen of as good big-type Poland China sows as will be seen in any one herd in the state of Iowa and we care not where you go. All of his younger sows will be sold and here will be a great opportunity to buy some great sows at your own price. He is leaving the farm and these sows must be sold, because the new owner will want the farm in the near future. All of these sows are immune, and that is another desirable feature if you buy them. Kindly mention The Homestead when you write Mr. Escher.

Chester White Sows for Sale.

On page 43 will be found the advertisement of Thos. F. Kent, Walnut, Iowa, owner of the celebrated prize-winning herd of Chester Whites that made such a sensational show record at the leading state fairs the past year. Mr. Kent announces that he is now ready to sell bred sows and he has about 200 that are ready to ship at any time. He offers 100 head of junior yearlings and aged sows that will weigh from 300 to 500 pounds and he also offers 100 head of spring gilts bred for spring litters. These are sired by the most noted prize-winning boars of the breed and many of these are out of sows that are daughters of champion and grand champion boars. If any of our readers want some good bred Chester White sows they should lose no time in getting their order to Mr. Kent, as these sows will not last a long while, as the call now is so great that it is keeping him pretty busy shipping them every day. He also has a few good boars left and he can furnish anything you want in the Chester White line. Write him your order at once and kindly mention this paper.

The Triumph Incubator.

An advertisement of Neubert's Triumph incubator will be found on page 23. The Triumph is perfected and up to date on every point which goes to make a good incubator. Its manufacturer, Mr. Neubert, is an old-time poultry man whose experience has taught him every requirement of a successful and profitable incubator. He has included all these points in the make of the Triumph. Then, too, he has reduced the price so that his patrons save money by buying from him. His new catalog may be obtained by writing to R. F. Neubert, Box 887, Mankato, Minn.

Herman Baltz's Great Poland China Dispersion.

When the sale of Poland Chinas that will be made on January 24th by Herman Baltz, Fremont, Neb., is concluded, one of the great herds of Poland Chinas of central Nebraska will have passed into history. It has been a herd that has been well maintained at all times and many excellent hogs have been sent out therefrom. It is being dispersed when it has really reached the highest state of perfection that it has ever known, and at a time when the future of the hog business generally is most alluring. However, Mr. Baltz feels that he has done much toward the advancement of the breed, and that while he would gladly labor along the same lines much longer, except that he is getting well past the zenith of life and that he feels that his later years should yield him much of the enjoyment that he has foregone in younger days that he might accumulate the competence that he has now to enjoy. He now plans a trip to Europe next season and for this and other reasons already stated the entire herd will be dispersed. There will be included a lot of extra choice sows, some as good as we know of in any herd, and a few choice fall sows will be listed as well as a number of extra choice spring gilts. The herd boars, Henry Expansion by Dorr's Expansion and B.'s Golddust by Golddust Hadley, will also be offered. We would like to see a number of good Poland China breeders present at this sale. The offering merits their patronage. To those who cannot attend the services of J. C. Price, the field man for this paper, are at their disposal. Bids sent to him, in care of Mr. Baltz, will receive proper attention. Send for a catalog today. It is full of the details of the location as well as the breeding of the herd. Send for it at once and mention this paper when writing. See advertisement on page 39.

Proper Care of Horses.

No farmer can give his horses that care and treatment to which they are entitled and which makes them most profitable unless he knows a great deal about horses, about their diseases, means of cure of disease and the manner of treatment which preserves good health and soundness. We are pleased to call the attention of our readers to a treatise on the horse which has been prepared with the particular purpose of giving information to farmers. It is the work of a master hand and is valuable in every page and paragraph. It tells all the things that every horse owner ought to know. It may be obtained without cost by every reader of this paper who writes for it to Dr. B. J. Kendall Company, Enosburg Falls, Vt. See the advertisement on page 26.

Prichard & Sons' Draft Horses.

W. E. Prichard & Sons, Ottawa, Ill., the importers and breeders of Percheron and Belgian horses, report themselves as being highly pleased with the prospect of a strong trade. They say: "From one end of the country to the other bountiful crops have been harvested and prosperity has been assured. Farmers interested in the raising of pure-bred draft horses are now seeking to make investments in stock that will enable them to raise valuable horses on their high-priced land and thus insure them of fair interest on their capital. There is no surer way for a corn-belt farmer to largely increase his profits than to raise a few good strong draft colts each year. A good market for them is assured. Buyers on the big markets are paying almost fabulous prices for drafters of the right stamp and are continually complaining because there are so few of them. 'Strike the iron when it's hot' is a good maxim, and the American farmer has the opportunity before him now. The progressive American farmer has never been accused of overlooking a good thing and we do not believe he is going to overlook the splendid chances of the present. The scientist tells us where we came from, the philosopher tells us why we are here and the preacher tells us where we're going to; but the fact remains we are here at the present moment and it is up to us to do the best we can now. So we must all get busy. We have a splendid collection of big, rugged drafters, Percherons and Belgians, both imported and American bred, and we are selling them at right prices. We would like to hear from the readers of this paper as to what they need in our line. We can help you solve your horse problems and increase your income." Mention The Homestead when writing.

Wilkinson's Draft Horses.

In an announcement on page 39 of this paper H. P. Wilkinson & Bros. invite the attention of our readers to the fact that they are offering for sale imported Shire and Percheron horses of both sexes. These animals were selected from their native farms in the old country by H. P. Wilkinson himself. He bought just such horses as he would have selected were they for his own personal use and, as a result, buyers will find on the Wilkinson Farms high-quality horses of both breeds and either sex that cannot be bettered in any importing stables. The Wilkinsons do business in an economical manner and give the advantage of the saving to their buyers. They guarantee every animal to be as represented, make most reasonable prices and take every pain to satisfy their patrons. Those who wish to visit the farm will be met at either the Rock Island depot or at the Interurban railway if notice be sent in advance. Address inquiries to H. P. Wilkinson & Bros., Mitchellville, Iowa.

Lefebure's Annual Catalog.

The twenty-fifth illustrated annual catalog issued by Henry Lefebure, Fairfax, Iowa, has come to our notice and we particularly note that in keeping with Mr. Lefebure's enterprise the catalog just received is more attractive than any he has heretofore issued. The catalog contains a brief history of the Belgian horse which will interest all lovers of the breed. Reproductions from photographs of the different buildings on the different farms, as well as reproductions of a large number of horses made from drawings by Lou Burke makes the catalog of interest to any Belgian horse admirer. Mr. Lefebure's twenty-five years of experience have ripened his judgment until at the present time he is considered and generally recognized as one of America's best judges of the Belgian horse. He has learned to know the type and quality of horse that the corn-belt buyer demands and, being of Belgian descent and speaking the language fluently, enables Mr. Lefebure to dispense with the services of interpreters, which means a considerable saving in the purchase of 100 horses. Mr. Lefebure is rather a modest advertiser and another economical advantage he has over many importers is the fact that he keeps his horses out on the farm, where he raises a large part of the feed necessary to

B. C. MARTS' SALE OF DUROC JERSEY BRED SOWS AT HAMPTON, IOWA, WEDNESDAY, JAN. 22

40 BRED sows. The offering consists of tried sows, fall yearlings and gilts bred to our great herd boars, **Chief's Model 104713** by Model Chief by Ohio Chief and out of City Queen by Advancer; WONDER AGAIN 118151 by Crimson Wonder I Am and, HAMPTON KING 102077 by Model Jr. by Model Chief Jr. by Model Chief and dam by American Royal Jr. From point of individuality and blood lines I feel confident in saying that a better lot of stuff will not be offered this season. Send for a catalog, mentioning The Homestead, and arrange to attend the sale. Sale will be held in feed barn in town. Auctioneers, Mossman Bros. Homestead field man, Carlos C. Palmer. Address **B. C. MARTS, Hampton, Ia.**

GROOTERS' POLAND CHINA SOW SALE

BOYDEN, IOWA, THURSDAY, JANUARY 23, 1913

40 HEAD of the biggest and best that I have ever raised and offered to the public. I have a much better lot than a year ago and now can show both gilts and tried sows that are worthy to be compared with the leading herds of big-type Poland China swine. Sows bred to **Boyden Jumbo,** one of the very best sons of the famous **Big Jumbo** that Peter Mouw ever sent to anyone. There are but a few of the sons of this boar in service and here will be a good chance to buy some really first-class sows with this particular breeding. Send for a catalog and look over the blood lines they carry and see if their breeding won't suit you. Mention The Homestead. **J. A. Benson, Auctioneer.** Address

WM. GROOTERS, BOYDEN, IOWA

keep the horses. These savings, together with many others, are in favor of the purchaser, as Mr. Lefebure, when he prices an animal, takes cognizance of these savings and gives the buyer the benefit. See page 47 and if in need of a good Belgian horse write or visit Mr. Lefebure, mentioning this paper.

Eggers' Stallions.

Those of our readers who want to buy a good Percheron, Belgian or English Shire stallion should call and see P. J. Eggers, Denison, Iowa. He has a lot of yearlings, two and three year olds on hand and a few that are older. Mr. Eggers says he can sell as good a stallion for $1,000 as can be bought in the West. He has some, of course, that will cost a little more money, but he says he will sell a stallion as cheap as they can be bought anywhere on earth. He also has some good Percheron mares on hand and for sale. Some of these will weigh from 1,600 to 2,000 pounds. Write him about these at once and kindly mention this paper. See advertisement on page 45.

Robinson's Greatest Poland China Sale.

F. P. Robinson, Maryville, Mo., will hold a sale of mammoth Poland China hogs on January 29th, selling fifty head of tried sows, fall yearling and spring gilts. Mr. Robinson has been breeding these big Poland China hogs for eighteen years and is producing a superior big-type Poland China. He has paid particular attention to individual merit and has used such sires as he found would promote size and hold quality. His herd boars are as large as are found, they have made good as sires and a number of their get have been winners in the strongest shows where big-type Polands are shown. Pawnee Pete, the senior herd boar, weighed 950 pounds when two years old, passed the 1,000-pound mark as a three year old and could have been made to weigh 1,200 pounds. His dam, Miss Corwin 2d, seven of his daughters and ten head out of sows by him sell. Prince Tom and Prince Ito, sons of the noted Bell Prince, are the sires of a large number that sell. Prince Ito was lost while being fitted last summer and Mr. Robinson cannot estimate the loss, as he was an excellent individual and was proving an exceptional sire. Those who come to Maryville, Mo., on January 29th will be more than pleased with the size and quality of the big Poland Chinas Mr Robinson sells. He is going further than is customary in his guarantee by making the best guarantee on mail bids ever put out, so that the purchaser may see his hog, look it over and if not satisfied get his money back on return of the hog. Write Mr. Robinson now to put your name on his mailing list and kindly mention this paper when doing so.

K. F. Dietsch Short-horn Sale—Last Call.

We are this week calling attention for the last time to the sale of Short-horn cattle that will be made by the well-known Short-horn breeder, K. F. Dietsch, Orleans, Neb., sale to be held at Scribner, Neb., on January 15th. In previous issues of The Homestead we mentioned that this offering was particularly high class, containing cows and heifers that were suitable to go into the very best herds, as well as a choice selection of real herd bulls. The white bull, Victor Star, by Morning Star and out of Victor's Secret by Prince Victor, second dam Secret of Hill Farm 3d by Imp. Merry Hampton and tracing to Imp. Sunbeam by Royal Violet is a Cruickshank Secret that will be hard to duplicate anywhere in the western states. He is a bull of much substance, yet smooth and well covered in all parts with well-filled round, twist and flank. He is one of the sort that make the competition for the first places at the fairs, and he is bred well enough to head a choice herd of Scotch stuff. He is an April yearling. Another of the young bulls is the roan by Morning Star and out of Golden Rose 2d by Golden King, second dam Golden Rose by Golden Fame, and third dam is Imp. Rose Alpine by Clan Alpine. This is a beautiful young bull, and by many would be liked better than the white bull, being practically as good in all parts and will be a two year old the last of this month. There are a few other bulls nearly as good as the ones mentioned, and for some herds will be fully equal. The female end of the offering is particularly strong in choice young things. Many of them are Scotch and the others are well bred and they are of good conformation and good colors. The females of breeding age will be well along in calf to good bulls, or have calf at foot. We say again, keep this sale in mind, for there are good cattle here, and the future of the cattle business is certainly encouraging. Remember that the sale will be held at Scribner, Neb., and letters sent after the 10th of January should be addressed to that place.

Finley's Percherons and Jacks and Jennets.

W. J. Finley, Higginsville, Mo., proprietor of the celebrated Lafayette County Jack and Jennet Farm, announces that he will not hold a sale in March and that all the big, black Kentucky and Missouri-bred Mammoth jacks and jennets that would have gone in the sale are for sale at private treaty. Mr. Finley has forged to the front as a breeder of high-class jacks and jennets and has at his farm as great a string of fourteen and one-half to sixteen hands high jacks as one often finds. They are all blacks with mealy points, are broke and guaranteed. He also has in his barns ten registered Percheron stallions and a large part of these are imported horses ranging from two to eight years of age. Mr. Finley would trade any of these good Mammoth jacks and prices them so that they will make money in the stud. He also has an imported German Coach and an imported Belgian stallion that are priced right. Twenty Mammoth-bred jennets in foal to Dr. McCord should find ready buyers. Dr. McCord is one of the greatest jacks ever produced, he having been a great show jack and is the sire of great show and breeding jacks. Note page 39 for Mr. Finley's advertisement and when writing or visiting him kindly mention this paper.

Long's Big-Type Poland Sale.

On January 24th, James G. Long, Harlan, Iowa, will make his annual sale of Poland China brood sows and he will sell sixty head of the large-type kind. The Long herd has been well and favorably known for a number of years and he has bred some good hogs. His herd came into prominence largely through the boar at the head of his herd, as well as through the many sows he has bred. The herd boar referred to is B Wonder, one of the greatest sons of Fesenmeyer's old A Wonder, and he is one of the good individuals in the state, as well as one of the strongest breeders. This boar, B Wonder, could hardly help being a good breeding boar, as he is not only sired by A Wonder, but he is also out of Lady Mastodon 85th, one of the greatest sows that ever trod the soil of Iowa and she in turn is a daughter of old Columbia Chief 2d. Mr. Long is selling thirty head of fall sows sired by B Wonder in this sale and there are some outstanding good ones. He is also selling four daughters of old A Wonder in the sale and two of these are full sisters to this boar, B Wonder. The latter two sows are out of old Lady Mastodon 85th and the old sow will be sold in the sale. While she is getting a little age on her just now, yet she is still a great brood sow and the breeder who buys her will not go far wrong. The old sow will be bred to his great big boar, Mastodon Leader, and this ought to make a splendid cross. Another good sow is Miss Wonder 4th and she will also be bred to the big boar. This boar, Mastodon Leader, is one of the largest boars today in the state and he is bred to quite a few of the B Wonder sows that he is selling in the sale. Another boar that he has used this year is Black Surprise, a son of old Gold Medal, the boar Mr. Long formerly used in the herd. The spring gilts that he is selling are sired by Mastodon Leader and Proud Model and he will have some very good gilts in his offering. If any of our readers want A Wonder or B Wonder sows the Jim Long sale will be a good place to buy them. Write for a copy of his catalog and kindly mention The Homestead. Bids sent to M. T. White, Homestead representative, in care of Mr. Long, will be properly handled on day of sale. Remember this sale will be held in the heated sale pavilion, so there is no reason why the

GRAND DUROC JERSEY SOW SALE

SUPREME EFFORT OF SEASON AT

LOUISVILLE, KY.

THURSDAY, JAN. 16th

WE will offer sixty bred sows of splendid individual merit and unparalleled magnificence of breeding. Royal blood and show record in every pedigree. Twenty-five are bred to Kentucky Col., the sire of our great show herd. There will be twenty-five sows by him and bred to Maple Grove Col., Cherry Col. 6th, and Ringmaster. We will not show next year, so we are putting in our show sows and a lot of splendid show prospects. Among the special attractions are Zelina 26th (dam of Zelina 35th, that was champion sow at Illinois, Kentucky and Tennessee in 1910 and sold for $427), Zelina 36th (a prize-winning sow that sold for $355), and Zelina 45th (one of the greatest of the breed). She is bred to Kentucky Col. for an early litter. She will be a rare bargain for some one who knows Duroc Jersey merit. Usual accommodations at Hotel Wilton. Auctioneers, Colonels Igleheart and Wheeler. H. E. Browning will represent The Homestead. For catalogs address

GOODENOUGH'S GREATEST ATTEMPT

IN AN OFFERING OF

HAMPSHIRE BRED SOWS

AT THE FARM NEAR

MORRISON, ILLINOIS,

MONDAY, JANUARY 27, '13

55 HEAD will be sold, consisting of 25 mature sows, 8 fall yearling sows and 22 spring gilts. The mature sows are sired by Teddy R. B., Bon Bon Beauty and Perfectum, a son of Bon Bon Beauty. The gilts are all sired by Shelby Lad and Perfectum. The sows will be bred to Dudie, first in the junior yearling class at the Iowa State Fair, 1912, and Shelby Lad, first in the junior yearling class at the Indiana State Fair, 1911. I will hold no sale in 1914 and for that reason I am cataloging a number of the very tops of my herd that otherwise I would not think of selling. This is the best lot of Hampshires I have ever sold at public auction and you will say so when you see them sale day. I raised them to sell and they are yours at your own price on January 27th. Write me for catalog, mentioning The Homestead, and arrange to be my guest sale day. Send bids to Carlos C. Palmer, Homestead field man, in my care, and they will be honorably treated. Fred Reppert, auctioneer. Address

HERRING'S CLOSING OUT SALE DUROC JERSEY HOGS
THAT ARE IMMUNE

IOWA CITY, IOWA, TUESDAY, JANUARY 21, 1913

THERE are two by Crimson Wonder Again, three by Model Chief, eight by The Wonder, one by Model Wonder, three by Proud Col., two by Golden Model 4th and one by Model Chief 2d. Several of these sows have won honors in the ring. Also a few gilts along the same line of breeding. A major portion of the offering are bred to the great hog, **Golden Model 30th,** third at Des Moines, first at Hamline, first at Huron, third at Sioux City, 1912. This boar is included in this sale. In dispersing the Grundell herd we sell sows that we would not part with were we to continue breeding Durocs. The herd is the result of careful selecting and proper mating of the best blood of the breed. Sale at Graham's livery barn at one o'clock. Mention The Homestead when writing for catalog. Address

JAMES WILLIAMS, MARCUS, IOWA
DUROC JERSEY BRED SOWS

WEDNESDAY, JAN. 22, 1913

42 HEAD of tried sows, fall and spring gilts of the choicest blood lines, and including some great types as well. Some of the best brood sows I have ever owned will be cataloged in this sale. Here are a few: Golden Queen 8th by Golden Model II., bred to Model Chief VII.; her daughter, Golden Queen 9th, by Ohio Blossom Col.; Miss Notcher Tolstoi by the famous Iowa Notcher, out of Lady Tolstoi 3d; Model Beauty 1st and 2d by Model Chief VII., dam Beauty Sensation, and a lot of other similarly bred sows. The gilts are by Model Chief VII. which gives them nice bone and stretch, and it will be found that they have a lot of quality besides. The herd boars are Model Chief VII., Col. Scott Jr. and Golden Col., all being bred in the purple. Get in your order for some of this better stock early and you will be sure of some real bargains. Ray L. Gribben will attend the sale for The Homestead in your interest. Address

Col. F. F. Luther, Auctioneer.

JAMES WILLIAMS - - - MARCUS, IOWA

When Writing to Advertisers Please Mention The Homestead

cold weather should stop those who want sows from attending the sale.

Goodenough's Hampshire Sale.

One of the most widely known breeders of Hampshire swine to be found in the corn belt is A. L. Goodenough, Morrison, Ill. Mr. Goodenough is one of the men who a few years ago spent his time and money exhibiting Hampshires at the leading state fairs and disseminating information regarding their superior merits. It is largely to such men as he that the credit is due for the present popularity of the Hampshire. Mr. Goodenough has been holding annual sales, but has come to the conclusion that in the future it will be best for him to hold sales every two years and put up a better offering at each sale. He will hold no sale next year and for that reason is putting in a larger number of the tops of his herd than he would otherwise think of doing. The sale will be held January 27th at the farm. Fifty-five head will be sold, consisting of twenty-five mature sows, eight fall yearling sows and twenty-two spring gilts. This is without question the best lot of Hampshire sows Mr. Goodenough has yet offered the public and to those who have attended his former sales this may seem like a strong statement, but the sows will back up the statement when seen on January 27th. The sows will be bred to two noted prize-winning boars and their produce should be in demand. Shelby Lad is one of the boars the sows are bred to and he was first at the Indiana State Fair in 1911 and Dudie is another great boar that was good enough to win first at the Iowa State Fair in 1912. He is a son of the noted Essig boar, Compeer. See page 37 and write Mr. Goodenough for a catalog, mentioning The Homestead.

Cooper's Great Poland China Sale.

To men who are interested in either the production of pure-bred swine or swine for the pork barrel, the inspection of a modern swine-breeding establishment would be of considerable benefit. Such an establishment can be seen on the farm of W. H. Cooper, Hedrick, Iowa, and all breeders of swine are cordially invited to visit Mr. Cooper on February 4th, which is the date he has set aside for his great brood sow sale, and look over his plant. It is doubtful if a better equipped hog farm can be found anywhere than the one owned by Mr. Cooper. It is always Mr. Cooper's ambition at his annual sales to drive through the sale ring as good a bunch of hogs as are sold anywhere. This year he has made a special effort to present greater attractions sale day than he has heretofore done. Twenty-five two-year-old and yearling sows and a number of fall gilts and some twenty spring gilts make up the offering. They are a great lot all the way through and we want to say that there are some sows to be sold in this sale that would be hard to duplicate in any herd. There will be spring gilts weighing over 400 pounds sale day. The offering is sired by such noted boars as Big Bone 2d, Mr. Cooper's present herd boar, that weighed 860 pounds in his two-year-old form; Big Ex.; Giant Look; Superor Look; Big Chief 2d; Chief Ideal; Chief I. X. L. 2d, and other noted boars. The sows are bred to Big Bone 2d; Big Expansion, the great breeding son of Dorr's Expansion; Chief Leader, and Giant Chief. Arrange to attend this sale if possible, as Mr. Cooper will be glad to have all present that can come. The catalog can be had by addressing a postal card to Mr. Cooper, mentioning The Homestead. See page 42.

DeYoungs to Hold Duroc Sale.

A. J. & L. L. DeYoung, Sheldon, Iowa, who hold a sale of Duroc Jersey bred sows on January 24th, have an offering differing from the average run in that of the sixty head to be sold they will put in only eight or nine tried sows, the rest good, big gilts that will weigh around 300 pounds by sale time. The entire offering is a strictly selected lot, being the pick of the two separate herds maintained by the above named gentlemen. Buyers who have in past seasons been accustomed to patronize their herds will find the offering even above the high standard of past years, and will make no mistake in being at the sale on the above date. The herd boars from which the sows come are herewith listed: King of Cols. Again by King of Cols., dam Lena J. by Orion Chief, a full brother to the twice International champion, is a cracking good boar and has been the sire of a lot of pigs of the same mould as himself. Phalas Col. by King of Cols. Again, dam Lady Phalas, tracing to Proud Advance, and Mr. DeYoung says has been one of the best breeding boars he has ever had, and the class of sows to be sold from him bear the statement out in every way. Crimson Advance by Advancer, dam Earl's Crimson Lady by the great Liberty Chief, and on her dam's side tracing to Crimson Wonder I Am, is a boar that has put some great backs and frames on the females by him. Crimson Sol. from Sol Frank's herd, has seen good service and put a good stamp on many of the females he has sired. With this line of boars as sires and Big Bone Climax by Crimson Climax, dam Challenge Girl VI., one of the choice products of O. S. West's herd, and Model Chief I Am by Model Chief Jr., dam by Top Notcher Again, one of the best young boars in northwestern Iowa, as boars used on the offering both the sows sold and their litters will be the paying sort. The sow stuff all carries acceptable and excellent breeding and is individually classy. That the herds are producers of a profitable class of stock is proven by the fact that at least two users of boars from here have had loads of fat hogs on the Chicago market which sold at the top when they were bought at the yards. Write now for catalog of the offering, mentioning The Homestead. Address A. J. & L. L. DeYoung, Sheldon, Iowa. See page 40.

H. Smith & Son's Short-horn Cattle Sale.

A Short-horn cattle sale that should interest many of the readers of The Homestead will be the sale that will be held by H. Smith & Son, Tobias, Neb., on March 18th. The cattle for this event have been carefully selected and comprise practically every choice young thing on the place. Some of the older cows that have proven themselves excellent producers will be retained to build up from again. It is usually a fact that such cows do not bring near their worth, and in this case it either means keeping them or keeping some of the choice young ones, and these gentlemen have decided to keep the older ones. Smith & Son's herd has long been regarded as one of the best of the state, and they have a right to the reputation, for they have at all times kept sires that were of splendid breeding, and that were good producers. Nearly the entire offering has been bred by them, and are chiefly the get of the great bull, Golddust (263019) by Morning Flash and out of Fabian, tracing to Imp. Golden Drop 8th by Gladstone. He was a bull of much substance, plenty of scale and a uniformly good breeder, as will be proven by his get that are in the sale offering. All cows of breeding age will either be bred to or have calves at foot by the great breeding bull, Roan Cumberland, by Cumberland's Last and out of Pinegrove Mildred 11th by Marquis Zenda and tracing to Imp. Mildred by Gladstone. The greater part of the yearlings in the sale are sired by him and they are certainly a choice lot. A Scotch heifer and a Scotch bull by him are good enough to interest anyone. The heifer is out of Palmetto Secret by Imp. Prince Oderic and tracing to Imp. Spleenwort by Royal Victor. The bull is of almost the same breeding, being out of Emily by Scottish Knight; second dam Empress by Ducal Crown and tracing to Imp. Spleenwort by Royal Victor. There are quite a number of Scotch cattle in the offering and all of the very best ages and will be presented in only such flesh as will keep them in good thrift. Taking this sale offering as a whole, the writer is of the opinion that it will be one of the very good offerings to be sold in Nebraska this winter and spring. We would like for our readers to keep the sale in mind. It will be one of the best opportunities of the year to purchase the get of two of the greatest Scotch bulls used in central Nebraska in some time, and those with their own best interest in mind should not overlook this sale. It would be a good plan to send your name on a postal today and ask that the catalog be sent you as soon as out. When writing mention The Homestead.

Theo. Martin's Short-horn and Poland Sale.

A young man who has made marked progress in the breeding of pure-bred live stock of his chosen breeds is Theo. Martin, Bellevue, Iowa. Only a few years ago this energetic young fellow started breeding Short-horn cattle, Poland China hogs and Plymouth Rock chickens in a very small way owing to a limited capital. By perseverance, hard work and careful financiering he has been continually improving his herds and flock by adding first-class individuals of the best breeding until at the present time the stock of these breeds to be found on his farm are a credit to his ability as a breeder. Mr. Martin has had a definite aim in mind from the beginning and he has been very successful in the carrying out of his plan. His herd of Short-horn cattle has increased until he finds it necessary to dispose of part of the herd and has decided to sell a select draft of excellent young bulls and females at public auction on February 13th. At the same date he will also sell thirty Poland China bred sows. The Short-horn offering consists of nine bulls and fifteen females. Among the bulls Monarch Viceroy, for several years Mr. Martin's herd bull, is one of the attractions. He comes from the Princess Royal family and is sired by the noted Purdy bull, Orange Monarch. Monarch Viceroy has been a consistent winner at the Iowa State Fair during the past three years and his show record has brought considerable advertising to Mr. Martin's herd. His sons and daughters have also been winning at the shows, which is the best recommendation any bull can have. Among the young bulls a June calf of the Rosebud family sired by Monarch Viceroy is one of the tops. He is one of those deep, thick, good quartered, mossy-coated fellows that everyone likes. A yearling Fashion bull sired by Monarch Viceroy is an extra good calf from end to end and will be admired by many on sale day. There are two young bulls just past a year old, one a Victoria and the other a Rosebud, that are of the right type. A Rose of Autumn calf in the offering is an especially worthy individual. Among the better things in the females is Sweet Fashion, a two-year-old show heifer by Monarch Viceroy. She was good enough to win fourth at the Iowa State Fair in 1912 and sixth in 1911. She is a remarkably thick, deep heifer and would grace any herd. Victoria's Pride is the show cow Mr. Martin has had on the circuit and is a worthy individual of the breed. She is sired by Fancy Pride and out of Victoria Alexa, second dam Imp. Victoria Mary, the noted cow that has produced so many things in the Lind herd. We have not space to go into further details re-

ELLERBROEK'S BRED SOW SALE

AT SHELDON, IOWA,

TUESDAY, JANUARY 21, 1913

75 : : HEAD THAT LEAD THE : : 75 BIG-TYPE POLAND CHINAS

30 Matured Sows, 25 Fall Gilts, 20 Spring Gilts, Tops of Herd. Nothing but Extremely BIG-TYPE POLANDS

Friends:—In the bereavement of Mr. Ellerbroek we have decided to cut down our herd to some extent, and therefore we might nearly call it a **dispersion sale.** The sale will include the best brood sows.

Thirty matured sows, that are peerless. The 700 and 800-lb. kind, by Big Bone. A Wonder 107353, A Wonder 143421, Big Orange, Gritters' Longfellow, Beauty's Jumbo, **Big Jumbo.** A Wonder Next. Long Price. Choice Chief Price, Choice Price, Young Wonder, Chief Leader, etc.,

Twenty-five fall gilts, that are **Queens** in the **Big Type.** By A Wonder 143421, A Wonder 107353, Longfellow again 170275.

Twenty spring gilts of real brood sow prospects, by A Wonder 143421, A Wonder A 176989, Longfellow Again 170275, Mouw's Tecumseh 181765, Nolan's Wonder 176779, Big Bone Again 183139, and out of these **Great Matured sows** which go in the sale.

This offering will be bred to boars of reputation, such as A Wonder 149421, A Wonder A 176989, Longfellow Again 170275, Peter's Jumbo 190793, he by Big Jumbo, Sampson 187761, he a grandson of old Chief Price, Ellerbrook Wonder. Write now at once, for an illustrated catalog, giving all information. Don't delay. Sale in heated tent. Sheldon is located on three roads. Come and attend. You are welcome. Address all inquiries to

Auctioneer, J. A. Benson. **Peter Ellerbroek Estate, Sheldon, Ia.**

GRITTERS'

POLAND CHINA SOW SALE

HULL, IOWA,

WEDNESDAY, JAN. 22, 1913

70 HEAD of the Real Big-Type Poland China Sows and Gilts. 70 HEAD

THERE will be fifteen head of tried sows bred to some of the greatest boars I have had in the herd for the last few years; twenty head of fall gilts by the same sort of boars, and thirty-five head of the best spring gilts that I have raised for several seasons. These will be bred to the following sires: A Wonder A, A Wonder Again and Sioux Chief, the latter by Gold Dust Hadley, dam Big Gem. This boar is a half brother to that first-prize boar at the Nebraska State Fair in 1911, also to the first-prize pig of 1912. He is a splendid pig and such a cross should make some great pigs from my big stretchy sows. The sow offering is the best I have had for a long time and there will be something here to please the most discriminating. Send now for the catalog of the sale and plan to attend. J. A. Benson, auctioneer. Mention The Homestead. Address

E. GRITTERS, Hull, Iowa.

garding this offering, but suffice to say that it is up to date in every respect and worthy the patronage of Shorthorn breeders in general. The Poland China offering consists of an extra good lot of big, smooth, heavy-boned sows and gilts and are bred to Mr. Martin's noted boars, Big Jumbo and Dude's Masterpiece. Watch for further particulars in later issues.

Wigstone Bros. Offer Poland China Sows.

On page 42 will be found the advertisement of Wigstone Bros., Stanton, Iowa, owners of one of the best big-type Poland China herds in western Iowa. These gentlemen will not make a public sale this winter and have concluded to sell all their sows at private treaty. Among these are some of their noted prize winners, daughters of Prospector, Big Jones 3d and other noted boars. Many of these sows are bred to their 1,027-pound boar, Chief Price Again II, also a second-prize winner at the Iowa State Fair last fall. Now is the time to buy these sows and get your pick. Write Wigstone Bros. at once and kindly mention this paper. If you are going to want big-type Poland China sows here is one of the greatest opportunities of the season to buy them at private sale.

Free Veterinary Advice.

An announcement of unusual interest to live stock owners is being made by the Dr. David Roberts Veterinary Company, Waukesha, Wis. Dr. Roberts, who is known to many of the readers of this paper as a prominent veterinarian, has planned to widen his field of usefulness by coming into personal touch and correspondence with stock owners wherever located. He gives an open invitation to stock owners to write him about any disease or ailment of their herds and receive his personal reply. There is to be no charge for this. Dr. Roberts undertakes personally to answer free all inquiries, the only condition being that a two-cent stamp shall be enclosed to pay the postage on his reply. Dr. Roberts would also appreciate it if all inquirers when writing would give particulars as to what kinds and how many animals they own. Dr. Roberts can always be reached by phone or telegraph where his services are sought in emergencies. His practice is national, and he arranges to go anywhere to personally treat valuable animals. In writing for advice, direct simply to Dr. David Roberts, Waukesha, Wis. See advertisement on page 26.

Sol Frank's Sale Announcement.

Sol Frank, Sioux City, Iowa, will sell Duroc Jersey bred sows at his farm in north part of Sioux City on Friday, January 24, 1913. Breeders who have in past years been using animals from this herd know that the offering will be of the same kind as he has always put out, and that buyers will be certain to find sows of refinement and quality that are the good producing kind. Mr. Frank has been careful in selecting his breeding stock to secure good backs, the high-arched, strong-backed kind, deep in body and we noticed that his spring gilts are every one up squarely on their toes and with plenty of clean, hard bone. This herd has produced some dandy prize-winning stock during recently years and two of the better gilts in the sale this year are from the same litter as the first-prize boar pig at the 1912 Interstate fair. Quite a number of the offering are by the well-known show boar, Sol's Crimson Wonder, a sire not only possessing winning qualities himself, but also having the faculty of transmitting them to his offspring. In 1911 at the Interstate fair the boars from a litter of pigs by this hog attracted more attention than any single show at that competition, carrying away the leading prizes for which they were shown. In this sale there is at least one gilt of the same breeding as that litter, out of the sow, King Solomon's Daughter. The brood sows in this herd are a great lot, taken all through, as good a collection as any breeder could wish for. They are the kind that ought to produce well and Mr. Frank can show gilts that furnish all the necessary proof of their reproducing qualities. The herd boars used are richly bred in good strains, as the following list will show. They are Frank's Holiday by Crimson Climax, one of the best of the good bunch of herd boars sent out by O. S. West this season; The Harvester by Indicator's Model, and Red Light by Crimson King, the latter the first-prize hog of the 1911 Interstate. The sale will be held at the farm, which is reached by taking a Pierce and Jackson car to 34th street and then taking a short walk of four blocks to the farm. The catalogs are ready and will be sent at once on making application. Write now, mentioning The Homestead. Address Sol Frank, Sioux City, Iowa. See advertisement on page 40.

BALTZ'S GREAT POLAND-CHINA DISPERSION

WILL BE HELD AT THE FARM NEAR FREMONT, NEBRASKA, FRIDAY, JANUARY 24, 1913

THIS sale will comprise some 45 head and marks the complete dispersion of this noted herd. Every top thing on the farm will go in this sale. Tried sows that were not for sale at any price heretofore will be consigned. The very best of the fall sows and the pick of the last spring crop complete the offering. They are bred to the great boars, **B.'s Great Hadley, Henry Expansion** by Dorr's Expansion and **B.'s Golddust** by Golddust Hadley. This will be one of the greatest chances, east or west, to secure choice breeding stock this season. Buy one of these top sows to raise your next herd header. Buy any of them as an investment. They are gilt-edged security. J. C. Price is the field man. Col. H. S. Duncan is the auctioneer. Mention The Homestead when you write for catalog. Address

RUDE & SON'S DUROC JERSEY BRED SOW SALE

MOOREHEAD, IOWA, JANUARY 22, 1913

45 HEAD: 14 MATURED SOWS, 7 FALL SOWS, 24 GILTS 45

THIS is the best offering we have ever sold and no better will be sold this winter. We have selected fourteen of our very best matured sows—daughters of **Lafollette, Col. Willetta, Grand Master Col., Proud Col.** and **Golden Wonder.** The seven fall sows are sired by **Iowa Col., Golden Wonder** and **Model Chief's Last.** We have also selected the best gilts we have in the herd for this sale. These will be bred to our two great herd boars, **HIGH CHIEF,** first prize Iowa State Fair boar, and **IOWA COL.,** the 900-pound son of Tippy Col., and a few are bred to a son of Crimson Wonder Again. Write for our catalog and mention Homestead.

DE YOUNG'S DUROC JERSEY BRED SOWS

Sale at SHELDON, IA., JAN. 24th

60 HEAD picked from the best in both these herds. A strictly high-class sow sale, including about eight tried sows and yearlings, the rest spring gilts, weighing about 300 pounds each by sale day. Herd boars, King of Cols. Again, full brother to Defender; Phalas Col., Crimson Sol and Crimson Advance. Sow stuff bred to Big Bone Climax and Model Chief I Am, royally bred boars both of them. These boars are all excellent individually and carry popular producing stock. Write, mentioning The Homestead. Address

A. J. & L. L. DE YOUNG, SHELDON, IA.

J. A. Benson, auctioneer. Ray L. Gribben, field man.

FRANK'S DUROC JERSEY BRED SOWS

SIOUX CITY, IOWA, FRIDAY, JANUARY 24, 1913

40 HEAD of good prospects for brood sows, including two yearlings, six fall gilts and thirty-two spring gilts. Sows all safe in pig for early farrow, and in nice condition, not loaded with fat nor too thin. A number of the better things in the sale by the show boar, Sol's Crimson Wonder, a sire of both good show animals and herd headers. Sire of the great spring litter at Interstate Fair, 1911. Others by Indicator's Model and Crimson King, bred to the above boars and The Harvester by Indicator's Model, Red Light by Crimson King and Frank's Holiday by Crimson Climax. Sale at farm in north Sioux City. Take Pierce and Jackson car to 34th street and go west direct to farm.

Cols. H. S. Duncan and A. A. Lyle, auctioneers.

SOL. FRANK - - - SIOUX CITY, IOWA

Herring's Smooth Price Sale.

On January 23d, Chas. Herring, Columbus, Neb., will make his annual big-type Poland China brood sow sale and he will sell fifty-five head of outstanding good sows. The Herring sale is a most important one and for many reasons. First and foremost, because he is selling a great offering of big-type sows, bred in the blood of the most noted large-type sires, and secondly because of the number of daughters of his noted herd boar, Smooth Price, and the number of sows bred to him. Smooth Price is one of the best-known sires today in Nebraska. He is a son of Chief Price 2d by old Chief Price and out of Smooth Maid by Sunshine Chief. He was bred by Peter Mouw and he is one of the recognized breeding boars today in Nebraska. He is the sire of Big Joe and Big Ben, boars that are now used in the Henry Fesenmeyer and J. W. Pfander herds at Clarinda, Iowa, and these are two of the most promising young Poland China boars today in Iowa. He is also the sire of Oakland's Big Surprise, the third-prize boar at the Nebraska State Fair in 1911, and he weighed 780 pounds at eighteen months of age. This boar is a full brother to Mr. Fesenmeyer's Big Joe, and is an outstanding good one. Mr. W. E. Zimmerman, Neola, Iowa, has a son of his at the head of his herd and he is an outstanding good one. Other sons of his head some of the other leading herds throughout the central West, and his daughters have also been in strong demand by the best breeders. In his coming sale he will sell thirty Smooth Price sows and ten head will be bred to him. Mr. Herring will also sell two splendid daughters of old Big Bone, one daughter of old A Wonder, three daughters of Orange Chief, six daughters of Long Wonder and ten gilts by Smooth Jumbo. Nos. 1 and 2 will be Smooth Molly and Long Molly, both daughters of Big Bone, and both are bred to Smooth Price. One of these sows has weighed over 900 pounds, and both are excellent big-type sows. No. 3 is Long Molly, a daughter of Smooth Price and she is a litter sister to Fesenmeyer's Big Joe. Her dam is Big Mollie, a daughter of Big Bone, and is also a litter sister to Nos. 1 and 2. She is bred to Smooth Jumbo for an early litter. Mr. Herring also sells a full sister a year younger. Another good sow is Smooth Molly 2d, a two-year-old daughter of Smiith Price and out of Smooth Molly by Big Bone, and she is bred to Smooth Jumbo. Two of her litter sisters also go in. Extra 3d, a fall two year old by Smooth Price, out of a daughter of old A Wonder, and two of her litter sisters, are among the choice sows cataloged for the sale. The dam of these sows will also be sold in the sale. There are a few outstanding good gilts in the sale by Smooth Price and Long Wonder. Mr. Herring is selling a splendid lot of big-type sows, bred in the blood of the most noted large-type sires of the breed. Those of our readers who are wanting breeding of this kind will find about what they are looking for in the Herring sale. Write Chas. Herring, Columbus, Neb., for catalog at once and kindly mention The Homestead. Our M. T. White will attend this sale for The Homestead and will care for any bids sent in his care. See page 41.

Gritters' Poland China Sow Sale.

E. Gritters, Hull, Iowa, will sell on Wednesday, January 22d, at his farm north of Hull, the greatest lot of the genuine big-type bred Poland China sows that he has ever offered to the supporters of the breed. There will be plenty of chances to get good stuff here, as the catalog has seventy head listed, which will include fifteen tried sows by Gritters' Longfellow, Long Prospect and Longfellow Jr; twenty fall gilts mostly by A Wonder Again, a very few being by Long Surprise, and thirty-five spring gilts by A Wonder A, A Wonder Again, Big Surprise, Long Surprise and Long Prospect. It is hardly necessary to say much about the breeding of these boars because they are well known wherever there are big-type Poland Chinas. Mr. Gritters has sent both young boars and bred gilts from all of these sires to many parts of the country and it should be remembered that this was the herd which produced the famous A Wonder, the boar which has made such a wonderful record for himself and for the breed, as well in the hands of every person who has owned him. All of these boars have been used in service that could be had, and in addition there were two young boars, one by A Wonder Again and out of a sow, Good Mollie, by North Star Chief; the other by A Wonder A and out of a sow by Longfellow Jr. Both these younger boars are good individuals, so that people who buy at this sale will have line-bred Poland Chinas of the recognized big type, and may be certain of securing all the stretch and size that will be desired. Mr. Gritters' sow stuff is all big and his gilts, especially his fall gilts, are as good in size as he has ever put in a sale. Nor is mere size the only good feature about them. They are smooth, with good backs, the strong, highly arched back that denotes strength, and the sows from which they come are noted for the size of the litters they produce, a very important point to look for in buying prospective brood sows. Another matter of interest that Mr. Gritters has to announce is that his famous herd boar, A Wonder Again, is for sale. He will not be put up for auction at the sale, but Mr. Gritters merely takes this method and time to announce his being on the market. Write today for the catalog of this sale and mention this paper when you write. Address E. Gritters, Hull, Iowa. See advertisement on page 39.

Ellerbroek Estate Sale of Poland China Sows.

The annual sale from the well-known herd of Poland China hogs that the late Peter Ellerbroek had so thoroughly established, will be held on Tuesday, January 21, 1913, at the farm at Sheldon, Iowa. This sale will consist of seventy-five head, divided as follows: Thirty matured sows by boars of size and accomplishment in the breeding line, twenty-five fall gilts by a string of sires equally as well known, and twenty spring gilts, all of the same sort that Mr. Ellerbroek was so noted for raising. This herd has long been a leader in the production of the big type and many breeders have secured their stretchiest stock at this place. A glance at the names and the blood lines of the boars that have sired the sows that will be sold on the above date will convince any breeder of the excellent breeding to be secured at the sale and the same sort of boars have been used in getting the offering bred. Of course it will be largely an A Wonder sale, not merely because this great sire has been used in the production of the sows to be sold, but because there is so much of the same line of breeding that made him the boar that he is in the other other sires that are found in the pedigrees of the offering. Besides A Wonder 143221, there are as sires A Wonder A, Next, Big Orange, the boar that Geo. Castle, of Inwood, Iowa, sold at such a long price to go into southern Iowa; Big Jumbo, Gritter's Longfellow, A Wonder A, Big Bone, Longfellow Again and others of the some kind. For service boars the following were used: A Wonder, A Wonder A, Longfellow Again, Peter's Jumbo by old Big Jumbo, Sampson, a grandson of old Chief Price, and Ellerbroek Wonder. The sows are all big, stretchy sows with the high-arched backs that go so uniformly with this type. They stand well on their feet, have for the most part good, big bone and will be in the right condition to go into other herds and make a success there. Full information as to the breeding of the sows may be obtained from the catalogs, which may be had on application and by mentioning the paper you saw this in. Write for them now, and by all means plan to be at the sale, for there will undoubtedly be a good chance to secure some very high-class breeding animals at a figure much lower than at later sales. This statement is made in view of the fact that the present season finds the demand for good brood sows more than usually heavy, and the supply will certainly not grow any larger as the season advances, so we think that the man who gets in early will pick up the best things at the best prices. Write, mentioning The Homestead, Mrs. Peter Ellerbroek, Sheldon, Iowa. See advertisement on page 39.

Paulsen's Great Hampshire Sow Sale.

Without question the greatest lot of Hampshire bred sows that have ever been offered at public sale anywhere in the West will be put up by the well-known breeder, C. P. Paulsen, Nora, Neb., on Saturday, January 25th. This sale will comprise some 100 head, all selected with the idea of adding strength to this sale. It will include show sows of the very highest type and brood sows of known worth as well as a number of great promise. The writer recently visited the herd and we were of the opinion that it was the greatest lot of Hampshires that we ever saw assembled for one sale. They include stock that are all descended from prize-winning dams or sires. They are descended from the tops of practically all the noted herds of the country today. It is a matter of history that Mr. Paulsen rarely attends a public auction but that his herd is enriched by the addition of the tops of that sale. There will be thirty sows that have raised litters, about thirty-five head of sows that were a year old this fall, but that have not raised litters, and the remainder will be choice spring gilts. The fall sows are nearly all sired by the great breeding and show boar, Nebraska Top by Iowa Top by Wonderful and out of the great sow, Anna Lee. He has proven himself a wonderful sire and those who attend will certainly be impressed with the excellence of these fall yearlings. The spring gilts are mostly sired by the Illinois junior champion boar, Everett True 3d by Everett True and out of the great sow, Mildred B. by Bon Bon Beauty. Most of the tried sows are bred to Everett True 3d, while most of the fall sows are bred to Paulsen's Gen. Allen by Nissen's Gen. Allen, and the spring gilts are mostly bred to DeKalb King 11th by Major by Stone's Duke. Major is probably the best, if not the only, living son of the great Stone's Duke, and the breeding is hard to equal. Nissen's Gen. Allen sold in the Nissen sale last fall for $500, which is pretty good evidence how the breeders rated this great boar. Probably the greatest show prospect in the sale or that will in all probability be offered this winter, is Golden Maid 3d by Clara's Duke and out of the great sow, Golden Maid (3400). Clara's Duke is by the great Blythedale Jim. There are many that we would like to mention in detail, but the catalog tells the story in detail and we would urge that our readers send for it at once. Mention The Homestead when you write and remember that if unable to attend this sale that you may send bids to J. C. Price, representing The Homestead, and your interests will be faithfully looked after. See page 41.

The Forthcoming Hereford Sale at Grand Island.

The combination sale of Hereford cattle that will be held at Grand Island, Neb., on February 14th and 15th, will be one of the great sales of the year in the West. Well over 100 head of cattle are listed for this event and are drawn from many of the most prominent herds of the country. The sale is under the management of Robt. D. Mousel, Cambridge, Neb., of the firm of Mousel Bros., of that place, and among the best known Hereford cattle breeders of the entire country. The consignments are of the order not always found in combination sales, but as Mr. Mousel insisted that only top individuals be entered for this sale, it will be one of particular merit. E. C. Rodwell, Cambridge, Neb., will consign twenty bulls and they are a very high-class lot. They are the get of his great breeding bull, Beau Denver, and many extra good ones are in the lot. Geo. O. Benger & Son, Callaway, Neb., also list some choice ones, but their offering is mostly females. Gudgell & Simpson, Independence, Mo., will be on hand with about twenty head of their best productions; O. E. Green, Genoa, Neb., will consign about a dozen head from his famous Cloverdale herd; A. C. Smith, Lexington, Neb., will list about fifteen and F. W. Mues, Arapahoe, Neb.; G. E. Stryker, Rising City, Neb.; Thompson Bros., West Point, Neb.; Hugh Whiteford, Guilford, Mo., and Dauchey Bros., Stockville, Neb., will all consign a few head each. At the sale made by Messrs. Mousel and G. G. Clement at Grand Island last winter some excellent bulls were offered. Many expressed the opinion that they were the best that they had ever seen in one sale and doubted if a like offering would again be offered soon. The sensations of the sale were the bulls sired by the great Beau Mischief. We wish to state for the benefit of intending buyers of herd bulls that we think the offering of bulls got by Beau Mischief are, as a whole, better than last season, and the tops are fully equal to the ones sold last year. A senior yearling calf called Beau Contender is a fitting equal to the great Beau Mousel sold last season, and Beau Lindell, the late junior calf, is certainly up to Beau Kinzer, that was thought by some to be the best bull of the auction last season. Beau Mousel went to Dr. T. D. DeWitt, Colorado Springs, Colo., and Beau Kinzer went to the old established herd of Steele Bros., Richland, Kan. Beau Contender is out of Mary Helmig 3d by Princeps A. by Princeps 4th and Mary Helmig 3d had for dam Mary Helmig by Beau March On. Beau Lindell 2d is out of Lilac, out of Lilly, a full sister to the great Mapleton Hero. There are many more nearly as good and all are as well bred. We will mention them further in later issues of The Homestead. Just bear in mind that there will be headers for the very best herds of the entire country and kindly send in your name now that it may be put on the mailing list. When writing mention The Homestead.

Great Herd of Durocs at Auction January 21, 1913.

Perhaps no better bred offering of Durocs will be sold this spring than that of S. E. Eakle & Sons, Prophetstown, Ill. No one has watched popular blood lines closer than S. E. Eakle and he never buys a poor individual. He has one of the greatest bunches of well-bred sows in the land and he has been just as particular in selecting his herd boars. Just look up the advertisement on page 40 of this issue. He has used such males as S. E.'s Defender by Defender, dam by Chief's Col. out of Proud Fancy, the boar recently sold to H. E. Browning to head his herd. Another is S. E.'s Premier Col. by Premier Col.; Crimson Wonder by Crimson Wonder III., dam the great sow, Helen's Duchess, that sold for $675 in the Browning sale recently. Still another is Captain Model, a full brother to Golden Model II. The sows are by Defender, Chief's Col., Top Col., Morton's Top Col, Model Chief, Proud Advance, Crimson Wonder, Volunteer, Golden Model, Crimson Wonder Again and other noted sires, and the fine thing about these sows is that each one is a fine specimen of the breed. Many would make their mark in the show ring if fitted out. What is to be expected of a herd like this when its proprietor is a real hog man? We say a fine line of stuff for a sale and that is just what you will find here. While the gilts are not fat they are growthy and in fine shape to go ahead and raise litters that will make money for their owners. The sale is an offering of the best young things on the farm, strengthened by some good older sows that have proven their worth in the breeding pen. Some of these attractions are Proud Bess, one of the best Proud Advance sows of the breed. Another is a great aged sow by Model Chief, while another great sow is by Col. Browning, and a Model Chief Again sow looks good. A good gilt is by Crimson Wonder Again, while others are by S. E.'s Defender, Manley and S. E.'s Premier Col. Duroc men looking for a few well-bred sows to add to their herd should remember this sale. H. E. Browning will represent The Homestead. Cols. C. C. Plumley, H. S. Allen and Geo. J. Fruin, auctioneers. For catalog write S. E. Eakle & Sons, Prophetstown, Ill.

"GREATEST OF ALL ADVERTISING MEDIUMS."

THE advertisement in The Homestead is selling cattle faster than I can get them here. I do not hesitate in calling The Homestead the greatest of all advertising mediums for our breed of cattle." Henry C. Glissman, who wrote the letter from which the above was taken, is a breeder of Holstein-Friesian cattle. His advertisement has appeared in our columns for several years and always with good results. His experience should be valuable to others who have cattle for sale. A postal card inquiry will get our rates. Address

HOMESTEAD CO., - DES MOINES, IOWA.

Champion Duroc Jersey Blood.

The Duroc Jersey brood sow sale which S. P. Freed will hold at Ames, Iowa, January 20th, contains a larger proportion of the blood of state fair prize-winning animals than is usually consigned by any one breeder. His principal herd boar, Freed's Col., will be remembered as a grand champion at the Iowa State Fair in 1910. His get in this sale show remarkable attractiveness in their smooth finish, symmetrical proportions and growthiness. Wonder Crimson Again, another herd boar in use, was also a prize winner at the Iowa State Fair and one of the good sons of Crimson Wonder Again, than which few animals have proven themselves so valuable as producers of show-yard quality, breed type and actual merit. There will also be daughters of Crimson Wonder 3d (a prominent winner), B. & C.'s Col. (an Iowa State Fair champion) and Manley Orion (for several consecutive years an Iowa State Fair winner) and still others that have made meritorious records. An instance of the value of the brood sows that have gone out from this herd is that of a sow sold at the sale two years ago which went to Mr. Ransbottom, of Ohio, for whom she produced a litter which sold at $1,600. A litter sister to this sow has been cataloged and is bred to the grand champion, Freed's Col. A number of gilts of more than ordinary merit by Wonderful Crimson Again and from Freed's Col. dams have been bred to Freed's Crimson, a last spring pig by Crimson Chief and out of a dam by Iowa Notcher. There is too much merit in this offering for breeders to overlook, while there is enough promise to true pork-making quality to justify farmers in buying at good prices. Send for catalog. Address S. P. Freed, Ames, Iowa. See advertisement on page 43.

Choice Alfalfa Farm for Sale.

While the fact is not so very generally known among the farmers of the corn belt, nevertheless the truth is that a good alfalfa farm situated in the Republican valley of Nebraska is a greater revenue producer than some of the highest-priced corn lands of the country and the work is easier, subject to less risk and has a market equally as certain. In the years 1911 and 1912 the writer knows of several alfalfa farms in the Republican river valley that have paid for the land in alfalfa each season with alfala seed, to say nothing of the hay secured the same season. We know a farm near Arapahoe that in 1911 cut a splendid hay crop, a crop of seed that sold at the machine for $105 per acre and then furnished pasture for an immense drove of hogs till late in the season. The total income from that land was easily $130 per acre. John E. Kelley, McCook, Neb., has a choice piece of land for sale that is of the same order. A part of it is now seeded and is producing fine. More of it could be seeded nicely, while a part of it is permanent native hay land, this latter part being close to the river and the water is too close for successful alfalfa land, yet it produces abundant native hay of fine quality and this land never overflows. This farm can be bought at a bargain. This land will positively pay good dividends on the investment to a man who will take and operate it as it should be. Write Mr. Kelley about this at once. Also write him about the alfalfa hay he has for sale. It is choice and $11 f. o. b. McCook, Neb., if it is taken soon. See advertisement on page 19 of this issue.

Duroc Jersey Sale.

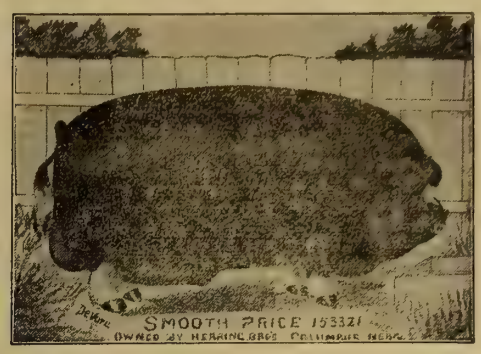
On page 44 H. Gilbert, Perry, Iowa, announces his sale of Duroc Jersey bred sows to be held Saturday, January 25, 1913. He will sell about thirty head of good sow stuff, including three extra good tried sows which some breeder will do well to secure, as they are top notchers and well bred. The whole offering is full of good blood, Crimson Wonder, Golden Model and the like. Send for a catalog which will give breeding in full. Address H. Gilbert, Perry, Iowa.

Charles Herring's Great Offering

SMOOTH PRICE

BRED SOWS

COLUMBUS, NEB., THURS., JAN. 23, '13



55 HEAD
22 Tried Sows
8 Fall Yearlings
25 Gilts
55 HEAD

I AM selling one of the grandest offerings of big-type Poland China bred sows that will be sold in Nebraska this winter. Thirty head of these will be daughters of my great herd boar **SMOOTH PRICE**, the sire of **Oakland's Big Surprise**; Fesenmeyer's **Big Joe**, and Pfander's **Big Ben.** Ten sows in the sale will be bred to him. I will sell three litter sisters to **Big Joe** in the sale, also two daughters of **Big Bone**, three daughters of **Orange Chief**, one **A Wonder** sow, ten by **Long Wonder** and ten gilts by **Smooth Jumbo.** These are all out of Mouw-bred sows. If you want **extreme size and quality** write for my catalog and come to my sale. Please mention The Homestead when writing for catalog. Address

SALE OF BATES-BRED SHORT-HORNS

MARSHALLTOWN, IOWA,

TUESDAY, JAN. 28TH

ABOUT 40 HEAD
11 ARE BULLS

THE only herd in the state exclusively of Bates breeding and of the most costly and fashionable blood, 21 head of the Duchess and 14 of the Oxford tribes, the two highest-priced Bates families. The herd bull, Earl of Barrington 266481, is included. He is a direct descendant of the noted cow, Imp. Lally 8th by 7th Duke of York (17754). There is only one other pure Bates Barrington bull living. He will be one of the bargains of the sale. A large number of females of breeding age will drop calves early in the spring and are bred from milking strains for which Bates cattle are noted. The sale will afford an excellent opportunity to lay a foundation for a milking herd of Short-horns of the most fashionable Bates breeding. Send for catalog.

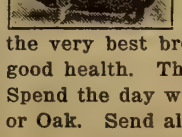
O. M. HEALY - - - BEDFORD, IA.

COL. CAREY M. JONES, Auctioneer.

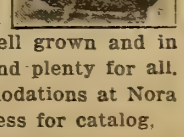
100 HEAD HIGH CLASS HAMPSHIRES 100

From the herd of C. P. PAULSEN, NORA, NEB., will sell at farm midway between

NORA and OAK, NEB., on SATURDAY, JANUARY 25, '13



SOME of the highest-class HAMPSHIRES that have ever been offered anywhere in the West will go in this sale. They are descended from



the very best breeding in the herd books, they are well grown and in good health. There will be hogs to suit all comers, and plenty for all. Spend the day with us if possible. Free hotel accommodations at Nora or Oak. Send all bids to J. C. Price, field man. Address for catalog,

C. P. PAULSEN - - - - NORA, NEBRASKA

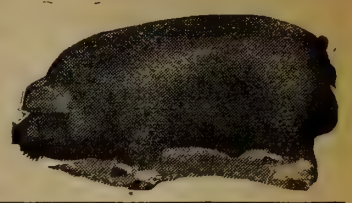
POLAND CHINA SWINE.

COOPER'S GREAT BRED SOW SALE, HEDRICK, IOWA, FEBRUARY 4TH

AS USUAL, this offering is selected from our herd with the greatest consideration, to present to our visiting friends greater attractions than any preceding effort and we assure all comers one of the very greatest and best offerings of real big bred sows and gilts to go this season in the corn belt. We will include 25 head of 2-year-old and yearling tried sows, several fall yearling gilts and big, stretchy spring gilts weighing over 400 lbs. sale day. These sows are sired by such boars as Big Bone 2d, our present 860-lb. 2-year-old boar, Big Ex, Giant Look, Superior Look, Big Chief 2d, Chief Ideal, Chief I. X. L. 2d and other noted boars the catalog will give. They will be bred to Big Bone 2d, Big Expansion, a son of Dorr's Expansion, Chief Leader and Giant Chief. Send for our catalog. It will be interesting to you, in the big-type blood lines. Arrange to come and see one of the corn belt's best big-type herds of Poland Chinas and one of the most complete swine breeding plants. Mention The Homestead. Address

W. H. COOPER - - - HEDRICK, IOWA



Healy's Milking Short-horns.

On January 28th, at Marshalltown, Iowa, O. M. Healy, Bedford, Iowa, will make a public sale of forty head of strictly Bates cattle, representing the most noted milking strains known to the breed. Among these will be Airdrie Duchess, Grand Duchess Kirklevington and Oxford cattle. It will be remembered that the Airdrie Duchess cattle were the highest-priced Short-horns in the New York Mills sale, and that record still stands today for the highest-priced Short-horns ever sold. The Healy herd is a strictly Bates-bred herd and is one of the few, if not the only, strictly pure Bates herds today in the West. Included in this sale is his present herd bull, Earl of Barrington, one of the best-bred Lally Barrington bulls in this country. He is a roan in color, will weigh over a ton and is the sire of the most of the young bulls and young heifers in the sale. He is also selling a good three-year-old bull called 7th Duke of Wapsie. This bull is a red roan in color, is a son of Earl of Barrington and belongs to that celebrated Airdrie Duchess tribe. He is also selling a good young Bates Oxford bull that is one of the good young bulls in the sale, and a June 7th roan yearling that is the best young bull in the offering. Altogether there will be ten bulls in his offering. Among the females is 16th Duchess of Wapsie, a three-year-old heifer by Earl of Barrington, and she is out of Wapsie Duchess by that great bull, Airdrie Duke of Hazelhurst. She is a wonderfully thick young cow and will be due about March 1st to 7th Duke of Wapsie. Another good cow is Oxford Beauty, a daughter of Airdrie Duke of Hazelhurst, and her dam is Oxford Wapsie by 4th Duke of Oaks. She also has a splendid three-year-old daughter in the sale sired by Earl of Barrington. There will also be three of her daughters in the sale, viz.: 2d Oxford of Wapsie, 4th Oxford of Wapsie and 6th Oxford of Wapsie. These are all bred and sae in calf. He is selling 12th Duchess of Oaks, a daughter of 2d Duke of Oaks, and three of her daughters will also be sold in the sale. The old cow has been a grand breeder and she belongs to that well-known Airdrie Duchess tribe. Wapsie Duchess is another good cow and she sells with an August 30th heifer calf at foot by Earl of Barrington. This cow is the mother of the best heifer in the sale. One of her daughters, 14th Duchess, is the dam of the best young bull in the sale. Kirklevington Lady is a very choice cow of that celebrated Kirklevington tribe and she sells with a red heifer calf at foot by Earl of Barrington. There will be several good yearling and two and three-year-old heifers in the sale. As we said above, the Healy herd is the only Bates-bred herd today in the West, and those of our readers who are interested in the milking strains of Short-horns should send for his catalog and arrange to attend his sale. The sale will be held at Marshalltown, Iowa, but when writing for catalog address Mr. Healy at Bedford, Iowa. Kindly mention The Homestead when writing for it. See page 41 for Mr. Healy's advertisement.

Rude & Son's Duroc Sow Sale.

One of the very important Duroc Jersey sow sales that will be held in the early part of the year will be that of Rude & Son, at Moorehead, Iowa, on January 22d. This sale will follow the J. A. Shade sale and breeders can make direct connections from one sale to the other. Their sale offering is a good one and they have listed a splendid lot of their very best sows for this sale. They are selling forty-five head, among which are fourteen matured sows, seven fall sows and twenty-four spring gilts. This firm have been one of the best buyers of the best Durocs during the past three years and their offering will speak for itself when the breeders see it. This fall they went out and secured from Waltemeyer Bros. that splendid prize-winning boar, High Chief, and many of the best sows are bred to him. This boar was first-prize hog at the Iowa State Fair and he also won second prize at the Interstate Fair. Another very excellent boar in this herd is Iowa Col., a son of the great boar, Tippy's Col., and this hog will easily weigh 900 pounds in flesh. He is one of the best big boars today in western Iowa and he is a splendid breeding hog, as his get in this sale will show. He is a wonderfully smooth, big hog and his get have plenty of size and quality. Then a number of the sows will be bred to two sons of that old grand champion boar, Crimson Wonder Again. There will be fifteen daughters of Iowa Col. in the sale and fifteen sows will be bred to him. Among the matured sows they will offer are daughters of Lafollette, Col. Willetta, Grand Master Col., Proud Col. and Golden Wonder. These sows are about as good as were ever sired by those boars, as Mr. Rude always bought the very best. The fall and spring sows will be sired by Iowa Col., Golden Wonder, Model Chief's Last and Brilliant Wonder. This sale offering has been selected from among 150 head now on the place and, take our word for it, they are selling a splendid lot in this sale. Write for their catalog at once and kindly mention The Homestead when asking for it. Bids sent to M. T. White, Homestead representative, in care of Rude & Son, will receive attention on day of sale. See page 40.

Closing Out Shadeland Durocs.

One of the greatest sales of Duroc Jerseys that will be held this winter will be that of J. A. Shade, at Kingsley, Iowa, on January 21st. This sale will be practically a closing-out sale because of the sickness in his family and he has concluded to close out his herd in order to reduce the work on the farm. This herd has long since been regarded as one of the foremost herds in the West. The matured sows that have made up this herd were gathered from what we might say the very best herds in this country, both east and west. A couple of years ago Mr. Shade made an extended tour of the entire East in the quest of foundation stock, and at that time he visited the most noted herds and came back with one of the best collections of brood sows and boars that hay up till that time been brought into the West. Many of these same sows will be sold in this sale and there are certainly some outstanding good ones. His two present herd boars will also be sold and here will be inducements to those breeders who will want a herd header. First and foremost will be Missouri Model Top, the noted champion and grand champion American Royal boar, and he goes into the sale without any reserve. A great many of his get will also be sold in the sale and he will also be bred to the most of the best sows that he will sell at that time. The other boar is King Superba, a son of that great Browning boar, Superba, and out of a dam by King's Col. Nearly all of the sows that will be sold in the sale will be bred to these two boars. Among the more noted sows that will be sold will be two by Searchlight. One of these won junior championship at the American Royal this fall. Her sister is almost as good and either one will be a great find for any breeder to put into a herd. The first of these two sows was first in class, junior, reserve and grand champion sow at the Royal in 1912, so here will be something for the breeders to go after. There will be twenty daughters of Missouri Model Top in the sale, twenty by Challenge, five by Carl's Col., five by Prince of Cols., five by American Royal and others by King of Cols., Premier Col., Prince Malcolm, Ohio Chief, Iowa Notcher, Model Chief 2d, Crimson Wonder Jr. and others by equally noted boars. These sows were purchased without regard to cost and among them are some of the best brood sows that have ever been sent through a western sale ring. If our readers want something bred in the purple it will pay them to attend this sale. Write J. A. Shade, Kingsley, Iowa, for catalog and kindly mention The Homestead. Bids sent to M. T. White, representing The Homestead, in care of Mr. Shade, will be properly handled on day of sale. See page 44.

The Bloomington Breeders' Sale.

The annual offering of draft horses of the different breeds will take place at Bloomington, Ill., January 28th, 29th, 30th and 31st, under the direction of Chas. W. Hurt. For several years these breeders' sales at Bloomington have been big affairs, and Mr. Hurt has furnished an outlet for a great number of horses. For the coming event he announces there have been consigned some 300 head of imported and home-bred stallions and mares of the different breeds, and assures prospective buyers that a better class of horses has never been offered at any of the Bloomington sales. Percheron, Belgian, Shire, Clydesdale and French Draft stallions and mares are included in this big offering, and some of the best-known breeders and importers are among the consignors. In addition to the draft horses there will be sold 100 head of registered trotters, road horses, grade drafters, single drivers, etc., as well as fifty head of imported and native-bred Shetland and Welsh ponies and some cross breds. There will be horses in this sale to suit every class of buyers, and where so many are to be sold bargains are bound to be plentiful. The advertisement appears on page 46. Look it up and send for a copy of the catalog to the manager, C. W. Hurt, Arrowsmith, Ill., mentioning that you saw the advertisement in The Homestead.

Young Percherons for Sale.

C. F. Jones, Rippey, Iowa, is offering to Homestead readers two particularly good things in young Percherons from his stud. One is a yearling filly that will develop into a mare of much size and a good brood mare. She was entered in the Percheron futurity at Des Moines last fall and ranked well in the large number shown there. She is a coal black filly with only a star in the forehead, has style, quality, a good flat bone and a foot of the right texture and size. The mother of this mare weighs around 2,200 pounds and has been a good brood mare during her five years of production. She has bred regularly and her colt looks as though she had the making of a good brood mare also. Along with this filly Mr. Jones offers just now a good weanling stallion at a quick-selling price, and for something to grow into good money rapidly it will prove worth an investigation. See advertisement on page 45 and write Mr. Jones now, kindly mentioning The Homestead when you do so. His address is C. F. Jones, Rippey, Iowa.

Chas. H. May Offers Durocs.

The well-known breeder of Duroc Jerseys, Chas. H. May, Roca, Lancaster county, Neb., will not make a sale of bred sows February 3d, as he had planned, but will offer immediately about twenty-five head of choice ones at private sale. Mr. May has a very choice herd and the ones he is offering for sale are really choice enough for anyone, but for the fact that he would have been obliged to sell much of the foundation stock in order to gather together enough for a sale, he will sell at private treaty. He has twenty-five head to offer, nearly all spring gilts, and they are, as we stated before, choice enough for anyone. Really a few are show propositions, having won the past season at Lincoln, and look very promising as junior yearling sows. They are mostly the get of Valley Col., a son of Prince of Cols. and out of a daughter of Valley Chief. A number also are sired by Golden Model 5th, while a few are sired by C. H.'s Crimson Wonder by Crimson Wonder Again. They are mostly bred to Proud Medium by Chief Protection. Proud Medium was a good winner at the Iowa and Nebraska fairs this season. Mr. May will price these sows at as low a price as is consistent with good business in order to move them early. We would suggest that our readers lose no time in writing for them, for with the present price of market hogs, and with the generally low price of feeds of all kinds, hogs cannot but be a wise investment. When writing Mr. May kindly mention The Homestead.

50 HEAD POLAND CHINA SOWS FOR SALE 50

WE WILL not make a public sale and we are offering 50 of the best big-type sows ever listed at private treaty. Among these are prize-winning sows, yearlings, spring gilts and matured sows. These are bred to our 1,024-pound boar, Chief Price Again 2d, and W.'s Wonder. Bred for January, February, March and April farrow. Write us at once.

WIGSTONE BROS. - - - STANTON, IOWA

CLOSING OUT POLAND CHINA SOWS

I AM offering all my noted big-type brood sows for sale at private treaty. Forty head, daughters of Chief Price 2d, Monarch Chief and other noted boars. I am offering twenty head of brood sows that cannot be equaled in any one herd in the state. I am leaving the farm and they must be sold. Write or come and see me. Address

E. F. ESCHER - - - MANNING, IOWA

BIG WONDER, 2d Prize Iowa State Fair Boar

WEIGHS 1000 pounds and the greatest hog today of the breed. Sow sale March 1, 1913. Drop me a card for catalog. Address, mentioning The Homestead,

FRED SIEVERS, - - - - AUDUBON, IOWA.

BIG-TYPE POLAND BRED GILTS

THESE gilts are sired by Longfellow 2d 183143, and Giant Wonder 183147, and are bred to Giant Wonder, L.'s Wonder by Gritters' A Wonder Again and Orange Jumbo by Mouw's Tecumseh Jumbo. Gilts are out of sows by Longfellow, Long Wonder, Miller's Chief Price, Big Orange and Beauty's Jumbo. Write for price, mentioning The Homestead.

THOS. LIEN, ELGIN, IOWA

IMMUNED POLAND BOARS AND GILTS

THESE are the real Nebraska big-type Poland Chinas. They are from big litters and are now in fine breeding condition, having been immuned in early summer. I am pricing them very low as I need the room for my fall pigs. Order at once mentioning The Homestead.

G. A. WIEBE, - - - - BEATRICE, NEBRASKA.

BAIRD'S POLAND CHINA BRED SOW SALE

ON Saturday, January 25th, I will sell a draft of 45 of my big-type Poland China sows, bred for spring litters. 30 head bred to the thousand-pound champion, Columbus. Send in your name for catalog. Entirely sold out of those fall pigs by Columbus.

R. B. BAIRD, Central City, Nebraska.

MELBOURNE HERD BROOD SOWS FOR SALE. Having decided to close out my herd, am offering all the good brood sows that have proven their worth in my herd at private treaty. They include the well-known sow, Utility; the great Lady Jumbo sow, Phillecia Leader Lady by Union Leader; the great What Ex sow, Louise Belle; Whiteface Beauty by Prince You Tell, and others. They are either bred or will be for spring litter to the great yearling boar, Melbourne Jumbo, a grandson of Wade's Jumbo. These sows can be seen on the farm near Burchard, Neb. For further information address Melbourne Farm, Burchard, Neb., or John C. Haiderman, Inez Hotel, Kansas City, Mo.

PERCHERONS, SHIRES, BELGIANS

SAY, Brother Horseman, if you want to buy a stallion go to **Hudson, Iowa,** and see **Crownover's** new importation of big, flashy, draft, ton type that are sound and right in every way, and a square deal is guaranteed. No hot air, but high-class horses at right prices. Send 10c stamps for large picture of horse parade.
WILLIAM CROWNOVER - - HUDSON, IOWA

150 STALLIONS

Home-bred draft stallions, $250 to $650. Guarantee to sell you imported stallions for less money than any firm in America. Come to a live stallion market and see all draft breeds.
A. LATIMER WILSON, Creston, Ia.

The POWER OF PERCHERONS
BIG crops emphasize the necessity for first-class horse power. Quicker trips to the elevator, with heavier loads, means **real money,** and during the approaching winter mares might just as well be carrying profitable Percheron foals instead of inferior, light weight young. Write me for free bulletin C. It tells all.

Our New Importation of

100 PERCHERON, BELGIAN AND SHIRE STALLIONS AND MARES

Arrived October 15th and can now be inspected at our stables. If you want to save from $300 to $500 on a stallion or a pair of young mares you can do so by buying at once. **Every animal guaranteed sound and a satisfactory breeder.** Write at once for particulars or call at the farm.

S. METZ & SONS - - - HOMEWOOD, ILLINOIS

Homewood is on the main line of the Illinois Central and Big Four Railroads, 23 miles south of Chicago, with trains every hour. Bell phone, Homewood 58 W.

BELGIAN EMPORIUM of AMERICA

150 Head of STALLIONS, MARES and COLTS

including a car load of choice young Percherons, 60 head, the best importation of Belgians that ever came to America; arrived Oct. 14—making 100 head imported by me this season. Write for circulars. Catalog ready Dec. 1st.

Fairfax is 8 miles west of Cedar Rapids on C. & N. W. and on C., M. & St. P. Come to Cedar Rapids and phone for auto to meet you at interurban 3 miles from farm. Car each way every hour.

HENRY LEFEBURE, FAIRFAX, LINN COUNTY, IOWA

PETER HOPLEY & SON

LEWIS and ATLANTIC, IOWA,

BREEDERS and IMPORTERS

PERCHERON AND SHIRE STALLIONS AND MARES

One importation arrived October 25 and are now offered for sale. These are the best lot of horses that have crossed the Atlantic this year. Another importation now on the road. Write or come and see our horses.

WHY ARE YOU

reading this advertisement? Because you want prices and terms on the late importation of **PERCHERON** stallions now in the barns of

E. J. HEISEL, Fremont, Mahaska Co., Iowa.

91 miles west of Burlington, 70 miles southeast of Des Moines, Iowa, 180 miles west of Peoria, Illinois, M. & St. L. and C., B. & Q. R. R.

HOLERY (76516) 62688

STALLIONS THAT ARE RIGHT

PERCHERON, BELGIAN and GERMAN COACH.

Our barns are filled with seasoned horses of strong individuality, extreme quality and the highest breed type. We will price them at bed-rock figures and give you a guarantee that is different and more liberal than that of any other firm. You will save money if you investigate our plans and terms and see our horses. Mention The Homestead when you write.

OLTMANNS BROS., Watseka, Illinois.

Eighty miles south of Chicago on Chicago & Eastern Illinois and T. P. & W. railroads. Foreign headquarters, Leer, Germany

---

W. A. LANG & CO.,

Greeley, Delaware County, Iowa.

Importers of BELGIAN and PERCHERON STALLIONS and MARES.

We wish to announce to the buying public that we will now, as in the past, give you more good, sound, young horses for the money than you can get elsewhere. We do not advertise cheap stock because we do not think the best breeders want that kind, but we will sell you the good ones at as reasonable margin of profit as possible, and do a remunerative business. All horses are backed up by our GILT EDGE GUARANTEE. Write for full particulars. Large CALENDAR after December 15th.

PERCHERONS of this Type and BELGIANS and SHIRES ALSO

OF the very highest order are the only kind imported by Jos. Rousselle & Son. The Custom House records show that we import the most valuable horses that come to the West. Former buyers our best reference. We sell these horses at the prices ordinarily asked for inferior ones. Let us tell you of them. Address

JOS. ROUSSELLE & SON,

25 miles west of Lincoln. **SEWARD, NEBRASKA.**

THIS PONY FREE!

WE WILL GIVE YOU OR SOME OTHER BOY OR GIRL THIS PONY WITH THE COMPLETE OUTFIT

"DAPPLE"

"Dapple" is a beautiful three-year-old dappled-chestnut Shetland Pony 42 inches high, with Silver Mane and Tail. He weighs about 300 pounds and is pretty nearly worth his weight in gold. Of the 83 Shetland Ponies we have given away to boys and girls we believe "Dapple" is the prettiest. In fact you very seldom can get a pony of this color. You may have seen lots of ponies in Circus Parades, but you never saw one prettier than this pony "Dapple" that we are going to give to you or some other boy or girl. We selected him out of 100 ponies at the famous Heyl Pony farm, Washington, Ill., and you'd be the happiest child alive if "Dapple" were yours. Hitched up to his nobby pony wagon he will haul you and all your boy and girl friends that can pile in, just about as fast as you want to go. And when you are not riding or driving him he will play with you and you can teach him to come when you whistle, and lots of cute tricks. Didn't you ever notice what good times children have who own ponies and how pretty these cute little fellows look when trotting up the road? Everybody runs to the door and stops to look at a Shetland Pony going by. Can you think of anything you would like to own better than "Dapple?" Read this page through carefully and then send us your name and address at once.

Here's "Dapple"

THE OUTFIT

And best of all we send free with "Dapple" the complete Pony Outfit just as you see it in the picture. Besides the Pony, the Pony Buggy and the Harness shown we send a Saddle and Bridle, which would make you the most complete outfit that money could buy. You could ride horse-back or take all your boy or girl friends driving everywhere. The Pony Wagon is just the most comfortable riding and easiest pulling we could buy for our purpose. We have given away so many that we know exactly what kind most boys and girls like. The handsome nickel trimmed harness looks just fine on "Dapple" and the riding bridle is imported and the saddle which we also send we had made to order for "Dapple." No child, no matter how rich his parents may be, owns a nobbier or more desirable pony and outfit than this one which we shall send free and all freight with express charges paid. Read down below what some of our pony winners say about their ponies and outfits—how proud and happy they are—and see if it doesn't make you want one, too. This is surely the best chance you ever had to get a Shetland Pony, so if you haven't any and think you would like to have us give you one, send your name and address to us right now so it will get to us quickly.

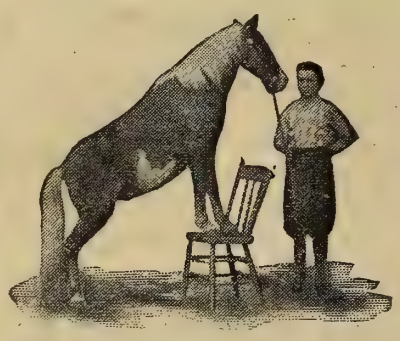
Send Us Your Name Today

If You Want to Own "Dapple"

As soon as we hear from you we will tell you how to become a contestant for "Dapple." Don't let anybody persuade you that you cannot win this pony because our plan of giving ponies away is different from others. The fact that we have already given 83 ponies to 83 boys and girls all over the United States from the State of New York to the State of Washington is proof that we give them away. The Webb Publishing Company publishes The Farmer's Wife and The Farmer. The banker or postmaster in your town knows that we are one of the largest publishing houses in the United States so we can well afford to give ponies to boys and girls to advertise our papers. We never heard of one of these 83 boys and girls until they wrote and told us they wanted a pony which shows how fair and square our pony contests are, and no matter where the winner lives "Dapple" will be sent without any cost to you. You must send your name and address right away.

We Have Given Away 83 Ponies

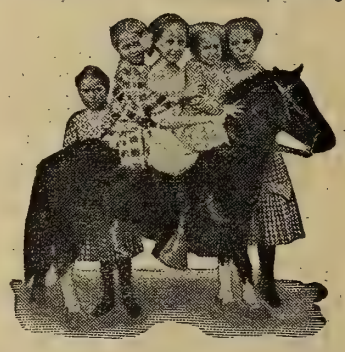
Here Are Pictures of Some of Our 83 Lucky Pony Winners and the Ponies We Gave Them



"Roine," Clarence Busick, Adams Co., Indiana

"I live seven miles from Decatur, Ind. I won a pony in The Farmer's Wife Contest. My pony's name is 'Roine.' When I go to the gate and whistle 'Roine' will come to me. I drive him to school with my three sisters. The scholars think that is one of the nicest outfits that a boy could have to go to school with. Before The Farmer's Wife gave 'Roine' to me I was absent from school for more than a year because I was sick and it was too far for me to walk. When the doctor heard I had won a pony he said it was one of the finest things I could have for my condition, to be out of doors all the time. This was quite interesting to me, and I am glad to say I am now well again, and the doctor says 'Roine' has done his share in it, and also The Farmer's Wife of St. Paul, Minnesota, who gave him to me."

Clarence F. Busick, Adams County, Indiana, is one of our Lucky Pony Winners, and here is his picture and part of his story.



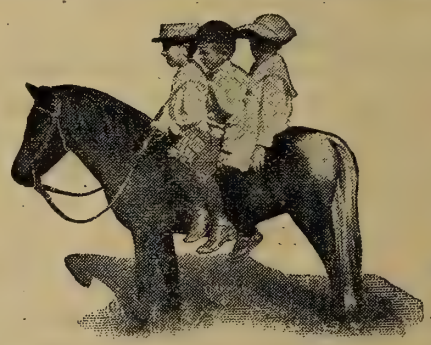
"Jerry," Cleta Johnson, Douglas Co., Kansas

"I have the dearest little black Shetland Pony named 'Jerry' which The Farmer's Wife sent me free all the way from St. Paul up in Minnesota out here to Lawrence, Kans.

"When I first started out to get my friends to help me win a pony, I can tell you it was pretty hard work. Some of them laughed at me and made fun of me and said: 'Oh, you can't win a pony.' However, I entered the contest, and now have 'Jerry' as proof that the company did as they agreed.

"I took 'Jerry' down to the Douglas County Fair at Lawrence, Kansas, to see if he could win a prize, and he took the first prize of $6.00 in cash over all the ponies there. When they tied the blue ribbon on 'Jerry' he acted more proud than ever, and how the people in the Grand Stand clapped their hands and cheered."

This is a part of a letter written by **Cleta Johnson,** Douglas Co., Kans., who is another of our 83 Lucky Pony Winners.



"Sonny," Elmer Hoth, Allamakee Co., Iowa

"I am a little boy 10 years old. I weigh 87 pounds and have light hair and blue eyes. But what I want to tell you about is my pony 'Sonny,' which the Webb Publishing Company, publishers of The Farmer's Wife, gave me. 'Sonny' is the finest pony in these parts and he and his outfit are better than $500 to me.

"I went to the depot to meet my pony the day he came. I could hear him whinnying, but could not see him. Then I saw him in a little crate in the express car. They lifted him down and I took him out of the crate and I was so happy I couldn't talk.

"I have lots and lots of good fun with 'Sonny' and no money could buy him. He goes as fast as he can when we go after the cows at night. I am never going to sell him, and 'Sonny' is so good he makes me feel happy all the time."

This is what **Elmer Hoth** of Allamakee County, Iowa, has to say, because he, too, is one of our 83 Lucky Pony Winners.

"Mac," Ruth Mead, Saline Co., Missouri

"I shall never forget my first drive to town with the Shetland Pony which The Farmer's Wife gave me. We hitched 'Mac' to my beautiful little cart, and as we drove through Main Street we attracted as much attention as if we had been a circus parade, for it was the only pony outfit in town. Men, women and children came out and stood all around to look at 'Mac' and pet him, and how proud of him I did feel.

"He is so gentle and good natured and will stand with his fore feet on the porch or on a box and let us slide off his back to the ground. I wish every little boy and girl had a pony and cart like mine and had the jolly time I have with 'Mac,' and I hope they will enter The Farmer's Wife Contest and get a pony half as nice as 'Mac.'"

Ruth Mead, a little girl in Saline County, Mo., still another of our 83 Lucky Pony Winners, writes this and a lot more about the Shetland Pony we gave her.

Notice that we print the photographs of these four of our 83 Lucky Pony Winners and the ponies we gave them free, which removes all doubt of the fact that we really do give away live Shetland Ponies. Furthermore we promise to give you the full addresses of any of these four winners and also the complete names and addresses of any of the other of our 83 Lucky Pony Winners upon receipt of a request from you. Now, doesn't that make you feel positive we will do exactly as we say in the contest? And right here we want to tell you that we have a BIG SURPRISE for you which will DOUBLE YOUR CHANCES of winning a pony. We haven't room to explain it here, but we will tell you AS SOON AS WE HEAR FROM YOU. Remember, you can't win "Dapple" till you send us your name, so sit down and write us at once. Don't miss this opportunity!

SEND YOUR NAME TODAY

Our ponies are given away so quickly that you will stand a better chance to get this one if you sit right down and write us a letter or a postal card or send the coupon opposite filled out with your name and address (either way will be all right). The work we require you to do to become a contestant for "Dapple" is something that any boy or girl who can drive a pony can do, and any child who becomes a contestant will win a fine prize, even if he fails to win "Dapple" which is the best prize of all.

CUT OUT AND SIGN THIS COUPON OR COPY ON A POSTAL CARD AND MAIL TODAY

THE FARMER'S WIFE, 305 Webb Bldg., St. Paul, Minn.

Please send me Certificate of Entry, and pictures of "Dapple" and tell me how to take care of Shetland Ponies. I haven't any Shetland Pony and want to own "Dapple."

Name.....R. F. D.....

P. O.....State.....

THIS COUPON IS GOOD FOR 1000 VOTES FOR "DAPPLE"

EACH CONTESTANT A PRIZE WINNER

All contestants will surely get a prize of their own choosing from a list which we will send them. Besides the Pony Outfit and Twenty-five Grand Prizes we shall offer Gold Watches, Base Ball Outfits, Gold Bracelets, Fountain Pens, Hand Bags, Flash Lights, Rifles, Shot Guns and dozens of other desirable prizes. If you become an enrolled contestant in this Pony Contest you can't lose. But don't let anyone persuade you that you can't win "Dapple" because you have the same chance as any other child.

Be sure to address postcard or envelope **THE FARMER'S WIFE** 305 WEBB BUILDING, ST. PAUL, MINNESOTA

Overland

65% go to Farmers

IN the past five years we have built 60,000 cars. This year's output of 40,000 makes a grand total of 100,000 cars. *Sixty-five per cent. of this great production will be bought by the modern American farmer.*

Take Minnesota as one example: Minnesota is one of the nation's greatest and richest farming states. In the automobile registrations of the fiscal year Overland cars in the entire state of Minnesota show *a gain of 98 per cent.* The nearest competitor can show a gain of *only* 87 per cent. and the next *only* 55 per cent.

In Minnesota towns and villages of 1000 inhabitants, or less, Overland cars, for the year, show a gain of 136 per cent. The Overland's nearest competitor shows a gain of *only* 104 per cent. and the second nearest a gain of *only* 73 per cent. And so you find it all over the country.

The Overland has the approval of the majority of America's big farmers—the most substantial and practical class of people in America.

The 1913 Overland at $985 is the exact equal of any $1200 car manufactured. It has a powerful thirty horsepower motor. Seats five large people comfortably. This car has center control and tires of ample size. The springs are of the finest steel—three quarter elliptic in the the rear. The wheel-base is 110 inches. The rear axle is three-quarter floating, drop-forged and fitted with the famous Hyatt bearings; the front axle is an I" beam, fitted with Timken bearings. Overland brakes are unusually large and strong. t is completely equipped with top, windshield, Warner speedometer, Prest-O-Lite tank, and the very best of everything. Nothing is lacking.

Forty thousand cars in 1913 alone make possible this big value.

Look up the nearest Overland dealer at once. Secure a demonstration. Let us prove to you that the Overland is the most economical car you can buy. A post card will bring additional information, our 1913 catalogue and the dealer's address. Please address the factory, Dept. 80

The Willys-Overland Company

Toledo, Ohio

Our Big Instruction Book---Free

For a postal card you may have our big automobile instruction book—*absolutely free.* It contains over 100 pages; each page is illustrated with simple diagrams. The language is not technical; the young people will read it with interest and can understand every word. It tells you how to purchase, operate and care for an automobile.

We want you to have this book because it will help you and because it will help us. A thorough reading will prepare you to appreciate the good and bad features of automobiles. And such knowledge will only emphasize to you the very high Overland standard. Write for this free book—today.

The Iowa Homestead

DES MOINES, IOWA, THURSDAY, JANUARY 16, 1913.

DELICIOUS, IN NAME AND TASTE

The story of how a grain-belt orchardist stumbled upon one of the most popular and edible varieties of apples and how a prominent firm gave it to the world of apple buyers and eaters.

DELICIOUS, BOTH IN NAME AND TASTE. THE THIMBLE AND SPOOL OF THREAD GIVE A GOOD IDEA OF THE SIZE OF THE APPLES.

THE story of the origin of the Delicious apple, one of the most popular of the early winter varieties, is exceedingly interesting. Nearly thirty years ago a sprout grew up under a Belleflower tree in the orchard of Jesse Hiatt, near Peru, in Madison county, Iowa. It made rapid growth and impressed with its vigor, Mr. Hiatt, an experienced orchardist, finally cut down the old tree in order to give the sprout ample room in which to develop. Mr. Hiatt was at that time about fifty years old and had grown apples all his life. He was amazed when the sprout had grown into a tree and borne its first fruit to discover the wonderful quality of the apple produced. From his long and varied experience he knew that he had an absolutely new variety and was convinced that it was destined to become a leader, if the proper parties could be interested in its propagation. The matter was put up to a number of Iowa nurseries, but notwithstanding the fact that they realized the fine points of the new variety they were slow to take hold of it, for the introduction of new apples is not generally profitable. Mr. Hiatt finally interested a prominent Missouri firm of orchardists who immediately recognized the value of the new apple and made elaborate arrangements to introduce it to the trade. They gave to the apple the name of the Delicious, having the name registered in the United States Patent Office as a trade-mark. Then began the slow and laborious task of working up a stock with only the wood of one tree to work from and also the task of testing out the variety in orchards and experiment stations in every part of the country. Their success is evidenced by the fact that eighteen years of testing have proven the Delicious apple adaptable to every section in the United States, the last few years finding its popularity increasing until it is now one of the most talked of and best liked apples in the country. The fancy specimens of this variety are bringing $1.50 and $2 a dozen at the fruit stores of the large cities, while there is never an apple exhibit without an artistic display of the Delicious, because of the fact that it loans itself so readily to exhibition purposes. Its waxy red color and its peculiar shape, with five protuberances at the blossom end give it an individuality and impress it upon the memory so that even the unelect are able to recognize and identify it. This is a strong point commercially in its favor, apple buyers knowing the variety and being able to pick it out regardless of the limited extent of their knowledge of other varieties.

Because of his success in bringing the tender sprout to maturity and interesting the prominent Missouri firm, which has since popularized it commercially, Mr. Hiatt is entitled to the same credit with the Delicious apple as Ephraim Bull, who gave the Concord grape to the world; C. C. Patten, of Iowa, who gave to the North Patten's Greening, and Peter N. Gideon, of Minnesota, who grew the Wealthy apple. Mr. Hiatt has gone to his reward, but the fame of the apple which he gave the world will long survive him. The original tree is still standing, but the orchard at Peru has passed into other hands.

The manner in which the Delicious apple loans itself to artistic arrangement for display purposes was strikingly shown in the window of a large fruit house in Chicago. A group of Delicious apples was painted by a world-famous artist, the foreground of the picture showing cloth of royal purple. The window trimmer matched the foreground of the picture with velvet of exactly the same shade, and handsome Delicious apples were then so arranged in front of the picture and upon the foreground of velvet that sidewalk observers could not tell where the real apples stopped and the painted replicas began. Not an apple show in the country, whether it be national or merely state wide, but makes a prominent feature of its display of Delicious. Not the least valuable feature of the Delicious is that it will grow successfully in practically all parts of the country, fruiting with equal certainty in the North and the South, the East and the West.

The expert pomologist who is interested in the technical description of this apple (without which his orchard cannot be a complete success) will find this description, made by the United States Division of Pomology, of interest and value: "Fruit large, roundish conical, ribbed; skin medium thick, tenacious; surface smooth except the ribbing; color yellow, washed with mixed red, splashes and broken stripes of crimson; bloom whitish; dots numerous, small, yellow, some indented; cavity regular, large, deep, gradual, russet; stem medium, stout; basin regular, large, deep, gradual, furrows and knobs; eye medium, closed; calyx segments medium, erect or reflexed at tips. Core conical, clasping, medium; seeds plump, medium,

MR. AND MRS. JESSE HIATT AND THEIR APPLE ORCHARD IN MADISON COUNTY IOWA. THE ORIGINAL DELICIOUS TREE IS THE LARGE ONE IN THE FOREGROUND.

HEAVY DRAFT HORSES IN FAVOR

Although motor trucking is said to be in its infancy, and possibilities for its growth immense, the motor truck has not injured draft horse prices any yet. Instead, there has been a lack of desirable drafters at all the leading horse markets for several months past, particularly heavy draft horses. There are several reasons why the development of motor trucking will not hurt draft horse prices for a long time to come, at least under present conditions.

Motor trucking on a large scale must be done on paved streets, because of the economic necessity of hauling heavy loads. Country highways as a rule are unsuited to heavy traffic in motor trucks, except in a very small proportion of the country, hence the business has its limitations there. It is not enough that roads be made passable for automobiles, but they must be of more solid construction to stand the wear and tear of heavy trucks, which is a general movement in rural development too remote to threaten draft horses greatly. The price of gasoline is advancing so rapidly that dealers in gas machines are alarmed lest it reduce the general use of the machines. That is an item of sufficient importance to halt the encroachment of motor trucks on draft horses, if there is any danger thereof. While gasoline costs more, feed for horses costs less than heretofore, which is having its influence is stopping some truckers in cities from turning from horses to motors.

The drift in the manufacture of farm machinery for the last few years has been toward implements that would take the place of farm hands. Machines of greater power, operated by a single person, often do the work of several similar machines of a few years ago, each of which required a man to handle it. These heavier machines also call for more horsepower, which makes the farm demand for draft horses greater. Farmers who formerly got along with 1,000-pound animals now see the advantage of using horses of greater weight.

THE DISAPPOINTING "LIFE OF EASE."

The picture of a "life of ease" in the city has appealed to many a farmer in the past. The more the reverse side of the picture is studied the less strong will be the appeal in the future. We cannot refrain from reprinting the following article from one of the daily newspapers of the grain belt:

Three brothers came to this county a good many years ago and with their families settled on land that they bought all in the same neighborhood. They worked and managed and prospered. One by one, as they became old they sold off their personal property, rented their farms and moved to one of the good towns where they were wont to trade and where they were in consequence acquainted. Two of them, possibly the third also, built homes and made every preparation to spend life's evening in well-earned ease. That was several years ago. This fall one of these men now seventy years of age, husked sixty loads of corn, somewhere between 1,500 and 2,000 bushels, that grew on his farm. He moved back soon after he went to town because he didn't like it in town at all. Nothing like farm life for him. Another of the brothers has recently finished a neat cottage close to the old farmhouse where a married daughter lives. His wife wasn't contented a day during the brief period of retirement in town, but judging from the energy and enthusiasm which the old gentleman was putting into the work of helping a son build bunks for feeding cattle on one of the farms the other day it isn't "mother" alone who is glad they are back to the farm. The third of the brothers still lives in town. Has been there two years. How does he like town life? "Oh, not very well."

Here, we believe, is a typical case. All three of these farmers struggled for years to obtain a competence. They worked hard. They were up early and retired late. They toiled throughout all kinds of weather. They experienced fat years and lean years. Through it all was the will-o'-the-wisp allurement of a retirement to the city when enough money had been earned. This long-deferred reward was made to take the place of those temporary pleasures which would have broken the monotony of too much and too steady work. Another quarter section, another $1,000, always a little farther on in the future stood the castle of their dreams; a vine-covered cottage on a paved street in the city. They forgot the rumble of the street cars past the doors of the cottage; they forgot the heavy taxes and innumerable expenses of the city; they forgot the nerve-racking bustle and noise and utter indifference of neighbors in the city to which their fancy was always turning.

They know better now. They have had their fling at city life and are perfectly content to go back to the old farm and stay there, until they are carried away. There is absolutely no more effective way of summing up the whole subject than to borrow current slang and say: Life in the city isn't what it is "cracked up to be." It is full of heartaches and disappointments; of "what might have been" and "if it only hadn't been." There is a little town in the heart of one of the grain-belt states, one block of which is known as Widow's block. A few years ago every house was occupied by a retired farmer. But they did not long survive the transplanting, and today they lie in the town cemetery, their widows forming a mournful colony pointed to curiously by the townspeople.

These are things to think of when the picture of a retired life in town becomes too alluring. Remember how the picture looks when the bright light of fancied romance is taken off it. A few experiences such as we have cited above should offset millions of day dreams; a few heartaches such as the above testify to should be remembered, and should decide the question, when temporary enthusiasm seems about to make the farmer take a momentous step which he is almost sure to regret sooner or later.

IMPROVING THE TYPE OF BEEF CATTLE.

The chairman of the board of directors of the Union Stock Yards, John A. Spoor, has called attention to the present scarcity of cattle in a rather unique way. According to Mr. Spoor it will require a period of seven years before an adequate supply of beef steers are available for slaughter in this country. This being the case what objection could there be made if cattle raisers during coming years should make up at least a part of the needed increase by improving the quality of their cattle?

It will be conceded that a given improvement in the quality of our cattle can be made at a less cost when the number of breeding animals is small than could be made when the supply is normal. This is partly due to the fact that on account of the smaller number of males being required the quality of these males may be maintained at the highest standard. It would, therefore, be a great mistake if after the lapse of a seven-year period the farmers of the corn belt should be sending to the shambles the same class of low-grade steers. Men who have pinned their allegiance to a herd of pure-bred cattle and who have not lost faith should find their opportunity during the coming years. This opportunity consists in placing at the head of grade herds a larger number of good useful beef bulls than have ever been used in the past, and secondly, it should mean to them years of appropriate reward for their allegiance to the higher ideals.

It must be borne in mind that this seven-year estimate does not carry with it the suggestion that in that time the market can be glutted. There may be intervals when reckless marketing of half-fat cattle may depress prices to the point where there is little profit to the feeder, but these intervals are bound to be short. With such a rapidly increasing population and in the face of a strong tendency on the part of a large percentage of farmers to grain their land, it seems that those who painstakingly build up good herds of beef cattle whether these be grade or pure bred will justly earn and we believe reap a reward that will exceed in our opinion that obtained from similar effort directed in any other channel of farm affairs.

MAKING MACHINERY PAY ITS WAY.

No man should purchase a piece of machinery of any description unless by so doing he can see in advance that it will eventually pay its way out. In some instances certain types of machinery are used only a few days during the season, but in that time they effect such a saving in labor that they may be said to pay their way right from the beginning. Such machinery as the mower, binder, the sulky rake, the hay tedder, etc., are idle practically fifty-one weeks in the year. They belong to the class of absolute necessities, but if properly cared for they should answer the needs of an ordinary farm during a whole generation. The man who buys a self-binder, cuts four or five crops and hauls it aside as worn out cannot be said to be making a profit on that type of machinery. On some of the big wheat farms in North Dakota instances are known where a single binder has cut an average of 200 acres for a period of fifteen years. This simply shows what good care can accomplish and what "service" possibilities can be found in this type of machinery.

The gasoline engine is a representative of another type of machinery. It may not be an absolute necessity in running an ordinary farm, but on the other hand its sensible use may result in yielding much larger profits than some of the "essential" types. In this connection we would like to quote from a communication recently received from an Illinois subscriber, who says:

That the gasoline engine is a labor-saving and a money-making piece of machinery for almost every farmer, whether he be farming in a general way or raising fruits or truck will not be gainsaid, when the many uses to which they can be put are fully understood.

This little machine is now within the reach of most every farmer, gardener or fruit grower, and at nominal cost, and the uses that it can be put to are almost without number.

For the man with a greenhouse or large areas covered with hotbeds or cold frames, it can be connected with the pump and an ample supply of water secured for all purposes of the dwelling.

When the spraying season comes it is mounted on a wagon and there made to work the spray pump far more successfully than any other power that is available. At other times the engine can be used as stationary power, running the wood saw to cut the fire wood. It will run the fodder cutter or shredder, the feed mill, grinding stone, fertilizer mixer, and to begin to enumerate the uses to which it can be put would be no little task. In fact, I learn some new use every year. The uses here described will give the non-user a definite idea of what a gasoline engine is capable of doing when its power is properly harnessed.

The farm engine as now manufactured and sent out is so simple that any intelligent man need have no fear of not being able to run it. My advice, however, to intending purchasers is not to buy too small an engine; all purposes considered, four horsepower is as small as should be considered.

This is no poetic outline of gasoline engine usefulness, but on the other hand it is a mere matter of fact statement of what many farmers are accomplishing with this form of power. Here is a type of machinery that instead of standing idle fifty-one weeks in the year may be actually operated every week during the year. It can be put into service in bad weather as well as in good weather and in no way is its great usefulness shown more than in the manner in which time is economized when labor in the field is at a standstill. Where large quantities of grain are used for live stock the grinding of the same may be wholly accomplished when farm affairs generally are at a standstill and what is said of grinding grain applies to many forms of profitable employment that may be carried on indoors. Would that such a showing could be made for more type and forms of farm equipment as can be made in behalf of this comparatively new form of power!

THE SPECIAL FARM ADVISER

It will be quite worth while for individuals and whole communities to study the experience of those counties whose farmers have placed themselves in a position to be advised by a farm expert on practical agricultural problems. We have abundant confidence in the plan and we are pleased to note that the greatest degree of care is taken in selecting men for the work. For this position a man must have a comprehensive, practical knowledge of farm affairs and this must be combined with a rare degree of good common sense. The state of Iowa is going about the matter systematically with a hope of eventually placing an expert in every county in the state. Missouri is carrying out the same plan and exceedingly satisfactory results have been obtained thus far. At this time we are in receipt of a communication from one of our subscribers who may be regarded as a typical representative of experienced farmers. He has been farming for a period of forty years and yet is most enthusiastic in his endorsement of a farm adviser. He says:

It looks to me as if we were coming to a new condition of things on the farms of this country. I am led to say this by the announcement that in our own county a man has been stationed at one of the most central points for the purpose of helping the farmers to do their work more efficiently. This man has the authority of the national government, the state and the local chamber of commerce back of him. He is a practical farmer, as well as having had a good preparation in one of the leading agricultural colleges of the country.

It is proposed to have this man see the farmers of a certain territory at the meetings of granges or at specially called gatherings, talk farming over with them and suggest ways of doing farm work easier and better and with greater prospect of success. He will also in the right season visit the farms of his territory and look them over with a view to showing the owners just what is needed to make these lands most productive.

I have been interested in following the results of a similar attempt to help the farmers in a nearby section of the country, and I am glad to say the results have proven to be very satisfactory. At first the farmers were a little suspicious of the man assigned them, not because they had any reason to suppose that he was not competent, but because they felt afraid that it would not be of any practical value to them. They have changed their minds. I have heard farmers say who have attended the meetings held and come face to face with the teacher on their own places that they considered his work highly important. It is really bringing the agricultural college to the farmer.

It appears to me that great things may come from a movement of this kind. None of us know all about farming. There are always things we need to know, and how can we get this knowledge more surely and more satisfactorily than through the agency of one who is thoroughly competent to tell us and comes with the backing of the highest agricultural authority of the country?

Institutes are good. So are bulletins if prepared carefully and simply; but so should be these heart-to-heart talks with men of the class referred to. I believe we as farmers should stand by this effort to help us in our farm work.

We only repeat that this movement has received our strongest endorsement from the beginning because the farm expert is in reality the ideal connecting link between agricultural educational institutions and the farmer. In the past there has been an imaginary gulf between the majority of farmers and the college that is run by the state for their special benefit. We are not saying whether this has been the fault of the farmer or the college, but it is creditable to both that the newer method which has largely been devised by the colleges is meeting with such marked favor at the hands of farmers.

All silage that is scattered about the feed-alleys and mangers at feed-time, should be gathered up, as it soon deteriorates and causes a bad odor. This is especially to be guarded against if the refuse is about the dairy stalls, since freshly drawn milk is quick to absorb an odor of any kind, the taint also being transmitted to the cream and butter.

FEDERAL PROTECTION OF BIRDS

Federal protection of migratory game birds is being urged. It is argued that state restrictions do not suffice. Inasmuch as the varieties which feed on crop-destroying insects are dwindling in number, the temptation of each state to secure a full share of game birds during spring and fall migrations has been too active to permit of effective state supervision. Three bills are now pending in congress, one of them, the McLean bill, having the endorsement of the committee on wild life protection of the National Conservation Congress. This bill provides that "all migratory game and insectivorous birds shall hereafter be deemed to be within the custody and protection of the government of the United States" and that they shall not be destroyed except under restrictive regulation of the department of agriculture. Inasmuch as there are 610 species of migratory birds, it is argued that the problem is too big a one for state supervision, the birds belonging to the entire nation, but now undergoing slaughter at various times of the year under sanction of state laws. That this slaughter entails a heavy and direct loss to the farmer has frequently been pointed out, but we cannot refrain from reprinting the comment of one of the leading magazines on the matter.

The average man who knows that birds do protect the crops seems to underestimate the extent of the economic loss involved in the present slaughter. The Hessian fly in 1900 destroyed 2,577,000 acres of wheat in Indiana and Ohio, whereas ornithologists cite numerous examples showing how birds in vast numbers in Australia and in our West have averted the desolation of large territories threatened by insect pests. The United States Biological Survey is responsible for the estimate that the natural increase of one pair of gypsy moths, if unchecked, would defoliate the United States in eight years. Reports of the bureau of entomology declare that the destruction of crops in consequence of the decrease in the number of birds is constantly increasing. The annual loss is now estimated by Professor Forbush, the state ornithologist of Massachusetts, to be $800,000,000! That the United States has one remaining passenger pigeon in captivity may well serve to emphasize the pity of the situation. Scores of species that sportsmen and pot hunters are allowed to shoot for sport and for sale are of immense value to agriculture. Thus thirty species of shore birds eat noxious weeds. Gunners shooting legally are destroying 154 species of insect-eating birds classed by law as "game" in both the North and the South, while in the South they are also slaughtering many song birds, including the robin, similarly classified. In seven states—Louisiana, Mississippi, Maryland, North Carolina, Tennessee, Virginia and Florida—the robin is annually and legally killed as game! Five states expressly permit the killing of blackbirds as game. Cranes are shot for food in Colorado, Nevada, Nebraska, North Dakota and Oklahoma. Doves in twenty-six states, at a great loss to the farmers, are likewise killed as game. And these are merely cited as examples; many other useful birds are being destroyed.

Now that the conservation movement, as directed toward the preservation of forests, water rights, coal rights, and so on, has made such headway, it is only a matter of time until the conservation of bird life comes to occupy more and more attention. The farmer is coming to look upon insect-eating birds as one of his allies and will welcome any movement which looks toward the protection of his feathered friends.

HANDLING BEEF HIDES.

A Missouri subscriber calls our attention to the fact that beef hides are not handled properly by the average farmer. He states that it is not necessary to pay a big commission on them and in addition sell them as green hides at one or two cents a pound less than if they were cured. According to his plan as soon as the skin is removed from the animal it is spread out, flesh side up, and well salted, being careful that all meaty spots are given an extra salting. This salting absorbs the blood and cures the meaty portions so they will not putrefy and lower the grade of the hide. When the salting is finished the hide is wrapped in a bundle as nearly square as possible, and laid away where it will not freeze, the cellar being a good place in which to store it.

After ten days or two weeks the hide is ready for shipment, it having gone through what is called the "curing" process, and will bring from one cent to two-and-a-half cents more per pound than the "green" hide, that is, one which is sold as soon as it is removed from the animal. Another means of "curing" is to make a strong salt brine of several gallons, pour it into a barrel, wrap the hides as above directed, and place them in the brine, leaving them there from five to ten days. Of course, hides treated in this manner will freeze somewhat quicker than those handled as at first directed, but they will shrink less, as the brine aids in retaining the moisture, while with the first-named process there will be a shrinkage of several pounds in the course of curing. However, either method will prove very profitable for the small amount of time and labor involved.

USE THE PARCEL POST SERVICE.

We wish to urge upon all farmers the advisability of taking advantage of the new parcel post. A market for farm products is thus opened up which presents great possibilities. The daily newspapers of the grain belt contain advertisements of city consumers who desire to be put in direct communication with farmers and secure from them butter, eggs, dressed poultry and other small farm products which might be sent by the new postal system at the very low rate of five cents for the first pound and one cent for each subsequent pound (up to a maximum weight of eleven pounds) providing the shipment is made simply by city carrier or rural free delivery carrier and not by railroad. One of the daily newspapers of one of the leading cities of the grain belt has a department in its classified want ad columns headed Parcel Post, containing a number of advertisements of which the following are good examples:

Wanted—Correspondence with farmers who have butter, eggs and other farm produce for sale. Address blank.

Wanted—To correspond with some farmer who can furnish me with fresh butter, eggs and possibly a dressed fowl occasionally. Address blank.

Another newspaper published in the same city offers for a limited time to publish free of charge the names and addresses of all farmers who can supply fresh produce by parcel post direct to the city consumer, thus cutting out the profits of the middleman with the result that the cost of living will be reduced to the city consumer and the farmer will receive an even better price for his produce than he has heretofore. The mayor of this same city has prepared statistics showing that 1,168 farmers live upon the six rural routes emanating from that city. This shows the possibilities of the new service and the number of farmers who may profit by it.

An examination of the advertising columns of the home paper will undoubtedly disclose to the farmer opportunities to secure city customers which will greatly add to his profits during the ensuing year. Packages intended for transmission by parcel post may be given directly to the rural free delivery carrier or if the proper postage is affixed may simply be left upon the rural free delivery box where they will be d ly collected. Bear in mind that special "parcel post" stamps must be used and the proper value of postage in ordinary stamps will not answer the purpose.

GRAIN CORNERS PROHIBITED.

Corners on cotton, wheat, oats and other farm products are held to be in violation of the Sherman anti-trust law by a decision of the United States Supreme Court handed down last week. The question in issue was the criminal action against James A. Patten, because of his attempt to corner the cotton market by deals on the New York Cotton Exchange. The decision is far reaching inasmuch as it applies not only to this effort on the part of Mr. Patten and his associates, but to all similar efforts made frequently; notably the wheat corner of Joseph Leiter six years ago.

The supreme court, the highest tribunal in the land, holds that it is as much a conspiracy in restraint of trade to create artificial conditions in the marketing of farm products as it is for any trust to stifle competition and obtain a monopoly by buying out or freezing out all opposing companies, large or small. Corners on natural products necessarily impede and burden the due course of trade and restrict the common liberty to engage therein and are held by the supreme court to be contrary to public policy and common good. The language of the court is positive on this point:

It was a conspiracy to run a corner in the market. The commodity to be cornered was cotton, a product of the southern states largely used and consumed in the northern states. It was a subject of interstate trade and commerce, and through that channel it was obtained from time to time by the many manufacturers of cotton fabrics in the northern states.

The corner was to be conducted on the cotton exchange in New York city, but by means which would enable the conspirators to obtain control of the available supply and to enhance the price to all buyers in every market of the country. This control and enhancement of the price were features of the conspiracy, on the attainment of which it is conceded its success depended.

Upon the corner becoming effective there could be no trading in the commodity save at the will of the conspirators and at such price as their interests might prompt them to exact, and so the conspiracy was to reach and to bring within its dominating influence the entire cotton trade of the country.

Bearing in mind that such was the nature, object and scope of the conspiracy, we regard it as altogether plain that by its necessary operation it would directly and materially impede and burden the due course of trade and commerce among the states and therefore inflict on the public the injuries which the anti-trust act is designed to prevent.

The decision vitally affects the welfare of every farmer, as it removes those impediments to trade which have proved a burden heretofore. Under this decision it would be impossible hereafter for any person so to influence and alter the natural course of supply and demand as arbitrarily to increase the prices demanded of the consumer, without at the same time increasing the amount paid to the producer, by manipulating the stock market.

OUR RED LETTER SUBSCRIPTION OFFER

THE IOWA HOMESTEAD
KIMBALL'S DAIRY FARMER
WOMAN'S WORLD
KANSAS CITY WEEKLY STAR
PEOPLE'S POPULAR MONTHLY

All sent one year for only **$1.25**

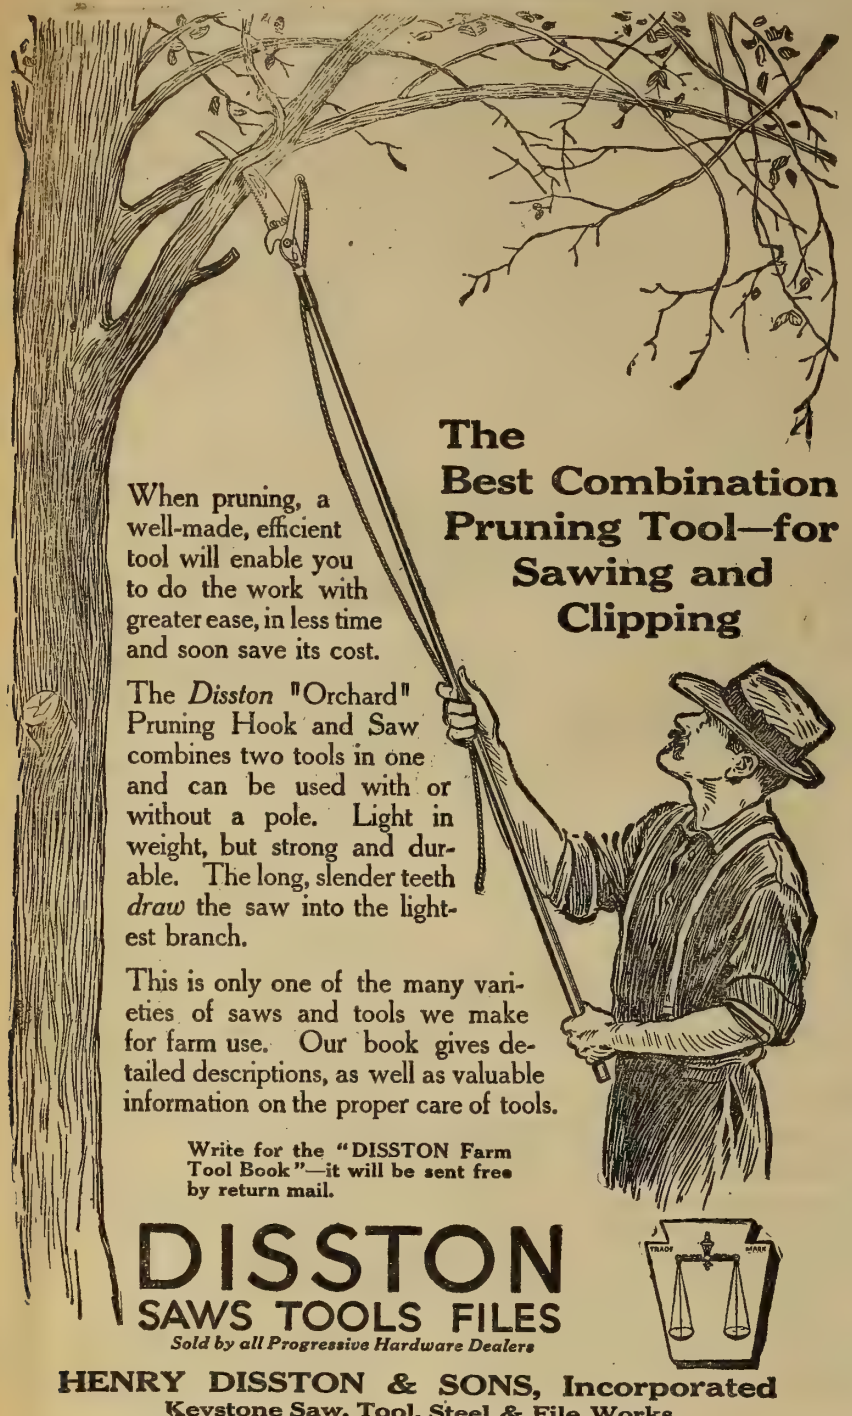
The regular price of these five splendid papers is $2.25 a year. By taking advantage of this unparalleled offer you secure a whole year's good reading matter for the entire family at only a trifle more than one-half the regular price.

Each of these five papers is a leader in its respective field. The combination makes a library of current news, useful information, practical advice and entertaining literature. Kimball's Dairy Farmer is practical and up to date, full of dependable advice and information for the man who keeps cows. The Woman's World is a monthly household magazine of striking and particular interest to the housewife who wishes to make her home attractive and to keep posted with what woman is accomplishing the world over. The Kansas City Weekly Star is conceded to be the newsiest and most reliable weekly newspaper published in the country. It presents the news of the world in a clear and concise manner, without political bias or embellishment. The People's Popular Monthly combines the best fiction, poetry and feature articles dealing with economic development, in a monthly symposium of interest to every member of the household.

The publisher of The Iowa Homestead has elaborate plans which will make The Homestead better, larger, brighter and more practical in 1913 than ever before. Every department will be continued throughout the year and will be in charge of practical experts who practice what they preach and who allow no unsound doctrine to creep into their columns. The Homestead will continue under the management of the same editor-in-chief, who owns and operates his own farms and gives to subscribers the benefits of his own personal and successful farm experience.

No more liberal or attractive subscription offer was ever made by any publisher. The introduction of our Red Letter Offer created a sensation among farm readers because it presented the maximum of farm and home reading at a minimum of cost. The opportunity is so splendid that it should be taken advantage of at once. Five great papers will be sent one entire year for only $1.25, being a saving of a whole dollar on the regular subscription price. Make your remittance today, so as to insure you getting all the big winter numbers of all these five splendid papers. Do not delay, but remit $1.25 at once to

THE IOWA HOMESTEAD, DES MOINES, IA.



The Best Combination Pruning Tool—for Sawing and Clipping

When pruning, a well-made, efficient tool will enable you to do the work with greater ease, in less time and soon save its cost.

The *Disston* "Orchard" Pruning Hook and Saw combines two tools in one and can be used with or without a pole. Light in weight, but strong and durable. The long, slender teeth *draw* the saw into the lightest branch.

This is only one of the many varieties of saws and tools we make for farm use. Our book gives detailed descriptions, as well as valuable information on the proper care of tools.

Write for the "DISSTON Farm Tool Book"—it will be sent free by return mail.

Don't Feed Your Last Year's Crops Into Idle Horses This Winter

Sell your extra horses and farm with an Avery "Light-Weight" Tractor and "Self-Lift" Plow. Don't keep idle horses any longer standing around eating their heads off.

Agricultural statistics show that farm horses average only about 100 full days work a year. The other 265 days time you have to feed them just the same—**all for nothing.**

You **can't** afford this expense—this waste—when **fuel for the Avery Gas and Oil Tractor costs less than horse feed.** And this means when working. When idle a Tractor costs you nothing for fuel.

An Avery Tractor and Plow Cuts Cost of Plowing in Half

Also **saves you money** in discing, harrowing, seeding, harvesting, hauling and other farm work. **Proved by definite cost records kept by owners** of Avery Outfits. Makes farming easier. Enables you to raise **bigger crops** by doing your work **better** and **quicker** at just the **right time.**

Don't stop with the few facts we can give you in this small space.

Write for Sold on Approval Terms and Avery Tractor Book

that shows how any man on a small or large sized farm can farm with power. Tells about the little 12-25 H. P. Baby Avery Tractor built for small farms—pulls 3 to 4 plows; the medium size 20-35 H. P.—pulls 5 to 6 plows; and the big 40-80 H. P.—pulls 8 to 10 plows. Explains how the wonderfully "Light-Weight" of Avery Tractors enables them to **travel on any ground** in fit condition to be worked with horses and why they don't pack the ground and waste fuel like the heavy weight tractors do. Shows why Avery Tractors are the **simplest tractors built.** Describes the Wonderful Avery No-Man Automatic "Self-Lift" Plow that does away with a plowman, saves hard backbreaking work and saves time. You or your boy can run an Avery Outfit alone. Tells about the Avery Company's Policy of Selling **on approval at low prices** and backing up with **strong guarantees.** Write today for 1913 complete Avery Tractor Book with Power Farming Facts and Complete Selling Plan. Also manufacturers of Avery Undermounted Steam Traction Engines, "Yellow-Fellow" Grain Threshers and Gasoline Farm Trucks.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Seed catalogs and seed house advertisements remind us that it is time to plan for another season of bumper crops.

It is to be hoped that the major portion of the seed corn was carefully selected and stored in safe places, but no place is so secure that it will not be well to look after it occasionally. Mice and other vermin will do things to seed corn in a short time if given half a chance.

It is pleasing to note that neither the farmer nor his work is "copy" for the jokesmith for the city dailies at the present time. The farmer of today is a business man, and his farm is his place of business, and the best part of it is that his business is becoming more pleasant and profitable as the years go by.

A square rod of alfalfa well cared for would be of more benefit to the learner than a whole library of alfalfa reading matter and no real experience.

They tell us that the price of butter is on the toboggan and that the slide is greased with oleomargarine. This may be true, but it is a safe guess that the appetite of the butter-loving public will stand the slide so that the ride will be neither swift nor dangerous.

Those who are holding their breath for fear that the markets will be flooded with beef and pork when our present corn crop is fed out might as well hunt up something else to worry about. There will be no flood, because stock hogs and cattle are too scarce.

A short time ago, I noticed a handy device in a farm paper for skimming ice out of the stock tank, but it struck me that it would take more work to make it than to install a tank heater, also that it would take less work to keep the heater going than to cut and skim the ice out. Ice is all right in its place, but it is out of place in the stock tank in the winter time.

So far the weather prophets have missed it bad, as none that I know of predicted all this fine weather. I am glad the goosebone men proved false weather prophets.

The weather makes a great difference with all of us, in fact it pretty nearly rules the universe. The prosperity of the farmer depends upon the way the weather treats him, and the prosperity of all else rests with the farmer.

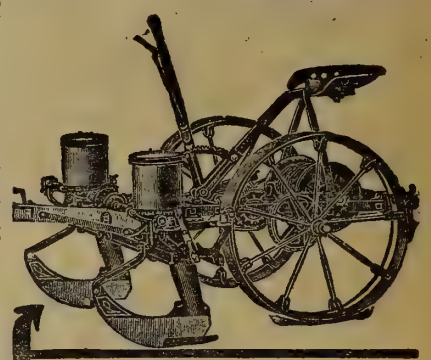
They are sending bricks by mail since parcel post went into effect, one Indiana manufacturer sending six tons of bricks as samples, each brick wrapped and going to a different address. They'll soon be sending gold bricks that way, no doubt.

A lone tree is a nuisance out in the field. It can be farmed around with no great bother with everything but a corn planter, but I, for one, will cut the tree before I will cut the check row wire every time I plant by a tree.

Motorists complain that much of the gasoline now refined contains too much kerosene. Kerosene in limited amounts is a good thing for a gasoline engine, for there is nothing to beat it as a carbon remover, but too much of it mixed with gasoline kills the power, particularly in cold weather. An auto can be run with kerosene, but the engine must be very hot when starting to use it and it must be kept hot or it will not ignite readily. It is not best to use kerosene in the place of gasoline, however, as all kerosene soon fouls an engine.

There is a difference of thirty cents a sack on flour at two different points near me, and the flour is of the same grade, too. I know the man who sells thirty cents the cheaper does not sell at a loss, but you couldn't get the man at the thirty-cent advance to admit that he makes anything at that price. Some middlemen try to make so much that they do not make anything, simply because they do so little business on their high-priced basis.

It certainly has been a fine fall season for getting through with the work. I heard a neighbor say yesterday that he had one little job left he expected to do before real winter came, but he has been trying to remember what it is for the last three days and cannot, so it must not be very important. Aside from the chores, for a farmer to be out of a job is something very unusual.



Mix Brains With Your Planting!

Use your head and get two to ten bushels more **per acre** and without any more expense or work. You can now do it because of an invention by which you can change the number of seed to the hill **instantly.** You don't have to stop. You don't have to get out of your seat. You simply pull a lever and it's done.

When you come to the **richer** parts of your field you shoot an extra kernel or two into each hill. And when you come to **thin** soil you plant **less** grains per hill. Thus you **waste no seed** and you make the **richest** soil raise the **most corn.** Besides, the poorer soil makes more and better ears if you don't overload it. **This is scientific and right.**

And it's just as easy and fast as ordinary planting. No extra work—just use your head.

Rock Island No. 1 Corn Planter

This planter is also instantly changeable from **edge** to **flat** drop. Both plates furnished free. It plants straight, even rows, whether horses walk fast or slow. **Positive** clutch that's absolutely **trouble-proof** and that **outwears four** ordinary clutches. Special flexible connection to front frame makes uniform planting certain, no matter how hilly your land. Adjustable width. Adjustable seat. Discs or runners. 30 or 36-inch concave, flat or open wheels.

It's the **masterpiece** machine of corn-planter construction. Has become the sensation of the Corn Belt in three seasons. Over 10,000 machines now in use and **all doing wonderful work!** More than pays for itself in one season.

WRITE! Drop us a postal at once and you will receive our latest Corn Planter Book and a copy of Prof. Holden's famous book on Corn Growing—ALL FREE! We will tell you where you can see a Rock Island No. 1.

Simply write this on your postal: "Am interested in the Rock Island No. 1 Planter." Then add your name and address and send the card to

Down On the Louisiana Gulf Coast They're Harvesting Third Crops Now

While you Northern farmers are watching your corn land, valued at around $150 an acre, lie idle under its cover of snow, the Louisiana farmer, on land bought at *one-fifth the price*, is preparing to gather the final crop of the year, planted *after* the corn was harvested.

He's *fattening* his bank account while you are *drawing* on *yours*. Winter is an *asset* to him, because he grows crops that bring him high prices just because *your* farm is idle. While your stock is housed in expensive barns and eating up the contents of the corncribs, the Gulf Coast farmer's stock is running in the pasture. Corn is a *money crop* to him, not a safeguard against cold.

Just about the time *your* hired man is bringing in a bucket of coal or shoveling off the snow the *Southern* farmer is getting a few oranges for breakfast.

The Climate Is Perfect—the Soil Is Deep, Rich, Inexhaustible—and There Is Good Growing Weather Every Month in the Year

January and February are the *plowing* months, and the *harvest* months run from now to December.

There's a *big dividend-producing farm* for you down on the Gulf Coast of Louisiana. The land will cost you *one-fifth* what land, not so good, will cost you in the North. You can grow *all* the staple crops you now grow. Your farm implements will do all the work for you there and your horses and cattle will thrive. With two or three crops a year instead of one, the bank account grows fat rapidly. There's none of the long waits between deposits; none of the heavy withdrawals for living and heat.

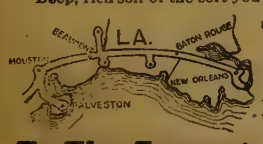
The few times a fire is needed there's wood for the hauling. There's none of the heavy building needed, either in the house or the barns, because they don't know what a blizzard looks like in Louisiana. The Gulf breezes take care of the North winds and drive them back.

In the summer, there's *hot, growing weather*, but the heat isn't of the withering sort, because of that same Gulf breeze. Louisiana with its 40 to 60 inches of rain a year, knows no droughts that cut off a crop just when it looks most promising. And the soil is *your* kind—you can have *your choice* of ridge, prairie or bottom land. It's all *deep, rich, fertile,* and practically *inexhaustible*. Thousands of acres of that prairie land have never had a plow on them. Cattle have browsed there on the rich, native grass and have done their part in enriching the fields.

The Splendid Advantages of Louisiana

To The Farmer:

A growing season 12 months long.
Two and three crops a year instead of one.
Deep, rich soil of the sort you are farming now, at one-fifth the price.
All the staple crops you now produce and **in addition** such money-makers as cotton, rice, sugar cane, lespedeza, and a score of others.
Labor at **one-half** the price you now pay.
Markets are as close or closer to you than any you now reach.
Outdoor life the year 'round.
No pioneering—**all the conveniences** of civilization—splendid transportation facilities. The opening of the Panama Canal, now but a short time off, will multiply the prosperity of the South many fold.



To The Farmer's Wife:

City conveniences that make work easy.
Electricity to do the washing and ironing, the churning and end the drudgery of lamp cleaning.
Telephones that bring your neighbors always within speaking distance.
Rural free delivery to keep you advised of the world's news.
Schools and churches of the best.
More time to devote to the chickens, garden and bees—the profits from which will educate the children.
Oranges, figs, lemons and other fruits from your own trees.
A climate that means health to you and yours.

It will make you feel like a new man—for never before was there tobacco like Velvet.

It's the choicest growth of Burley leaf—delightful in fragrance, temptingly rich and flavorsome — smooth, satisfying and free from bite.

And with all its unmatched goodness, Velvet only costs 10c for a big, full size 2-ounce tin.

Don't do without it!

Liggett & Myers Tobacco Co.

CURRENT EVENTS

HEARINGS on the proposed tariff revision are in progress before the ways and means committee of the lower house of the present congress, the entire month of January being devoted to the public. This work is preparatory to the introduction of bills and the final hearings by the democratic ways and means committee of the special session which President Wilson will call probably about March 15th. It is announced that most of the schedules will be revised practically the same as the bills which were passed at the last session of congress, but which were vetoed by President Taft. Many of the leading members of the present ways and means committee will be absent after March 4th, only two of the republicans now on the committee (Payne, of New York, and Fordney, of Michigan) holding over into the new congress. Congressman Underwood, of Alabama, is certain to remain as chairman of the committee, the majority of the members of which will be democratic. It is confidently expected that before the extra session is called enough states will have ratified the income tax to enable congress to pass an income tax law, supplanting both the corporation tax and the proposed excise tax. Such an income tax, the democrats estimate, would supply from $80,000,000 to $100,000,000 of the government's annual revenue, a fact which will play an important part in the proposed revision of the tariff which will materially reduce the government's income.

IN A PUBLIC speech, delivered in New York a few evenings ago, President Taft announced that he favored putting the controversy over Panama Canal tolls, between the United States and Great Britain, in arbitration before a special tribunal composed of an equal number of citizens of both countries. The president does not believe that a just decision on this matter could be expected from the International Court of Arbitration at The Hague, because of the fact that practically every nation there represented has a personal interest in the matter and the decision would be influenced by this interest. In taking this stand President Taft sets himself over against a majority of the republican leaders of congress, most of whom maintain that the question of Panama Canal tolls is one which should be settled by congress alone, and (affecting a purely home governmental institution) is not one for settlement by foreign nations. Great Britain has signed a formal protest against the law as it exists at present exempting American coastwise vessels from paying the tolls demanded of foreign-owned vessels, contending that this exemption is contrary to the treaty between the United States and Great Britain which declared that no nation should enjoy privileges in the canal over any other. The situation was considered critical for some time, but it is confidently believed that it will be amicably settled in a short time, either by arbitration or by congress rescinding its action exempting American coastwise trading vessels.

JEFFERSON DAVIS, United States senator from Arkansas, died during the past week at his home in Little Rock, at the age of fifty years. He had the distinction to be the only man elected governor of his state three times. He had served in the upper house of congress for six years and was victorious for re-election at the recent primaries. A large number of candidates for his successor are already in the field, probably the most prominent being Governor Donaghey, whose recent action in freeing 360 convicts (because of the fact that they were farmed out on the contract system) brought him into prominence. It is possible that a special primary will be called within the next few weeks to settle the matter, inasmuch as democratic supremacy in the upper house is too insecure to permit of a democratic state being represented by only one member. In the meantime, J. N. Heiskell, editor of the Little Rock Gazette, has been appointed to serve until March 4th.

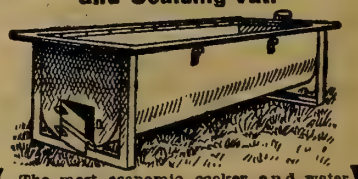
DEMOCRATIC supremacy in the senate is beginning to worry the party leaders. At present the democrats control the upper house of congress, over the republicans and progressives, by a vote of forty-nine to forty-seven. This narrow margin may be lost entirely, owing to prospective deadlocks in the legislatures of various states. During the past week President-elect Wilson held a conference with Senator Hoke Smith, of Georgia, and Senator Gore, of Oklahoma, in an effort to capture some of the legislatures and add to the democratic senatorial strength, the situation in Maine, New Hampshire, Illinois and South Dakota being gone over carefully. There is good reason to believe, however, that the vote will be so close in the senate that Vice-President Marshall will be called upon to cast the deciding vote, in which case, of course, the democrats will carry the upper house, thus giving them complete control of the legislative and administrative branches of the government.

THE most severe cold snap in twenty-five years caused a loss variously estimated from $20,000,000 to $40,000,000 in the orange and citrus belt of southern California. Practically every one of the 150,000 acres of fruit has been more or less damaged by the frost, in some cases (particularly in the region around Pomona, the very heart of the citrus belt) nine-tenths of the crop being destroyed. On receipt of weather warnings the orchardists set out

Columbian Hog Shed

Save corn by having a clean, dry, warm house for your hogs. They will grow and fatten faster. Little pigs should not be crowded. A Columbian Shed makes lots of room. There is no wear out to them. Will last almost a lifetime. Write us tonight for prices on different sizes. Do it now before you forget.

Columbian Feed Cooking Tank and Scalding Vat.



The most economic cooker and water heater made. You can cook feed, scald hogs, heat water quicker and with less fuel with this cooker than any other cooker on the market. The furnace is under the entire bottom of the pan, requiring less fuel than a tank heater. It makes a good watering trough the year round. Write for folder describing same, with prices.

smudge pots, keeping fires burning throughout the night for three or four consecutive nights. A heavy wind blowing inland, however, drove the smoke clouds away, so that the frost continued its ravages. Following the cold snap a sudden return to the usual warm weather conditions added to the irreparable damage sustained by the fruit, so that not in many years have the orange and lemon growers of California confronted as poor a crop season as the present. So severe was the cold spell that water pipes in San Diego, in the extreme southern part of California, burst. The cold snap was particularly uncomfortable to the large number of eastern tourists who have been in the habit of going to California, in order to avoid the rigors of winter in the East and middle West, and who were totally unprepared for the sudden decline in the temperature.

PRESIDENT TAFT delivered his swan song at a republican reorganization dinner in New York a few evenings ago. He defended his administration and made an attack upon his political opponents, confining himself almost exclusively to the progressives. He declared that, while beaten at the last election, the republicans were far from disheartened or disappointed, believing that in spite of the adverse vote "we were still victorious in saving our country from an administration whose policy involved the sapping of the foundation of democratic, constitutional, representative government, whose appeals were calculated to arouse class hatred that has heretofore been the ruin of popular government, and whose contempt for the limitations of constitutional law and the guarantee of civil liberty promised chaos and anarchy." These allusions to Colonel Roosevelt and the party which he headed at the recent election show that the breach between the two former friends is as wide as ever. President Taft and Colonel Roosevelt sat quite close to each other at the funeral of the late Ambassador Whitelaw Reid; neither gave any signs of recognizing the other. At the New York dinner plans were laid for revitalizing the republican party, in the hope of making it play a more important part in the 1916 election than it did in the 1912. President Taft invited those republicans who voted the progressive and democratic tickets last fall to return to the ranks, promising that many of the abuses which drove them from the party would be corrected, although he did not go into detail or make any specific promises.

AN ECHO of the November election was heard in Idaho last week when the state supreme court sentenced three editors of one of the daily papers of Boise to serve ten days in jail and pay a fine of $500 each, for printing a statement made by Colonel Roosevelt attacking the court. It will be recalled that the Idaho Supreme Court denied the progressives the right to be represented on the ballot, a decision which called forth a stirring denunciation from Colonel Roosevelt. Publication of this denunciation by the Boise paper was held to be contempt of court and the editors were summarily sentenced. On Colonel Roosevelt's suggestion the fines of $1,500 were raised by penny contributions from all over the country, Colonel Roosevelt himself sending a fund of $10, consisting of pennies contributed from 1,000 residents of Long Island. Commenting on the action of the court Colonel Roosevelt said: "No anarchist agitator could ever do anything against the courts comparable in effect to those actions of the highest of one of our state courts. There could be no better proof than we need in any state the power to recall judges from the bench when they act badly and that everywhere we need to give to the people themselves the right expeditiously to make their own constitutions and to be in every act the master of their own destinies."

DELICIOUS, IN NAME AND TASTE.

(Continued from page 3.)

brown; color yellow; texture fine, tender, juicy; flavor subacid, very pleasant; quality good to very good. Early winter."

The fact that the grain belt gave this apple to the world is simply another evidence of its horticultural supremacy and of the fact that its orchardists stand foremost among all those of the country for their progressiveness and their determination to do everything possible to advance the science of pomology. That there is good money in growing the Delicious apple there are scores of grain-belt orchardists to testify, while the rare flavor of the variety and its beauty make it a good "runner" for the entire product of the orchard. Of an unsurpassed flavor and with a fragrance which is unapproached by the aroma of any other apple, the Delicious is a winner in the apple world and is rapidly growing in popularity, as the apple-buyers come to demand it more and more.

Seven Million Watch-Towers in the Bell System

The original campanili were the watch-towers of old Venice, guarding the little republic from invasion by hostile fleets.

Later, bells were mounted in these same towers to give warning of attack and celebrate victories.

Judged by modern telephone standards, such a system of communication seems crude and inadequate.

In the civilization of today a more perfect intercommunication is essential to national safety, convenience and progress.

The Bell System binds together a nation of nearly one hundred million people, by "highways of speech" extending into every nook and corner of this great country.

Seven million Bell telephone stations are the watch-towers which exchange, daily, twenty-five million messages for the happiness, prosperity and progress of all the people.

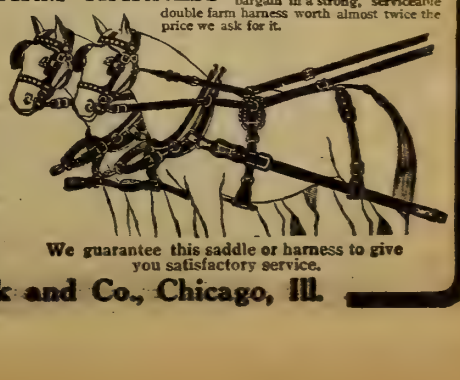
TRACES—1¾ inches wide, Moeller clip cockeyes.
PADS—Flat harness leather, felt lined; drop hooks and terrets; nickel spots; folded bellybands; 1⅛-inch hip and back straps; scalloped safes, cruppers buckled on; Cooper's trace carriers, nickel spotted on outside.
TRIMMINGS—XC buckles.
Weight, packed for shipment, about 80 pounds.

No. 10W35567¼ Price. without collars **$32.79**



We guarantee this saddle or harness to give you satisfactory service.

Sears, Roebuck and Co., Chicago, Ill.

Making Concrete Blocks in Winter

Any kind of concrete work can be done satisfactorily in cold weather, if proper precautions are taken. Many farmers plan to do such jobs in winter, when they have more time than later in the season.

If you contemplate doing any building with concrete, you can easily make the concrete blocks now, and erect your structure in milder weather. The blocks may be made under shelter—without the discomfort of working in the open—and weather conditions need not interfere with the work.

UNIVERSAL PORTLAND CEMENT

gives unvarying results in concrete construction. It is uniform in quality, strength and color. Booklet containing instructions for doing concrete work in cold weather will be sent upon request.

Write us for help in any kind of concrete work you may want to do.

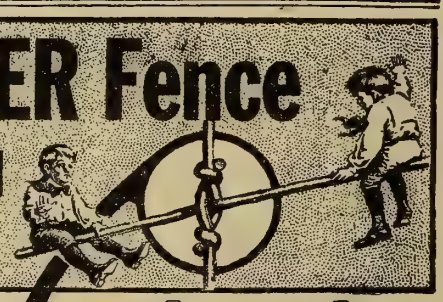
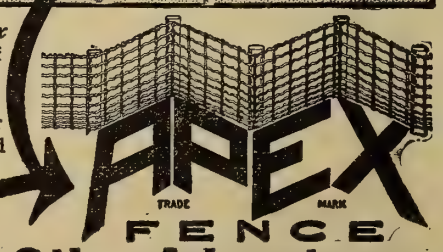
This BETTER Fence Follows Every Hill and Hollow



THE *swinging joint* allows *Apex Fence* to conform to the roll of the *land*. The upright stays clasp the line wires firmly, yet the line wires swing up or down hill or hollow, while the stays always stand plumb. It is the easiest fence to put up—no buckling or straining, no sagging or lopping. That makes a better fence, and *saves money* on the first cost.



Many Other Advantages Besides the Swinging Joint

The swinging joint makes Apex Fence the best fence bargain even if it were no better in other ways. But to make every part of the fence as good as the joint, we use only high-grade genuine *Open Hearth Steel—galvanized* by the most thorough and modern process that brains and money have been able to discover—and *guarantee* Apex Fence to *satisfy*.

Let us tell you some things worth while about fence. Let us prove that Apex Fence costs less per year than any you have had. We save you money in repair cost as well as first cost. Get the best you can buy and you will be pleased. Apex is now on thousands of farms giving the best of satisfaction. Shall we send you letters to prove it?

Get All Facts Before You Buy!

Don't buy a rod of fence for *any* purpose until you get our booklet. Just tell us about how much fence and what heights you'll need, and when you expect to put it up. Also tell us at what town you buy your fencing. We'll send you our free booklet and important facts, with an interesting proposition. We may have an Apex dealer near where you can see the fence. In any case, you will be supplied with fence promptly at the right price. Address

JANESVILLE BARB WIRE COMPANY
100 South Franklin Street, Janesville, Wisconsin

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

SYMPTOMS AND TREATMENT.

HOG-TIGHT FENCE.

A Subscriber, Sac county, Iowa.—Kindly print in The Homestead how a legal hog-tight fence is made—how high, how far between posts and what size the posts should be.

Answer.—A lawful hog-tight fence must be not less than forty-eight nor more than fifty-four inches high, consisting of not less than twenty-four-inch substantial woven wire on the bottom, with three strands of barb wire on top, or eighteen-inch woven wire on the bottom and four strands of barb wire on top, or good substantial woven wire not less than forty-eight nor more than fifty-four inches high, without barb wire. Barb wire must have not less than thirty-six barbs of two points to the rod. The fence must be fastened to good substantial posts set firmly in the ground, not more than twenty feet apart. The law does not fix the exact size of the posts.

DIVIDING PARTITION FENCE.

A Subscriber, Dexter, Iowa.—A owns a quarter section of land and B owns an adjoining quarter section directly north thereof. The partition fence runs east and west. A public road runs along the east side of the two quarter sections. B thinks that the partition fence should be measured from the north and south fence along the west side of the public road, and A contends that it should be measured from the center of the road where a stone marks the half-mile line of the section. The contention makes a difference of two and one-half rods. Each party is to keep up one-half of the fence. Which is correct?

Answer.—In dividing a partition fence for construction and repairs, between adjoining owners, each party is required to make and keep in repair one-half of the actual fence. In this case the actual fence will of necessity begin at the north and south fence running along the western side of the road, and not in the center of the road. Therefore B is correct and the partition fence should be measured from the fence on the western line of road.

CORPORATION—ELECTION OF DIRECTORS.

Mr. J. W. Blackford, Hillsboro, Ill.—There is a difference of opinion upon the question of electing directors of the American Poland China Record Association, as to whether a majority vote of the stockholders is required to elect, or whether the ones receiving the highest number of votes are elected. I took the position that as no by-law of the association required a majority vote, the law of the state prevailed, which does not require a majority. Was I correct? Article 7 of the articles of incorporation provides: "The affairs of this corporation shall be managed and controlled by a board of nine directors, who shall be stockholders, and shall be elected by ballot at the stockholders' annual meeting, to serve for three years and until their successors are elected and qualified."

Answer.—You were correct.

INSPECTION OF ANIMALS—SHIPPING.

Mr. E. W. Rice, Galesburg, Ill.—I expect to move to Iowa about the first of next March and will take with me some horses, cattle and hogs. The cattle are principally calves of mixed breeding, none registered or eligible thereto. (1) Will I have to have this live stock tested? (2) Is there a limit to the number of horses, cattle and hogs to be shipped in an emigrant car?

Answer.—(1) The law does not require you to have such live stock tested. (2) No limit is fixed by law. The railroad company may have rules and regulations on the subject. The railroad station agent may give you the information you desire.

INHERITANCE—PENSION.

Mr. B. F. Hayes, No Postoffice or State.—(1) A husband and wife had no children or descendants. They took a boy to raise, but did not adopt him. The wife died and the man married again and died. Who is entitled to his estate, and does the boy get any of it? (2) The man was an old soldier. Is his widow entitled to a pension?

Answer.—(1) We assume that the man lived and died in Iowa, leaving property there. The widow is entitled to half the estate, and the other half goes to the man's father and mother, or if one be dead to the other, and if both be dead, the half goes to the heirs of the parents. The boy is not entitled to any of the estate. (2) The widow is entitled to a pension.

VOIDABLE JUDGMENT.

A Subscriber, Ruthven, Iowa.—About seventeen years ago A gave his note to B for $30, which he did not pay. Four years ago A's wife was sued on the note. She paid no attention to the matter and failed to appear. A short time ago she was sued again and a judgment was taken against a farm belonging to her mother, her father having died some years ago leaving the property to the mother during her lifetime. (1) Does the fact that A's widow did not appear in the first suit make her responsible for the note? (2) Had B a right to obtain a judgment against the farm, the owner having nothing to do with the matter?

Answer.—(1) The judgment against A's widow was probably wrongfully made, but having been rendered, it will stand good against her unless it be set aside, and she is liable thereon. She can probably have it set aside by

Grinds ear corn, wet or dry, shell corn, Kaffir corn or any kind of small grain. Also make the celebrated Ditto Sweep Grinder. Write for FREE catalogue.

G. M. DITTO, Box201, Joliet, Illinois

HANDY FARM POWER

The tireless capacity of a **Hart-Parr Oil Tractor** makes it the handiest, biggest money-earning power for every kind of traction and belt work on farms of 160 or more acres.

You can use this tractor to better advantage than 15 to 30 sturdy horses, and at far less expense. It will do your field work—plowing, discing, harrowing, seeding and harvesting—in the shortest time; hence saves you money and swells your profits.

It does not injuriously pack the soil. The drivers of generous width, equipt with wonderful wave formed lugs, prevent this.

When your field work is finished, you can use that same tractor for countless belt jobs—threshing, grinding feed, shelling, husking, etc. It will also haul your crops to market in record time.

Many shrewd farmers add to their yearly earnings by using the tractor for road construction work in spare time.

No matter what kind of work you are doing, one man can operate and care for the tractor. For fuel it uses *cheapest kerosene* at all loads. The engine is *oil cooled*—no danger from freezing in winter.

proper legal proceedings. (2) Under the circumstances stated B had no right to obtain such a judgment, but as before stated, proceedings should be brought to have it set aside. The widow needs the assistance of a good local lawyer.

LEASE—OFFER AND ACCEPTANCE.

Mr. Charles Young, Bellville, Ohio.—I am a renter on a farm. My term expired on November 1, 1912, but previous to that time I received a letter from the owner saying I could have the use of the farm for one year more. Later I received another letter from him, offering the farm for sale, and saying if he does not sell the place I can stay on it another year, as he had given his promise to that effect. I have both of said letters. The farm has been sold and I got notice on December 8, 1912, to vacate by April 1, 1913. Can I hold possession of the farm as tenant for another year?

Answer.—The whole matter depends upon whether you accepted the offer of the owner made in his first letter. If you answered his letter saying you would accept his offer, and keep the farm for another year accordingly, it constituted a contract between you and him, but if you did not do this, then there was no further contract, and you cannot in such case hold the farm for another year. Two things are necessary to make a contract—an offer by one party, and acceptance by the other party.

CURE FOR CORNS—LICENSE.

A Reader, Farmington, Iowa.—I have an efficient remedy for corns and I wish to manufacture it and put it on the market at wholesale and retail. (1) Is it necessary to put the formula on the boxes? (2) I am not a doctor. Will I have to obtain a license in order to sell the remedy either at wholesale or retail?

Answer.—(1) The law of Iowa requires every package of such a remedy to bear a statement on the label showing the name and the exact quantity or proportion of any alcohol, morphine, opium, heroin, chloroform, cannabic indica, chloral hydrate, acetanilide, or any derivative or preparation of any such substances contained therein. This statement must be plainly printed upon the outside wrapper, in type "eight point caps"—provided in case the size of the package will not permit the use of eight point caps, the size of the type may be reduced proportionately. The printing must be such as to be easily and plainly legible. (2) All persons who by any method publicly profess to treat or cure disease, injury or deformity shall pay to the treasurer of the commission of pharmacy an annual fee of $100, upon the receipt of which the secretary of the commission shall issue a license for one year from its date.

REMOVAL OF TEMPORARY IMPROVEMENTS.

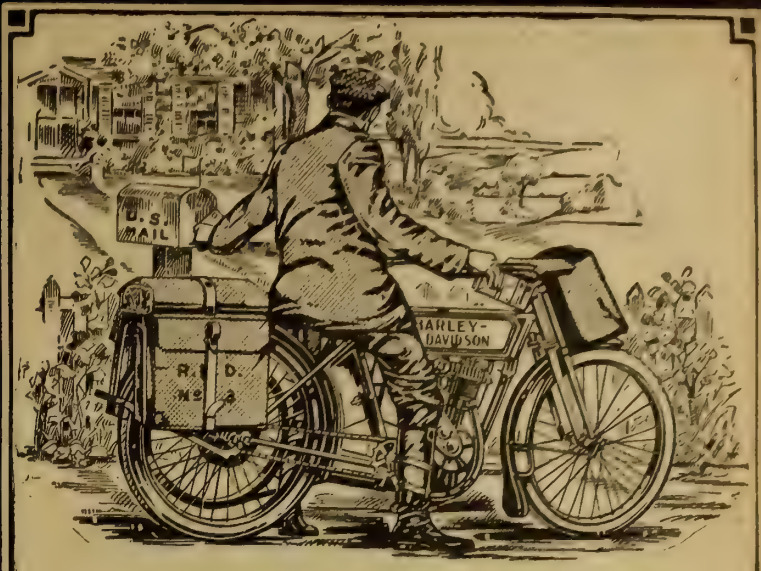
Mr. John Hyde, Rome, Iowa.—I live on a rented farm and I asked the landlord to build me a cattle barn for my milk cows. I have a lot of farm machinery and it is standing out in the weather and the landlord refuses to build a shed for it. In case I should build a cattle barn and machine shed would I have the right to remove them from the place when my term expires?

Answer.—You would have a lawful right to remove such improvements, provided you build them in a temporary manner for your own use, and in such a way that they can be moved without doing any damage to the premises, that is, leaving the place in as good condition as when you took possession as tenant. There is no certain or fixed way in which you are required to build them, only so they are not fixed to permanent foundations, so as to make their removal an injury to the place as you received it. You should remove them at or before your time as tenant expires.

DIVISION OF INSURANCE MONEY.

Mr. Avery E. Vardeman, Braddyville, Iowa.—A died in North Dakota about the last of October, 1912, leaving a $2,000 life insurance policy made payable to his mother. The mother lived in Iowa, but has been dead for several years. Her husband and all of her children are dead. A's brother had seven children, one of his sisters had six children, another sister had two children and another sister had one child. These grandchildren of A's mother are all living. How should the insurance money be divided among them?

Answer.—If the brother and sisters of A died previous to his death, the money should be equally divided among the grandchildren of A's mother, each one receiving one-sixteenth part of it.



A New Model of the Silent Gray Fellow

MORE pulling power at low speeds, more power on the hills, more reserve power for sand and mud. That was the demand our engineers set out to satisfy by building the

HARLEY-DAVIDSON "5-35"

(5 actual horse-power—35 cubic inches piston displacement). Dynamometer tests show that this motor develops 166 per cent. more power at 5 miles per hour than even the former 4 horse-power Harley-Davidson, which was the acknowledged leader in its class. 145 per cent. more power at 10 miles an hour, 80 per cent. more power at 20 miles an hour.

It will climb hills, pull through sand and over roads impassable to the average automobile. The "5-35" motor will pick up from a standing start to forty miles an hour in 300 feet. At low speeds this machine develops more power than some twin cylinder machines with higher horse power rating.

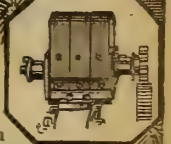
The Ful-Floteing Seat (an exclusive Harley-Davidson feature) places 14 inches of springs between the rider and the bumps. The springs absorb all jolts, jars and vibrations, making the Harley-Davidson ride as easy as the highest priced touring car.

The Free Wheel Control (another exclusive Harley-Davidson feature) is incorporated in each model this year. This device enables the rider to stop and start his machine by the mere shifting of a lever, thus doing away entirely with the tiresome pedaling and the objectionable running alongside to start.

Description of these and other features on request.

HARLEY-DAVIDSON MOTOR CO.
651 A Street **MILWAUKEE, WIS.**

A Big Hot Spark—A Quick Start



New Lauson Gear Driven Magneto is built right into the engine and entirely eliminates batteries, their expense and troubles. Won't wear out or get out of order. Throws a big, hot spark in any weather that never weakens nor fails. Can't burn igniter points.

LAUSON FROST KING
Gasoline Engines

Starts Easily.—The Frost King starts on the magneto without turning over. Requires no cranking. Positively Frost Proof.

Takes Less Fuel and oil and delivers more power because of special features and design. Replacements due to wear and breakage are all but eliminated by having the parts case-hardened or fitted with adjustments.

Perfect Balance.—Every part is accurately ground and fitted. Engine stands perfectly quiet even under full load—another proof of durability.

Satisfaction Guaranteed—or money returned. Shipped quick from all transfer points. Write for catalog stating power required and name of Lauson dealer.

1 to 100 H. P. All Types.

HINTS-SUGGESTIONS-DEVICES

AND CONDENSED LETTERS FROM CORRESPONDENTS

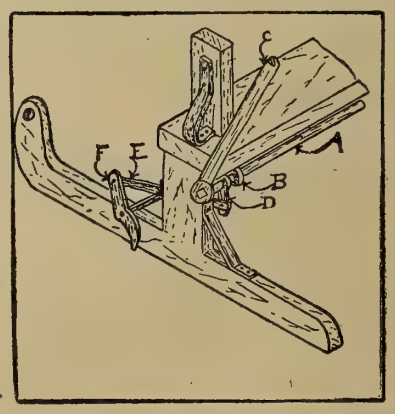
WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm or something that is connected with the home.

HANDY WATER HEATER.

Many farmers now have electric lights, and almost all of these private light plants, have in connection with them, a storage battery which will furnish from one to twenty-five lights after the engine and dynamo have been shut down. That is, the battery will furnish the lights for a certain length of time. Possibly many of the owners of these plants do not know that jar or small bucket of water may be readily heated with the ordinary sixteen or thirty-two candle power light bulb. A water-tight, and moisture-proof bulb must be used, and inserted in the vessel containing the water as shown in the accompanying illustration. A thirty-two candle power light will boil a quart or more of water in about six minutes, or will keep a larger quantity warm. Do not turn on the light, until after it has been placed in the water, as this might break the bulb. Those who have the storage plant, above mentioned, can readily heat water, milk, etc., in case of sickness, any time during the night or day.

A Sled Brake.

A sled brake can be made as shown in the accompanying illustration that will take the load from the team when descending hills. To make this brake a round bar A is fastened to the front bob with heavy eyes as shown at B. A square head should be formed on



the outer end, over which is placed the lever C, by which the brake is operated. A lug D is made fast to the bar A and drops down four or five inches with a hole in its lower end, to which is bolted the bar E, which in turn is bolted to the dog F. By pushing forward the lever C the dog F is lowered below the runner and catches in the snow or ground, thus acting as a brake.

Why Tanks Taper.

Many farmers and others, when purchasing a wooden tank, never stop to think about the taper of the tank, or why it is tapered. Many who have used tanks that have little or no taper find that the tank has shrunk and the hoops no longer do the work they were intended to do, for the reason that in order to tighten the tank they must be driven below the proper place for them. Especially is this true of the smaller tanks that have solid hoops without lugs for tightening them up with bolts. A tank, to give good service, should have plenty of taper. If not, when the hoops are driven down, the lower hoop, in many cases, will be driven entirely off the tank, and the top hoop will be so far down that the

What Low Price Means To YOU

Read what I have to offer you:

A New 1913 Model Farm Engine

—So simple a child can run it;
—So economical, it costs but a cent or two for gasoline on a big job;
—So reliable, it won't go wrong;
—So efficient, a touch starts it going;
—So durable, I give you a permanent guarantee of satisfaction;
—And so positive am I that you'll buy one if I make my price low enough, that I'm going to sell my 1913 Model.

staves will warp open and the tank will leak. Strange as it may sound, wood will not only season in water, but it will also shrink some, and for this reason, good tanks have plenty of taper. Many tank manufacturers do not give the tank its proper taper, as this decreases the capacity of the tank, and they must use more material if the tank is tapered and has the same capacity as the straight tank.

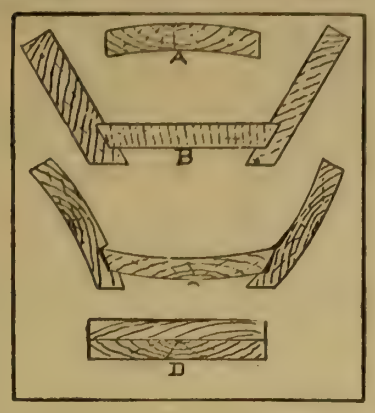
Poultry and Vegetables.

A Vernon county, Missouri, man has an idea that looks good, so much so that we herewith illustrate and describe same. The idea is one of getting the most from his poultry and vegetables, which he does in the following manner: His plot of ground consists of about five acres, which he has divided into two tracts. The entire tract, including the division fence, is fenced with poultry wire eight feet in height, with four gates. One side of his small farm is used for a garden and the opposite side for a poultry yard. After the vegetables have all been harvested and the ground plowed and planted to wheat, oats, or some grass, the poultry houses are moved over by hauling them with four horses. The poultry yard just vacated is at once prepared for the next season's vegetables. The idea, of course, is to utilize the poultry manure and provide a new and clean yard for the poultry. This man lives close to a good-sized town, and has no trouble to find a ready market for all of his poultry and garden products. The yards are used for laying stock only. The male birds are never allowed in this yard. The eggs are sized, graded for color and shape, dated and marketed in cartons holding one and two dozen, and they are nearly always spoken for in advance.

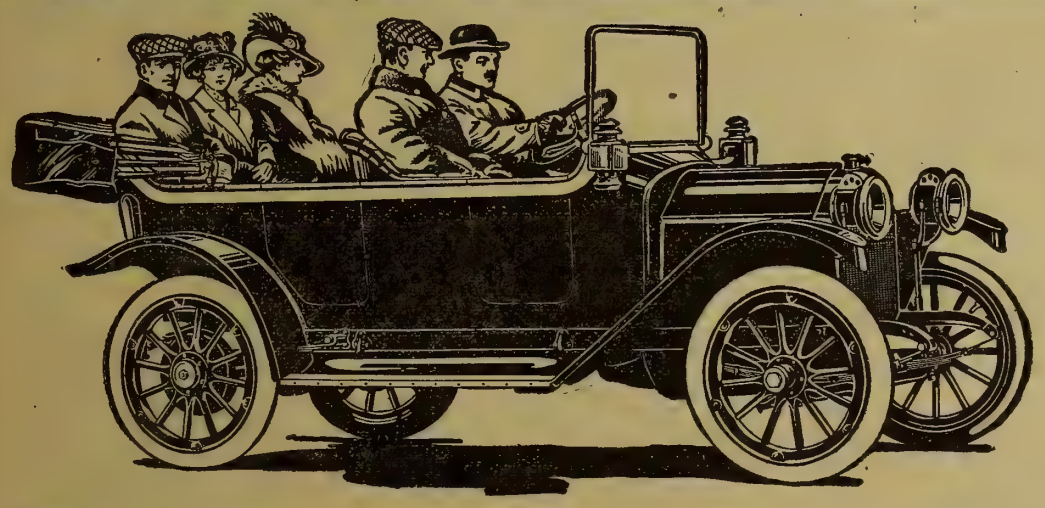
The poultry houses are well built, warm and kept in good repair. The hens for the laying yard are selected from his own flock of several hundred, well fed and well cared for, and this little five-acre tract brings greater returns than any forty acres of his 400-acre well-tilled farm. As shown in the exterior view of the houses, they are on runners, and are easily moved from one yard to the other, and as the idea involves no great expense, it looks as if many farmers who live near to large towns could go and do likewise, and enjoy an added profit. Good vegetables, as well as good poultry products, when properly crated, always bring top prices in any market.

Grain of Lumber.

A farmer was heard lately lamenting his luck in building water and other troughs. He complained that they warped and spung out of shape and soon leaked. Possibly the accompanying illustration and this short description will help many farmers in building troughs that will not leak. The warping, shrinking, etc., of lumber depends altogether on its grain,



or, that is, on how the grain runs through the board. In the illustration, A shows a board that was cut about the center of the tree, and directly through the tree. The tree being small the grain runs in a circle through the board, with a portion or all of the heart on the top or rounding side. This causes the board to not only warp, but to shrink as well. The trough shown at B was built of what is termed edge grain, or quarter-sawed lumber. As shown the grain runs nearly straight through the boards, thus we have no shrinkage except through the board, and it will not warp. Edge grain lumber will shrink in thickness, but not otherwise. In the trough shown at C we have lumber that is similar to the board shown at A and it will soon shrink and warp all out of shape. In building up timbers, where two or more pieces are nailed together, if the grains are placed in a reverse position, as shown at D, the warping of one will counteract the other, and the built-up piece will not warp and twist nearly so bad as one not so built.



$850 and $900

Fully Equipped. Special Equipment.

Nine Big Features:

1. Ball bearing throughout.
2. Long stroke, high power motor, unit power plant fully enclosed.
3. Full floating rear axle.
4. Left hand drive, center control.
5. Extraordinary braking surface.
6. Multiple disc clutch, running in oil.
7. Extra capacity tubular radiator.
8. Enclosed valves all on one side.
9. Platform rear spring.

The Detroiter—Your Car at Your Price

No longer consider an automobile a luxury. The Detroiter—the sensation of the year at $850--$900, is so low in price that it is easily within your reach. Better still, its upkeep is so small, its life is so long because of its durable construction, that you can easily afford to maintain it.

Low Cost—Low Upkeep.

No car at the present time possesses the features of the Detroiter and sells at anywhere near its price. Study the nine big features listed above and prove this statement for yourself.

In upkeep the Detroiter is remarkably economical. One gallon of gasoline=20 to 25 miles. One quart of lubricant=100 miles. With gasoline increasing in price, this remarkable economy of the Detroiter is a most timely feature—one that you will appreciate more and more. Its tires are over-size—making for economy here also.

In appearance the Detroiter is one of the handsomest cars, regardless of price.

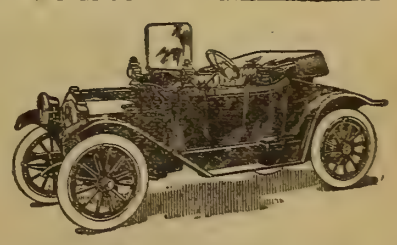
Rugged—Powerful—Durable.

Built to withstand hard usage, to travel unharmed over rough roads, through sand and mud and up steep hills—the Detroiter has met every test of service. It has ample power for every need.

Its durability—long life under severe conditions—is insured by such features as the ball bearings throughout, the full-floating rear axle, the numerous drop forgings, etc.

In short, the Detroiter is built for service—and it gives it every time.

Don't take our word for this. See the car for yourself. Write to us or to any of the following representatives. Make them prove everything we have claimed. Don't delay. Today is the best time.



Five Models—at $850 and $900—afford equipment to suit every preference. Top with side curtains and dust cover, windshield, kits, lamps, generator, horn and jack—with $850 model. In *addition*—Speedometer. Prest-o-Lite or electric outfit; quick demountable detachable rims, tire irons, etc., with $900 models.

FARMERS, IT WILL PAY YOU

to use our **FARMER'S FORGE OUTFIT** on your farm in doing blacksmithing and repairing. We have high endorsements for the thousands of Farmer's Forges sold direct to farmers within the past fifteen years in every state and Canada. Our Forges have hearths 24x26 inches, $11\frac{3}{4}$ inch blowers, run easy, and have all the first class qualities of high-priced forges.

WE POSITIVELY GUARANTEE our Farmer's Forges to be as large, as durable, do as much work and equal in every way any $10.00 forge on the market, and as represented or money refunded.

SPECIAL WINTER OFFER until March 31, 1913, we offer 1 Farmer's Forge complete $3.60 or one Farmer's Forge, one anvil and vice combined, and one pair of tongs, all for $5.40. Ten carloads on hand. Orders shipped promptly. This offer may not appear again. Write to-day. Send stamp for catalogue No. 23 and testimonials.

C. A. S. FORGE WORKS, Saranac, Mich.

VALUE OF DEEP PLOWING.

Deeper Plowing Endorsed by Practical Men, Because of Increased Yields Resulting from the Practice.

E. W. HARRIS:—I will give my experience on an old, run-down farm and the benefit which I think I derived from deep plowing. Five years ago I moved on the farm which has somewhere between forty-five and fifty acres in cultivation, twenty acres in land and the balance upland. The farm had been in cultivation seventy years when I moved on it and the bottom land had had but two years rest in that time, wheat one year and lay out one year with corn the rest of the time.

The fall I moved on the farm I bought the rent corn, forty bushels and forty-two pounds and the bottom twenty acres was in corn that year. Think of it, twenty acres of land making only 121 bushels and fifty-two pounds of corn and that of a very sorry grade! My friends told me that I could not make a living on that farm, as it was worn out, but I thought I could, so early in March of the next year I broke the bottom from seven to nine inches deep with a number nineteen Oliver chilled plow. The neighbors told me that previously the land had been broken from two to three inches deep with a small one-horse plow drawn by one horse.

The first year we had an overflow in May and my crop was almost a failure, so the next winter I broke the same ground with a small one-horse stirring plow, using two horses and plowing from eight to ten inches deep. That fall I gathered from eighteen to twenty-two bushels of corn per acre and so each year since I have broken my land from eight to ten inches deep and am gathering from twenty-two to twenty-five bushels of corn per acre. I have brought this land up from five or six bushels per acre to twenty and twenty-five bushels per acre and I am convinced that deep plowing did it, for I have put no manure on this bottom land, spreading all the manure I could get on the upland. I have also plowed the upland from six to eight inches deep and have brought it up to produce double what it did when I moved on the farm.

I am a strong believer in deep plowing and I think deep plowing is better in the fall of the year for the next crop than to wait until spring. The ground should freeze and air slack. I have noticed that my corn seems to stand a drouth better than my neighbors who do not plow as deeply as I do. Ten inches of loose soil will hold a great deal of water and then it seems reasonable when this ten-inch mulch gets soaked full of water the roots will go on down into the unbroken land.

Most of my land is broken now and next spring I think I shall try an experiment. I want to rebreak my ground in the spring, in March if possible, with a long plow on single stock with two mules hitched to it, letting the small plow a little deeper than I turned the land. I think this will be all right, as it will not turn the new dirt out on top, but will loosen up the ground deeper and give the corn roots more room and a deeper mulch to hold water.

F. P. MERCER:—I wish to add my mite as to deep plowing and will start out with actual experience. I have lived in Sumner county, Kansas, for forty years and have seen our rich alluvial soil greatly impoverished by constant shallow plowing. As 90 per cent of us came here very poor and horsepower was scarce we naturally plowed shallow. We were able to produce abundant crops of wheat, but times have changed and our land has failed to come up to our expectations. We have simply gotten into this old rut and cannot pull out of it and keep up our general acreage.

I have tried deep plowing and find we can renew our farms. Three years ago I put six horses to a two-disk plow of standard make and plowed a piece of land ten inches deep This field was distinguishable at a distance by the black green wheat, rye or corn that was growing on it and at harvest time it more than doubled my adjoining land. I have now decided to put in less acreage by half and plow my land in the fall, say in October or November before any freeze comes. This for two reasons: First, because my teams are rested and in good condition and the weather is fine; and second, then the wheat pests will all be turned up from their winter quarters and the consequences are that the soil will not contain a living thing.

Early in the spring I will disk and cross disk this deep-plowed land. This will produce a seed bed for corn that will make the corn stay green through most any hot, dry period.

I have made inquiry of a firm that manufactures a deep-tilling machine and I think I shall buy one for my

A Furnace Guaranteed to Heat Every Room to 70 Degrees in Even the Coldest Weather!

THE one furnace on the market today that is absolutely *guaranteed* to make good—the one that is guaranteed to give better, steadier, cleaner and *healthier* heat—perfectly moist. It's the greatest *saver* of fuel bills in the world. Has big water reservoir, holding 15 gallons or more—this means moist air *all the time.* Has large firepot, big fire, slow combustion, every particle of heat is used—this *saves* fuel. Patent Heat Retainer saves fuel. Big air chamber saves fuel. Down draft radiator saves fuel. These are only a few of the practical points of construction in the

Campbell Guaranteed Winter Chaser Furnace

—that make it *a money saver.* It will outlast any other furnace made. Heavy steel plate is the kind used to make it so doubly durable. This Winter Chaser Furnace has been in many homes for more than 25 years. And the happy owners are still getting perfect moist heat even during coldest weather. It can't freeze and burst—it burns anything—you always have warm floors—it makes *cleanest* heat—all registers in the right place. It's first cost is within *your* reach.

Termaat & Monahan Co.
12 S. River St.
Oshkosh, Wis.

own use. These machines will go down to a depth of twenty inches, but they can be pulled by four good horses and regulated to a depth of ten inches. When this deep-plowed land is replowed there will be practically no bottom to it, as it has so filled up with moisture that it has no hard bottom to the furrow.

I have 320 acres of land of my own and for the last twenty-three years have had 320 additional acres leased, but I have turned this leased land over to my neighbors and intend to make a garden of Eden out of my half section. I shall make it my life's aim to plow deeper and do less than I have heretofore, that is, farm less acres, and by the aid of two large silos which I have on my farm and a good manure spreader I intend to get out of this aforesaid old rut.

FRED DEWEY:—In regard to deep plowing, I don't know as I know anything worth mentioning, but I am certainly in favor of it. I know that it is harder on horse flesh and takes longer to plow a given amount of ground. I will say here that it sounds good to hear of a man plowing 3½ to 4 acres a day with a 16-inch plow or 6 or 7 acres with a gang plow. I have used as good horses as any man, but cannot plow that amount. I can if I skim thereabouts, but I call anything under five inches beginning to skim, especially four inches. I never aim to plow under six inches. We all know how the majority of the farm renters skim over everything.

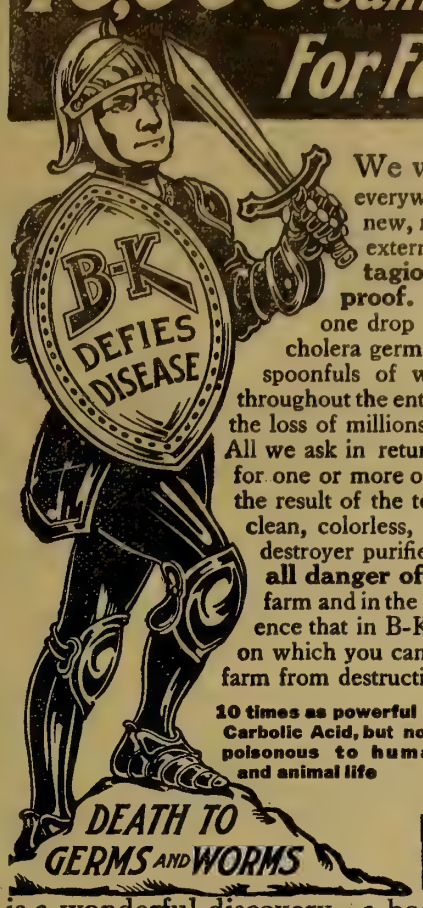
I am living on a farm now that had been rented for a long time and not much change from corn had been made. I moved here three years ago. Most of the ground had been listed the same way every year. Most of the soil is black loam with particles of sand shining in it when plowed in the spring. I bought the corn in the field when I bought the place and it would scarcely make fifteen bushels. The first year I plowed about six or seven inches deep in the spring and it was so lumpy I had to disk and slab before I could plant. I raised about thirty-five bushels per acre. I drilled this corn with a John Deere planter. The second year I plowed beam deep or so the end of beam would hit a good deal, but it was not so cloddy. I check rowed, but did not get a good stand, about thirty bushels per acre.

This year I double listed deep and it was so loose that my shovels would not scour. It is making forty to forty-five bushels on pieces that I have not changed to small grain. I contend that by deep stirring the water capillaries are broken and that stops the water from evaporating so fast. Also that in case of a heavy rain the deep plowing will absorb more rainfall and not wash away so badly. It will perhaps stay soft a day or two longer than shallow plowing. This plowing was all done in the spring. A year ago through all those hot winds and dry weather there was plenty of moist dirt a couple of inches deep and my corn hardly wilted any day. Neighbors remarked about its being so black and green. Now deep plowing may not have had anything to do with it; and it might have been the same with four or five-inch plowing, but I don't think so. I try to stir deep for any crop and work it good before planting, then I leave it to the elements and the Almighty for the outcome. I always cultivate deep, deeper a good deal than my diamonds every time.

JOHN KLINGELE:—In my opinion plowing should always be deep, as shallow plowing is of no use at all on our flat, hard-pan land, though one must be governed by the time of year or crop to be planted. Deep plowing should be done in the fall so that the freezing in winter will dissolve the dirt that might never have been plowed. This is important, for we know that roots will do best in rightly packed dirt. They do not easily pass a vacancy or thrash, never water. One can work two or three days sooner on packed ground than on loose. Spring plowing will hold moisture better than fall plowing, but fall plowing works up a much better surface and being winter packed counterbalances this. It will pay every corn grower to do some fall plowing.

Pasture or meadow land is much

10,000 Large Sample BOTTLES FREE For Farmers to Test



We want to put into the hands of farmers everywhere a large FREE bottle of **B-K** (Bacili-Kil) the new, non-poisonous, powerful disinfectant and disease exterminator which will enable you to **fight off contagious diseases and keep your farm disease-proof.** This new discovery is so powerful in action that one drop in five tablespoonfuls of water destroys the hog cholera germ instantly. One drop in four and one-half tablespoonfuls of water destroys the dysentery germ—and so on throughout the entire list of contagious diseases which cause farmers the loss of millions of dollars every year.

All we ask in return is that you use **B-K** according to directions, for one or more of the purposes named at the right, and write us the result of the test. We want you to see for yourself how this clean, colorless, odorless, non-poisonous disinfectant and germ destroyer purifies, sterilizes, destroys foul odors and **removes all danger of loss from contagious diseases**—both on the farm and in the home. We want you to know from actual experience that in B-K you have always at hand a powerful weapon on which you can safely rely to protect your home, family and farm from destructive diseases.

10 times as powerful as Carbolic Acid, but non-poisonous to human and animal life

B-K Bacili-Kil

Destroys Germs, Removes Odors, Disinfects, Prevents Disease.

is a wonderful discovery—a boon to mankind—especially to farmers and stock raisers. It not only quickly destroys all forms of disease-breeding germs, but also rids your farm animals of those thieving parasites such as worms, etc., which retard their growth and so frequently cause disease and death.

Here are two reports of actual tests, selected at random from our files, showing the remarkable power of B-K over two of the most stubborn and destructive of all disease germs. You know that no more severe test could be given any preparation. What further proof is needed of the remarkable efficiency of **B-K?**

"On receipt of your five gallons of Bacili-Kil and instructions for using the same, we proceeded to treat a herd of forty cows which had suffered from Contagious Abortion for some time. We had lost seven calves and there were a number of cows due to freshen the following five months. Since using Bacili-Kil we have not had the slightest trouble, our calves have been born alive and normally. We are pleased to say that Bacili-Kil cleaned our stable when other things had failed."
A. S. H., New Lebanon Centre, N. Y.

"We are surprised and gratified to be able to report so soon that our herd of hogs which were badly afflicted and dying with Swine Plague are completely recovered, through the use of your Bacili-Kil Sterilizing Method. You certainly understand your business. We congratulate the breeders of this country that you are able to do such thorough work in stamping out diseases of live stock. We feel that our investment in hogs is now safe."
K. J. S., Delavan, Wis.

What This Free Sample Will Do for You

It will quickly destroy the stubborn disease germs.
It will rid your stock of worms.
It will protect yourself and family from the virulent germs of diphtheria, typhoid, scarlet fever, tuberculosis, malaria, etc., by destroying all germs of such disease with which it comes in contact.
It will quickly remove all foul odors in cream separators, milk cans, pails, garbage, swill barrels, cuspidors, sewerage, lavatories, outbuildings, etc., and is highly recommended for washing cows udders and tails to prevent the spread of disease and the development of bacteria.
It will do more, do it better, go farther and cost less than any other known disinfectant and germ destroyer. We are ready to prove all this at our risk. We offer you this unusual opportunity to test B-K. Send no money. Simply fill out the coupon—mail it at once and get this large bottle absolutely free. Send today.

CLUB RAISERS WANTED

I want a local subscription representative in each town in Iowa, Illinois and Nebraska, where I do not have a solicitor at present, to take subscriptions for The Homestead during the winter months. An energetic person can make excellent money working for me.

A Justice of Peace and farmer made $347.00 during December, January, February and March last year with practically no effort on his part. Just as he happened to meet his friends he asked them to subscribe.

An old soldier has earned $386.00 in the last year and has not been away from his blacksmith shop to solicit subscriptions.

A lady who had sold extracts all her life took up our work last winter and has made over $300.00 this year without leaving her home town.

It requires no particular ability to become a subscription representative. There is no reason why you should not make from $300.00 to $600.00 this winter, looking after my subscription interests in your locality.

If you prefer premiums to cash commissions, write us for a list of the nice presents we can make you for raising a club in your neighborhood. We have everything useful to give away from egg beaters to sewing machines and gold watches. Address

James M. Pierce, Publisher Homestead, Des Moines, Ia.

better if deep fall plowed and our experience is that this kind of land, if well plowed, will do as well as far as tillage is concerned for three or four crops and perhaps better if shallow plowed. We find on our level, hardpan land that deep fall plowing is best for corn, then we plow shallow or disk thoroughly for corn or oats for two or three years, as the case might be, and then plow oats land in July or August for wheat, plowing three to four inches deep, using one and one-fourth bushels of seed and 125 pounds of bone meal to the acre. We find this a better rotation than only corn and oats.

Farming is gambling with the season and plowing is gambling on the weather, but we often do things and don't know the reason why and it seems strange that as far as cropping is concerned the hit-or-miss farmer does about as well as any. However, this is not the case in the other lines of work that must be performed on the farm.

Iowa Beef Cattle Industry.

THE beef cattle industry of the state of Iowa was the subject of extended discussion at the hands of farmers and members of the Iowa Beef Producers' Association at a meeting held at Ames on the evening of January 7th. Prominent among those who took part was Chas. Escher, president of the association. Mr. Escher started out to account for the present shortage of beef cattle in Iowa by saying that some six or seven years ago everybody got the land fever and, in order to make payments on land, sacrificed their cattle stock. The shortage was caused in the range countries by the action of homesteaders and land seekers in settling up the range country to a great degree and turning it to agricultural purposes. The result was that the great steer producing herds that had previously been a prominent source of supply for Iowa feeders were forced out of existence. He believed that the clamor of laboring people for lower priced meat products had created a demand for butcher stock and been the means of restricting the prices on the more valuable beef cattle.

The purpose of the Iowa Beef Producers' Association is to educate farmers to realize the need of better cattle, to convince them that the use of better sires of pure breeds is essential in the promotion of the beef-producing industry. Cattle raising is an essential department of farm operation. Without cattle, the fertility of the soil cannot be maintained, nor can the products of the farm be utilized so advantageously. There is no farm in Iowa that would not be the better because of a well-proportioned equipment of cattle, none which would not suffer from the absence of cattle. The products of the farm, that is, its grains and grasses, should be sent to market in the finished form of live stock, and only by the employment of those breeds especially adapted to the purpose can the greatest profits be obtained. An estimate is made with the present supply of breeding animals it would take seven years to bring the number of cattle in this country up to a normal condition in keeping with the population and the demand.

The experience of the Escher herd was drawn upon to illustrate some of the more important facts connected with beef producing. A number of years ago the Escher herd contained something like 200 head of pure-bred cows. While these had been gathered together for the purpose of maintaining the herd from which to select breeding cattle, the opportunities for the production of high-class beef appealed to the owners to such an extent that they entered heartily into that plan. Their more prominent efforts were in the growing and finishing of show cattle in car lots. In the beginning, while they produced and put into the show rings animals of the highest order of excellence and fitted to a nicety, they had failed to meet with a proper appreciation because of their advanced ages. The cattle were too big, as the market demanded the so-called baby beef. Profiting by the lessons of the first two or three years, they turned their attention to finishing steers at eighteen and twenty months and there they succeeded in sending into the show rings cattle of phenomenal merit which were recognized and awarded in the most liberal manner. In a few words descriptive of the manner of growing these young cattle, Mr. Escher said that care should be begun before the calf was weaned. In his own operations he built a calf creep through which the little fellows could have access to a trough of grain which the cows could not reach. They early learned to eat and by this manner of treatment they reached a weight of from 500 to 600 pounds in the fall. Mr. Escher carries a curry comb instead of a comb, believing that kindness has its effect where roughness has a deteriorating influence. He talked to some effect on the need of utilizing the entire corn crop, either in the form of shredded fodder or in the silo or, still better, in both.

Rex Beresford, who is manager of the Iowa Beef Producers' Association, and in whose hands rests, in a large degree, the necessary exploiting and cultivation of the beef cattle industry, presented some figures of remarkable

A STREAK OF GOLD

FREE "The greatest dollar buying piece of literature ever penned by man." So write my farmer friends who have read my latest book. Have you read it? If you haven't you are missing a *golden treat*. Yes, I mean it, for "A Streak of Gold" will show you how you can coin real *gold dollars* from your manure pile. It's written from the net results of America's greatest soil experts—and the experience of thousands of farmers. Mail me a postal or letter today for *your* copy—*free* and get my offer for you to prove how you can have bigger crops next year.

Monmouth Tongueless Disc

No tongue to worry the life out of your horses—no neck weight—no side draft—and that means better work because your horses work *in comfort*. The Monmouth has the greatest Disc Blades ever made—better material, better temper. It's what we call "125-point Carbon"—very tough and hard—takes a splendid polish and holds a thin edge. Cuts like a finely tempered knife blade. Penetrates hardest ground—pulverizes lumps and cuts sod in a way that will do you good to see.

The Monmouth has a *steel frame* with Wood Cushion. The Main Cross Piece is Heavy Angle Steel—side braces are Stiff High Carbon Steel. Square timber through the center acts as a Cushion between side braces—gives it a bit of flexibility—keeps frame from buckling under heavy strain—prevents springing out of shape. Many other features all told about in my new book. Hard Maple, Oil-Soaked Bearings easily lubricated. Forward Trucks make it as easily turned around as a plow. Scrapers held by Coil Spring in just right position to prevent clogging—occasional foot pressure cleans discs in stickiest soil. Furnished with Transport Trucks, Cutaway Discs, Plow Cut Discs—in all sizes.

No neck weight—no side draft. Discs that are *sharp* and *stay* sharp. Wood Cushion that keeps bolts from shearing—prevents frame from springing. Many other features all told about in free book—and the best bargain-price ever made on any disc that approaches the Monmouth Quality.

Just Send Me a Postal Card Now

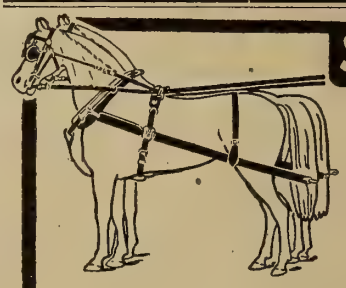
Dust-tight Hard Maple Bearings

Factory, 615 S. Main St., Monmouth, Ill.



SAVE 25 TO 50% ON HARNESS $25.00 FREIGHT PREPAID

For $25.00 we offer our Leader No. 53—1½ inch Team Harness set down at your railroad station. This harness, designed and made for durability and service is the biggest bargain we have to offer. While the price is exceptionally low for a harness of this nature, quality has not been sacrificed on that account. But, "after quality, it's the price that counts." In the harness here illustrated only the very best grade of Oak Tanned Leather has been used in its manufacture and our money-back guarantee stands behind every sale.

We issue a 100-page, completely illustrated catalog, jammed full of just such bargains as shown in the illustration.

Just drop us a card and we will send you by return mail one of these handsome books. We manufacture all our own harness in our spacious factory at Waterloo. This alone accounts for the rock bottom prices we quote—no jobber, salesmen, agents or brokers to split up the profit—just the manufacturing cost with one small profit added. This accounts for the fact that we are absolutely the largest manufacturers of harness and leather goods, selling direct from factory to user.

A comparison of quality and prices will surprise you. Write today to

WESTERN HARNESS & SUPPLY CO., 613 Main Street, WATERLOO, IOWA

import He stated that in 1900 the cattle supply of the country included 50,500,000 head while the population was 76,000,000 In 1912 the cattle products had fallen to 37,250,000 head while the population had increased to $95,000,000 This showed an increase of 25 per cent in the population or the country and a decrease of more than 28 per cent in the number of cattle. In 1900 the proportion of beef cattle to people was one to 1:5; in 1910 one to 2.2; in 1912 one to 2.5. Speaking of Iowa specifically, he showed that in 1900 Iowa had 3,940,000 cattle; in 1910, 3,041,000; in 1912, 2,773,000, or a loss of 29 per cent Referring to other states, he noted that the cattle loss in Kansas was 50 per cent in the Dakotas from 60 to 70 per cent, with similar losses in many other states. The inability of the ranges to produce feeding cattle in any numbers, he said, must compel the farmers to raise their own feeders. In his promotion work, Mr. Beresford had visited ninety-seven men who had already embarked upon the work of raising their own beef cattle. Some of the information he obtained was of particular interest. On twenty-four farms 816 head of cattle had been brought to an average weight of 832 pounds at an avarage age of fourteen and a half months. These had been sold at $69 per head, which was a profit of $7 each, the cost having been figured at $62 per head The basis on which this cost was estimated was corn at sixty cents per bushel, cottonseed meal at thirty dollars per ton, silage at four dollars per ton clover hay at fifteen dollars per ton and pasture at a dollar and fifty cents per month. On this basis he argued that corn, which is now sold at thirty-five cents per bushel, would, if fed to good beef animals, net a selling price of one dollar per bushel. This year, with a greater quantity of corn than ever before, the value is less because of the lack of cattle to which to feed it. As a means of presenting an idea of the value of cattle on the farm, he stated that from statistics collected from nine different farms it had been found that on the cattle farms the yield of corn was fifty-two bushels per acre and on the grain farms thirty-eight bushels per acre, while the average for Iowa was thirty-six bushels. By the use of corn silage and proper pasture methods he believed it easily possible to maintain a proportion of one animal per acre on any farm.

Geo. H. Burge, presented some interesting figures and arguments. From his vicinity, he stated that recently two cars of calves, composed of fifty-five head, had been collected by a shipper. Farmers, when questioned as to the advisability of selling their cattle at these ages, stated that they could not afford to keep the calves. Mr. Burge believed that it is almost a crime to sell good cows. He referred briefly to the proposed law regulating the selling of female stock. It is a duty of the farmer, he said, to raise beef cattle. The farmer has a moral responsibility to produce a sufficient supply of meat-producing animals. The beef-raising section is a small one in which Iowa occupied a prominent position and in which it held a proportionate responsibility. People, he said, cannot afford not to raise cattle. The scarcity in supply is apparent. Farm values are bound to increase, while labor is scarce. Better live stock, better farm machinery and better education along lines necessary to the production of cattle must necessarily follow if the farmer of Iowa perform his duty and gain the profit which is due him.

Speaking on the subject of "Corn and Cattle," Professor Curtiss stated that there was not sufficient stock in the country to eat the feed. This was due not only to cattle shortage, but also to the extraordinary losses of hogs due to cholera during the past season. Agricultural conditions he believed to be out of balance and that live stock must be increased in order to maintain the fertility of the farm and to re-establish the proper balance. There should be more cattle and more corn, as the two necessarily go together. Statistics prove that Iowa ranks first in products because of the prominence of its live stock industry. The professor referred to the economy sometimes advocated of an all grain and vegetable diet for humanity. He believed that men and women, fed well, must depend on the beef diet for strength and vitality. He believed that much of the welfare of humanity depends upon the concentrated, vitalizing meat and dairy products. He believed that producing people was the business of the world and that industries which forwarded that object should be considered of greatest importance and that the live stock industry leads among all these. We should maintain our agriculture. We should leave our lands better than they were when we got them. We can do so only through the use of live stock.

MIDWINTER WITH SHEEP.

To the Editor of The Homestead:

We have learned that if we can get our sheep through the winter in good shape they will be pretty apt to do well all the rest of the year. Sheep that come out in spring skin poor are surely under a great handicap. They cannot be expected to produce as good lambs, nor are they capable of bearing as good fleeces of wool. This cuts down the profit for the year very materially.

In the first place, then, we like to give our sheep a good place to stay, a place where they will not be worried by other stock or molested by dogs if we can. This does not mean necessarily that the barn shall be warm all the time. Sheep are naturally warm blooded animals and their fleeces protect them from the cold, but they do need a shelter from cold storms and raw winds, as well as a good clean place to lie and clean troughs to take their grain and other feed from.

And then the feed makes a lot of difference. Clear timothy hay is about as bad feed as we can give sheep. It is constipating and constipation is the bane of any animal. If possible some clover ought to be given regularly. Clover is the best all-round grass feed that can be given. Even with clover a bit of grain is a great help. This will not need to be as heavy if we have clover as if we are depending on timothy, for clover is rich in itself. Wheat bran is a fine grain, no matter what the rough fodder may be. The same may le said of oats, which I consider one of the finest all-round grains for sheep that we have.

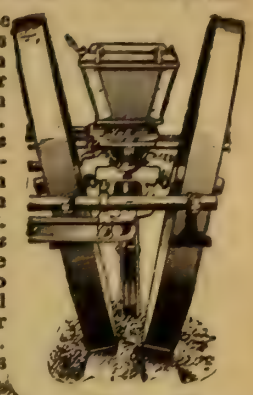
Watch sheep while they are eating roots in winter and you will at once conclude that these are highly necessary to the well being of these animals. Anything they enjoy as they do turnips, for instance, must surely be good for them. But we have learned that it is impossible to keep sheep in good physical condition and yard them too closely. They need exercise, not once in awhile, but every day. This keeps the blood stirring, the bowels in better condition and the general health good. These things will almost certainly have the effect of bringing us some good lambs in the spring and make it reasonably sure that the sheep will come through well and thrifty, ready for the work of another year. E. L. Vincent.

Get Your Corn In ON TIME

Thousands upon thousands of corn growers lose heavily every year from *delayed* planting. Just as soon as your fields are in proper planting condition you can *rush* work with the **Hayes.** Permits earlier and faster planting, forces quicker and surer growth —important factors in the success of the corn crop.

Hayes Four-Wheels *cover where all ordinary open wheels fail.* They open at the top and clean themselves. Guaranteed not to clog or carry the corn over, even in wet and sticky soil. Insures a stand even in low wet spots of field and *allows earlier planting.*

Hayes Four-Wheels guarantee *surer germination* and *quicker growth.* Wheels pack the dirt from the sides to hold the moisture and leave a ridge on top so that corn sprouts quickly and comes up several days sooner. The ridge gives greater surface for sun's heat and prevents washouts in hilly fields. This method *assists the budding sprout,* protects its vitality and makes stronger and healthier stalks.



GUARD Against Loss From Uneven Planting

Uneven depth of planting means a bigger loss than many realize. It's *especially bad* in cold, backward seasons. Often amounts to several times the cost of a planter in a single year. Avoid a planter that covers part of the corn so deep that no matter how good the seed or how rich the soil *many of the hills never come up*—or leaves other hills uncovered so that the sun and wind *destroy or stunt their growth.*

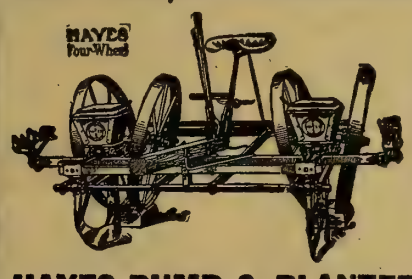
Hayes Four-Wheels regulate depth of planting to the fraction of an inch—this planter plants every kernel *exactly the same depth.* Here's why: Runners set back between the wheels, within 10 inches of the covering point. In going over ridges, dead furrows or uneven ground the shoe *rises* and *falls* with the wheels. **Hayes** planted corn all comes up at the same time, (proof of even depth of planting) and *allows earlier cultivation.*

THIS Planter Never Misses A Hill

The **Hayes** Drop *never fails.* It is the simplest, most durable and most efficient ever made. Fewer parts, less breakages and delays. Has no clutch to miss and give trouble. *Never cracks or grinds the seed.* Will drop accurately any size or shape kernel. *No bare spots* in **Hayes** planted fields. Increased yields soon pay for it.

No matter how fast you drive, the **Hayes** *always plants in perfect check.* Cross rows straighter than the way you drive. Easiest handled planter. Also shortest coupled, making it the *lightest draft,* and turns in *shortest space.* For these reasons you can plant from *three to five more acres a day* with the **Hayes** and get your corn *in earlier.*

OVER 160,000 Satisfied Users Know



In our Free Booklet of Planter Facts, we make it clear to you why the profits of one season—the time and trouble saved—the increased yield—will more than pay for a new **Hayes.** Think these things over and start investigating *NOW.* Learn the overwhelming advantages in **Hayes** Four-Wheel construction. Take time to find out all the facts before you make your choice. *Ask any* **Hayes** *user.*

Can be furnished with perfect working Fertilizer and Cow Pea Attachments, also Stub Runners or Discs if preferred.

WRITE! Begin investigating today by sending for Free Booklet "P" full of valuable planter facts. A postal brings it.

The Chance to Save the Dollar

It is right here. Your seed is right, your cultivation is right, and the weather is right for a bumper crop; but if the manure or fertilizer is not right you stand to lose the bumper crop even if you do succeed in making a small one. When you want a big crop, (and most farmers do) it is up to you to feed for it, because your soil does not contain enough **available** plant food. That is where

EMPIRE FERTILIZERS

do their work. They supply to growing crops in available form the plant food elements required which in connection with good seed, cultivation and weather and the plant food supplied by the soil and air, are producing good crops of profitable size and quality. Farmers depend upon them as upon other old friends, and have done so for years.

Agents wanted where we have none. Address early for prices and terms,

EMPIRE CARBON WORKS

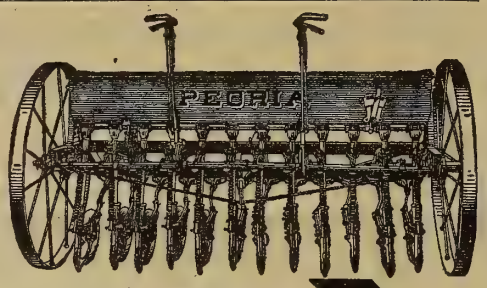
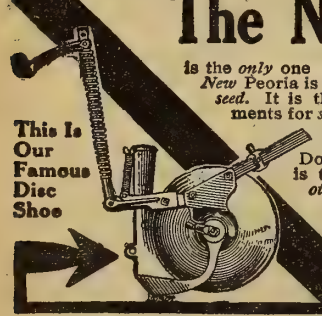
The Only Drill With a Perfect Furrow Opener



Here's the drill that will greatly increase *your* crops and profits, just as it has done for hundreds of *other* progressive farmers. It is equipped with our wonderful DISC SHOE FURROW OPENER, the *only* one that combines *every* advantage of the *single disc* for cutting trash and penetrating hard ground, with every advantage of the *shoe*, for forming the furrow and depositing the grain. It's the only furrow opener that *packs* the seed bed after the *disc* has *opened* the furrow. The *shoe* carries the seed to the *bottom* of the *packed furrow*. Every seed counts. Every seed is sown at a proper, *even* depth. So *every stalk* comes up and ripens *evenly* and the grain *grades* up best. The shoe prevents any dirt from falling into the furrow until *after* the seed is deposited.

The New Peoria Drill—



is the *only* one equipped with this *Disc Shoe Furrow Opener*. So the *New* Peoria is the drill that is sure to *increase* your *crops* and *save* your *seed*. It is the drill that insures *every* seed the three *essential* requirements for *successfully* growing small grain—Heat, Air and Moisture. Even if you have a new drill of some other make, it will pay you well to discard it and buy a New Peoria. Do not think that the wonderful Disc Shoe Furrow Opener is the *only* advantage of the New Peoria Drill. Every *other* part is just as superior. Let us *prove* it. Let us send you a *booklet* and all the *facts* and *figures*, also opinions of *men who know*. Send your name and address on a postal *now*. It's worth money for you to know all the details.

SUCCESSFUL GRAPE CULTURE.

To the Editor of The Homestead:

Every farmer should grow grapes, at least enough for family use. And let this family supply be a large one for purely economical reasons. There is no fruit more universally loved and relished than the grape. For one meal a day it is very nearly a balanced ration. With the exception of the apple there is no fruit which goes so far in lowering the meat and other food bills for a family. Many people believe that they cannot be grown successfully in the rigid climate of Wisconsin, but the success which many of us have had proves this theory to be false. The most important thing in growing grapes in cold climates is the selection of varieties. There are several very good varieties which will prove a success in a cold climate if soil, cultivation and other things are as they should be.

Niagara is among the very best varieties, as it bears profusely hugh bunches of very large grapes. This grape has just a hint of the wild in its flavor, but not enough to spoil it, in my notion just enough to make it good. We do not, as a rule, get a correct idea of this grape from those upon the market, for they are seldom sufficiently ripened. For home use allow them to remain on the vine until dead ripe and note the difference. The Niagara is perhaps the most desirable grape for the farmer to grow, but it requires a fertile soil and good cultivation. In winter it needs a little protection easily given by detaching from its support and spreading upon the ground and covering with straw or leaves.

Moore's Early is a very good black grape which ripens very early, before there is danger of frost, and bears very heavily. This grape is capable of standing a great deal of neglect and is a very good grape for common culture.

Worden is an immense bearer and ripens the last of September before we have any hard frosts. There is no purpose to which grapes are put that the Worden will not successfully fill. If pruned and thinned it is a very large grape of superior quality. It has one objection, which is a thin, tender skin, which makes its shipping and keeping qualities poor. For home and immediate use it is an excellent grape. Aside from their other fine qualities the three above-mentioned varieties are especially desirable, because they are self-pollenizers. One fine point about the Worden is that it is sweet and delicious as soon as it turns black. The Concord is like the Worden in very many ways, but is sour for quite a while after turning black.

Brighton is a delicious red grape worthy to rank with the above, but it loses its rich flavor soon after ripening and lacks the power of self-pollenizing.

Herbert is a very hardy variety of black grapes. It is a late ripener, but its hardy characteristics usually enable the grapes to ripen without frost damage. Nectar is another black grape of high quality if it can be coaxed to live, but has a habit of dying when there is apparently no cause.

Other good grapes for this latitude are: Concord, Moore's Diamond, Lidley, Hayes and Delaware.

Taken as a whole, grapes are not very particular about soil and exposure, but do best on high, well-drained soil. They are good feeders, but this can be supplied by manure, ashes, lawn clippings and the like. Both spring and fall are good seasons for setting out vines. If done in the spring they should be set out as soon as the frost leaves the ground. Vines do best if planted eight feet apart each way and set deep, a little deeper even than they stood in the nursery. Roots should be trimmed until not more than seven or eight inches long. The main thing the first year is to make growth and get the vine well established. No pruning or nipping should be done. Many prefer to start with two-year-old vines, but to my notion one-year vines are just as good. I prefer to train the vines on a trellis

Hitch to a FOSSTON For Bigger Profits

The very best thing you can do now—today—if you want to raise *more* and *better* wheat, barley, oats, corn, rye, or any crop—is to write me a postal card or letter telling me to ship you—for 30 Days' Free Trial—at no expense to you for freight either way—no obligation to buy if not satisfied—this great

Fosston Automatic Combination Grain Cleaner and Corn Grader

The FOSSTON is perfectly built—simple and strong; has exclusive features; grades, cleans and separates grains accurately for the big crops that good grain produces. *Hitch to a FOSSTON!* Tie up with it now—for a 30-day free trial anyhow! HENRY FIELD SEED CO.,
Box 25 Shenandoah, Iowa.

of three wires in the form of a T. The fall is the best time for pruning, as the wounds are well healed by spring. It is best to remove at least half of the previous year's wood. Grapes should be thinned severely after the fruit forms, for if left to themselves they will overbear. When this is allowed the bunches do not develop to their best size and are late in ripening and do not ripen as well. If well cared for vines will be bearing full crops by the fall of the third year. Rot will give trouble unless hindered. To prevent, spray with a strong Bordeaux mixture. People who have but few vines and no spraying outfit sometimes prevent trouble from this source by enclosing each bunch with a sack. This also protects against loss by birds. These bags in order to be effective should be placed upon the bunches just after the vines are through blooming and the fruit is beginning to form. They will do no good if the spores of the rot fungi get upon the fruit before they are used.

No fruit will give any more satisfaction or better results for the trouble and money expended than grapes.

Wisconsin. C. J. Griffing.

MAKING HOTBEDS AND COLD FRAMES PROFITABLE.

To the Editor of The Homestead:

The use of hotbeds and cold frames in the market garden business is not in vogue as much as it deserves to be. The large market gardeners have all realized their value, however, and are using them very extensively, in many places.

However, there are large numbers of small growers who should develop this side of the industry to a much greater extent. With the hotbed one is able to start early tomatoes, cucumbers, melons, sweet potatoes, etc., which all come on early, thereby giving him the jump on his next-door rival who neglected to start his plants early enough. Some quick-growing crop, such as radishes and lettuce, can be grown to maturity early in the spring in hotbeds.

It is not the intent in this article to treat on the making of the hotbed. Most gardeners of any experience ought to know how to build a hotbed. I find that it pays to use good plank and eighteen to twenty inches is deep enough to make the beds. This depth allows for six-inch space between the ground and the sash for growth of the crops, three or four inches of soil and eight or nine inches of good manure for heating purposes if manure is used for that purpose.

One can be none too careful in choosing and preparing the manure for the bed. The use of the manure, of course, is to furnish heat from its fermentation with which to grow the crops. The manure should be a good horse manure, which is about one-third to one-half litter or straw and quite moist, yet not wet. The manure should be piled **up and worked over** every few days in order to get it uniform before putting it into the bed.

Here in southern Illinois we start our first hotbeds in the latter part of January or the first of February. At my farm it is planned to put in one or two beds each week, which allows for a succession of crops. Right here I might say that I do not like to have the beds longer than forty feet and prefer thirty feet, as it saves considerable time later in the season when it is necessary to take the sash completely off from the beds each day.

In putting the manure into the beds I find that it pays to spend a lot of time to thoroughly tramp it. A layer should be put in, tramped down, another layer put in, thoroughly tramped down, and so on until the desired amount is in the bed. Be sure to fill and tramp the corners thoroughly.

I leave the bed in this condition for twenty-four hours before putting in my rich soil, as the manure seems to start its fermentation better.

I leave the hotbed stand, after putting in the soil, for several days in order that the soil may get warmed through and that the rate of fermentation in the manure may become more uniform. Loosen the soil well before sowing any seeds. I use a 2x4, which is cut the right length for the hotbed, by which to space my rows. I find that for most plants four inches

We've Made Good Paint for 64 Years

'Way back in 1849 this business was started by John Lucas, in a little, tumble-down gristmill. Today our business has grown until we occupy the enormous plant pictured above—the largest and best equipped paint factory in the world.

Lucas Paint Is Mixed With Experience and Brains

Experience is the only teacher in the paint business. All the constant study, research, experimenting and practical tests of 64 years are concentrated in every can of Lucas Paint. It is the best we can make—the best that **can** be made, as **proved** by our private tests and on thousands of buildings the country over.

Lucas Quality Never Wanes

Having attained the best in paints, we keep every can of paint we make absolutely up-to-standard. Our raw materials pass four searching, expert inspections. Employees of 25 to 40 years' experience at our factory oversee every step in the making of Lucas Paints. The actual work is performed by the most efficient and dependable equipment in the business. The finished paint must match our established standard exactly, in color, working qualities and weight. We never hurry, but put our best work into every can of

Lucas Paints and Varnishes

The Greater Care Put Into Lucas Paints Insures Greater Service on Your Buildings

In every can bearing the name "Lucas" you are guaranteed paint that will "act" right, cover right, protect right and be the most beautiful and economical paint you can possibly buy. The exacting care that we take to **prove** our materials, mix them perfectly and thoroughly, and then test our finished product, insures satisfaction.

Free Book

"When and How to Paint"

tells you how to judge paint and select the right kind for house, barn or other buildings. Also tells what product to buy, what kind of brush to use, how long to let the paint dry between coats, etc.—to refinish furniture, decorate walls or woodwork, to paint implements, carriages, autos, etc. Worth dollars to you. You'll always keep it handy. We'll send you a copy free, if you fill out and mail us the coupon.

Your **SPRING SEED Grain Cleaned and Graded FREE!**

1913 Model

The CHATHAM Grain Grader and Cleaner

Manson Campbell

Now that farmers everywhere are cleaning and grading their Seed Grain, the question is, how to get it done *best, easiest* and cheapest. Here's my 1913 offer

Write me a postal and I will ship you, FREIGHT PAID BY MYSELF, this improved 1913 model Chatham Grain Grader and Cleaner with all equipment. Clean your Seed Wheat, Oats, Flax, Barley, Peas, Beans, Corn, Grass Seed, etc. Then PLANT those fine seed. AFTER you have harvested a bumper crop, pay me my low price.

YOUR CHATHAM WILL HAVE MORE THAN PAID ITS ENTIRE COST in INCREASED CROPS. Then you'll have a "Chatham" to work FREE for you the rest of your life.

30 Days to Test It

I don't want you to keep my "Chatham" unless it pleases you. If, after a 30-day test, you are not satisfied, return the machine at my expense or keep it and pay me later.

A Machine That Fits Your Farm

After 40 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on *your* farm. Experience has shown that a Grain Grader and Cleaner should have special equipment for the particular farming section to which it goes. For example, I send an *entirely different equipment of screens*, riddles and gangs to Maine from what I send to California. In fact, *there are scarcely 2 states in the U. S.* to which *I send the same equipment*. Thus you get the exact and proper outfit to handle the grains and weed seed that grow on *your* farm. You *don't* have to pay for a lot of extras for which you have no use.

Extra Screens and Riddles Free

In case you want more or different screens, just write me and I will send them free. Not a penny would I ask for extra screens and riddles.

I also have a Free Service Department which will separate, clean and grade FREE any mixture you send in. If you've got some impurity in your grain that you cannot get rid of, don't get discouraged. Write me.

Handles all Small Grain and Grass Seed

My 1913 Chatham handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all sunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

Special Corn-Sorting Attachment

Last year I added a Corn-Sorting Attachment, which grades corn so that a *round* or *edge* drop planter drops the right number of grains in 98 out of every 100 hills (in repeated tests at State Agricultural Colleges). Same planters, loaded with *ungraded* corn, make only 65 out of 100 perfect hills. In two months I shipped to Iowa farmers alone 4,000 machines with Corn-Sorting Attachments. Try my Special Corn-Sorting Attachment. *It will increase your corn crop amazingly!*

Postal Brings My New Book

on Seed Selection. Every chapter is highly practical and exceedingly interesting. It shows an easy, simple way to get rid of any weed on your farm; how to separate any mixture of grains—in short, how to get perfect grain for *sowing, feeding* or *marketing*. Send postal *today* and receive by *next mail* my new Book *free*. Address Dept. BB,

MANSON CAMPBELL CO., Detroit, Mich., Kansas City, Mo., Minneapolis, Minn.

THE A. I. ROOT CO., Box 214, Medina, Ohio.

apart is sufficient, as I thin pretty well in the rows.

I like to alternate rows of early beets and early cabbage, as the cabbage will come up and can be transplanted to cold frames before the beets are very large. The rows of beets will then be eight inches apart and will come along very nicely. Their first trimmings will furnish beet greenings which will always sell well and, as soon as the beets attain a size large enough to bunch I always find a ready market for them at ten cents per bunch with three in a bunch. This is of course very profitable as beets do not require very much care. Cabbage plants can be grown between lettuce plants in the same way fairly successfully. Early cabbage plants always bring a good price with me. I have often been able to sell quite a lot at $5 per 1,000, which certainly makes them very profitable.

Growing lettuce plants to sell as well as to set out into other hotbeds or cold frames is also remunerative.

I am having very good success with starting my tomatoes in hotbeds and then transplanting them into cold frames, as I have no greenhouse in which to start them. I have to be careful to let the soil get very warm, about ninety degrees, before putting in the seed. I do not plant the seed very deep and am careful to keep the bed rather warm and uniform in temperature, damp, but not wet, until the seed comes up. Care must be taken to transplant tomato plants before they get too large, otherwise the plants will be quite materially injured and set back.

I find that it pays to sprinkle a liberal application of bone meal upon the bed and work it into the top soil just before planting the seeds.

The water question, is, I guess, the question that most people are somewhat troubled with. I water my beds thoroughly and not too often. I always try to water before noon so that the stuff will have an opportunity to dry out some before evening.

The management of a hotbed must be governed by good common sense and practical experience. One can tell how he did it one spring, but local conditions and a different season would change these methods entirely for another season. A thermometer should be placed in the hotbed and it should be looked at rather often so that the heat can be kept from running too high during the day and the plants getting scalded as a result.

Ventilation by means of raising the sash should be carefully attended to as soon as the heat gets higher than it should be or when the moisture content of the enclosed air is heavy. Raise the sash on the upper side and continue raising it through the day as the sun becomes warmer. Start closing the sash the middle of the afternoon so as to hold some of the heat from the sun.

During the early part of the season the hotbed should be covered every night with mats made of burlap, rye-straw matting, or other material to help keep in the heat. Some of the colder days it will be found necessary to keep the mats on all day, even at the expense of the sunlight. Light wooden shutters are also put on my beds during the extremely cold weather.

As for profits they vary greatly with local conditions, ability of the man and the crops. It is almost impossible to figure the profits from a bed of early tomato plants, as they are transplanted from one bed to another.

I figure upon a profit of about $3 per sash or about $30 per bed of ten sashes. This is about what I usually average, I think.

Illinois. R. B. R.

Walter Palmer, of Ottawa, Illinois, who has judged light horses at a number of the recent Wisconsin State Fairs, has been appointed a member of a committee which will select stallions and supervise the United States Government experiments in the breeding of horses for military purposes. To date thirteen stallions representing the thoroughbred, saddle, Morgan and standard bred types have been selected and will be used upon the respective government studs.

WARM SHEDS DANGEROUS FOR SHEEP.

To the Editor of The Homestead:

Sheep are perhaps the most easily wintered of any animals we keep upon the farm, as they require no pampering and do not need close confinement in warm, expensive sheds. A good roof is essential and the three closed sides should be tight enough to keep out cold, driving rains, snows and very cold winds. The south side may be left entirely open for about four feet from the ground. The cold does not matter so long as the shed is dry. In this locality all who use the cold fresh-air sheds have good luck with their sheep.

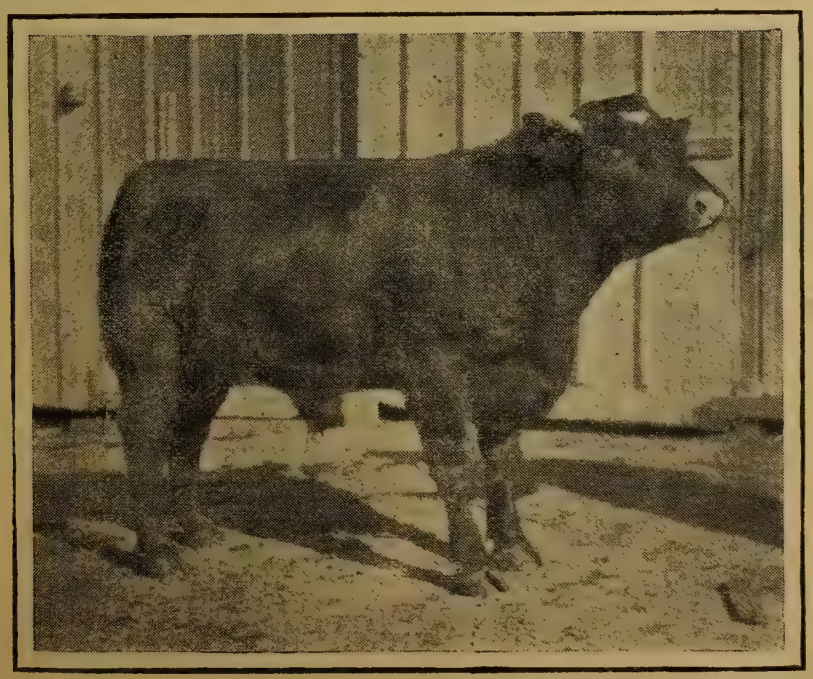
Sheep are dipped in summer and spring and ticks do not bother in winter, as the cold is unfavorable for their development. One man in our neighborhood attempted to winter his sheep in a warm stable and met with loss. Many of his sheep died and those which remained were very thin and run down at lambing time. Many of his lambs were weak and died soon after birth. Many came dead. The ticks were so bad on these sheep that he was forced to shear very early and before it is thought of by others in order to save his sheep. His object in using the warm stable was early lambs.

If early lambs are desired the ewes can be put into warm quarters at lambing time for a few days. Sheep should have free range and it is a fine thing if this can be in a brush field. Then they will pick much of their living and come out in the spring very fat and with a heavy fleece. Sheep should be kept within their sheds during cold rains and wet heavy snow storms. Moisture in the coat of fleece is very dangerous. Exposure to a cold rain is almost sure to cause catarrh. If sheep are not fed a little grain all winter and are fed up as lambing time approaches they will lose their wool badly. A little grain is best during the winter not only to keep the ewe in condition but to develop the unborn offspring. A variety of foods is not necessary as with other stock and it is well when one ration is established to stick to it. Clean hay and cornstalks make a good roughage and corn and oats with roots or ensilage daily make a good combination. Two pounds of grain daily is sufficient.

Again, plenty of exercise, with pure, cold air and ordinary feeding will produce the best of results in wintering sheep. Certainly there is no need of expensive outlays when simpler, cheaper construction will answer the purpose better. C. J. Griffing.

MARKING SHEEP.

The best and most satisfactory way of marking sheep, according to Frank Kleinheinz, shepherd of the Wisconsin College of Agriculture flocks, is by means of metal ear tags or labels. Each of these labels bears a number on one side and the breeder's initials on the other or if the breeder's name happens to be short, it is stamped on the label. Contrary to the suspicions of many flock masters, these labels do not disfigure the sheep in any way nor cause pain at any time. When properly attached to the ear by means of a suitable punch or pinchers, the labels are very seldom lost. If attached to the upper portion of the ear, the labels may be torn out by being caught in barb wire fences, etc. This difficulty, however, may be avoided by attaching the label to the lower side of the ear and fairly close to the head. To avoid bleeding, the hole for the label should be punched between the veins. Some sheepmen make the mistake of assuming that when these labels are used upon young lambs their ears are hung down throughout life on account of the excessive weight. This, however, is not the case, for at the Wisconsin Experiment Station all lambs are labeled the second day after born and Shepherd Kleinheinz has never had any difficulty from this source.



The great herd bull, Diamond Digger, at the head of the Short-horn herd owned by Chas. A. Siepicka, Tobias, Neb. See field note in this paper.

Sloan's Liniment is a necessity to the stock farmer. Can be used for all the common ailments of horses, cattle, hogs and poultry.

"I have just used your Liniment on stifle lameness and had fine results. My horse was perfectly well in a few days."—A. M. BOATWRIGHT, of North Augusta, S.C.

Governor of Georgia uses Sloan's Liniment for Hog Cholera.

Gov. Brown says that he has never lost a hog from cholera, and that his remedy has always been a tablespoonful of Sloan's Liniment in a gallon of slops, decreasing the dose as the animal improved.

SLOAN'S LINIMENT

"I had a horse sprain his shoulder by pulling, and he was so lame he could not carry foot at all. I got a bottle of your Liniment and put it on four times, and in three days he showed no lameness at all, and made a thirty mile trip besides."—WALTER B. ALDERSFORD, of La Salle, Colo., R.F.D. 1.

We Make Pastures Green in January

We have enabled more than 25,000 farmers to have just as fresh and economical feed for their stock in midwinter as they have in the springtime. We have increased the milk flow of millions of dairy cows and put tons of prime meat on an uncounted number of feeders. We have increased the net value of the crops of 25,000 farms by almost 50% and we are ready to do as much for your farm.

We make the

INDIANA SILO

with this object in mind. We build it to give the utmost silo value for the owner. We use only the most perfect silo material. We shape every stave so that it fits exactly and makes an air-tight seam. When we splice Indiana Silo staves we use our patented self-draining all-wood mortised joints, and we send out Indiana Silos so that you can assemble them without trouble and with the least possible cost.

All this means better silage for you. It means that you can feed your stock as profitably and as economically in winter as in the spring. It means more milk, more meat and more profit, with less expense, less labor and less waste.

We have 700 Indiana Silos in a single county in Ohio. We have four great factories with a capacity for making 150 Indiana Silos a day. We are the largest Silo Manufacturers in the world.

Let us build an Indiana Silo to your order now, and we will make delivery when you want it.

WRITE today for our catalogue and a free copy of the book "Silo Profits", which is the story of the Indiana Silo as written by scores of owners of Indiana Silos. And ask us for the name of our representative in your locality.

Remember you don't need cash to buy an Indiana Silo—"It buys itself."

More Facts For YOU

In the *Great Western Separator Book* Than In Any Other Catalog

You *must* get the Great Western Free Book before you choose any Cream Separator. It tells just what you want to know about the best methods of separation, how to get the most cream and butter, the highest quality products—the biggest profits. It tells and proves in plain words and by real photo-illustrations—why the Great Western Cream Separator skims closest for the *longest number of years*—why it will be easy running and as easy to clean after 10 or 20 years' use as it was on the day you bought it.

The Greatest Dollar-for-Dollar Value

That is what the Great Western Separator is. It means $12 to $15 more profit every year, from every cow, for any man who does not now own a separator. It means $5 to $10 more profit per cow every year for any man who owns any other make of separator. See the only separator that follows natural laws, cleaned in a jiffy, so no taint or odor can possibly remain to spoil next skimming, made as accurate as a fine watch, skims cold milk to a trace. The only separator that will get you *all* the profits possible from your cows and save you the hard, tedious work necessary to turn and clean other separators.

Send Your Name Now On a Postal

Our book is more than a catalog. It contains information of great importance to every farmer and dairyman. Write us a postal card for it today.

We will be glad to arrange any kind of trial you want on any size Great Western. If a personal trial in your own home doesn't prove to you all we claim, you don't pay a cent. We know it will and you will be glad of the day you wrote us. Do it now while you think of it.

ROCK ISLAND PLOW CO., 182C Second Ave. Rock Island, Ill.

GALLOWAY SAVED HIM $45.00

Read this letter sent to me from P. H. Sells, of Garwin, Iowa:

"We wore out a high-priced —— separator which is the only kind we ever had and I would not give this Galloway for a half dozen high-priced separators, and they sold me their No. 1 for $65.00 and asked me over $100.00 for the size of your No. 14, so I saved $45.00 by buying your No. 14 and think we have a better one."

I have hundreds of *other* letters to *prove* that the Galloway

Bath-In-Oil Cream Separator

is the equal of any on the market at any price, and I save you $20 to $45 *cash*. I give you 30 to 90 days' free trial to *prove quality*. "I have never found one as well constructed, as close a skimmer" is the comment of Cornelius M. Hunter, of El Reno, Okla. Theodore Casper of Dodgeville, Wis., says he "wouldn't trade it (the Galloway) for any of those high-priced separators." So, any way you look at it the Galloway takes the banner for *Quality and Price*. Send a postal today for my separator book—my special offer to 10 or more men in every township, and I will also send my big 5-color catalog of my general line, new handsome, complete, truthful, convincing—all free and postpaid. Write me today. Address

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

HANDLING DAIRY COWS.

To the Editor of The Homestead:

The dairy cow is the most highly specialized and most sensitive of all our farm animals. She has been selected, bred and developed especially with the view of securing high production. In her primitive state the cow gave milk sufficient to rear her calf. In addition to that she used up her energy in roaming the plains in search of food and drink and in fighting and fleeing from wild animals and in keeping herself warm in cold and stormy weather. Now in her great specialization we expect her largest and best energy and efforts to go to the production of milk. It is essential, then, that many of the external conditions which she met regularly in past ages and which usurped much of her energy and the components of the food which she ate shall be removed in modern farm and dairy conditions. The dairy cow has become a highly specialized, highly organized, nervous individual. Her nervous energy is directed toward the secretion of milk and not toward buffeting a furious storm or tramping forty miles for a drink of water. So far as man protects the cow from the conditions which she met in primitive times and furnishes conditions that are favorable does he succeed in furnishing proper care for his cows. In the early times the cow was of little use to man. Now she is his best servant and must be given due care and consideration in order that the best shall be gotten from her.

Among the factors to be considered in handling dairy cows for maximum production and maximum profit there is none greater than the man. Upon him depends everything. He can make or mar a cow's record. A short time ago the writer had the privilege of visiting one of the best producing practical farm herds in America. The man was found to be very well posted on dairy affairs and was a keen, open-minded, generous-hearted individual. When we went to the pasture every cow came up to be petted. Everyone of them seemed to have the most absolute confidence in their master. The cows were looked over carefully to see if any required special attention. The condition and supply of grass was noted and the flow of water and the tanks examined. The owner explained that it is through giving heed to small details that profit largely comes. Just as our great packing companies make their profit off the by-products so must a dairyman make his profit from giving all necessary attention to the smaller as well as to the larger features of care and management. Th re were thirty-five cows in that man's herd. All were in the advanced registry. All but two had been raised on the farm. Never had fancy prices been paid for high producers. Simply had consistent breeding and selection been successfully carried on until the average production of the herd was above 400 pounds of butter fat per cow and there were a number of two-year-old heifers included in that average.

That man was well-nigh an ideal dairyman. He had a distinct liking for the business and a love for good cows. He believed in dairying as a business that would pay. He believed and knew that dairy farming would improve the fertility of his farm. His carefully kept records showed the correctness of profit a yield of crops much higher than was produced on neighboring farms proved the increased fertility proposition. His careful study of each cow enabled him to meet her individual peculiarities and this we may say is another very big factor in successful management. No two cows are exactly alike in temperament, capacity and ability to produce. In a large herd individual differences are very marked. Where all the cows are treated, handled and fed in exactly the same manner a mistake is made. It will pay any man to study the individuality of his cows.

Quietness and freedom from excitement must be prominent among the watchwords on the dairy farm. The highly developed, nervous system that is so essential in a good milker

Address,

PEOPLE'S POPULAR MONTHLY,
211 Grand & 3rd
Des Moines, Ia.

is at the same time very sensitive to shocks of all kind. A dog is an abomination of the worst order where milk cows are kept. Two western dairymen had cows purchased for them from eastern herds. The entire lot was sent to their destination in one shipment and the cows were divided as equally and fairly to the two men as was possible to do. The two herds were placed under very similar conditions of farm, shelter and feed. After a time one herd was found to be producing very satisfactorily. The other was considerably lower. The owners and neighbors being rather inexperienced with real dairy cows were unable to locate the difficulty. Finally one who really knew cows was called by the man whose herd was doing poorly. The first time the cows were driven in from pasture the mystery was solved. A dog was used to drive the cows. He was one of the noisy, ferocious kind and the cows were in mortal fear whenever he was near. On the other farm there was no dog. It was recommended that the dog be disposed of and that was done. Following that the production of the herd increased and finally equalled the other herd.

Especially at milking time is quietness and comfort essential. On many dairy farms visitors are not allowed in the barn during milking time. There is justification for such a rule. The greater portion and the richest milk are secreted while the milking is being done. Naturally anything exciting or distracting will check the secretion for that milking. Kindliness is equally as valuable. A mild tone of voice and gentleness will pay big returns. The milking stool was never intended as a curry comb. Its use on the back or body of the cow will reduce the net income as surely as will a houseful of city visitors reduce the family larder.

The essential features of shelter must be provided or else the yield of milk will go up and down as often as does the barometer only the upward movement will never equal the successive drops. Those essentials may often be supplied cheaply if need be. They are protection from rain, especially cold rain and shelter from cold wind and storm. The writer has a friend whose shelter for his dairy herd is essentially a pen with a tight wall on the north, the west and the south. From each of those walls a tight roof extends toward the interior for a distance of sixteen or twenty feet. It is not expensive, yet it is absolutely protective against rain. It is perfectly free from drafts and sufficiently warm in times of cold weather. Of course, a real dairy barn has a great many advantages, but a genuine dairy cow will respond if the requirements mentioned above are met.

There is another condition that may be said to be as bad if not worse than exposure and that is overhousing. Many men, especially beginners in the dairy business, through a desire to be kind to their cows, house them too snugly. The cows are put into places that are overwarm and poorly ventilated. A neighbor to the man mentioned above who uses the open-shed method as described followed such a practice. His cows were stabled in a lean-to shed which had neither windows nor ventilation. All the cows breathed into the hay which filled the main part of the barn. Finally the herd was tested for tuberculosis. Nineteen out of the twenty were lost. That really horrible example was one factor that led to the open-shed method on the part of the first of the two men mentioned. Cows are not comfortable when too warm and are susceptible to all sorts of changes.

Along with shelter and inseparable from it are dryness and cleanliness. The location and size of the barn and yards have important bearing upon those two features. On cornbelt farms where there is an abundance or even an oversupply of straw no better use can be made of it than run it through the corn stalks and have manure made of it. Thus a double return is secured from being liberal with dry, clean bedding. The cow is made more comfortable and more manure is made available for the fields. More comfort means more milk. Also clean cows mean cleaner milk. In just the same sense bedding keeps the cows dry and makes them more comfortable. No high records were ever made where cleanliness

DE LAVAL CREAM SEPARATORS

Those who *know* buy the DE LAVAL

Creamerymen—Because they are experts in the handling of cream and know by long experience that the De Laval skims cleanest and wears longest. That is why 98% of the World's creameries use the De Laval exclusively.

Experienced Dairymen—The De Laval is the universal favorite among big dairymen. They know that no other separator will give them such satisfactory service.

Old De Laval Users—Whenever a man who has used an old model De Laval decides to purchase a later style machine he invariably buys another De Laval.

Men Who Investigate—If anyone takes the time to investigate the merits of the various cream separators, either by finding out from other users what kind of service their machines have given or by testing other machines out against the De Laval, the chances are a hundred to one that his choice will be the De Laval. More De Laval machines are in use than any other make. There is a reason. The De Laval agent in your locality will be glad to tell you why.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

HOLSTEIN-FRIESIAN CATTLE.

Pure-bred Registered
HOLSTEIN CATTLE

Do you realize that the sire is half your herd? Do you know how rapidly the qualities of a pure-bred sire accumulate in the high grades?

By using a pure-bred Holstein sire your herd will be 15-16 pure-bred Holstein in four generations.

Why should you milk any but the most profitable cows when you can secure them so easily?

Holstein bulls impress their characteristics upon any blood they come in contact with and their calves are thrifty from the start.

Send for Free Illustrated Descriptive Booklets.

HOLSTEIN-FRIESIAN ASSO., F. L. HOUGHTON, Sec'y, Box 113 Brattleboro, Vt.

Holstein Cows and Heifers at Bargain Prices

ON account of shortage of ensilage crop in N. Y. state I am shipping west 300 head of high-grade Holstein heifers and cows, 2 to 5 years of age. These are arriving in lots of 50 every week and I will make attractive price to men that can handle a car load. All tuberculin tested and bred to registered bulls. Also a few registered bulls ready for service. ROCK BROOK FARM, STA. B, OMAHA, NEB.

BULLS READY for SERVICE From YEAR RECORD COWS

PAULINE QUEEN JOHANNA has just finished a year record of 1,024 lbs. of butter from 25,660 lbs. of milk. Her yearling bull and other bulls of this class on hand and for sale. Also some fine young cows. Write us for information; also let us know your wants.

CHICAGO STOCK FARM,
R. B. YOUNG, Prop., Buffalo Center, Iowa.

40 BULLS 40

PURE-BRED registered Holstein bull calves, from 1 to 12 months old. An extra choice lot, most of them sired by our great herd bulls, and many of them out of high record cows. Our prices are bedrock. We are short of room and must sell at least 20 of them in the near future. Send for price list.

WOODLAWN FARM COMPANY, Sterling, Ill.

"WE ARE NOT SHORT OF FEED."

Russell's Holsteins

Quality. Individuality.

OVER 200 head of splendid individuals always on hand, all from advanced registry and heavy milking dams. The kind that never fail to fill the pail. The blue-blooded, better-bred sort that will make you money. We want your trade. You need our Holsteins. Write us today.

T. H. RUSSELL, - Geneva, Ohio

HOLSTEIN COWS

And choice Heifers and Bulls for sale. Any one wishing a few choice registered cows, heifers or bulls can make their own selection from a herd at C. B. McCanna's Edgwood Stock Farm, Burlington, Wis. All tuberculin tested by State Veterinarian. C. B. McCANNA, Proprietor, Burlington, Wisconsin.

"RESTHAVEN HERD" OF HOLSTEINS

THE very choicest lines of breeding represented. Bulls and heifer calves. Herd tuberculin tested
Geo. Burmeister, Prop., Waukesha, Wis.

GUERNSEY CATTLE.

THE GUERNSEY

will **produce more** and **eat less** feed than any other cow.

We will tell you all about them.

INGLESIDE GUERNSEYS

MAY King and Glenwood families. 38 advanced register cows. All mature cows in the A. R. Largest herd of registered Guernseys in Illinois. Bull calves and a few heifers for sale. Send for catalog. T. W. BROPHY, Proprietor, 81 E. Madison Street, Chicago, Illinois.

REGISTERED GUERNSEYS

WE now offer 30 head of registered females and 8 May Rose bulls, 5 of them ready for service.
WILCOX & STUBBS CO., Des Moines, Ia.

AYRSHIRE CATTLE.

AYRSHIRE Cattle for sale. Bred for good dairy results. Breeders and Shippers. Prices reasonable. F. TSCHUDY & SONS, Monroe, Wis.

and dryness were not very closely observed. Filth breeds disease germs and discomfort for the cows. Filthy conditions are almost synonymous with low returns and lack of profit.

The dairy cow needs plenty of good water. In ages past when the cow produced milk only to rear a calf perhaps one drink per day even of water that was foul or icy was sufficient. Nowadays when she is producing enough milk as several calves could take, the water supply must be different. Many dairymen furnish pure fresh water in the barn. There in comfort the cow may drink all she cares for and with some arrangements whenever she cares for it. The watering place ought by all means to be in some protected place. The cow will not drink as much as her system needs, if she is forced to stand in a cold freezing place and drink ice water. A tank heater will no doubt pay better on a dairy farm than on any other, for the reason just mentioned. Then if the water is icy when taken into her body, it must be warmed from heat made from the high priced feeds which she has eaten. Hay and grain are worth about $20 per ton as feed. Much cheaper fuel can be used in the tank heater. A long trip to the watering place is detrimental. It requires that energy that the cow should be using in digestion and milk secretion. Merely to carry on those two functions makes the dairy cow the hardest working animal on the farm.

What is said above will apply equally as well to feeding. The cow that roams through the greater part of the day in search of feed will use up much of the energy she obtains from the food that she gets in that same roaming. The feed rack if outside should be in a protected place where the cows can eat in comfort and all that they may care for. For best results the quality must be good. They will eat more of the appetizing hay and digest it more thoroughly. The practice of some dairymen who allow their cows to pick over alfalfa and leave the coarse stems and then to feed those rejected stems to the horses is a good one for the cows. A cow can no more manufacture milk without plenty of good feed than can a woolen mill manufacture cloth without raw goods. It pays to feed good cows and to feed them liberally.

H. E. McCartney.

Iowa Draft Horse Breeders' Association.

THE fact that Iowa stands first in importance of its draft horse industry above all other states of the Union was brought out at the meeting of the Iowa Draft Horse Breeders' Association held at Ames last week as one of the important meetings of the short course. The meeting was opened by a talk on the subject of "The Value of Colt Shows," made by Pres. G. W. Grigsby, of Madrid, Iowa. In his remarks, Mr. Grigsby presented some of the many advantages which were the outgrowth of the colt shows held in his town annually for the past eight years. These were that interest had been stimulated and pride brought about in better horses so that colts were better cared for, better sires used and the community improved through the fact that buyers of the better class of draft horses were attracted to the section in which the shows were held, to the financial profit of the farmers who took advantage of their opportunities. He believed that the colt show appealed to a large number of people. In his community the betterment in the class of sires in use now over those at the time when the colt show was first established was more than doubled. He believed that eight or ten colt shows in any county would make a wonderful improvement in the draft horse business of that county.

Wayne Dinsmore, secretary of the American Percheron Association, presented an extended paper dealing with the four market classes of horses. These were the drafters, the carriage horses, the roadsters and the saddlers. The majority of his attention was devoted to the drafter, which he described as a horse weighing 1,600 pounds or over and adapted to the heavy work of the city. As an encouragement to draft horse breeders, he stated that the demand now is as strong as it has been in twenty years and that prices in the city for good horses reached an average of $350 each. The country has been scoured for good ones until very few remain and the prospects for the demand are as good as ever. The carriage horse, weighing from 1,100 to 1,150 pounds, he said did not belong to the utility class and the demand had decreased to such an extent that really the carriage horse business could not be considered as more than a mere incident. Roadsters, meaning light animals weighing 1,050 to 1,150, with a capacity to get over the ground quickly, had also suffered seriously through the influence of automobiles. Saddlers, including 1,050 pound horses, were not in the utility class and the demand was small. He concluded that the horse business was bound up in draft horse raising and that the profits of farmers must come from that source. He took up to a considerable extent the claim sometimes advanced that auto trucks in the cities would eventually drive the draft horse out of business. From inquiry he had learned that for short hauls of three miles or less the horse was more economical than the auto truck and as the great majority of hauls were within this limit there was little chance of the horse being displaced.

Wm. Crownover, of Hudson, Iowa, presented some excellent thoughts on the subject of feeding draft colts. He said that it paid to feed and to fit colts, that feed was as important as breed, and that the colts should be fed from the start. He favored the use of cane as a feed for brood mares and colts. He would discourage the practice of working mares with young colts as the colt which was obliged to follow its dam through the field at working time would not have a fair chance, and if left in the barn the infrequency of nourishment would give it a setback hard to overcome. The first four weeks in a colt's life is a critical period. The colt will begin to eat oats at three weeks of age. Oats and pasture should be provided liberally in summer and in winter, clover hay, oats and sugar cane are equally important.

The ailments of the horse were treated at some length by Dr. Kline, of the college. He took up the matter of sanitation, purity of water, ventilation and disinfection, giving a list of the chief ailments of horses and some of the more common methods of treating them.

An interesting diversion from the program as connected with the horse breeders' meeting was the practical instruction in horse judging given in the short course classes. Veterinarians and college instructors put in the entire day at this work and it may be said, tore the horse all to pieces, illustrated his defects, brought out his strong points and gave a large volume of really important information which would benefit any farmer and increase the profits of his horse raising business.

A very live portion of the program was taken up in the discussion of the Iowa stallion law. This discussion was largely made by owners and importers of stallions. None of them were satisfied with the law and, from the arguments presented, farmers had not been benefited by it. It was freely stated that in most of the states having stallion laws there had been a lowering of the standard of horses employed and a general damaging of the business. The argument was presented that the annual examinations insisted upon were an injustice to stallion owners and that as a result of the uncertainties men could not be prevailed upon to invest good money in animals which might be disqualified from service at any annual examination. Senator Ames, who presented and secured the passage of the Iowa law at the last session of the legislature, defended it loudly and believed that it answered most of the purposes. However, the general sentiment of those who entered into the discussion was that the law should be amended at several points. A committee was appointed who reported an amendment providing that ringbone be added to those diseases or affections that disqualify a stallion. The amendment also provided for taking bone spavin out of the disqualifying paragraph and changing it to that of unsoundness. The recommendation was also made that certificates be issued only on the report of veterinarians and not on the owner's statement, as may be done under the law as it now stands. An amendment also was proposed that if a horse has successfully passed two consecutive examinations at six years old he shall be given a life certificate for soundness and no further examinations made. A legislative committee, appointed at the fall meeting, made no report. A committee was appointed on enforcement of the law, the object being to bring to the attention of the county attorney or prosecuting officer the owners of grade stallions who pay no attention whatever to the law.

Secretary Corey, of the Iowa State Fair, read a paper giving some of the features brought out by the present stallion law. He found that certificates had been issued for 5,679 pure-bred stallions and for 2,493 grade stallions. Sixty-eight animals had been disqualified and certificates refused them. Two thousand eight hundred and thirty certificates had been issued on the affidavits of owners and 5,915 on a veterinarian's report. Seventy per cent o fthe animals to which certificates had been issued were pure bred. Of these 2,716 were Percherons, 766 Belgians, 485 Shires, 464 French drafts and 421 Clydesdales.

The manure spreader may seem expensive, but it is not. True, it is a costly piece of machinery, but with proper care in operation, and protection from the elements when not in actual use, it will last practically a life-time. Then, when we consider how much more work it will do than can be done by hand; how evenly it distributes the fertilizers; how quickly the soil responds to its beneficial effect; adding to these virtues the time, labor and expense it saves, what could the farmer pay for one, and still realize an enormous profit above its cost and operation.

Put away a little fuel in a dry, sheltered place one of these mild days. It will look mighty good when a blustery day of snow or sleet strikes you.

1913 SAGINAW
Even Better Than 1912

Another Big Silo Sensation

Experienced Dairymen and Stockmen tell us that the SAGINAW, with its ALL-Steel Door Frame, with its Base Anchor, with its Inner Anchoring Hoop, is UTTER PERFECTION. But despite this, we promise 1913 Silo buyers a startling New Feature. Our engineers have already tested the New Feature. It will soon be publicly announced.

The Favorite Silo The Saginaw is the King of Silos. Men know from experience that the Saginaw won't twist or collapse or blow down. And they know that Silage stored in the Saginaw keeps clean and bright even at the edges next to the wall. Saginaw owners never have rank, soured, spoiled silage. This news has spread from farm to farm, until the Saginaw has become the most popular Silo in America. Last season, in a single day, orders for 637 Saginaws were received. Thus, year by year, the Saginaw demand has grown until it now keeps five mammoth factories busy. And this has been done in seven years. Other Silos not one-tenth so popular have been exploited twice that long. These facts you should weigh carefully.

Saginaw Silo

Licensed under Harder Patent No. 627732

A Fine Silo Book for You! Our latest Silo Book is now ready. It not only describes the Saginaw, but also contains a Wealth of Information on Silo Building and Silage. No up-to-date Dairyman or Stockman should miss getting it. Drop us a line today for booklet No. 34 and you will receive it BY RETURN MAIL. Address our nearest factory. (63)

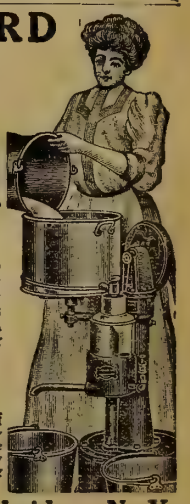
Saginaw, Mich. Des Moines, Iowa Minneapolis, Minn. Cairo, Ill.
THE McCLURE COMPANY OF TEXAS, Ft. Worth, Texas

$15.95 AND UPWARD
SENT ON TRIAL
AMERICAN SEPARATOR



Thousands In Use giving splendid satisfaction justifies your investigating our wonderful offer to furnish a brand new, well made, easy running, easily cleaned, perfect skimming separator for only $15.95. Skims one quart of milk a minute, warm or cold. Makes thick or thin cream. Different from this picture, which illustrates our low priced large capacity machines. The bowl is a sanitary marvel and embodies all our latest improvements.

Our Twenty-Year Guarantee Protects You

Our wonderfully low prices and high quality on all sizes and generous terms of trial will astonish you. Whether your dairy is large or small, or if you have *an old separator* of any make you wish *to exchange*, do not fail to get our great offer. Our richly illustrated catalog, *sent free of charge* on request, is the most complete, elaborate and expensive book on Cream Separators issued by any concern in the world. *Western orders filled from Western points.* Write today for our catalog and *see for yourself* what a big money saving proposition we will make you. Address,

AMERICAN SEPARATOR CO., Box 1073, Bainbridge, N. Y.

DES MOINES SILO

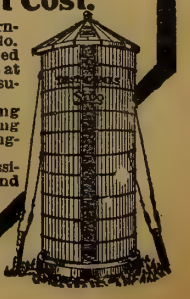
Built for Permanence
First Cost Is the Last Cost.

Creosote dipping adds, according to Government reports, 17 to 20 years of life to the Silo. That is the reason the Des Moines Silo is dipped in creosote. A special dipping plant was built at great cost to add this feature to the already superior construction of the Des Moines Silo.

The creosote penetrates into the wood covering every check and going deep—making the wood absolutely impervious to moisture, thus preventing rot and in a large measure overcoming the shrinkage and swelling due to changing atmospheric condition. It is never necessary to paint the Des Moines.

Des Moines Silos are equipped with spring lugs that overcome the last possibility of the hoops becoming loose. The Des Moines Triple Anchor System and three inside hoops are the best in the world. Positive insurance against damage by wind. Other buildings may go but the Des Moines Silo will stand.

The story of the Des Moines Silo is told in a book that will be sent free.



DES MOINES SILO & MFG. COMPANY
507 New York Avenue Des Moines, Iowa.

POINTS ABOUT PRUNING.

To the Editor of The Homestead:

Many an orchard is left to grow watersprouts and limbs for years without a pruning. Such an orchard becomes practically useless and a disgrace to the farm. If a farmer has such an orchard he should begin pruning it at once. It should be pruned gradually so that the wounds may have a chance to heal without killing the tree.

May is the best time of the year to prune an orchard, but some farmers are so busy at that season they neglect pruning and often leave it until winter. Winter pruning should be done carefully, sawing off the side branches close to the main branch so they will heal rapidly next season. When pruned in winter numerous watersprouts will put out early next spring, and these must be taken away. When they first appear they can be easily rubbed off with a gloved hand. If left for a week or so a sharp knife or saw will be necessary to sever them.

Careful pruning is necessary for several reasons. The tree bears younger and a more abundant harvest of apples. The air and sunshine get among the branches, preventing fungous growths and disease. Then the sunlight and air get into the buds, causing them to produce more delicious and highly colored fruit. And all know that well-colored fruit brings the best prices.

I think it is best to begin pruning when orchard is about two years old. The pruning will be light and quickly done, and the pruning from year to year will be easily done. The orchard will never need a heavy pruning. Then in a short time there will be a fine orchard of healthy, symmetrical trees that pay for their keep by their abundant harvest of apples.

When branches over a half inch thick are cut away it will be best to paint the wound to keep it from drying and cracking. White lead mixed with grafting wax and thinned down until it can be applied with a paint brush is about the best I have discovered for wounds. One application of this mixture will last until wound heals.

But one should ever remember that pruning is only one step toward a crop of fancy apples. The trees must be sprayed in season, fertilized and cultivated every year. When these things have been faithfully done the farmer has performed his part, and he must leave his crop in the hands of Nature, whose laws are in the hand of a higher Power that sends the harvest for the just and the unjust.

Subscriber.

WATERING AND GIVING THE COW EXERCISE.

To the Editor of The Homestead:

For years I had the impression that a cow must be allowed in the barnyard at least an hour or more a day to do her best and keep healthy. Also, if the weather was of an extreme nature, that she should be kept in and watered inside. Close observation has taught me that a cow wants the same deal every day and should be watered the one way, either inside or outside. If cows are used to being turned out they will frequently refuse water when given them in the barn and they will also chafe and get very uneasy when not let out at their regular time. I have learned by close observation covering a long period, that cows give decidedly more milk when watered inside, if the barn is kept clean and comfortable. When I say comfortable, I mean warm and well ventilated and the cows confined in a manner that is not tiresome. With a good, dry, soft bed and plenty of room and freedom so they can change their position and lick themselves when they so desire, a cow is comfortable providing she gets plenty of good feed and drink with plenty of sunlight. Comfort and good feed is what they want and what makes them yield up.

When it comes to the matter of exercise, a cow that is giving a good mess of milk does not have a disposition to move about much when she is turned out in the yard. This is particularly true when the weather is cold. I have watched them by the hour and find that they seldom go farther than the tank unless there be something to entice them away. On the contrary they will seek the most sheltered spots in the yard and stand humped up until it is time to go back into the barn. Cows that are dry and in calf, and younger animals, need and will take more exercise.

Young heifers that are to become the future dairy cows on the farm will be all the better for daily exercise, in being compelled to rustle. On the other hand, if cows are kept in ill ventilated barns where cow comfort has never been studied, and closely confined in rigid stanchions, a barn where sunlight is unknown, it is better to let them outside. Outdoor freedom is better than indoor suffering and discomfort.

R. B. R.

IOWA STATE DRAINAGE MEETING.

The 1913 annual meeting of the Iowa State Drainage Association will be held in Fort Dodge, February 18th and 19th, with headquarters at Wahkonsa Hotel.

This meeting will be of very special interest to all men interested in drainage, especially to those who have problems from the standpoint of the engineer and land-owner. Speakers at this convention are noted men in the drainage world, and men who are coming to the Association with enthusiasm and a great deal of important data. Citizens of Fort Dodge are planning to make this meeting a great success, and have arranged to banquet all members of the Association on Tuesday evening, February 18th.

The program for the Fort Dodge meeting cannot fail to prove of interest. The officers of the Association believe that every address will contain something that is absolutely worth while. There are hundreds of drainage engineers, farmers and business men in the state who will be particularly interested in the talks on the practical problem which are encountered in reclaiming the wet lands of Iowa.

Further information regarding the meeting, including a list of the speakers and their subjects, will be announced within a few days by Professor W. H. Stevenson, secretary, Ames, Iowa.

IOWA ABERDEEN ANGUS BREEDERS' MEETING.

The annual meeting of the Iowa State Aberdeen Angus Breeders' Association will be held in Des Moines, February 6th and 7th. Secretary Silas Igo and President J. V. Arney have spent considerable time in working out an interesting program and while it is not yet complete we can assure our readers at this time that this will be one of the most important meetings ever held by this association. It is the purpose to take up the question of beef raising in a systematic order beginning with the care of the cow, following this by discussing best methods for raising the calf, this to be continued by assigning to an expert the finishing of steers and to another expert the care and disposal of the carcass from the butcher to consumer.

Among those who have already consented to give addresses at this meeting are Charles Escher, Jr., E. T. Davis, H. J. Hess, A. C. Binnie, Sears McHenry and O. V. Battles.

The Homestead will publish the full program in next week's issue. If there are those who desire further information in regard to the program and particularly if any of our readers desire to present a matter for discussion at this meeting we would suggest that communication be established with the secretary, Silas Igo, Indianola, Iowa.

NEWS OF THE SALE RING.

F. Bieth & Son's Sale.

Owing to the quality of the offering and excellent breeding many of them being bred like the champions barrows at Chicago and bred to their first-prize under-year boar, Prince A's Col., Messrs. Bieth enjoyed good patronage. The entire lot was sold by Colonel Reppert in a short time, the sale being snappy throughout. Forty head averaged $56 and this must be remembered among the good sales of the year. Below is a list of buyers and prices:

1.	L. E. Thomas, Golden, Ill.	$ 66.00
2.	E. H. Deal, Elwood, Ill.	40.00
3.	Ed Barnhardt, Big Rock, Ill.	37.00
4.	Nevins & Son, Modesto, Ill.	38.00
5.	Finch Bros., Joliet, Ill.	50.00
6.	Finch Bros.	40.00
7.	G. H. Francis, New Lenox, Ill.	42.00
8.	Menaugh Bros., Gardner, Ill.	75.00
9.	H. E. Busch, Elwood, Ill.	41.00
10.	H. L. & R. C. Sharpe, Wasco, Ill.	40.00
11.	John Morton, Elwood, Ill.	40.00
12.	W. A. Bollman, Grass Lake, Mich.	29.00
13.	Fred Swan, Missouri Valley, Iowa	75.00
15.	J. W. Storm, Seville, Ohio	62.50
16.	Connell & Son, Joliet, Ill.	77.50
17.	Tom Smith, Scanlan, Ill.	68.00
18.	Lew Mooney, Mazon, Ill.	40.00
19.	G. A. Peterson, Morris, Ill.	48.00
20.	Finch Bros., Joliet, Ill.	43.00
21.	Wm. Harding & Son, Brimfield, Ill.	66.00
22.	Smith & Rodgers, Springfield, Ohio	116.00
23.	Menaugh Bros.	43.00
24.	Ed Barnhardt	65.00
25.	F. D. Thorpe, Rochelle, Ill.	51.00
26.	Geo. Sodders, Big Rock, Ill.	65.00
27.	Fred Schweitzer, Ellwood, Ill.	36.00
28.	W. E. Matterson, Morris, Ill.	57.00
29.	H. L. & R. C. Sharpe	40.00
30.	Menaugh Bros.	96.00
31.	G. H. Francis, New Lenox, Ill.	43.00
32.	T. A. Stephens, Chicago, Ill.	62.00
33.	W. W. Porter, Syracuse, N. Y.	41.00
34.	Finch Bros.	40.00
35.	E. W. Matterson, Morris, Ill.	48.00
36.	O. S. Larson, Logan, Iowa	150.00
37.	Morton Deal, New Lenox, Ill.	36.00
38.	T. A. Stephens, Chicago, Ill.	50.00
39.	Michel Drouden, Plainfield, Ill.	40.00
40.	W. E. Matterson	51.00
41.	Connell & Son, Joliet, Ill.	105.00
42.	T. A. Stephens	37.00

Smith & Rogers' Duroc Sale.

On Saturday, January 4, 1912, Smith & Rogers, Springfield, Ohio, held a most successful Duroc sale. The top was No. 6, the great sow, Lucy Superba, selling for $500 to J. W. Storm, Seville, Ohio. Mr. Storm also bought an unfarrowed pig choice 1913 litter by Volunteer, dam the grand champion sow, Mc's Dream, that Smith & Rogers recently purchased in the Browning sale for $700. Colonels Igleheart, Reppert and Irwin (after a big feast prepared by the firm and their wives) did a good piece of work in selling. Below is a list of prices and buyers:

1.	F. Bieth & Son, Joliet, Ill.	$ 81.00
2.	R. A. Elder, Springfield, Ohio	60.00
3.	S. H. Harmon, Bloomsburg, Pa.	122.00
4.	Bob Ewing, New Hampshire, Ohio	58.00
5.	E. S. Mayes, Springfield, Ky.	105.00
6.	J. W. Storm, Seville, Ohio	500.00
7.	J. S. Petrey & Son, West Mansfield, Ohio	107.00
8.	L. E. Houper, Garrett, Ind.	57.00
9.	Bollman & Moller, Covington, Ohio	55.00
10.	J. W. Storm	105.00
11.	R. C. Walt, Cedarville, Ohio.	59.00
12.	Ross Runyan, Vienna, Ohio.	40.00
13.	J. R. Hanes, London, Ohio.	42.50
14.	F. O. Ford, Greentown, Ind.	50.00
15.	F. J. Rupert, Spencerville, O.	53.00
16.	R. O. Huggins, Mt. Orab, O.	49 00
17.	B. F. Dunn, Beattytown, O.	242.00
18.	Chas. Elder, Selma, Ohio	41.00
19.	Lord & Son, Greentown, Ind.	114.00
20.	Prof. W. A. Thompson, Columbus, Ohio	43.00
21.	R. C. Huggins, Mt. Orab, O.	39.00
22.	Chas. Elder	35.00
23.	Clark Crebill, Springfield, O.	55.00
24.	J. W. Storm	91.00

Fifty-two head sold for an average of $83.

Ben M. Bell Makes Good Sale.

The sale of Poland China bred sows at Beattie, Kan., January 9th, held by that well-known breeder, Ben M. Bell, was one of the most successful ever held by him. Although the weather was very cold and the roads badly drifted from the recent snow, interfering greatly with the attendance, especially from a distance, the entire offering cataloged, totaling sixty-two head, was disposed of at good prices, the total of the sale amounting to $2,584. The top of the sale was $75, J. T. R. Nash, Minden, Neb., paying this sum for a two-year-old Bell Metal sow bred to Bell's Long King. La Colossa Bell 1st and La Colossa Bell 2d, two splendid daughters of the Nebraska champion, Colossus, went to A. B. Garrison, Summerfield, Kan., the price being $70 in each instance. Although there were no high prices recorded, the prices were very even, considering the size of the offering. Col. H. S. Duncan did the selling. Below is given a partial list of the sales:

1.	Joe Burnside, Beattie, Kan.	$40.00
4.	Coleman Bros., Ithica, Neb.	50.00
7.	H. L. Harry, Beattie, Kan.	40.00
8.	L. C. Walbridge, Russell, Kan.	40 00
12.	Jack Nave, Kansas City, Mo.	42.50
14.	L. C. Walbridge	39.00
19.	W. B. Hawk, Beattie, Kan.	39 00
24.	J. T. R. Nash, Minden, Neb.	40.00
25.	J. T. R. Nash	50.00
28.	J. F. Menehan, Summerfield, Kan.	50.00
30.	W. B. Hawk	40.00
32.	E. E. Meelen, Clay Center, Kan.	47.50
33.	E. E. Meelen	45.00
40.	W. F. Fulton, Waterville, Kan.	48.00
42.	H. F. Detweiler, Axtell, Kan.	41.00
46.	J. T. R. Nash	75.00
51.	A. B. Garrison, Summerfield, Kan.	70.00
52.	A. B. Garrison	70.00

CHANGES IN TRAIN SERVICE

To conform with operating conditions during the winter months, several minor changes in train schedules became effective Sunday, January 5, 1913. For full particulars apply to ticket agents, Chicago and North Western Ry.—Adv.

The World's Greatest Power Washer

Direct from Our Factory to You. No jobbers' or dealers' profit to pay. It will cost you only a little more than half of what inferior machines cost. The NEWTON POWER WASHER, with reversible five-year guaranteed wringer complete, shortens the hours of wash days to minutes. Dirtiest clothes washed in six to fifteen minutes. Saves time, labor and money, depending on the kind of machine you buy. The Newton Washer is made for either hand power, gasoline engine or electric motor. Get Our Free Circular Showing Styles. Try it in your home for thirty days, you to be sole judge. If the machine is not satisfactory, ship it back to us and we will pay the freight both ways and give your money back with six per cent interest. A postal from you will bring quick proof to you of our reliability and our free circular.

Save $3.50 to $25

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

SETTING NEW POULTRY STAKES.

To the Editor of The Homestead:

On our farm we have practically doubled our capacity in the past year. We have fully as many again hens as we had a year ago and our buildings have been correspondingly increased. Just now we are looking forward to the hatching season of the new year. It is not too early to do this. One of the greatest mistakes that can possibly be made in the poultry business is to let things drift along as they will and then when it comes time to set eggs for the new chicks, or to put them into the incubators, run out, grab up any and every egg that comes handy and get it started toward hatching. That is the way to be sure of having just an average lot of chicks; and average chicks are not what any of us should be satisfied with. We ought to reach up for something better.

So now is the time to get the breeding stock in line for the coming season's work. Where the hens are too thick in the houses room should be given the birds which are to lay the eggs for hatching. That implies that a lot of inferior birds should be taken out of the way. Every hen that is old or in any way below par ought to be put in a house by herself, leaving only the best and the most choice hens for breeding purposes.

Then, too, a similar course of selection should be set on foot for the best roosters. No inferior male bird should ever be permitted to project himself into the future by the process of mating. The very nicest, most thrifty and vigorous birds, and these only, should be used to head the different flocks.

Then, too, only a few hens should be given a male bird. Twelve to fifteen, according to the kind of fowls we have are enough. To mate more would be to invite infertile eggs. That we cannot stand. The matter of the houses is also important. They should be clean and light so that the birds may be happy all the time. You will find that your best and most fertile eggs come from birds that are happy, well fed and regularly exercised. I must not stop without a word as to feed. For the best results the feed should be the best and purest possible, given in liberal quantity and varied often. Hens that have such feed are far more likely to give us the finest eggs possible, and so to insure a good hatch a little later; and upon the hatch depends practically everything.

E. L. Vincent.

County Agricultural Adviser.

IN ALL the program of last week's exercises at the short course at Ames no feature was more interesting than the talk of Prof. S. M. Jordan, of Missouri, in which he elucidated the plans which have made the Pettis County Farm Bureau famous as the pioneer in the introduction of a farm adviser or expert. In his introduction of Mr. Jordan, Professor Curtiss stated that congress had increased the appropriation of $160,000 to be used for paying salaries of county advisers, under certain conditions, which were easily taken advantage of by any county which wished to do so. He referred to Pettis county, Mo., as having taken the initiative in this respect and mentioned the fact that several counties in Iowa had followed. He thought that in all probability ten or twelve other counties would next year introduce county agricultural advisers. The cost is borne in part by the college and the remainder must be provided for by farm or local organizations perfected for that purpose.

Professor Jordan is an entertaining talker, both in manner and in subject of discourse. He jumped right into the middle of his subject and explained the origin of the Pettis County Farm Bureau. It seems that the bureau was really the result of an impulsive action growing out of an interesting farmers' institutes held at Sedalia. Readers of this paper have been fully advised on this subject, however, and for that reason we omit the details. Professor Jordan explained that he had spent his life in the study of soil, forage crops and corn. Having been a successful farmer and teacher, with an aptitude in turning his experience to account, he became at once a powerful factor in the forwarding of agricultural interests. In his work at the head of the bureau with which he is now connected, he proved the value of the experiment in the matter of alfalfa culture alone. In his search for reasons why alfalfa was not successfully grown in Pettis county, he made 300 soil tests and, with a single exception, these tests showed that the soil was sour or with an acid condition which was fatal to alfalfa growing. Having once determined the cause for failure, it was an easy matter to provide the remedy, which was the application of limestone.

A feature of his work which was of intense value to farmers was the means taken to protect farmers and prevent them from using foul or adulterated seeds. The immediate need of this protection presented itself when he found that numerous farmers who had the previous season sowed clover seed, had infected their fields with dodder to such an extent as to make it a source of immense loss to them and a menace to clover growing in the entire section. By a system of proper instruction he is now able to teach any farmer to know the difference in seeds in thirty minutes and thus be able to protect himself from the losses involved by sowing poor, mixed or adulterated seeds. He advised all farmers to familiarize themselves with the seeds, not only of grains and grasses, but of weeds as well. He believed that the county adviser should be not only an adviser, but a soil doctor, a guide and an instructor. Having once established himself, Professor Jordan found his time entirely taken up. In addition to the regular work which he is employed to do, he gives instruction in the high school of the city of Sedalia and in many country schools. He prepares bulletins for publication in the county papers on subjects of timely interest. He believes that his lectures in ward schools were much more productive of results than those in the more advanced classes of the high schools. He had succeeded in interesting teachers and bankers as well.

The county adviser system, it would seem, has been brought to a high point of usefulness in the provinc of Ontario, Canada. In that province the organization is supported by a legislative grant of from $600 to $900 per year for each county, the county being required to provide an equal amount.

SURE HATCH INCUBATOR CO. Box 16 Fremont, Neb.

Most of the advisers start at a salary of $1,200 per year. At the present time there are something like thirty-seven counties which enjoy the system. The gentlemen who occupy the position of advisers are all agricultural college graduates, young men who have been selected because of their particular adaption to the work. It was at first a popular theory that only men of wide educational experience and extensive practical work could be considered capable of filling these positions. The impossibility of procuring men of this class, however, soon compelled the employment of the young college men and it is to their credit that scarcely a one of them has failed to perform his duties so well as to meet with thorough appreciation and an increase in salary. In each district the subjects of greatest import are taken up. In one, drainage is the all-important factor, and through the employment of scientific and practical methods the results obtained have fully justified the employment of the specialist for that purpose alone. In others, fruit growing attains success because of the advice given. Grain growing and live stock raising each occupies a prominent place.

Somewhat in line with the work of Professor Jordan is that of the Iowa Agricultural Experiment Association, the organization of which was completed at Ames last week. This organization was effected with the purpose of co-operating with the experiment station in the distribution of seeds, plants, fertilizers and other materials for experimental tests on the farms of the state. It is further intended to encourage improvement in the methods of farming and farm life by conducting co-operative experiments along various lines, the holding of annual meetings for the discussion of the results of experiments and other important topics, and the issuing of an annual report of all experiments. The membership of the association is restricted to persons engaged in agricultural pursuits in the state of Iowa. It is divided into three classes. The first of these, called regular members, are entitled to hold office, vote, and to undertake experiments under the direction of the association. The second class includes advanced members, to whom are accorded all the privileges of regular members and who have also done experimental work in a manner satisfactory to the executive committee for at least two years. The third class includes honorary members, or those who have gained particular prominence through their activity in the advancement of agriculture in the state. A membership fee of $1 is exacted from each regular or advanced member. The officers elected were as follows: President, Geo. Allee, Newell, Iowa; vice-president, E. R. Trites, Oakville, Iowa; secretary and director of experiments, Prof. J. Buchanan, of the college at Ames; treasurer, Prof. W. H. Stevenson, also of Ames. There are also twelve district representatives. These are F. B. Hanson, Inwood; A. M. Avery, Mason City; F. E. Tracey, Nashua; P. M. Peterson, Cherokee; M. S. Nelson, Goldfield; H. A. McCaffree, Janesville; E. D. Hunt, Logan; M. A. Hauser, Liscomb; Hon. F. D. Steen, West Liberty; Frank Sar, Essex; Fred Wooley, Garden Grove, and W. A. Hook, Packwood.

During the year 1912 the number of farmers who had made experiments in Iowa in connection with the experiment station was something like 400 and only two counties in the state had no experiments. These experiments were with alfalfa, oats, barley, ensilage corn, corn, annual hay or fodder crops, improving old pastures and winter wheat. The seeds in each case are provided by the experiment station without cost, the experimenter agreeing to perform his duties well and to keep an accurate account of results obtained. Membership in the organization may be secured through filling out an application form and agreeing to carry out the test or experiment according to instructions as far as possible and to report at the close of the season. Information in complete form will be supplied by Professor Buchanan on receipt of request.

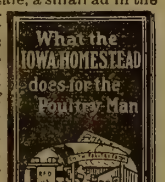
Good Prices for Your Poultry

THE shortage and high price of meats have led to a greater consumption of poultry. This and the cold weather last spring which cut down the spring hatch have greatly reduced the supply. Demand and supply always control price. Consequently, the high prices being realized because of an increased demand and a diminished supply are encouraging hundreds of farmers to go into the poultry business in a more earnest manner. One result is a great demand for breeding stock during the coming season.

If you have anything for sale, a small ad in the columns of The Iowa Homestead will find you ready buyers. The 145,000 farmers of Iowa, Illinois, Nebraska and sister states who read The Iowa Homestead regularly have, on account of their increasing interest in poultry, grown to greatly appreciate its regular poultry department which is recognized as the reliable, progressive and practical authority on farm poultry raising of this territory. For years, hundreds of poultry breeders have been patronizing The Homestead as advertisers. We would like to send you a little booklet of testimonials telling about the results these advertisers have received. No obligation attached. It is free to all our friends and every poultry raising farmer is our friend.



Poultry Advertising Department,
IOWA HOMESTEAD, Des Moines, Iowa

BEST EVERGREENS FOR WINDBREAKS.

To the Editor of The Homestead:

A Nebraska subscriber writes:

In the settlement of my father's estate I have fallen heir to a quarter section of prairie land. It is a part of a big farm, but it has no buildings or groves. I shall built next summer a house and barn and I want to plant some windbreaks. My friends tell me that willows and cottonwood grow very fast, but I don't think they are worth much for winter protection. Can I make the hemlock or the white cedar grow in this section? I want an evergreen hedge—if I can get it. But I have been a town boy and must confess that I don't know what I ought to do.

Your decision that you want an evergreen shelter belt about your proposed new buildings is a wise one. Evergreens give you the windbreak when you most need it. You are, however, too far west to grow the hemlock, which requires a rather moist soil and atmosphere. The hemlock is very pretty, and makes a good windbreak wherever it will thrive. Your chance of success with the white cedar, or arbor vitae, is better, but even that cannot be recommended in your location, as the variety to depend upon. We would strongly advise you to plant a composite windbreak, using several of the more ironclad varieties.

It is best to allow plenty of room between buildings, and windbreak at least ten rods. If placed too close you will have the snow sifting through and piling up directly about your buildings. And that is something which you will wish to avoid.

If you can afffford to make liberal plans, allow a belt two rods wide for your trees, and more rather than less. And in this belt set four rows of trees eight feet apart in the row. Use Scotch pine for the outside row, Black Hills spruce for the second row, and white cedar for the inside row. You ought to be able to get these trees in good condition, so that they will all grow. Much depends upon getting a good start. The way to be sure of a square deal is to go yourself to the nursery where you purchase trees, and see them dug and packed. You will understand the necessity of keeping the roots from drying out, and know that if they are once dried the trees are worthless. And you had best get them early, before the buds are started. Have them planted with care, without exposing the roots to sun, or wind. If you attend to these details personally, and this is something which should not be left to an employe, you are reasonably certain of success.

Good culture will be needed, for it is wise to force as good a growth as possible. And nothing responds to liberal culture more promptly than trees. You had better buy trees a foot to eighteen inches tall. They should be, of course, twice transplanted trees, and no wise nurseryman will try to sell you any other kind.

It is possible for you to get stocky eight to twelve-inch trees, that have been transplanted and have a root system sufficient to insure good growth, and if so they would naturally be cheaper than the larger trees. Trees of this size will look scattering upon the land, and you may well plant corn or potatoes between, and do this for three or four years, the culture which the crop requires being sufficient for the trees. Another plan which some would prefer to follow is to plant double the number of trees required for the permanent stand as they grow and begin to crowd, remove half of them for the Christmas tree trade. In the majority of cases this will be found fully as profitable as the plan of cropping the land. It is a question of having the cash to spare for the first investment.

For such a shelter belt six or eight years will be required to make its value apparent, and if it is surrounded by open fields it may meanwhile require a little attention to prevent injury by snowbanks, which will gather over it.

In some cases it is well to add to the evergreen belt a double row of willows placed upon the inside of the evergreens. This will be useful as a makeshift, while the "evers" are coming up to the helpful stage. Then they may be removed root and branch.

The three varieties we have named we consider the best and safest under all the circumstances, but there is some limit, some leeway, for individual taste. You might substitute the Austrian pine, and the red cedar for the spruce, and white cedar, and it may be that either of them would be safer for you than the arbor vitae.

But by all means you had best choose the Scotch pine for outside row, for that is the ironclad of the evergreens. M. E. Hinkley.

THE SILO A NATIONAL FACTOR.

To the Editor of The Homestead:

The leading agricultural subject of the day is the silo, and its coming is of national importance. No subject is receiving so much attention from the experiment stations, farm papers and farmers' institutes. All the great industries depending on live stock, such as the stock yards, creameries, packing houses and transportation companies, are advocating its use. It is a conservation subject of great importance, for with it can be saved a large part of our principal crop. Nearly 40 per cent of the food elements of the corn crop of this country are now wasted. By the use of the silo this could be saved and by so doing hundreds of millions of dollars could be added to our national wealth. The corn forage which annually goes to waste in this country is often referred to as the "billion dollar waste." Is it any wonder we are complaining of the high cost of living?

In the past eleven years the great stock industry of the United States, in comparison with our population, has been showing a decline. This

condition has been largely brought about by the rise of price in all kinds of stock foods, thereby making a smaller profit to the producer. This, in turn, has driven many men out of the stock business and discouraged others from going in. With the silo the cost of producing stock and stock products can be greatly lowered. Experiments have shown that by the use of the silo in place of the old feeding methods, butter can be produced from nine to ten cent per pound cheaper and a saving made on the production of beef from $1.50 to $2 per hundred pounds. As the largest part of our food comes from live stock it is plain to see the relation of the silo to our national food supply.

Silage can be made from nearly all kinds of farm forage and is a good and cheap ration for horses, cattle, sheep, swine and chickens. It requires little storage space, is a labor-saving device, doubles the value of the corn crop, triples the stock carrying capacity of the land, restores the fertility of the soil, and returns its user annually 100 per cent on the investment. A. L. Haecker.

That the city bred boy at the University of Minnesota, is the "all around" physical superior of the lad reared on the farm, was the statement of Dr. L. J. Cooke, gymnasium director and the head of the department of physical education of the University of Minnesota. According to Doctor Cooke among the physical defects found in students from rural communities are: Flabby muscles, humped shoulders, curved spine, low right shoulder, muscular weakness of heart action, small chest expansion, small lung capacity. "In the boy from the farm," said Doctor Cooke, "the muscles of the arms and shoulders usually are well developed, while nearly every other part of the physical organization falls below the general average. The city youth, who usually has had more or less physical training possesses a much better physique."

The increasing consumption of bananas in a number of countries naturally raises the question of an adequate supply to meet the coming demand. In Jamaica, where the immense banana crop is produced on about 3 per cent of the total acreage of the island, there is yet plenty of suitable land available. In Mexico, Central America, Panama and Columbia, not to mention the large possibilities of Haiti and the Dominican republic, there are vast tracts of land where a fertile soil, a warm climate and abundant rainfall favor the production of bananas on a large scale. Not only is there land enough, but the profits of the crop are sufficiently remunerative to attract the investment of ample capital to meet the world's demand.

Drain the oil-system of the automobile, brushing out and thoroughly cleaning with kerosene, then oil lightly, which will carry it through the winter free from rust.

By keeping a little tab on the hens that are laying best, now; then setting the eggs from these hens in early spring, one is pretty sure to develop a flock of first-class winter layers.

POINTERS.

—Buff Plymouth Rock cockerels and pullets of the best breed are offered for sale at very moderate prices in the advertisement of W. M. Black, Knoxville, Iowa, that appears on this page.

Mr. Black will also be able to furnish eggs in season.

—"I have a choice lot of Rose Comb White Leghorns this year," writes Mrs. George H. Tutt, Marathon, Iowa, in sending an advertisement that appears on page 29. They are not brassy, but pure white, and anyone wishing good cockerels will make no mistake in sending me their orders. I have no pullets for sale. I have a large flock from which to select eggs this season."

—With this issue of The Homestead J. T. R. Nash, Minden, Neb., is starting an advertisement offering extra choice White Orpington cockerels of the famous Kellerstrass strain at the very low price of $1.50 each. Mr. Nash has been breeding these birds for some time and they are descended from the very best foundation stock obtainable. Eggs for hatching will also be for sale from this flock within a few weeks. Ask for prices on them. You will find them below what such eggs can ordinarily be bought for. Mention The

SOLD HIS OWN AND FOUR OTHER FLOCKS.

MILT BRADSHAW, Beaconsfield, Iowa, ran a small advertisement six times in the Poultry Department of The Homestead. Then he wrote: "Take my advertisement out. I have sold all the turkeys I had and four other flocks besides, and could dispose of 300 if I had them." Pure-bred turkeys are in demand and those who have them for sale may find ready buyers through the medium of the advertising columns of The Homestead. For advertising rates address

Indian Runners Pencilled, mated trios, $5.00. Drakes, $1.50 to $2.00. Address Nishna Collie Kennels, Oakland, Iowa.

Homestead when you write. See advertisement on this page.

—C. J. Henline, Garwin, Iowa, writes: "I have some of the best Buff Plymouth Rock cockerels I have ever raised, fine, large, vigorous birds and at right prices." His advertisement appears on page 28.

—Mrs. Hester Musselman, Truro, Iowa, has Single Comb Buff Leghorn cockerels on which she would like to quote prices to Homestead readers. Her advertisement appears on this page.

—Rosalie Newberry, Argyle, Iowa, can supply Homestead readers with Mammoth Bronze turkey hens and toms and Barred Plymouth Rock cockerels at prices named in her advertisement on this page.

—The advertisement of Mrs. John Tucker, Birmingham, Iowa, in which she is quoting prices on Mammoth Bronze turkey toms and hens and Barred Plymouth Rock cockerels, appears on this page.

—"My Barred Plymouth Rocks were big winners at Boone," writes Charles E. Nelson, Boone, Iowa, whose advertisement appears on page 28. "I am offering a number of pen headers, either mating, at right prices. Money returned if not satisfactory."

—Walter Brown, Shannon, Iowa, is offering Buff Orpington, Golden and Silver Laced Wyandotte hens, pullets and cockerels for sale in his advertisement on this page. He writes: "This is all good stock and I hope to close them out quick at the special low price I am quoting."

—The advertisements of Mrs. Jennie Efnor, Monroe, Iowa, breeder of Single Comb Rhode Island Reds and Bronze turkeys, appear under the head of each breed in this department. She writes that she is able to supply the most exacting Homestead readers this year at right prices and from high-scoring, prize-winning flocks.

—The advertisement of C. E. Groff, Guernsey, Iowa, offering standard, line-bred Single Comb White Leghorns for sale, appears on this page of The Homestead. A list of prizes won at Grinnell, Ottumwa, Belle Plaine and the Iowa State Fair on stock exhibited by Mr. Groff will be found in the advertisement referred to.

—"We can furnish Homestead readers with White Plymouth Rocks and Indian Game cockerels, large, vigorous birds of good shape and color, suitable for pure-bred pens and also for the market breeder at very reasonable prices," write Hennessy Bros., Strawberry Point, Iowa, in furnishing copy for their advertisement on this page.

—Mrs. D. C. Molsberry, Plymouth, Iowa, writes: "My Mammoth Bronze turkeys are extra fine, both as to size and markings. I have pullets now weighing eighteen pounds with score cards up to 95¼. My young toms have score cards up to 96¼ and weigh twenty-five to twenty-eight pounds. They are very choice and in perfect health." See advertisement on this page.

—Mrs. W. Anderson, Rising City, Neb., whose advertisement of White Plymouth Rock cockerels appears on page 28, writes: "Our flock of White Plymouth Rocks are the best ever. They are all sired by pure white, $15 birds of last year's state show winners. Our pullets began laying in November and cockerels hatched the first of May weighed ten pounds in that month."

—Mrs. Alice J. Morris, proprietor of Orpington Farm, Big Rock, Ill., writes that she wishes every reader of The Homestead could see her fine flock of White and Buff Orpingtons. She still has a nice lot of birds for sale and can supply your wants. Her pens are now mated and eggs for hatching can be shipped at any time. Look up her advertisement on this page for prices.

—"In regard to the Barred Plymouth Rock cockerels I am offering for sale," writes W. E. Ruffcorn, Defiance, Iowa, "I will say they are a good lot with good bone and nicely barred. A good many are sired by my first and color special cock at the recent show at Des Moines. He was also first at the state show at Sioux City in December. I am pricing them low in order to move them."

—Mrs. William Stoll, Le Mars, Iowa, whose advertisement appears on page 28, writes that she has some fine Barred Plymouth Rock cockerels of the Ringlet and Bradley strains to sell. They are very fine and narrow barred, and anyone wanting cockerels will find her birds above the average. They are from prize-winning stock and are bred for eggs, utility and show room, and also for size. Her birds won prizes wherever shown this past fall.

S. M. Thompson, Birmingham, Iowa, is advertising Chester White boars and gilts of the very best breeding and they are of the large, growthy kind and in fine condition for breeding purposes. He is also offering one yearling Short-horn bull and two bull calves that are hard to beat and are well bred. Anyone in need of a Chester White boar or gilt or a Short-horn bull should write Mr. Thompson at once, kindly mentioning The Homestead. See advertisement on page 39.

The Columbian tank heater can be used in four-foot tanks and larger. Any fuel may be used and draft is regulated same as in a stove. One supply of fuel lasts fifteen to twenty-four hours. This is possible since the draft arrangement can be closed air tight. Fresh fuel can be added and ashes removed without disturbing the fire. This seems to be a very durable and convenient tank heater. If your stock water is too cold, or freezes, read the advertisement on page 8 and write for price, shipping weight, etc.

LEGHORNS.

A Choice Lot of Rose Comb

BROWN LEGHORN cockerels for sale at Pike Timber Stock Farm. EGGS IN SEASON. DAVENPORT & MACK, Belmond, Iowa.

Bake Less Often —Save Work and Fuel

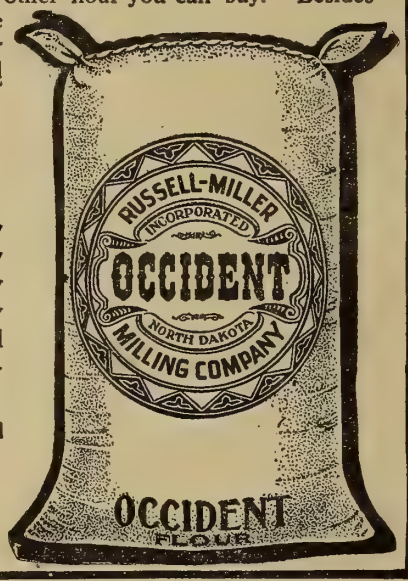
Occident Bread keeps fresh and moist and retains its fine flavor longer than any other bread.

If you use Occident Flour you can bake a double batch of bread at one time. This saves the work and fuel cost of several baking days each month.

Won't you just test this on our Money-Back Guarantee?

The Guaranteed Flour
OCCIDENT

makes bread which stays fresh longer than other bread because Occident is cleaner than other flour. Every kernel of the wheat is positively washed and scoured by special machinery, and goes through more purifying processes than any other flour you can buy. Besides this extra cleanliness we use none but specially selected wheat for Occident Flour—the choicest bread wheat grown.



Costs More —Worth It

Occident Flour costs you only a few cents more than ordinary flour but we GUARANTEE every sack to please you better than any other flour you ever used—for all baking—bread, cake and pastry—or pay back the price of the flour.

Get a trial sack from your dealer and send for our free booklet, "Better Baking"

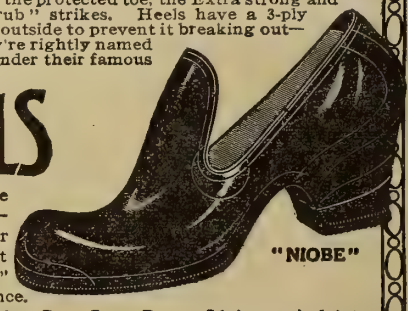
Russell-Miller Milling Co., Minneapolis, U. S. A.

The Heel that Stands the Grind

They fit your shoe at heel and toe. They are not clumsy or heavy yet stand long, hard wear—more than other rubbers. They are no ordinary rubber. The weak place in every rubber is the heel. Examine closely the protected toe, the Extra strong and fortified heels—points where the hard "rub" strikes. Heels have a 3-ply duck heel-plug and extra layers of rubber on outside to prevent it breaking out—making a balanced rubber. That's why they're rightly named "Top-Notch Brand", made and guaranteed under their famous "Cross" trade mark the

BEACON FALLS

LOOK FOR THE CROSS



"NIOBE"

When you find that "Cross" moulded in the instep—rest easy—behind it is quality—and the extreme of wear for your money. Inside—outside—right side—wrong side—the "Cross" guarantees a rubber of reliance.

Women's "CUPID"

NIOBE—A Storm Rubber, Pure Gum, Brown Lining. A dainty piece of Women's wet weather apparel. **CUPID**—Same as Niobe but low cut. Get them at your dealer's. If he hasn't them, send his name and we'll see that you are supplied. Send for free booklet 10

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 639, Aurora, Missouri.

WITH THE EDITOR.

A bright New Year and a sunny track
Along an upward way;
And a song of praise on looking back,
When the year has passed away,
And golden sheaves nor small nor few!
This is my New Year's wish for you.

The other day a friend of mine who lives on a farm told me that she, her husband, her son, who is just out of high school, and her daughter, who is just ready for it, were going to the state college to attend the short course. It struck me as being a fine thing to do and an example that other farm families might well follow. It means two weeks of profitable study, two weeks of intercourse with people from all over the state whose interests are the same, two weeks of complete change and rest from the daily routine of the farm, and, best of all, unlimited satisfaction in knowing that not one of the family was deprived of the pleasures or the educational advantages of the trip.

This is only an instance of the opportunities for improvement and pleasure within the reach of all. There is no reason why farm folks should not enjoy life as much as anyone else and get as much out of it. They can have the same books to read, the same magazines, can attend the same schools, lectures, concerts—in fact, everything of real value is as accessible nowadays to the farmers as to the people in the towns, and it is up to the farmers to make the most of it.

In these days of automobiles and electric interurbans it doesn't pay to let a good lecture or concert or play go by just because it is in town, when in many cases it is not much more trouble and doesn't take much more time for the farmer's family to go than the city man's. And an evening so spent will be of value not only because of the immediate pleasure it gives, but for the broadening effect of seeing what other people see, hearing what they hear, and taking home with us ideas and food for thought that would not have occurred to us otherwise.

But, much as we all need these outside influences, I doubt if there is anything more really satisfying than just being at home, seeing the family gather together in the evening for their hour or so of fun, or reading or study. And there should be wholesome things to read, late magazines and papers that keep one posted about what is going on in the world; good music to play, and all the happiness and good cheer you can crowd into one evening, for

What seems to grow fairer to me as life goes by is the love and the grace and the tenderness of it; not its wit and cleverness and grandeur of knowledge—grand as knowledge is—but just the laughter of children, and the friendship of friends, and the cosy talk by the fire, and the sight of flowers and the sound of music.

So let us try to put all the pleasure we can in our homes this year—pleasure of a kind that will be an aid to better living, pleasure that will enlighten our work and make it more worth while, and, best of all, pleasure that will be for all the family—for the home department of our farm economics.

HOME AND HOMEMAKING.

BROWN BREAD.

One and one-half cups milk (sweet or sour), one and one-half cups graham flour, one cup white flour, one egg, one tablespoon butter, two tablespoons sugar, one cup sirup, one teaspoon soda, a pinch of salt. Steam two hours.

NUT BREAD.

One egg, one cup milk, a pinch of salt, quarter of a cup of sugar, two heaping teaspoons baking powder, two cups flour, one-half cup nut meats. Let raise twenty minutes and bake in a slow oven one hour.

Pie tins made of coarse wire may be had and are excellent for baking pumpkin, custard, or, in fact, any sort of pie. The wire bottom instead of the tin one does away with the steaming and insures a nicely baked, crisp undercrust.

No recent home labor-saving device is of more actual value to the housewife than the vacuum cleaner. For those who have not electricity in their home there are smaller hand-power machines which do good work, and even small vacuum sweepers which are used the same as ordinary carpet sweepers and are very reasonable in price. They save the hard work of sweeping, do the work better than a broom and eliminate the dust that cannot be avoided in the old method of sweeping, no matter how carefully it is done.

A bowl of quicklime, if placed in a damp pantry or closet, will absorb the dampness and any odor that may be in the closet.

Enameled sauce pans, etc., that have been discolored may be rendered clean by boiling for half an hour in two parts of water to which is added common soda and a small packet of chloride of lime. Then wash thoroughly in clean water.

BURNT SUGAR CAKE.

One and one-half cups of sugar, one-half cup butter, creamed; three eggs, one cup water, two cups flour, one and one-half teaspoons vanilla, one and one-half teaspoons baking powder, two tablespoons burnt sugar. Bake in layers. Icing: Two tablespoons sweet cream and enough powdered sugar to make into a paste. Flavor with vanilla and one tablespoon of burnt sugar.

AMONG OURSELVES.

What a pleasure it would be to all of us if we would "let the sun shine in" a little more openly on what we are doing in our own neighborhood corners of life! What a help, what an encouragement it would be to others who are "thinking." This letter from "A Member" is plain enough, simple enough, to let us all know the value of such "get-together" associations. Meet just as women, wives and mothers. How you can take much of the narrowness, the littleness, the cramped feeling out of life when you take part in such meetings as are here told about:

I should like to tell the Home circle what a nice time the rural ladies of this neighborhood have. Last spring we organized a ladies' club (married ladies only) and called it the "So and Sew Club." We met every two weeks (in the afternoon) with a member and took our mending and had a social afternoon. No fees are charged. Light refreshments are served. We have a president and a secretary. For variety we often have speaking, reading, talks on household economy, care of children and one afternoon we all took our recipe books and exchanged recipes. Everyone enjoys it. We have about thirty members. All gossip is strictly prohibited. We are dubbed the "old hens" by the male men, but we enjoy our meetings so much more.

May we not look forward to more reports of meetings of this character?

Elizabeth has been reading. And she seems to read with a purpose that is worth while. One may read to pass the time, even to "kill" time, but is not one killing one's self when committing such murder? Read to know what life is by learning what others have experienced seems to be the thought in Elizabeth's mind. She says:

Just a word about "The House of Mirth" and books of its kind. I think any girl of sixteen is old enough for just this kind of reading—books that will teach life as it is and describe man as he too often is. So many lives are spoiled because mothers keep their girls too innocent of the stern realities of life. The only criticism I have to make of the book is that I should much rather the author had stated emphatically that her heroine accidentally took an overdose of her especial drug than to leave one in doubt; but otherwise it is a great novel.

We have but few "book hours," so it behooves us to choose well the volumes that occupy these hours.

And before we close, here is Mrs. E. L. Jenkins, who has a little story for the wee ones about something that happens too often, I'm thinking. How nice to have the happy "second thought:"

My children, dear, I'll tell you something shocking. Dear old Santa Claus forgot someone that really ought to

have a stocking. This happened last year, as I remember well; I felt so bad about it, how bad I really cannot tell. But there's some excuse for Santa Claus, he has always such a load, and besides you know mama says he does not come to grownup folks. I suppose she's right, but really I think the mamas ought to have something, because they are so good, you know. I'll tell you what I did. I had some pennies all my own to spend for Christmas things. I went down town and bought some candy and other things. Then I took my mama's stocking and quietly crept upstairs and just filled that stocking right up to the brim. Then I thought I'd wait till night, but oh, the day looked so long. When I saw my mama taking her after-dinner nap, sitting in her old arm chair, I just crept up quietly and put that stocking in her lap, and when she opened her eyes and looked at me I saw she was quite surprised, so I just had to tell her that I was her Santa Claus.

THE YOUNG FOLKS

Letters and Articles for this Department Should be Addressed to Aunt Mary, Hawley, Minnesota.

LEARN THIS BY HEART.

Do not look for wrong and evil;
You will find them if you do.
As you measure for your neighbo
He will measure back for you.
Look for goodness, look for gladness;
You will meet them all the while.
If you bring a smiling visage
To the glass, you meet a smile.
—Selected by Sally.

ROLL OF HONOR.

Anne of Green Gables	Evening Star
Atlantica	Little Missy
Bernette	Lively
Brown-eyed Beauty	Miss Hap
Callie	Red Ruby
Charmion	Riches
Dante	Tavino
Dollie	Viv
Eden	Wee Wifie

Silver Badge—"Iowa" is the first to win one.

Pansy Badges—Dante, Ella, Islie, Royal Blue and Shipmate are the winners this week, and are now in line for the winning of a silver honor badge.

No address—Helen McGuire.

Not original—Lilioke, Thora.

Written on both sides—Hattie Green, Prairie Queen, Snowdrop.

None of these are counted on the roll of honor. Try again, young folks.

AIN'T IT AWFUL?

A teacher was instructing her class in the right usage of words. It was a tedious task, till at length she wrote the following sentence on the blackboard: "I ain't been late for school yet this year." Turning to her class, she asked: "What is the matter with that sentence?" There was silence over the class till one boy, who seemed to be getting something out of it, raised his hand. "Willie," said the teacher, "you may tell me what is the matter with that sentence." "Ain't is in it, and ain't ain't no word."—Me, age 15.

The First Indians.

Once upon a time there was a fairy named India. He was a painter. One day he thought he would go out for a walk, and he took some red paint along so if he should find some red leaves he would paint a picture of them. As he was walking along he saw three little children playing. He climbed up in a tall tree and waved his wand until the children had fallen into deep sleep. Then an evil thought came into his mind, and he climbed down the tree and painted each of the little children red. Just as he had finished the king of fairies rode up and saw what India had done. He gave him a severe whipping, but that would not take the paint off the little children's faces, so after that they were called Indians—Bernette, age 11.

Moving Troubles.

My father built a new house this summer. It is thirty-two by thirty-four. There are seven rooms down stairs and there are four bedrooms up stairs, and there is a closet for every room, and then there is the hall, so there are nine rooms up stairs. There is a large garret. It is a fine play room. There is enough room to store away a lot of things. We used part of the old house to build the new one. This summer we had to live in a two-room house. There was the old kitchen and one bedroom up stairs left. We used the bedroom up stairs to sleep in for awhile. And then there was a wind storm came up and shook the up stairs so badly we were afraid the house would go over. And then after that nobody would sleep there because they were afraid that there might be another wind storm come up. So we moved down to the corn crib. We had a lot of trouble down there, too. There were quite a few electrical storms as we were sleeping down there. Every time there was one came up we always had to get up and fix the holes up so we would not get a bath. Sometimes we got a bath anyway. Then after the house was plastered and dried we slept down in the new house, and on September 2d we moved in to stay. It took us a long time to get it straightened up. We are living in it now. I like the new house better than I did the old one.—Atlantica, age 12.

The Census Taker.

(A dialogue.)

"How do you do, Mr. Watson. How do you feel today?"

"Oh, just tolerable, thank ye."

"Nice weather we're having, isn't it?"

"Pretty fair. Pretty fair. Can't complain."

"Mr. Watson, I presume you know I'm a census taker, and as such, have come to take your census. Of course, you understand the many varieties of questions. You had your census taken ten years ago, did you not?"

"Wall, now, let me see. I believe I did, but I declare to goodness gracious I forgot what the man did. Are you the same man?"

"No. You understand a census taker records a person's age, number of children, etc. How old are you, Mr. Watson?"

"None of your pesky business."

"But, my dear sir, you must tell. It is an important duty which must be executed. Please tell me your age."

"Well, I'll be hanged! Can't you see I'm no spring chicken?"

"That isn't the question, Mr. Watson."

"Being's you're getting rather hot

It Cleans Without Scouring—

With its patent sifter top — its magic cleansing qualities—its purity and full strength—a can of Lewis' Lye is a *necessity* in every home.

Powdered, perfumed, easy, agreeable and convenient to use—doing its work *better*, with less labor and more *economically* than any so-called cleanser on the market — is it any wonder to you who know and appreciate the importance of *absolute cleanliness*, that Lewis' Lye is the standard cleanser in a million homes?

Lewis' Lye

The Standard for Half a Century

—is lye, *pure lye;* nothing more or nothing less.

Made by manufacturing chemists who vouch for its 98% and full strength, Lewis' Lye is by far the safest and most economical household article obtainable; and every woman who has used it for any of the purposes named below, will endorse this statement as being absolutely true.

Get The Genuine—Made by Manufacturing Chemists—Guaranteed Absolutely Pure

If you value your skin—but don't think of starting to clean house or make hard or soft soap with anything but the *genuine*—which your grocer will vouch for in *quality* as *best* for—

—Cleaning	—Making Soap
—Disinfecting	—Spraying Trees
—Destroying Vermin	—Conditioning Hogs
—Softening Water	—And all general purposes

Our free booklet suggests half a hundred other uses for Lewis' Lye in the home or on the farm, that you'll be glad to know about. Send for a copy today. Simply address:

under the collar, I'll tell you. I'm sixty-seven come this next spring."

"How many children have you, Mr. Watson?"

"Let me see. Haven't got any 'cept one. All the rest are married."

"How many have you in all?"

"Five."

"Names and ages, please."

"Wall, now, if that ain't just too funny. I supposed every critter in town knew my children."

"Remember, sir, I'm a stranger here. I would be very much pleased if you would answer my questions."

"Certainly, certainly, of course. No offense was meant. Harry is twenty-one, Sally is twenty-six, Jane is thirty-five, Willie, he's only forty, Mary is forty-five."

"Their surnames, please."

"Watson, Black, Brown, White and Davis."

"Your wife's age, Mr. Watson?"

"Now, don't you be askin' me such a question. Ever' time I say anything to her about her age she gets terrible mad. Take my advice and don't ask her."

"How many chickens have you, Mr. Watson?"

"Haven't got a single chick. They belong to my wife."

"Say, is your wife at home."

"Yes, siree. Don't catch her away from home without me. She's afraid."

"I'm not interested in Mrs. Watson's fears. Please be so kind as to ask her all those questions. I'll be back tomorrow."

(Exit census taker.)

"Say, Maria, come out here."

"Well, what's wanted?"

"That census fellow was here."

"I don't care."

"He was asking all sorts of questions about you."

"What could he possibly want to know about me?"

"He wanted to know how many chickens you had."

"I know I have a fine bunch of chickens; but I didn't know the government was interested in them. What else did he ask?"

"He wanted to know your age."

"Want's to know my age. Lots of his business, ain't it?"

"Yes, yes, of course. That's just what I told him, but he said he must find out, as the government wanted to know."

"Well, why didn't you tell him?"

"Cause I didn't know. He'll be back tomorrow."

"When he comes you tell him I'm not a day older than I really am."

"You can tell him that yourself.

"I shan't have a word to say to him. The idea!"

"Well, we'll see about that tomorrow."—Socrates and Themistocles.

The International Sunday School Lesson

FIRST QUARTER Lesson III. Genesis III., 1-12; 22-24 January 19, 1913

MAN'S FIRST SIN—THE STORY.

Genesis "Third" is a target fairly shot through, not only with the darts of a vulgar infidelity, but the well-aimed arrows of a scholarly criticism. After all, however, the chapter is unharmed. It stands alone in literature. It is helpful toward the solution of an occult problem—the origin of evil. By some it is accepted as a literal history; by others as a vivid pictorial and poetic description of man's early struggle with evil. For purposes of interpretation, the former view is here followed. Adam and Eve are represented as nobly endowed. They had a happy environment, and were under daily tutelage of their Maker. But they were on probation. In Eden the problem was solving whether they would persist in choosing to obey God or not. A test was given. It was simple, but adequate. Of the fruit of one attractive tree they were forbidden. The prohibition was so explicit, peremptory, and oft repeated, that inadvertence was out of the question. "Thou shalt not!" was fairly written upon the leaves of the tree. Persistent abstinence was a visible sign to God and angels of their conscious loyalty to God. Under this Adamic covenant God stood ready for His part to supply grace sufficient; but Adam, on his side, must choose to keep obeying God. We have no means of knowing how long the happy Eden life continued. The true idea of Adam's state is probably that which places him midway between the savage and the sage. He was a laborer, but suffered not the excessive weariness incident to labor now. He was busy getting "dominion," subduing the triple kingdoms—earth, air, water, vegetable, animal, mineral. In the evening hour, when the activities cease and the human heart is most impressible, he enjoyed immediate communion with his Creator, who corrected his mistakes and inspired him with new courage. At length, at some period when man's tutelage was far enough advanced to make his chances for enduring the ordeal most favorable, a test was permitted. The outcome of the ordeal was not predestinated defeat. Adam had a good fighting chance. He might have persisted in his obedience toward God. He ought to have. The odds were not against him. He had had overmastering examples of God's goodness. He ought to have been loyal. An overweening vanity determined man to lift himself in the scale of being, even if he must needs make the staircase out of the broken commandments of a loving heavenly Father. The deed was done already in subjective intent, in the deliberate and pleasurable entertainment of the suggestion of doing it. Flesh and eye had already lusted, and pride had put the finishing touch. The manual act of reaching, touching, plucking, was only the objective complement of the mental determination, the other hemisphere of the black orb of sin which rolled on Adam. Their eyes were opened, but not to see themselves exalted to the lofty plane, but fallen below the plane on which they were standing before. The normal relation between soul and body was destroyed, so that the body ceased to be any longer a pure instrument of the spirit. So they were overwhelmed with their first sense of shame, and ceased to be like unconscious, unembarrassed children. Out of the shadows of Eden, in which, with a silly, ostrich-like instinct they sought to hide themselves, God called them. It was a fearful meeting. The reality of man's fall is evidenced by his changed being. The frankness of innocence is gone. When fairly cornered, with the historic cowardice of sin, he seeks to cast the blame upon the companion whom, up to that moment, he had loved devotedly and sheltered courageously, and indirectly upon the beneficent Being who had given her to him. Across the densest gloom of this shattered paradise God let one ray of heavenly hope fall aslant: "The seed of the woman shall bruise the serpent's head." The age-long strife just then beginning, with its varying fortunes, between the good and the evil seed, shall finally cease when the Man of Calvary puts his bitten heel upon the serpent's head.

The Teacher's Lantern.

Modernize this lesson. Translate it into the language of today. Every boy and girl and older person can be shown to be standing under a tree of test. Destiny is deciding now by one's attitude toward God. The chances of a happy outcome are better and worse than those of Adam. Worse because of an hereditary predisposition to a wrong choice. Better, because of the provisions of mercy. Where sin abounds, grace much more abounds. Even now God's voice is ringing, "Son! Daughter, give me thine heart!" One does not need to run the whole gamut of sin to be lost. Merely declining to obey God is enough to exclude one from His presence. Picture the approach of the first night after the exciting novelty of their experience was wearing away; the twilight

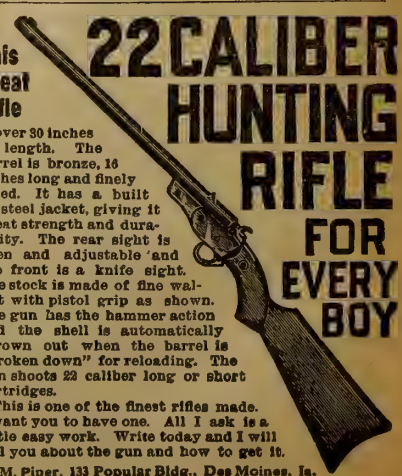
This Great Rifle

22 CALIBER HUNTING RIFLE FOR EVERY BOY



is over 30 inches in length. The barrel is bronze, 16 inches long and finely rifled. It has a built up steel jacket, giving it great strength and durability. The rear sight is open and adjustable and the front is a knife sight. The stock is made of fine walnut with pistol grip as shown. The gun has the hammer action and the shell is automatically thrown out when the barrel is "broken down" for reloading. The gun shoots 22 caliber long or short cartridges.

This is one of the finest rifles made. I want you to have one. All I ask is a little easy work. Write today and I will tell you about the gun and how to get it.

A. M. Piper, 133 Popular Bldg., Des Moines, Ia.

hour when retrospection is natural; when one wants to be assured of some strong safeguard; just when Adam and Eve were feeling most orphaned, the Heavenly Father sought His erring children. He has been doing so ever since. So, if the sinner feels a quickening of conscience, a kindling of desire, it is God at work, and in the most opportune hour. It is the supreme dictate of practical wisdom to know one's opportunity, and improve it.

OUR FASHION DEPARTMENT

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5837 Lady's Empire Dress—Here is one of the most stylish models of the season. The dress has the fashionable front closing and the design is quite easy to carry out. The waist is made with removable chemisette and the skirt is cut in five gores. The collar and revers add charm to the garment and the pointed turned-up cuffs are a pretty feature.

The pattern, No. 5837, is cut in sizes 32 to 42 inches bust measure. Medium size requires 6⅛ yards of 36-inch material, ⅝ of a yard of 22-inch all-over and ⅝ of a yard of 24-inch satin. Price of pattern, ten cents.

5903 Lady's Dress—The lines of this stylish frock are excellent, though the model is a simple one. It has the fashionable and convenient front closing and is made with a three-piece skirt.

The pattern, No. 5903, is cut in sizes 32 to 42 inches bust measure. Medium size requires 6½ yards of 27-inch material and 2⅜ yards of plaiting. Price of pattern, ten cents.

5991 Girl's Dress—Here is a dainty little frock for the small girl, and one quite easy to make. The garment closes at the right side of the front and has removable shield. The skirt is a three-piece one. There is a pretty sailor collar. The cuffs are edged with contrasting material and the dress is further trimmed with buttons.

The pattern, No. 5991, is cut in sizes 6 to 12 years. Medium size requires 3¾ yards of 27-inch material or 3 yards of 36-inch material. Price of pattern, ten cents.

5987 Lady's Waist—A delightfully chic waist design is here shown and one suitable for wear with separate skirts or for development as part of a complete costume. The waist has a deep yoke outlined with piping of contrasting material. The new-style sleeves with double frill at cuff is noted. Silk, madras or serge can be used to make this waist.

The pattern, No. 5987, is cut in sizes 32 to 42 inches bust measure. Medium size requires 1¾ yards of 36-inch material and ½ yard of 22-inch all-over. Price of pattern, ten cents.

5928 Lady's Waist—Here is a delightful waist model that may be developed for separate wear or as part of a complete costume. The garment may be made with Empire or regulation waist line and with long or short sleeves. The draped effect at the front is quite stylish. The big collar and the turned-back cuffs are fashioned of all-over.

The pattern, No. 5928, is cut in sizes 32 to 42 inches bust measure. Medium size requires 3⅛ yards of 36-inch material and ¾ of a yard of 22-inch all-over. Price of pattern, ten cents.

SLED THAT STEERS, FREE

YOU CAN HAVE ONE.

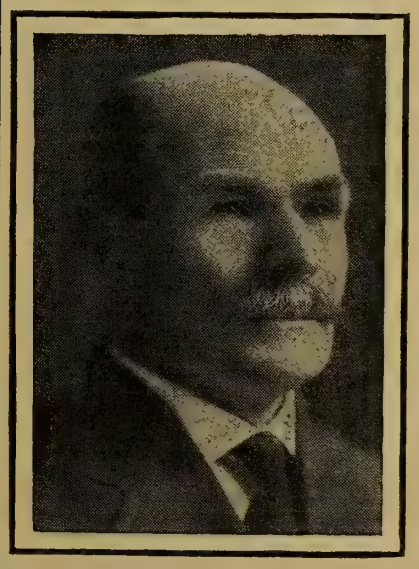
Send No Money

This is the greatest sled for boys and girls ever manufactured. Known all over the country as the "sled that steers." Runners are spring steel, and when you coast down hill a slight pressure of the foot curves them and steers the sled to one side. No digging in the snow with your heels or plowing the snow with your foot. Not one boy in a hundred has one of these sleds. You can have one for a little easy work. Write me today and I will tell you all about it.

A. M. PIPER, 840 POPULAR BUILDING. DES MOINES, IOWA.

WINTER LIVE STOCK MEETING SCHEDULE.

Stephen A. Baird, a promienet Waukesha county dairyman and one of the leading stockmen of the state, has been added to the Wisconsin Farmers' Institute corps. He will represent the Wisconsin Live Stock Breeders' Association and will attend as many as possible of the institutes to be held this winter for the purpose of encouraging the production of more and better live stock. During the month of January he has been scheduled to speak at Greenwood and Waupaca on the 21st and 22d, at the town of Hull and Withee on the 23d and 24th, at Iola and Stiles on the



STEPHEN A. BAIRD.

28th and 29th, and at Pulaski and Welcome on the 30th and 31st.

There is not a state in the Union which is better adapted by climate and soil to the raising of live stock than is Wisconsin and none are as conveniently located between the great American markets for live stock and live stock products. As a producer of milk and milk products and a close observer of market demands and familiar with Wisconsin's unsurpassed resources, Mr. Baird is convinced that the great majority of Wisconsin farmers should raise bred-for-production live stock. As a representative of the Wisconsin Live Stock Breeders' Association he will urge the farmers of the state to raise live stock of high production. To own dairy animals which can produce the most milk and butter fat, sheep which will supply the market with the best wool and mutton, hogs which will dress the most pork of superior quality, beeves which will cut up into the most and best beef and horses which will have the maximum pulling power, should be the ambition of every Wisconsin stockman.

QUILT PATTERNS

We want every quilter to have our book of **450 Designs**, containing the prettiest, queerest, scarcest, most grotesque patterns ever thought of, from old log cabin to stars and puzzle designs, also crazy stitches and circulars. All sent, postpaid for six 2-cent stamps (or silver dime.

People's Popular Monthly

Des Moines, Iowa

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, Ill., January 10th.—Week-end tone of the bovine and porcine markets are suggestive of some rather hard sledding for the selling interests if receipts come up close to the expectancy of buyers. This Friday's trade in cattle was anything but lively and at the low point of the week. Quality of the offering was of a sort depressing to the spirits of buyers, the run consisting mostly of ordinary classes that were made to appear even worse by reason of many of them having been delayed en route owing to bad weather, but the leading factor in influencing the trade to lower levels was found in the report reaching buyers' ears of extensive ordering of cars to load for next Monday's market. These reports were especially numerous from Iowa shipping points and suggest that many are about to follow the custom of shipping freely following the first bad storms of winter. They led some on the buying side to predict a crop of 30,000 cattle here for next week's opening session. The present weakened condition of the trade, however, may discourage the loading of much stock that would have been put over the wheels had the market held the mid-week basis. Weather conditions the past week are also expected to expand the marketward movement of hogs temporarily. Wintery weather has materially decreased the good profits that have recently been made in converting corn into pork. In any event, the fact that bad weather had been so long delayed this winter probably means that there will be a heavy proportion of heavy hogs in the run and big hogs are now under the ban. Packers are now making as little lard as possible, but are cutting hogs with a view to making maximum quantity of meat. They are expecting the early arrival of plenty of 350 to 400-pound hogs carrying all the lard they need. Live muttons have had a sensational advance this week, soarinng to the highest levels for January in trade history. Some reaction is not improbable, as such ovine stock as has been running in cornfields and not already shot to the shambles is pretty sure to be brought marketward by the high prices current and present condition of stalk fields, but many are under the impression that farmer feeders have already cleaned up to such an extent that a big run now is improbable, as big regular feeders in corn-belt territory are imbued with bullish sentiments and will market conservatively. Some Colorado lambs are in sight for the coming week's trade.

Receipts this week at Chicago have increased about 9,000 cattle, 20,000 hogs and 14,000 sheep over marketings for the opening week of the new year, but have fallen about 2,500 cattle, 20,000 hogs and 20,000 sheep short of the same week last year.

The week's trade in beef steers has been a very uneven affair, starting with a decline for the medium and heavier classes of cattle, recovered fully by Wednesday and turning downward again the last half of the week to a point 10 to 15 cents lower than a week ago. Light classes of beef steers sold higher during the first half of the week and have since merely lost most of their bloom, closing a shade better than a week ago. Best ripe 1,470 to 1,643-pound beeves sold during the fore part of the week up to $9.40, against a $9.60 top the week previous. Most of the strong weight steers coming are of a plainer kind than a few weeks ago and are not meeting favor, yet market conditions of forty to fifty days back have been reversed and weight is no longer a credit to a steer at the yards, even where quality is not lacking. As anticipated, a slice of $1 to $1.50 was quickly taken off top classes of cattle as soon as the Christmas demand for such was over, and now a narrowing of more than $2 in the price range of one month ago is shown. Only something of extra class and ripeness can now make $9.25, as against $11 to $11.25 as the top prices paid the first half of December. An unprecedented mid-winter demand for feeders, too, has forced the prices of all light classes of beef steers up about 50 cents per hundredweight, compared with a month ago. Unfinished cattle are now relatively much higher than finished stock, and an actual difference in real value, as based by normal trade conditions of from $1.50 to $2 per hundredweight, exists between the classes of steers now selling around $8 to $8.25 and the goods it takes to make $8.75. A spread of from $7.50 to $8.60 has taken the bulk of this week's supply. Quotations:

Prime steers, 1,450-1,700 lbs.	$9.00@9.35
Choice steers, 1,230-1,400 lbs.	8.35@8.90
Good steers, 1,100-1,300 lbs.	7.75@8.25
Plain fair beef steers	7.20@7.75
Fancy baby beef yearlings	8.60@9.00
Good to choice yearlings	7.75@8.50
Medium to good yearlings	6.85@7.65
Common to fair yearlings	6.40@6.80
Inferior steers, 850-950 lbs.	6.00@6.40
Common steers, 750-850 lbs.	5.80@6.20

Feeding cattle buyers are paying about as high prices for thin steers as have ever been recorded and prices for the last three weeks have been higher than ever before at this season of the year. Some mixed lots of stocker and feeder stuff as thehy arrive from the country are being picked up by yard dealers as much as 15 to 25 cents lower than early this week, but a search warrant is needed to detect any lowering of their prices for shaped-up lots.

Anticipation of spring scarcity is one incentive for mid-winter purchasing at current high rates, abundance of feed that if not fed to live stock will be waste next spring is another. A famine market will be needed when they return if the feeder is to be let out whole, but there is general expectancy of a gap in both fat and feeder cattle supply next summer and many light cattle are being laid in for the purpose of unloading them when that gap develops. The condition illustrates how close to age the country's cattle supply has been consumed. Feeder buyers have been able to acquire the title to very few good-weight feeders recently and any 1,000-pound weights of any class that have gone back to the country have cost upward from $7.40, a breedy 1,100 to 1,200-pound sort being quotable up to $8.75 or higher, where decent flesh in combination with quality is shown. In the lack of such kinds little well-bred steers of 525 to 700 pounds are selling as high as $7 to $7.40, while $6.25 to $6.85 stuff is only of medium stocker class and $5.25 to $5.75 grades are trashy. Quotations:

FEEDERS.

Selected, 1,000-1,100 lbs.	$7.40@7.85
Fair to good, 800-1,000 lbs.	6.25@7.25
Plain to good light	5.40@6.15
Feeding heifers, poor to good	5.00@5.40

STOCKERS.

Selected, 550@700 lbs.	6.90@7.35
Good straight lots	6.40@6.90
Fair to good, 500@650 lbs.	5.85@6.40
Common to plain mixed	5.00@5.75
Heifers, common to good	4.50@5.50

Good to choice grades of fat cows and heifers have slumped off about 10 to 15 cents from prices of a week ago and are fully 15 to 25 cents lower than the high spot last Wednesday, but canners and cutters, supply of which has been light, are fully 15 cents higher than late last week. A prime sort of fed heifers is not quotable up around $8, but few are selling above $7.35, most of the beef heifers from $5.60 to $7, and fat cows largely from $5.30 to $6.50. Below the $5.25 line the trade is in medium classes of stalk field stuff and canners and cutters, most of the good cutters selling at $4.25 to $4.60 and canners of good class up to $4, only old shells at $3.25 or lower. Bulls have receded 15 to 25 cents in value during the week, very good weighty bolognas closing around $5.50 to $5.60, inferior light stock bulls and cannery stuff from $4.75 down and most beef bulls upward from $6, an occasional prime individual up to $7.25 or better. Selected lots of 125 to 150-pound veal calves are selling at week-end up to $10.75, bulk of the 100 to 115-pound weights of fair to good class at $9.75 to $10.35, and some big-weight choice heavy calves up around $8 or better, with some fancy Angus stock calves going as high as $7.75, though most of the good stock calves now sell at $6.50 to $7. Quotations:

BEEF COWS.

Choice to prime fed cows	$6.25@7.59
Good to choice cows	5.60@6.20
Fair to good cows	5.15@5.60
Inferior butcher cows	4.60@5.10

CANNERS AND CUTTERS.

Good to choice heavy cutters	4.30@4.60
Fair to good light cutters	4.00@4.20
Fair to good canners	3.50@4.00
Poor to fair canners	3.20@3.40
Old, thin, weak shells	2.09@3.15

HEIFERS.

Choice to prime heifers	7.10@8.10
Good to choice fed heifers	5.90@7.00
Fair to good grass heifers	5.25@5.85
Common to fair heifers	4.50@5.10

BULLS.

Good to choice bolognas	5.60@5.75
Light and medium bolognas	5.15@5.50
Feeding bulls	4.85@5.25
Canner and poor light	4.25@4.85
Good to choice butchers	5.80@6.15
Choice to fancy beef	6.25@7.40

VEAL CALVES.

Good to choice vealers	10.00@10.75
Fair to good veal stock	8.75@ 9.75
Strong weight vealers	6.75@ 8.50
Good to choice stock calves	6.00@ 7.00
Inferior to fair heavy clvs.	4.25@ 5.25

An increase of about 60,000 hogs is shown in the aggregate marketing of hogs at eleven points during the first five days this week over like period of the week previous, the gain being practically all at western markets and 20,000 of it at Chicago, with outgoing shipments from this market totaling practically the same as last week. An increasing proportion of fat, heavy hogs in the run and centering of demand on light and butcher weight classes have been prominent features of the week's trade and further discrimination against the big weights in favor of the grades that go largely into fresh meat channels is promised. The market closed in bad shape today at a 5-cent decline from Thursday and 10 cents lower than today's opening sales on shipping and speculative account, with heavy packers selling off 15 to 25 cents from a week ago and whole loads of 400 to 475-pound sows down to $7.15 to $7.25, though in light stuff practically nothing above pig weights sold below the latter figure, and most of the good pigs from $7 to $7.40. Prime heavy and medium-weight shipping classes sold up to $7.60 early, but $7.50 bought the same kind late and such closed about 10 cents lower than a week ago, while light and light mixed were within a shade of last week's prices. Bulk of the entire supply sold from $7.35 to $7.55, against $7.45 to $7.60 a week ago. Quality is running good and an innreased marketing is sighted for the coming week. Eastern shippers are now taking about 35,000 weekly from this market and broadening of that outlet will be needed to maintain current quotations, which follow:

Buk of sales	$7.35@7.55
Mixed, 215-250 lbs	7.30@7.45
Mixed, 170-200 lbs	7.30@7.50
Medium weights	7.40@7.50
Light butchers	7.45@7.55
Heavy butchers	7.50@7.60
Light shipping	7.50@7.55
Heavy shipping	7.45@7.60
Heavy packing	7.15@7.35
Rough heavy packing	7.00@7.15
Throwout packing sows	6.60@7.00
Fair to choice light	7.35@7.50
Light-light, 135-155 lbs	7.25@7.50
Pigs, good to fancy	7.00@7.50
Pigs, inferior to fair	5.75@6.90
Boars, poor to good	3.00@4.25
Stags, subject to dockage	7.65@8.15
Government throwouts	3.00@4.50
Government pigs	1.00@2.50

Light receipts in the East, moderate runs west and a very healthy dressed market have caused a sensational advance in live muttons this week, the market gaining strength every day and closing at the high point of the week, season and for all time as concerns a January trade. The bulge was one that the trade has long seen coming and as soon as the market was passed the holiday season handicaps. Feeders are being forcibly reminded that feeding ovine stock bought last fall was well worth the money it cost and those who failed to get in before the supply was exhausted are nursing red-eyed regret. Practically everything that killers are buying in the sheep house is 75 cents or more per hundredweight higher than a week ago, numerous light, medium and heavy lambs and some heavy ewes showing as much as a dollar advance.

CANADA'S OFFERING

To The Settler

The American Rush to Western Canada is Increasing

In the **Free Homesteads** new Districts of Manitoba, Saskatchewan and Alberta, there are thousands of Free Homesteads left, which to the man making entry in 3 years' time will be worth from $20 to $25 per acre. These lands are well adapted to grain growing and cattle raising.

Excellent Railway Facilities

In many cases the railways in Canada have been built in advance of settlement, and in a short time there will not be a settler who need be more than ten or twelve miles from a line of railway. Railway Rates are regulated by Government Commission.

SOCIAL CONDITIONS. The American Settler is at home in Western Canada. He is not a stranger in a strange land, having nearly a million of his own people already settled there. If you desire to know why the condition of the Canadian Settler is so prosperous write to any of the Canadian Government Agents and send for literature, rates, &c., to

Frank H. Hewitt

How to Train Scary, Vicious, Balky, Tricky Horses and QUICKLY DOUBLE THEIR VALUE!

Write for Prof. Jesse Beery's FREE "HORSE-TRAINER'S PROSPECTUS"

If you are the owner of a vicious, tricky, kicking, balky, dangerous and unsaleable horse or colt, don't get rid of the horse—get rid of its bad habits.

Write for Prof. Jesse Beery's "Horse-Trainer's Prospectus," a large, handsome, illustrated book written by the

King of World's Horse-Trainers

Prof. Jesse Beery won world-wide fame and was tremendously successful giving exhibitions of his marvelous skill in mastering man-killing stallions, training wild horses to drive without bridle or reins. The whole country was thrilled by his daring deeds.

Secret of His Power Revealed at Last

In the grand Free "Horse-Trainers' Prospectus" Prof. Beery now reveals the secret of his power and shows the way to duplicate his dazzling success.

Train a Colt in 8 Hours!

You can do it by the Beery System. There is lots of money in breaking colts. The field is unlimited.

Prof. Jesse Beery

What His Graduates Have Done

Prof. Beery's Correspondence Course in Horse-Training and Colt-Breaking is the only instruction of the kind in the world. Thousands of his graduates are reaping the profits and benefits of his wonderful course. For example, take the case of Emmett White, Kaiona, Iowa, now a prosperous professional horse-trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy a home and an automobile solely through earnings from training horses as taught by your excellent methods."

Buys "Man-Killers" Cheap, Trains and Re-Sells at Big Profit

A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several different men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

S. M. Ryder, Mercersburg, Pa., writes: "I am making money buying 3-year-old kickers cheap, handling them for a few days and selling them, perfectly broken, at a large profit."

So it goes. Everywhere, Beery's graduates are making money as trainers and "traders," giving exhibitions. Write and we will tell you about more of them. It's intensely interesting.

Retires from the Arena—

Now Teaching Horse-Training by Mail

Prof. Beery has retired from the arena, after a career of unparalleled success, and is devoting his time to teaching his methods to a limited number of selected pupils—both men and women—by correspondence.

Graduates Making $1,200 to $3,000 a Year at Home or Traveling

The wonderful success of Prof. Beery's graduates—taught by mail at home during spare time—proves beyond question the value of his instruction. People gladly pay his graduates $15 to $25 a head to have horses tamed, trained, cured of bad habits, and colts broken to harness.

A Penny Postal May Make Your Fortune

No matter who you are or where you live, if you love horses and are ambitious to earn more money in a profession you will be proud of, write for the wonderful Free "Horse-Trainer's Prospectus" today, without fail. Tell me all about your horse.

Bang! Bang! Bang!

The Beery System Drives Out Fear

PROF. JESSE BEERY, Box 54 PLEASANT HILL, OHIO

Healthy, Vigorous Farm Horses

ABSORBINE

Prevents fatigue, stops pain and lameness, reduces swellings and inflammation, strengthens the muscles and ligaments and keeps out soreness.

No matter what his breeding, a farm horse cannot do good work while he is suffering from lameness, swollen glands or other trouble. You can make a crippled horse work, but you can get no more out of him than he has to give you. He will not go through the day with the strong, heavy stride that means dollars ahead of the plow when his body is tortured by the many ailments that Absorbine will remove.

Absorbine does not blister or remove the hair and horse can be worked.

Absorbine is a mild, pleasant liniment to use—it is healing, soothing and invigorating and a positive **Antiseptic and Germicide.**

USE ABSORBINE to remove **Bursal Enlargements, Bog Spavins, Thoroughpins, Puffs, Shoe Boils, Capped Hocks, Swollen, Painful Swellings** and affections; to cure any strain or lameness; to repair strained, ruptured tendons, ligaments or muscles; to strengthen any part that needs it. You can buy Absorbine at regular dealers, price $2.00 per bottle or sent to you, express prepaid with full instructions. Write me about any case on which you would like advice. Horse book 2A free. Manufactured only by

W. F. YOUNG, P. D. F., 381 TEMPLE STREET, SPRINGFIELD, MASS.

Yours for Bigger, Better Hog Profits

As a hog raiser—your every *thought* is of *profit*—and anything that tends to increase revenue from your hogs deserves all the investigation you give it. Darling's Digester Tankage mixed with hog feed will produce at least

30 Pounds Net Gain on Every Hog

and you can be sure of this gain without spending a single penny more than you are NOW spending.

COLT DISTEMPER

We absolutely Guarantee Frazier's Distemper Cure to Cure and Prevent this loathsome disease or return your money. Safe for any Mare, Colt or Stallion. Epizootic, Catarrhal Fever, Pink-Eye, Influenza, Coughs and Colds cured with one bottle. Send for Free Horse Booklet. $1.00 bottle holds three 50 cent bottles. Sold by all druggists, or prepaid from

BINKLEY MEDICAL COMPANY - Dept. D, NAPPANEE, INDIANA.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office

SYMPTOMS AND TREATMENT.

INFLUENZA.

Would like to have some information in regard to a strange disease that has broken out among our horses. One of our mares took it first, starting first in one eye. The eye was swollen in the morning when we first noticed it and discharged a bloody matter. The next evening her glands were swollen and on the third day her other eye swelled like the first one. About the fifth day the swelling began to leave her head and her eyes opened and cleared up. Then she began to get restless and the disease seemed to go to her bowels. She had spells something like the colic. On the eighth day she died. She ate well until the sixth day and did not lose flesh. Fifteen days later a colt took the same disease, but only one eye is swollen and the glands are swollen on one side. The veterinarian whom we called does not know what the disease is, but is doctoring for eye and throat trouble. What would it cost to get the state veterinarian and how should we proceed to get him?

The disease probably is that form of influenza commonly called "pink eye" or "epizootic" and it should prove responsive to intelligent treatment by a graduate veterinarian. It is the duty of the state veterinarian to investigate an outbreak of contagious disease, free of charge; but we doubt if he will feel justified in investigating cases such as you describe. You might, however, send him a description of the cases experienced to date, and especially so if the disease is becoming prevalent in your district. Meanwhile isolate the affected colt and clean up, disinfect and whitewash the places where the sick animals have been.

SWELLING.

About two months ago I noticed an enlargement of the cords on the sides of neck in front of tip of shoulder blades on my chestnut sorrel mare. This does not seem to be sore to press upon, but is soft. It does not increase in size. The mare is in foal and in good flesh, weighing 1,500 pounds.

Do not give severe treatment of any kind and do not use the knife. The collar no doubt has caused the puffs and she should be rested for a month or two; during which time rub the places two or three times a week with iodin ointment and on other days massage thoroughly, using a little sweet oil on the hands.

HYDATID.

Please tell me what is the reason for hogs holding their heads crooked and letting one ear hang down. I have been feeding oats, barley, corn and stalk fodder, also some shorts in swill. I penned them up and gave them special care for a month, but it did no good.

The cause is the presence of a clot, or effusion, or abscess on the brain; or there may be similar pressure and disturbance from the presence of cysts, called hydatids, which are the cystic form of a tape worm. There is no cure. It also may be stated that a blow on the head might lead to similar symptoms.

CHOLERA.

I have a few fall pigs that have been coughing for awhile and one died yesterday, although he seemed in perfect health up to that time, excepting the cough. His breast and belly were of a pinkish blue and he did not get stiff after being dead, giving off an offensive odor. They have had corn all along, but did not seem to grow much. Have had plenty of exercise and water.

We suspect that cholera killed the pig and if that is so the remaining pigs should be vaccinated with preventive serum. It is possible that some other disease is present, but without an investigation and post-mortem examination we are unable to give a confident opinion on the case.

Of the lumber cut of Canada for 1910, amounting to about 5,000,000,000 feet, one-twentieth consisted of hardwoods, valued at less than $5,000,000, while the value of the hardwoods imported into the Dominion exceeded this sum by 50 per cent. It would seem that Canada is becoming more and more dependent upon the supply of hardwoods from the United States.

Poorly Mixed Concrete Is Worthless

Cement cannot be thrown together with sand and stone in any old way and good concrete be secured—a fact many farmers have learned to their sorrow.

We have for the past decade been building a hand batch mixer for the individual use of farmers and small contractors.

This machine is simple, strong and durable throughout.

We sell it under an ironclad guarantee to return the money if after a thorough trial it has not proven entirely satisfactory. It does the work swiftly and satisfactorily.

We make a complete line of mixers from this size up to the largest used by contractors.

Send for catalog and prices.

Iowa Foundry & Mfg. Co.

Fort Dodge, Iowa.

Traub's Sanitary Collar Pad

SEE that pad resting in the hollow of the shoulder, the old-fashioned pad does not fit the collar to the neck. Traub's sanitary collar pad fits snugly to the collar bone, thus distributing the draft equally. It is filled with granulated cork and will not get hard. It is the lightest and coolest pad made. It will prevent sore shoulders and sweeny. Don't fail to write for circulars explaining this wonderful invention at once.

Traub's Sanitary Collar Pad Co., Mackinaw, Ill.

GET RID OF

Worms and Bots

You can remove every one of them. We guarantee to kill and bring from the body, dead, in from 18 to 24 hours, all pin worms and bots, with the safe and sure remedy.

NEWVERMIFUGE

Absolutely harmless. Can be given to mares in foal before the eighth month. Horse owners write us that Newvermifuge has removed from 500 to 800 bots and worms from a single horse. An animal that is wormy can't help but be ugly and thin. If your horses are troubled with worms send us your order today.

6 Capsules $1.25. 12 for $2.00. Postage paid.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

John Harms, Lohrville, Iowa, is offering a black Percheron stallion that weighs 1,950 pounds for sale in his advertisement that appears on page 53 of this issue of The Homestead.

R. M. Skillen, Greene, Iowa, announces a sale of Duroc Jersey bred sows for February 10th at his farm. He has a fine lot of sows and three good herd boars. Full particulars in later issues.

The advertisement of the farmers' forge outfit which will be found on page 14 of this paper is worthy of investigation because it presents to the farmer an opportunity to secure a farm blacksmithing outfit which cannot fail each year to pay its entire cost in the savings made in blacksmith work. A special winter offer is made good this month and next by which this forge may be obtained at a remarkably low price. For particulars concerning this special offer write for catalog No. 23. Address C. A. S. Forge Works, Saranac, Mich.

A splendid Polled Durham bull and one excellent young Short-horn bull can be bought right of W. H. Barr & Son, Villisca, Iowa, if taken soon. Now is the time to buy bulls and if any of our readers want them they had better write or go and see Mr. Barr at once.

Joe Egelhof, Cuba City, Wis., has some choice Chester White gilts that he is offering for sale in his advertisement on page 51 of this issue. These gilts are bred to Lewis B. 22617 and are due to farrow in March and April. If interested write Mr. Egelhof for prices.

O. R. Stevens, Rippey, Iowa, announces his annual public sale of Duroc Jersey brood sows for February 6th. Mr. Stevens has in his herd the descendants of Liberty Chief, Col. Gano and a lot of other high-class sires in which most good Duroc Jersey men are interested. Further announcements will appear in later issues of this paper.

E. J. Augspurger, Pulaski, Iowa, is advertising Poland China bred gilts due to farrow in April. These gilts are bred to a grandson of the noted boar, A Wonder. They are of the heavy bone, prolific kind and the low price of $25 to $35 each is quoted on them by Mr. Augspurger on page 39. When writing him kindly mention The Homestead.

F. J. Clouss, Barnum, Iowa, has some good young Red Polled bulls ready for service on which he will be glad to quote prices to anyone who can use a bull of the dual-purpose kind. His cattle rank well up among the good ones of this breed and these bulls are by good sires and out of the same sort of cows. His advertisement is on page 53 of this issue.

Sol Frank, Sioux City, Iowa, sells a good lot of bred Duroc Jerseys at his farm in North Sioux City on Friday, January 24, 1913. The farm is reached by taking a Pierce and Jackson car to Thirty-fourth Street and then walking west to the farm, about five or six blocks. Send for catalog if you have not one already and plan to attend the sale. Address, mentioning The Homestead, Sol Frank, Sioux City, Iowa.

Readers of this paper who are in search of Chester White sows should read the advertisement of E. J. Trumbauer, St. Charles, Iowa, which appears on page 51. That gentleman advises us that he has a choice lot of Chester White gilts bred to farrow in February, March and April. They are high-class animals and in order to sell them soon he will make some remarkably low prices. Write to the address named.

On January 25th, H. Gilbert, Perry, Iowa, will make a public sale of Duroc Jersey bred sows. Thirty particularly well-bred animals have been cataloged for this sale. While Mr. Gilbert does not have a large herd, he is paving the way to later success in numbers, as well as quality. Buyers will find his sale to be one at which bargains will prevail. Further information may be obtained by writing to H. Gilbert, Perry, Iowa.

The universal value which is now placed on cement as a material for the construction of farm buildings and the ease and cheapness with which concrete buildings may be obtained gives added interest to the announcement of the Universal Portland Cement Company on page 10. Almost any farmer may, during the winter time, manufacture concrete blocks for all kinds of farm buildings, doing the work at a time when he would otherwise have nothing to do and at an insignificant outlay of cash for the materials. A great deal of important information on the subject and facts which every farmer should possess anyway may be obtained from a booklet to be had free on application to Universal Portland Cement Company, 72 West Adams St., Chicago, Ill., or either of the addresses mentioned in the advertisement.

C. H. Porter, Eagle Grove, Iowa, is advertising bred gilts from his herd of Poland Chinas on page 48. These gilts will please you when you see them and will be profit makers when you buy them.

J. C. Porter, Ogden, Iowa, is offering some good bred Duroc Jersey gilts for sale at this time. Write him for prices and descriptions on them. You will be treated fairly. His card is on page 52.

Beltel Hansen, Alta, Iowa, has Poland China gilts of the big kind ready for sale at this time. Write him for his prices and descriptions of the stock he is offering. His advertisement is on page 48.

Parties who may need a hustling auctioneer for their winter sales should write J. R. Thompson, Merrill, Iowa. He has had experience both as an auctioneer and a breeder, and is thoroughly familiar with his work.

E. H. Kahl, Buffalo Center, Iowa, can supply some growthy bred Chester White gilts from the best lines of breeding and bred to good boars. Get your order in early, for these are choice and worthy the money asked for them. See page 51.

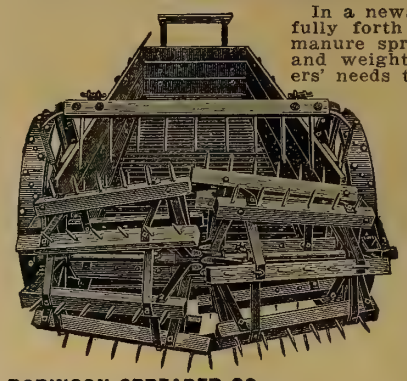
Some splendid Poland China sows are advertised for sale by E. F. Escher, Manning, Iowa, on page 48. He will not make a public sale and as he has sold his farm these must be disposed of at private treaty. Among these are ten to fifteen that are as good as will be found in any herd in the West. Were it not that he was leaving the farm these sows could not be bought at any price. It will pay anybody wanting good Poland China sows to write Mr. Escher or go and see these sows. Please mention The Homestead when corresponding with him.

J. C. Droz, Fairfield, Iowa, and Hanks & Bishop, New London, Iowa, will hold a combination sale in Fairfield on February 6th. They will sell fifty-five sows sired by some of the most noted boars of the breed and bred to the great herd boars at the head of these herds. Sows will be bred to Cherry Chief, Model Wonder and Proud Col., all of which have proven themselves sires of prize winners, and a few will be bred to Wonder's Model, the second-prize junior yearling at the Iowa State Fair, 1912. Keep this sale in mind and see the advertisement in the next issue of The Homestead.

Taylor & Jones, Williamsville, Ill., write: "We feel we were never in better position to please parties wanting good Percheron, Belgian or Shire stallions or mares. Our barns are filled with a choice lot of all the draft breeds, both sexes, and we invite inspection. We never had horses do better than ours have done this fall and winter and with our low prices and liberal guarantee we feel we can interest anyone wanting anything in our line. Write for our little booklet just printed. It has information of interest to all horsemen and especially to those who are planning to buy." See page 55.

J. C. Porter, Ogden, Iowa, advertises his Duroc Jersey hogs on page 52 of this paper. It is always a pleasure to recommend this gentleman and his stock to our readers because both are always satisfactory. Under recent date he writes as follows: "I have had a spendid trade this fall and winter from my advertisement in The Homestead. I sold the spring boars out in good season and could have disposed of several more. I am now offering for sale King Gano, sire Col. Gano, dam by a son of Claremont's Model. This boar is of March farrow and an extra strong pig with more length and bone than anything I have seen this year. He is not fat, but just in good, thrifty condition and is sure to be a good breeder. My gilts are doing fine. They weigh from 250 to 300 pounds. Ten of them are bred to King Gano and fifteen to R. J.'s Chief. I will price these gilts right, breeding and quality con-

The Spreader That Spreads.



In a newspaper advertisement we cannot set fully forth the merits and advantages of this manure spreader. Its size and style and width and weight make it more suitable to the farmers' needs than any other on the market. It has a capacity of 60 cu. ft. It is low and easy to load, the front and hind wheels track with each other and track with a farm wagon. Being narrow, it is handy to drive into a barn and easy to back into a shed. Its weight is 1,420 lbs. and two good farm horses handle it easily under all ordinary conditions. Its operating parts are simple, strong and serviceable, guaranteed to do the work a manure spreader is intended to do. The sectional cylinder rotates outwardly and spreads to the width of the wheel tracks. It is an ideal spreader. Your implement dealer should handle it. Write for our latest folder describing it. Address

sidered. For additional descriptions and prices write J. C. Porter, Ogden, Iowa.

Announcement is made that L. H. Luckhardt and a number of other breeders of Percheron horses, will make a public sale at Tarkio, Mo., March 12th. Additional information will be given concerning this Percheron sale in later issues of this paper.

The illustration in the Harley-Davidson Motor Co. advertisement on page 11 shows one of the reasons for the remarkable increase in the demand for motorcycles which is crowding the manufacturers to the full limit of their productions. Farmers in particular are finding the motorcycle to be a vehicle of convenience. Oftentimes there is demand for a quick trip to town or to the home of a neighbor and nothing can excel the motorcycle for this purpose. For descriptions of that advertised write to Harley-Davidson Company, 651 A St., Milwaukee, Wis.

E. W. Davis, Glenwood, Mo., will hold a dispersion sale of his noted herd of Duroc Jerseys on February 7th. This offering will include Model Queen 2d, the $750 Nebraska grand champion sow; Chief's Maid, the great daughter of Valley Chief that was the grand champion at Des Moines in 1912 and second in the same show in 1911; Ohio Queen, the great Ohio Chief sow that was third at Iowa and Nebraska in 1912 and fourth at Nebraska in 1911. The sale also includes the noted champion boar, Ohio Col., that has proven a great sire. There will be many other attractions in this sale, full particulars of which will be given in coming issues of this paper. Write for a catalog.

At a recent meeting of live stock men, which included also veterinarians of prominence in their profession, the statement was made that the foundation of all animal health was in sanitary conditions and surroundings. The importance of this subject gives additional strength to the statements made in behalf of Bacili-Kil, which is advertised on page 15. This preparation has remarkable value as a means of preventing a great proportion of the diseases affecting live stock as well also as the human family. A free sample of Bacili-Kil may be obtained by filling out the coupon in the advertisement and forwarding it to General Purification Company, 501 Pioneer Bldg., Madison, Wis.

Breeders of Poland China hogs who take the time to investigate records of the show ring and the pedigrees will appreciate the strong points in a litter of four pigs shown at the Des Moines state fair last fall where they gained the remarkable prestige of having captured second and seventh places in class for sows six months old and under one year, second as produce of sow, second as young herd, second as young herd bred by exhibitor and third as get of sire. The dam of this litter, Big Queen, was bred by Wm. Lentz, Ankeny, Iowa, whose public sale announcement will shortly appear in the columns of this paper. The blood lines most prominent in the Lentz herd are the same as those which produced the dam of the pigs in question.

It is always a pleasure to direct the attention of our readers to the announcement of the Overland car which appears in these columns from time to time. A very handsome and instructive advertisement of the Overland will be found on page 2 of the present issue of this paper. In this advertisement the remarkable statement is made that the manufacturers are prepared during the year 1913 to get out 40,000 cars. The aim is made to supply every Overland admirer a car and to do so at a cost which makes it easily as good a bargain as any automobile manufacturer can present. A big instruction book and descriptive catalog may be obtained free by writing to the Willys-Overland Company, Dept. 80, Toledo, Ohio.

In a recent letter from H. S. Allen, Russell, Iowa, he has the following to say regarding his forthcoming sale: "In calling attention to our brood sow sale which takes place at Chariton, Iowa, February 5, 1913, will say that breeders of Duroc Jerseys will see by looking over the list of sows and the boars they are bred to that it will be from a blood line viewpoint one of the greatest offerings to be sold this winter, either east or west. There are twelve sows bred to the old champion boar, Crimson Wonder Again. Among these are two daughters of Valley Chief, one daughter of Chief Select, one daughter of Defender, one daughter of Ohio Col., one daughter of Pride's Chief, one by Ohio Chief Again, three by Model Chief 2d, one by Chief's Model, one by Whitehall King, one by High Col. and two by Proud Col. There are twenty sows bred to Model Chief 8th. Among these are six sired by Crimson Wonder Again, seven sired by Crimson Chief Again, four by Proud Col., one by Col. Gano and one by old Advancer. We believe this offering has as much Ohio Chief blood as any offering that will be sold this winter, east or west. Model Chief 8th and Crimson Chief Again are both grandsons of Ohio Chief and many of the sows are granddaughters of his, and remember the Crimson Wonder-Ohio Chief cross is one of the very best ever made. Crimson Wonder Again has sired six state fair champions and no two of them out of the same sow. Proof that he is a sire of merit. He not only breeds quality, but size, too. Some of his daughters have weighed 810 pounds over the scales and he has sired many 900-pound boars. There are only a few sows in this sale bred to him and we seriously doubt if there will ever be another sow bred to him sold at public auction, as he is getting old. He has sired over 100 prize winners at the big state fairs. A postal card will bring you the catalog. It gives a list of the prizes won by the get of Crimson Wonder Again. When writing for it kindly mention The Homestead." See page 41.

Fox Terrier Male Wanted.

N. R. Rogers, Peru, Neb., the well-known breeder of Chester White swine, Fox Terrier dogs and Rhode Island Red chickens, is in the market for a strictly choice Fox Terrier male dog fifteen months or older. Write Mr. Rogers at once and state that you saw this notice in The Homestead.

Twenty Choice Steers.

On January 31st, Frank Roberts, Earlham, Iowa, will sell twenty choice three-year-old steers in his sale that will weigh 1,300 to 1,400 pounds. Mr. Roberts holds a Poland China sale at that time and will also sell these steers and a splendid span of five-year-old bred Shire mares. Write for his catalog and Mention The Homestead.

Son and Daughter of Carnot Go to Iowa Buyer.

J. Crouch & Son, La Fayette, Ind., write: "We have sold Martin J. Nelson, a prominent young horse breeder and farmer, Cambridge, Iowa, the black imported Percheron stallion, Konsecutif, and the two black imported Percheron mares, Kaoline and Kouture. This is an extra choice lot of stock, the stallion, Konsecutif 9156, being a son of the great Carnot and himself a horse of the highest quality, fourth-prize winner at the recent International show at Chicago in the two-year-old class. The mares are of exceptional quality, the mare, Kaoline, being also sired by Carnot and second-prize winner in the two-year-old class at the last International show in Chicago, the mare, Kouture, standing seventh in the same class, so both his stallion and mares were prominent winners at the last International show in Chicago. In years past we have sold Mr. Nelson a number of good stallions and mares and he has never sacrificed price for quality, and his recent purchase is evidence that nothing but the best is good enough for him, and in selecting such stock he is doing himself and his community a great good in the way of bringing the best blood of the Percheron blood that money can buy within their reach."

Golden Model 2d.

Golden Model 2d, the noted Duroc Jersey boar at the head of Waltemeyer Bros.' herd, Melbourne, Iowa, has made a record as a sire that has not been surpassed and it is doubtful if it has been equaled in the history of the breed. This firm have been showing the get of Golden Model 2d at the Iowa, Nebraska, Minnesota, South Dakota and Sioux City fairs during the past four years and his get have won more premiums at these shows than the get of any other boar living or dead in the same length of time. It has been a common thing for his sons and daughters to win grand championships at these shows. To give a list of the winnings of his sons and daughters at these shows during the past four years would take much more space than we have at command, but we will give a summary of them. During the past four years this firm has won 270 ribbons. Twenty-four of these have been championships, 117 firsts, sixty-eight seconds, thirty-eight thirds, twenty-four fourths and a few minor premiums. About 80 or 85 per cent of these winnings have been made on the sons and daughters of Golden Model 2d. To the average man this great record made by Golden Model 2d indicates his superiority as a sire. As a business proposition a good sow bred to Golden Model 2d cannot be purchased too high. Forty high-class sows, many of them show sows, will sell in the Waltemeyer sale on February 11th and nearly half of them will be bred to Golden Model 2d. It will pay Duroc Jersey breeders to keep this sale in mind. See page 41 and write for catalog, mentioning The Homestead.

Bloom, of Bridgewater.

Earl Bloom, Bridgewater, Ia., whose portrait appears on page 40, is a breeder of draft horses, Chester White hogs and various strains of pure-bred poultry. He has been quite successful in the lines mentioned and has stock for sale at all times. He would be glad to entertain correspondence or visits from prospective patrons. Address inquiries to Earl Bloom, Bridgewater, Ia.

Cooper's Big-Type Poland China Sow Sale.

W. H. Cooper, the well-known live stock auctioneer, breeder of big-type Poland Chinas, will sell fifty bred sows at his East Side Farm on February 4th. Mr. Cooper has selected a number of his top sows for this occasion and assures breeders of greater attractions in this sale than in any preceding offering. A Homestead representative has inspected these sows and pronounces them as good a lot as will be sold at public auction this season. Twenty-five head of yearling and two-year-old sows, several fall yearling gilts and a number of big, stretchy, heavy-boned spring gilts weighing over 400 pounds sale day make up the offering. They are sired by such noted boars as Big Bone 2d, Mr. Cooper's present herd boar, that weighed 860 pounds in his two-year-old form, and others will be sired by Big Ex, Giant Look, Superior Look, Big Chief 2d, Chief I. X. L. 2d and other noted boars. They will be bred to Big Bone 2d, Big Expansion, a son of the noted sire, Dorr's Expansion; Chief Leader, and Giant Chief. Anyone interested in big-type Poland Chinas should attend this sale. The catalog can be had by writing Mr. Cooper, mentioning The Homestead. See page 48.

Healy's Bates Short-horn Sale.

On January 28th, at Marshalltown, Iowa, O. M. Healy will sell forty head of Bates-bred Short-horns of the most noted milking strains. Among these will be Airdrie Duchess, Oxford, Grand Duchess and Kirklevington tribes. There will be thirty cows and heifers and ten bulls. If any of our readers want a Short-horn bull of the milking strain or some good cows and heifers they had better arrange to attend the O. M. Healy sale at Marshalltown on January 28th.

Kuper Bros.' Duroc Sale.

Kuper Bros., Bellevue, Iowa, will hold their second annual sale of Duroc Jersey bred sows in Felderman's garage on January 30th. These young men started in the Duroc Jersey business a few years ago and have been coming to the front. In 1912 at the Iowa State Fair they exhibited their herd boar, Ames Col., and he was good enough to win second in the senior yearling class, only being defeated by the grand champion boar of the show. They will sell thirty head in this sale, ten of which are yearlings and two year olds and the balance gilts. The gilts are sired by Springfield Wonder, S. E.'s Premier Col., Proud Ohio Chief, Perfection Col. 2d and Ames Col. As to the sows, one is by The Professor, one by Muncie Chief, two by Model Wonder and others by Perfection Col. 2d and Col. Highbred. The sows will be bred to Ames Col. and Young Premier. Ames Col. is a son of the Iowa champion, Freed's Col., and Young Premier is sired by S. E.'s Premier Col. and out of a Golden Model 6th sow. This offering is a well-bred one and there are sows good enough individually and well enough bred to suit any breeder. Send for a catalog, mentioning The Homestead, and if you cannot attend the sale send a bid to Carlos C. Palmer, Homestead representative, in care of Messrs. Kuper. See page 49.

A Successful Spreader.

An advertisement of the Robinson Spreader Company will be found on page 36. This spreader has many advantages peculiar to itself which make it a thoroughly effective machine with durability, high capacity and economical operation. It is made of a regular farm wagon width and is not heavy nor clumsy. Two horses can handle it under ordinary conditions. Read the advertisement carefully and write for descriptive circular. Address Robinson Spreader Company, Vinton, Iowa.

Dissolution of Menzie Poland Chinas.

Owing to the death of Col. F. D. Menzie, Hampton, Iowa, his excellent herd of Poland China hogs will be sold at public sale on February 4th as per announcement on page 39. The consignment will include three remarkably well-bred herd boars, ten matured brood sows and thirty spring gilts. This lot of hogs were gotten together by Colonel Menzie as the foundation of a high-class big-type herd and it is unfortunate that circumstances compel a dissolution. Catalogs may be obtained by writing to Anna E. Sharpe, administratrix, Hampton, Iowa.

The Short-horn Bull, Diamond Digger.

A likeness of Diamond Digger, the good son of the champion, Diamond Goods, is shown on page 21 of this paper and we wish to say that he is one of the good yearlings of Nebraska today. He is at the head of the Short-horn herd owned by Chas. A. Slepicka, Tobias, Neb., and an item of interest just now is the fact that all the cows of breeding age to go in the sale which will be made at this farm on February 14th will be bred to this young bull. Keep this sale in mind, get your name on the mailing list at once. When writing kindly mention The Homestead.

Quelland's Hereford Sale.

Charles Quelland, Williams, Iowa, will disperse his herd of twenty-three Hereford cattle at public auction on January 21st. The sale will be held at the farm five miles south of Williams. The offering consists of his herd bull, Baldy; six young bulls, ten cows, two yearling heifers and four heifer calves. They are a good, useful lot of cattle in nice breeding condition and anyone in the market for Hereford cattle will do well to be present, as they will sell worth the money. Write for any information you may want to Mr. Quelland, kindly mentioning The Homestead. See page 53.

Herring's Closing-Out Duroc Sale.

F. H. Herring, Kalona, Iowa, will disperse his herd of Duroc Jersey hogs at Graham's livery barn, Iowa City, Iowa, on January 21st. This sale includes all of Mr. Herring's noted brood sows, a number of them sired by Crimson Wonder Again, Model Chief, Model Chief 2d, Proud Col., Model Wonder, Golden Model 4th and others. They will be bred to Golden Model 30th, third-prize junior yearling, Iowa, 1912; first at Hamline and Huron and third at Sioux City. This boar is included in the sale and will be a good proposition for some breeder. If you cannot attend the sale a bid sent to Carlos C. Palmer, in care of Mr. Herring, will receive careful attention.

Swanson's Duroc Sow Sale.

On January 25th, S. W. Swanson, Stanton, Iowa, will make a public sale of thirty-five head of well-bred Duroc Jersey sows, and he will have some good things to offer the breeders. A great many of the sows he will sell are sired by Model King, a son of the noted prize-winning boar, Hogate's Model, and he was one of the best boars he has ever used in his herd. He also sells a number of good sows that are sired by Col. Willetta and King The Col. and three nice gilts by the grand champion boar, Crimson Wonder Again. These gilts are out of a daughter of Chief Select and, while they are late, they are very good for their age. A number of other good sows make up the list and they will be bred to Model King and King Willetta. Mr. Swanson has been a good buyer at the various sales and deserves the patronage of the breeders and the farmers. When writing for his catalog kindly mention The Homestead.

Eggert's Imported Horses.

George Eggert, Newton, Iowa, has an announcement on page 38 that should interest every man contemplating the purchase of a draft stallion or mare of any of the leading breeds. It has only been a few years since Mr. Eggert engaged in the importing and breeding of draft horses, but he has made marked headway since the time he engaged in the business. He never exhibited until this year he made a show at the Iowa State Fair and was very successful. He won first in the three-year-old class and championship on his imported Belgian stallion, Villiant De Merdes. He also won second in the three-year-old class on Max De Grace. Brown Bob, his two-year-old Shire stallion, was first owned and bred by exhibitor and champion Shire stallion of Iowa. He won first in the three-year-old Shire mare class and second on Shire filly foal. He also won fourth on aged Belgian mare. For the first show we consider this exceptionally good, but it only indicates the character of the horses Mr. Eggert imports and breeds. His last importation arrived in November and they are now in condition to show prospective purchasers. Mr. Eggert keeps his horses at his farm adjoining the town of Newton and has many ways of econ-

NEXT WEEK'S SALE PROGRAM

Monday, January 20	Duroc Jerseys, S. P. Freed, Ames, Iowa.
Tuesday, January 21	Duroc Jerseys, F. H. Herring, Iowa City, Iowa. Poland Chinas, Peter Ellerbroek Estate, Sheldon, Ia. Duroc Jerseys, S. E. Eakle & Sons, Prophetstown, Ill. Duroc Jerseys, J. A. Shade & Co., Kingsley, Ia. Herefords, Chas. Quelland, Williams, Iowa.
Wednesday, January 22	Duroc Jerseys, B. C. Marts, Hampton, Iowa. Duroc Jerseys, James Williams, Marcus, Iowa. Poland Chinas, E. Gritters, Hull, Iowa. Duroc Jerseys, Rude & Son, Moorehead, Iowa. Percherons, H. K. Frantz and C. F. Way, Mgrs., Lincoln, Neb. Belgians, H. K. Frantz and C. F. Way, Mgrs., Lincoln, Neb. Percherons, W. R. Wilson, (deceased) Mrs. Allie Cox, Admx., Arispe, Iowa.

Saturday, January 25	Duroc Jerseys, J. E. Smith, Victor, Iowa. Hampshires, C. P. Paulsen, Nora, Neb. Duroc Jerseys, H. Gilbert, Perry, Iowa.

OAKLAWN STOCK FARM BREEDS AND IMPORTS

PERCHERON, BELGIAN and SHIRE STALLIONS and MARES

THE accompanying illustration is a likeness of **Valiant De Merbes,** first-prize three-year-old and champion Belgian stallion at the Iowa State Fair 1912. We imported and exhibited this horse and our other winnings at the Iowa State Fair were first on two-year-old Shire stallion, bred and owned by exhibitor, champion Shire stallion of Iowa, first on three-year-old Shire mare, second on Shire filly foal, fourth on aged Belgian mare. These winnings indicate the high-class sort of draft horses we import and breed.

We had a fresh importation of stallions and mares arrive in November and these are now in shape to show prospective purchasers. They have the bone, size and draft qualities that all horsemen like. They are a clean-limbed, sound, good-acting lot of horses and anyone in need of a high-class stallion or mare should see me before buying. I treat my customers right which is shown by the fact that I have sold men their third and fourth stallions. I can save you some money if you will give me a chance. Write me your wants mentioning The Homestead.

GEORGE EGGERT, - NEWTON, IOWA

omizing on expenses such as on feed and expensive barns and this places him in position to make prices that will save buyers money. Mr. Eggert will be glad to quote prices or give any other information to our readers who will write him mentioning The Homestead. See this page.

Last Call the Paulsen Hampshire Sale.

We are this week calling attention for the last time to the sale of Hampshire hogs that are to be sold by C. P. Paulsen, Nora, Neb., on January 25th, and we wish to say that in this sale the greatest lot of choice Hampshires to be sold in the West this season will be offered. Make your selections from the catalog and if unable to attend send bids to J. C. Price, the field man for The Homestead. Your wants will be carefully looked after and purchases will be made with the greatest care and at the lowest dollar possible. Do not delay, but send bids early. Direct them to J. C. Price, in care of C. P. Paulsen, Nora, Neb. See page 47.

Marts' Duroc Sow Sale.

On January 22d, B. C. Marts, Hampton, Iowa, will sell forty Duroc Jersey bred sows at auction. Mr. Marts has Durocs of the most popular breeding and their individuality is of a high order. The sows are bred to Chief's Model, a son of the noted sire of Winner's Model Chief, Wonder Again by Crimson Wonder I Am and Hampton King, a grandson of Model Chief Jr. by Model Chief. The sale will be held in town and anyone in need of a good sow should be present or send a bid. Write for catalog, mentioning The Homestead. Send bids to Carlos C. Palmer, Homestead representative, in care of Mr. Marts, and they will be properly handled. See page 49.

H. S. Allen, Auctioneer.

On page 39 H. S. Allen, Russell, Ia., makes his announcement as a full-fledged live stock auctioneer, if you please, and he will be pleased to hear from anybody contemplating making a public sale. Mr. Allen has been known as one of the foremost breeders of Duroc Jerseys in the West. He has bred them for about fifteen years, also Aberdeen Angus cattle for about the same length of time, so that he is no novice in the live stock world. He is branching out now in the auction business and holds himself in readiness to cry sales in any part of the country. He has a number of open dates and will be glad to hear from anybody wanting a capable and well-posted auctioneer.

Mason & Brackmyer Sale.

Mason & Brackmyer, Morrison, Ill., will hold a sale of fifty bred Duroc Jersey sows on January 28th. These two gentlemen have joined forces in order to put up a useful offering of bred sows and they invite breeders and farmers to attend this sale and buy these sows at their own prices. Some excellent blood lines are represented in the pedigrees of this offering. A number of the gilts are sired by and a number bred to Chief Orion by Helen's Chief by Ohio Chief and out of Lillian Orion, one of the good sows formerly owned by M. A. Kraschel. Other gilts are bred to Royal Col., a son of Chief's Col. and Bell Royal. See page 41 and send for a catalog, mentioning The Homestead, and arrange to attend the sale.

Justice's Percherons and Belgians.

In his advertisement on page 39 J. R. Justice, Galesburg, Ill., says: "I think it is better to have extra good stallions to show when customers come to see than it is to claim you have them and cannot show." That is characteristic of Mr. Justice and his methods. He is a first-class judge of a horse, knows the kind that is best suited to the needs of the American farmer through his many years of connection with the market horse trade, and that is the kind he handles. He never has represented that he had all the good horses that were to be found in any importer's stable, but he always maintains that what he offers are the right kind, and the truth of this statement will be at once apparent to any person who visits his barns. He selects all his horses in person, handles them at the minimum of expense and can give buyers as much value for their money as any man engaged in the horse business. If you are in the market for a stallion, either Percheron or Belgian, or a span of the right kind of draft mares, get in touch with Mr. Jusitce. Write him as per his advertisement and mention this paper.

A Great Washing Machine.

The Newton power washing machine which is famous throughout the country for its long life and dependable work, is now to be sold direct from the factory to the user. The manufacturers claim this will make a saving of from $3.50 to $25, depending upon the kind of a machine purchased. The machine is made for hand power, gasoline engine or electric motor. It can be tried thirty days in the homes of our readers and returned if not satisfactory. See advertisement of the Newton Washing Machine Company, Newton, Iowa, on page 25.

Naiman's Special Offer on Fall Pigs.

Readers of this paper who are thinking of ordering some of the choice Poland China fall pigs that are being advertised in these columns for the remarkably low price named in the adtisement may now get photos of these pigs from Mr. Naiman. All pigs that are being advertised by this breeder are good, thrifty stock, will weigh close to 100 pounds and each pig will be pedigreed. Write at once for full information or send money with order at once. See the advertisement on page 48 of this paper and write immediately.

Williams' Poland China Sale.

On February 13th, L. B. Williams, Villisca, Iowa, will make his annual sale of big-type Poland China brood sows and he will offer forty head of exceptionally good ones. Six of them will be tried sows, four fall yearlings and thirty spring gilts. The spring gilts will be sired by Surprise All, Orphan Wonder and W.'s Quality, and these have both size and quality. In fact, some of these are going to be as large as any of the breeders will offer and three of the best of these are litter sisters to the $100 boar pig he sold to A. Z. Scott, Massena, Iowa, in his fall sale. He is offering a lot of other good things in this sale, which his catalog will show if you will only drop him a postal card and ask for it. When writing him kindly mention The Homestead.

Limestone Valley Farm's Thirty-fifth Annual Sale of Jacks and Jennets.

Limestone Valley Farm, Smithton, Mo., noted as the home of the world's greatest jacks and jennets, will be the scene of a notable event in the way of a public sale on Tuesday, March 4th. L. M. Monsees & Sons will shortly issue an announcement that should interest every breeder of Mammoth jacks and mules, and all who contemplate buying should secure the 1913 catalog, as it contains pictures of many, and the pedigrees of a string of as good Mammoth jacks as ever were found under one roof. Sixty-five head of these Mammoth-bred jacks and jennets will be sold and the number insures ample opportunity for selections. If you are interested write for catalog at once so that your name will be on the mailing list, which is now being made up, and kindly mention this paper when doing so.

David Boesiger's Duroc Sale.

The writer recently called on David Boesiger, Cortland, Neb., and spent some little time in looking over the Durocs he will put in his January 27th sale. We wish to say that this will be one of the best offerings that have been offered from the Plainview herd in recent years. They are nice and thrifty, well grown, good individuals and the greater part of them are unusually heavy boned. The greater part of the forty head will be gilts, most of which are the get of Lincoln Lad by Lincoln Wonder. The remainder are by Crimson Wonder Boy by A Crimson Wonder and C. H.'s Crimson Wonder by Crimson Wonder Again. There are three by this last named sire and they are very choice. Fully half of the offering are bred to the great show and breeding boar, Widle's Wonder by Uneeda Crimson Wonder, and this fact should lend much interest to this sale. It looks as though a good sow bred to Widle's Wonder would be a good investment for the average Duroc breeder, and with the present hopeful outlook to the business they should be doubly valuable. This is the only opportunity this season to own a sow bred to Widle's Wonder. Don't overlook this chance. The catalogs are ready for distribution. Send in your name for one at once. A postal card will do, and when writing kindly mention this paper. See page 43.

Closing-Out Percheron Sale.

It is not generally known by live stock breeders throughout the state that W. R. Wilson, so long connected with pure-bred stock interests, Arispe, Iowa, died during the past season. This necessitates a settlement of the estate. The stock equipment of the farm includes eighteen Percheron mares and fillies (four of which are imported mares) one 2,300-pound stallion and two stallion colts of his get. Those who knew Mr. Wilson in life will recall the fact that no matter what kind of stock he bred, it was the best to be obtained. The same applies to the horses spoken of above. These Percherons will be disposed of at the farm at Arispe at public sale on Wednesday, January 22d, as per advertisement on page 49. The farm will also be sold at private sale. Further particulars may be obtained by writing to Mrs. Allie Cox, administratrix, Arispe, Iowa.

Williams Bros.' Great Sale.

One of the really great offerings of big-type quality kind Poland Chinas that will be sold this winter will be that of Williams Bros., Villisca, Iowa, on February 5th. They will dispose of fifty head in this sale and they will be sired by such noted boars as Pawnee Nelson, Big Sampson, Long King, W.'s Major, A Jumbo and other well-known boars. These sows will be bred to Pawnee Nelson, Big Sampson, Wonder's Big Prospect and one or two other boars they have used. It is a great offering of great sows made by one of the best and most reliable Poland China firms today in the West. It is an offering that will meet with the expectations of every breeder who attends their sale. Few offerings will be sold this winter that will outdo this grand lot of sows they will sell in their sale. Drop them a postal card for catalog at once and kindly mention this paper.

Albert Smith & Son's Poland China Bred Sow Sale.

Among the good herds of Poland Chinas in Nebraska none rank higher than the one belonging to Albert Smith & Son, Superior. Adhering strictly to what these breeders love to refer to as the Nebraska type, this herd is rich in the breeding most desired by lovers of the big-type Poland. With a foundation built upon sows sired by Chief of Pawnee, a son of the noted breeding boar, Johnson's Chief, this herd is rich in the blood of similar bred families. The herd sows are sired by such boars as Chief of Pawnee, Smith's Big Hadley, a son of the famous Big Hadley; Jumbo Jr. by Nebraska Jumbo; Hammond's Price by Guy's Price and sires of like breeding. At the head of the herd are Jumbo Jr., a three year old by Nebraska Jumbo and out of Bell We Know by Bell Metal; Victor Prospect, two years old by Big Victor and out of Blushing Rose by Guy's Prospect, and Mogul's Monarch, the grand six-year-old boar recently at the head of the Carl Jensen & Son herd, Belleville, Kan. This boar is by Mogul, he by Blain's Tecumseh, and out of the grand Expansion sow, Faultless Model. The sale will be held on the farm, nine miles northeast of Superior, Tuesday, February 4th, and the offering will consist of forty-five head and includes the tried sow, Queen's Victoria, a litter sister of Lonergan's great herd boar, Big Victor; White Ear by Chief of Pawnee 2d, the dam of the best litter raised by these breeders last year; five fall yearling gilts and thirty-eight spring gilts. The spring gilts, practically all of March farrow, are as growthy a bunch of gilts as well be sold this winter, age considered. They are by Smith's Big Hadley, Jumbo Jr. and Victor Prospect. Four of the fall gilts are by Big Sam, he by Sampson, and are out of sows by Blue Valley Quality and Chief of Pawnee. The offering is bred to Jumbo Jr., Victor Prospect and Mogul's Model. The offering is good throughout and should appeal to all lovers of the big-type Poland. A number of good Short-horn heifers and a February bull calf, a great prospect, will also be sold. Keep this sale in mind and arrange to attend. John C. Halderman will represent this paper at the sale and look after all bids sent in his care. Write for catalog, mentioning this paper when doing so.

Con McCarthy's Duroc Sale is Off.

For the reason that he had but a few sows to spare, Con McCarthy, York, Neb., will not hold his bred sow sale scheduled for February 17th. It would necessitate selling too close to make the sale and putting in some that were too young to make a creditable showing. For this reason Mr. McCarthy will pass up the sale for this season, but he has a few, about fifteen, very choice sows to sell at private treaty. Parties selling close to make their sales or in need of a few choice sows will do well to write Mr. McCarthy at once. The price on these sows is as low as we believe it possible to buy this class of stuff. Write immediately and mention The Homestead when doing so.

Boyer's Chester Whites.

B. M. Boyer & Sons, Farmington, Iowa, well-known breeders of Chester White hogs, writes as follows under recent date: "Please change our advertisement, as we are sold out of boars. We have never experienced such a demand for good pure-bred hogs since we have been in the business, having sold thirty-seven boars since December 1st, besides ten bred gilts. We are receiving lots of inquiries for bred gilts and have thirty choice growthy gilts at present bred to the two boars that were first at the Iowa State Fair and at the Minnesota State Fair. These gilts are due to farrow in April and are the lengthy, heavy-boned kind. We will be pleased to correspond with anyone looking for a good bred gilt and if they will describe just what they want we will ship them one, paying all express charges and upon arrival if it does not fill their description all we ask is that they return it to us at our expense. We know of no fairer proposition than this, as the purchaser does not pay a cent if the gilt is not as represented. Our gilts are all guaranteed safe in pig before shipping. Will be pleased to mail our free catalog to anyone interested in good Chester Whites. We wish to thank your paper for the good it is doing us." See page 51 and when writing kindly mention The Homestead.

Davis' Great Hampshire Sale.

W. F. Davis, So. St. Joseph, Mo., who has bred Hampshire hogs for over fifteen years, will sell 150 head of bred sows and forty boars at the So. St. Joseph Stock Yards sale pavilion on Tuesday, February 18th. These are selected from his herd that produces 600 to 1,000 head of Hampshires each year, the tops of which go out as breeders, the balance to market. On numerous occasions Mr. Davis' Hampshires have topped the market by fifty cents per hundred and car loads have dressed as high as 87 per cent. Mr. Davis has used the very best of sires in his herd and a great many of the sows in this sale are daughters and granddaughters of Pat Maloy 1415, the world's great champion boar, never beaten in the show ring. Others are by Gold Gem's Model 4397, one of the great herd boars of the breed. A great many are half-sisters to Silvia 1st 16316, that sold in Mr. Davis' 1912 sale to Mr. Brook, of Iowa, at $190, and are equally as good as she. They are bred to Gold Jem's Model 4397, a grandson of Gold Medal; Blythedale's True Belt 4761, a grandson of Blythedale Duke, one of the greatest boars of the breed, and Good Deal 4493, a grandson of Solid Gold, and Choice Goods. Mr. Davis has never spared money or pains in breeding the right kind, securing the best boars money would buy. He had all his hogs vaccinated early in October with the simultaneous treatment and they are unquestionably immune from cholera. He brings his hogs to the sale ring in the best possible condition to be useful to the purchaser and sells them at the prices those present are willing to pay and the result is he has no trouble in disposing of such as he decides are good enough to go out as representatives of his work producing a superior type of Hampshire hogs. He is issuing a catalog that should be in the hands of

ROCK BROOK FARM'S DISSOLUTION SALE OF 125 REGISTERED HOLSTEIN-FRIESIAN CATTLE

AT THE LIVE STOCK SALE PAVILION, UNION STOCK YARDS, SO. OMAHA, NEBRASKA, TUESDAY AND WEDNESDAY, FEB. 4 AND 5, 1913.

80 HEAD of registered cattle, consisting of forty cows 3 to 8 years old, milking or soon fresh, and 20 yearling and two-year-old heifers. These females are all bred to sons of either KING SEGIS, KING OF THE PONTIACS or DE KOL 2D'S BUTTER BOY 3D, three of the greatest bulls of the breed. Ten heifers under one year, some of them granddaughters of the above bulls. Ten bulls ready for service and all out of great producing cows. More A. R. O. blood in these bulls than any bulls offered in the West. Forty-five young high-grade Holstein cows and heifers, all milking or soon due to calve by registered bulls. Every animal over six months is tuberculin tested. The results of thirty years of careful breeding are represented in this sale. Catalog ready about January 25th and will be mailed only on application if you mention The Homestead.

HENRY G. GLISSMAN, STATION B, OMAHA, NEBRASKA.

every hog raiser interested in Hampshires and will be glad to mail you one on receipt of your name and address requesting same and mentioning this paper. See page 43.

A Pair of Great Poland China Boars.

It seldom occurs, and we doubt if there is today a half dozen herds of Poland Chinas in the West that are as well fixed for herd boars as is the herd owned by Thos. F. Walker & Son, Alexandria, Neb. We know of a number of great boars, the sort that are hard to find and that cost good money when found, but they are one in a place. Walker & Son have two and it is a question which is the most valuable. The two-year-old boar is Blue Valley, a son of the famous Blue Valley Quality and out of Daisy Dean by the famous Big Hutch. Blue Valley is a boar hard to describe, because a description will scarcely do him justice. We will say, however, that for a back, a set of feet and legs, a good head and general conformation, he is a great boar. The writer tried to buy this boar when but a pig, but Walker & Son have steadfastly refused to price him. The young boar is Blue Valley's Orange by Big Orange. He was the top pig of the J. O. James October sale and a litter mate to the top boar of Mr. James' August sale. It is a question of development as to which will make the most valuable boar of these two, but today there is mighty little choice between them. Every sow that will go in Walker & Son's bred sow sale, which will be held in Fairbury, Neb., on February 15th, will be bred to one or the other of these boars. A great many will be sired by Blue Valley. Do not forget this sale. There will positively be hogs here for as good herds as were ever founded. This is the place to buy a bred sow to raise a herd header or a choice lot of stuff to keep in the herd. Get your name on the mailing list at once. Mention The Homestead when you write.

Kissinger's Poland China Sale.

In the sale of Poland China bred sows that will be made by G. A. Kissinger, Milford, Neb., on January 30th, there will be offered one of the most useful lots of Poland China sows that the writer has seen this season. There will be forty head in the sale, mostly spring gilts and mostly the get of one of the greatest boars of Nebraska. He is Hillcroft Model, a son of the well-known Hillcroft Halfton, and when we saw him a few days ago he appeared to the writer as one of the most active big boars that we had ever seen. He was out in a good-sized yard and romping around like a six-months pig. He is a boar of immense scale, would weigh close to 900 pounds in the flesh he is in, and of such make-up that he would be a good candidate for money at the Nebraska State Fair. The writer thought that he would be a good proposition for the state fair last fall, but we could not induce Mr. Kissinger to fit him. His junior yearling sow, however, won first in class and junior championship. Everything in the sale will either be sired by or bred to Hillcroft Model and the remainder of the sows not bred to him, which are the last spring gilts and fall stuff sired by him, are bred to Big Martin, the second highest-priced boar of the Lonergan sale last fall. Big Martin is a sure good pig. He has plenty of bone, good feet and plenty of scale and quality. The writer is of the candid opinion that a sow in this sale would be a good proposition for any breeder in need of a sow to buy. There are few places where as good stuff will be offered this season. We would urge that you get the catalog at once, make a selection from it if you cannot attend the sale and send a reasonable bid to J. C. Price, field man for The Homestead at this sale. Your interest will be looked after with the idea of making a good selection for you and securing at fair values what you wish. Send for catalog at once and mention Homestead when you write. See page 40.

The Williams Duroc Jersey Sale.

We are giving this week the final notice of the Duroc Jersey sale of James Williams, Marcus, Iowa, to be held Wednesday, January 22d, at the Williams farm. The catalogs are ready for distribution and we would advise everyone who might be at all interested in the sows to be sold here to at least write for the catalog and look over the pedigrees of the various animals consigned to see if there is not something that will be of use. We believe that these sows will prove the bargains of the winter, because they are good, several of both the groups of matured sows and gilts being entitled to consideration by anyone who wants to improve breeding herds, both as to blood lines and individuals themselves. Another big reason for being at Mr. Williams' sale is the fact that it is one of the earliest sales of the year and we believe that by the end of the sale season there will be many who will be ready to buy just such stock as will be sold here at high prices. The early buyer this season will, as far as anyone is now capable of judging, be the fortunate one. To repeat a word or two of the announcement of this sale, it will be remembered that Mr. Williams has always bought the best stock and has never been satisfied with anything else. This fact will be patent to anyone who studies the catalog. He sells Golden Model blood and Model Chief, Col., Iowa Notcher, Col. Scott by Carl's Col. and Proud Advance breeding are all prominent in the herd. Duroc Jersey men owe it to themselves to look up this offering. Farmers who do not make a specialty of breeding can find plenty in the sale to suit. Remember the date, Wednesday, January 22d, and take that day. If you cannot come and find something in the catalog which suits you, Ray L. Gribben, Homestead representative, will take care of your bids an Illinois Central train to Marcus strictly in your own interests. Address for catalog James Williams, Marcus, Iowa, mentioning The Homestead. See advertisement on page 49.

Robinson's Sale of Mammoth Poland Chinas.

In the sale of fifty head of strictly big-type Poland China bred sows and gilts which F. P. Robinson, Maryville, Mo., will hold on Wednesday, January 29th, breeders will find stock that they should add to their herds if wanting hogs that have size and quality and are so bred that they will produce their kind. Mr. Robinson has spent eighteen years perfecting these big, quality Poland Chinas and they are as he says, big, mellow, easy-feeding, quick-maturing hogs. He is selling twenty-one tried sows, all but two of these are one and two-year-old sows that have produced good big litters, three are fall yearling gilts and twenty-six are great big growthy spring gilts. Among the mature sows is Miss Corwin 2d, the dam of Pawnee Pete, Mr. Robinson's leading herd boar that is a 1,000-pound boar in just moderate flesh and a 1,200-pound boar when fattened for show. Miss Corwin 2d has always produced good big litters. A number of her sons have made valuable herd headers and as she is bred for early farrow her litter should be valuable. She is an exceptionally good individual and is a sow that will be good for several years to come. Dana B., her half-sister, and Princess Allie are a pair that should please. There are seven daughters of Pawnee Pete and ten sows and gilts out of his daughters in the sale. These should be appreciated. Others are by Prince Tom and Prince Ito, sons of the noted Bell Prince. Prince Ito was lost this summer while being fitted. He weighed 850 pounds when two years old and would have passed the 1,000-pound mark this year had he lived. He has sired some of the best things Mr. Robinson has bred and his get should be appreciated. These sows and gilts are bred to Prince Tom; Fred Jamison, a son of Pawnee Pete, that is the making of a great boar; Spotted King, a son of Long King's Equal, and Montecello Boy, a prize-winning son of Big Expansion, that was a winner at the Iowa and Missouri State Fairs this year. The conformation, size and quality found in Mr. Robinson's hogs is such that we are pleased to recommend them to our readers as being the right kind to buy. There are none better bred and they will breed on. All have been vaccinated with serum made under the supervision of Professor Conway, of the Missouri State College. It is Mr. Robinsons wish that you come to the sale, but to those who cannot attend and who send bids by mail he gives a guarantee that is an absolute protection. He allows those who purchase on mail bids the privilege of returning any sow or gilt bought in this way if she is not satisfactory, after the purchaser has had her home for any time up to five days for inspection. Furthermore, Mr. Robinson's guarantee is absolutely good and will be lived up to in every respect. Send now for his catalog, note that his hogs are well bred, also note what he has to say of them. See page 44 for Mr. Robinson's advertisement and when writing him kindly mention this paper.

Schram's Poland China Sale.

Mr. C. W. Schram, New Castle, Neb., will offer at public sale, on Thursday, January 30th, at his farm, six miles south of the town of New Castle, a strictly select lot of Poland China sows bred for early farrow, that is worthy of careful attention on the part of all breeders of the Poland China hog. One of the principal features of the sale will be the nice bunch of sows bred to boars of quality-producing powers, and themselves carrying the most desirable combination of big blood and the more medium sized and smooth breeding. This is a very practical kind of a hog and is just what the great majority of breeders are looking for. This cross has been made successfully, as a recent visit to the herd proved, and as a visit by anyone on the day of the sale will prove to those who will be in the market for this type this winter. Such a mingling of blood has been long sought for by all breeders of this strain, and we can conscientiously recommend the offering here to be just as represented. An examination of the blood lines in the catalog will show that the big and the more medium sorts have been well mixed and the smooth lot of sows in the sale will show that the breeding along these lines has been successful. The herd boars that have sired the greater part of the sale stuff are listed as follows: Fair Chief, the sire of a good many of the tried sows is by the well-known sire of size, Chief Price 2d, and out of the sow, Fair Maid 2d, an equally good producer of size in her offspring. Also a sire of some of the more matured sows in this sale is Expansion Prince by Exception, a doubly-bred Expansion boar. Then a younger boar, Hadley's Mogul by Hadley's Surprise, tracing to Big Hadley on his sire's side, has produced a fine lot of young gilts which will grow out to a good size, and which are especially good in quality. Mastiff's Pointer is one of the younger herd boars that has only a few gilts in the sale, but which is a well-bred boar, being by the Sioux City and Nebraska winner, King Mastiff, sold recently to R. A. Schug to go to a breeder in Illinois. Some of the gilts by him are bred to a spring boar, a grandson of the great Big Jumbo. The entire lot is well bred and contains much of real value to any breeder. Some of the tried sows in the sale that are perhaps as much of an attraction as any are those that are sired by the Fair Chief boar mentioned above and out of sows by Expansion Prince, the line-bred Expansion boar. Two of these, Arabelle and Mollie Fair, are very good sows and bred to the Hadley boar ought to give

SHEEP

REGISTERED SHROPSHIRE RAMS

FROM best imported stock. Fifty head rams to go at quick sale from $15 to $25 each. These are thrifty, weigh up good, and include lambs, yearlings and a few two year olds. Will also offer a select lot of ewes. Angus cattle of best types for sale at all times.

T. BRADY, Worthing, South Dakota.

G. A. KISSINGER'S GREAT OFFERING

OF EXTRA BIG, SMOOTH, BRED

POLAND CHINA SOWS

WILL BE HELD AT FARM 6 MILES NORTHEAST

MILFORD, NEBRASKA

THURSDAY, JAN. 30, '13

IN this sale will be offered a great many sows of the same blood lines as the ones that have been winning at the Nebraska State Fair, the greatest show of Big Polands on earth. Sisters to the first-prize sow will be included and others by the same sire. Everything in the offering is either sired by or bred to the sensational half-ton boar,

HILLCROFT MODEL 172553

ALSO A BIG NUMBER BRED TO

BIG MARTIN

Keep your mind on these two great boars. They are not comers, for they are already here. Hillcroft Model is the most active and best breeding half-ton boar in central Nebraska. Big Martin was a good show pig this season and is doing fine, and making a wonderful growth. If looking for the big ones, with as much quality as most of the small ones, attend this sale. They are here. They are the kind to raise you a herd boar another year, or a litter to take to the fair. Get the catalog at once. Mention The Homestead when you write. Address

G. A. KISSINGER, MILFORD, NEBRASKA.

Col. H. C. Wickham, auctioneer.

J. C. Price, field man for The Homestead.

LARGEST IMPORTERS OF CLYDESDALES IN THE UNITED STATES.

some who have definite ideas along the selection of strains that produce a certain true type a good chance to buy hogs that will suit them. There is also a sow by the Expansion boar out of a Lady Mastodon dam that is one of the attractions of this sort. Another good thing in the sale is Lady Wonder by Fair Chief. Villisca Belle by Young Look, dam Nodaway Belle 2d, is one of the choicest sort of females and would look well to any breeder who might see her. This sale is held by a breeder who has not been considered as a great publicist in promoting his herd, but he has bred unusually well, and we believe that there will be a good chance to buy the best at moderate prices. Write for the catalog now and when you do please mention The Homestead. Address C. W. Schram, New Castle, Neb. See page 42.

Tillinghast's Poland China Sale.

Sam Tillinghast, Peterson, Ia., holds his annual sale of Poland China brood sows at his farm on Friday, January 31st, this year. He has the usual good big sows, the sort that one expects when he reads that Mr. Tillinghast will hold a sale. We are sure that this announcement of his sale will be of interest to the many old customers of his as well as to those who have never bought at this place, but who are looking for the good sort of Poland Chinas with size and stretch. There will be about forty head in the offering divided among tried sows and gilts, about as follows: Twenty head

BLOOM, OF BRIDGEWATER.
See reading notice entitled "Bloom, of Bridgewater," on page 37.

will be spring gilts, ten head tried sows of the big, roomy sort, and the remaining ten head will be fall gilts. There is in this herd a very definite type that could have been secured only by the continual selection of the hogs of breeding and individuality that measured to the type sought for. They are big, they stand extremely well on their toes and are growthy pigs all through. There are among the older tried sows some of a type that will please those who want a roomy sort and of a kind that can be depended upon to farrow big litters. The fall stuff has made a lot of size and the spring pigs look like they would be the same in size as the rest when they are as old. The boars that have produced this offering of sows are good ones and we give here a list of them, with their breeding. The old one that Mr. Tillinghast is willing to swear by most is Mastodon Wonder by King Wonder, dam by A Wonder 107353. The dam is one of the old Wheeler sows that made the name Mastodon so well known. This boar is a very active fellow for one of his age and has the accomplishment of having been so long in service in a herd like this one. A younger herd boar is Sam's Big Jumbo by the boar that has made Peter Mouw's herd so prominent during the past few seasons. The dam of this boar is by Surprise Wonder and the second dam by Orange Chief. He has been used on some of the stock and is being included as an attraction in the sale, so he will go to some breeder who wants a high-class boar of this breeding. Jones' Monarch, another younger boar of rather good individuality, has been used on a few of the spring gilts in the sale. The sire of all the fall yearling gilts in the sale is I Am King by King Leader, dam Lady Surprise by Miller's Happy Tecumseh. There are three of the older sows in the sale that are a little more than above the average of this sort of thing offered in the winter sales. They are Great Prospect, Three Spot and Colly, all by Long Prospect, and out of dams by Victor Prince. The first two mentioned are full sisters and the last one is out of another sow. The grandam of this particular sow is by Jim Crow. All three of these sows are good breeders and one of them, the Colly sow, is the dam of some of the best boars that Mr. Tillinghast has sent out during his time as a breeder of Poland Chinas. Three Spot and Colly have each some gilts included in the sale and they are among the best. The sow, Colly, raised forty-four pigs in five litters and every one has been sold to a breeder that has been sold at all. She is a big sow and a great breeding prospect. Big X. Nelson by I. X. L. Nelson, dam a granddaughter of Up To Date, is the sire of some of the sows that will go in the sale, and there are a few yearlings by Mastodon Wonder. Those gilts by Mastodon Wonder and out of sows by Long Prospect look like the sort that the breeders will like. Write for catalogs, mentioning The Homestead when you do. Address Sam Tillinghast, Peterson, Iowa. See advertisement on page 42.

The Podendorf-Rainier Sow Sale.

On February 1st, at Logan, Iowa, A. J. Podendorf and Frank Rainier will make a public sale of fifty head of high-class Poland China sows, and more than two-thirds of their offering will be bred to those two great boars, Chief Price Again and Long Nelson. These two boars are admitted by all breeders to be two of the best sires today in the West, and the record made by Chief Price Again, both as a show boar and as a sire of show boars, is hard indeed to beat. Among the best sows Mr. Podendorf will sell are Logan Surprise 3d and Logan Surprise 4th, two of the very best sows in his herd, and they are both bred to Chief Price Again. One of these is a Big Orange sow, the other by High Price by old Pawnee Lad. Princess 1st is a yearling by Chief Price Again and she is a litter sister to his $195 pig that he sold in his sale, and she goes in bred to his splendid breeding boar, Long Nelson. He is selling a splendid fall sow by Chief Price Again, out of Logan Surprise 2d, that is a corking good one, and she is also bred to Long Nelson. There will be ten or twelve head offered by Mr. Podendorf that will be sired by Chief Price Again and bred to Long Nelson and every one a good one. Mr. Rainier is also selling a grand good lot of sows in this sale, about thirty-five head in all. Among the best he will offer is Lady Nelson by Long Nelson and out of Podendorf's Choice, and she is bred to Chief Price Again and she certainly is a good one; Columbia's Ideal is a double-bred Chief Tecumseh sow and she goes in bred to Chief Price Again; Ellerbroek's Beauty, Beauty's Surprise and Orange Queen are all good sows and these are all bred to Chief Price Again for early liters. A few more good sows that he will sell are Logan Surprise 7th by Big Chief, Belle Jones 2d and Lillie Jones 1st, litter sisters by Sterling Sanders and out of Molly Jones 3d. These are splendid big-type sows and excellent producers. Then there is Proud Columbia, White Faced Beauty and Choice of All that are good sows with lots of size and quality and will go into the sale in prime condition. Choice of All is a daughter of Osborn's Chief 2d and out of Lillie Jones 1st. Another good sow he is selling is Hadley Belle, bred by Henry Dorr. Mr. Rainier is selling fourteen head in the sale bred to the great boar, Chief Price Again. Write either A. J. Podendorf or Frank Rainier, Logan, Iowa, for catalog and kindly mention this paper. Bids sent to C. C. Carlin or M. T. White, representing this paper, in care of the above breeders, will be properly handled on day of sale. See advertisement on page 40.

Glissman's Great Holstein Offering.

One of the greatest offerings of Holstein-Friesian cattle that has ever been made in the central West will be the dissolution sale of the Rock Brook Farm at South Omaha, Neb., on February 4th and 5th. It will be a two days' sale and they will sell 125 head of cattle, making it not only the largest, but one of the best sales of this breed that has ever been held west of the Mississippi river. There will be eighty head of registered cattle in the sale—forty cows three to eight years old, milking or soon fresh; twenty yearling and two-year-old heifers, and these are bred to a son of King Segis, King of the Pontiacs or De Kol 2d's Butter Boy 3d, three of the greatest bulls of the breed. There will be ten heifers under one year old, some of them granddaughters of the above bulls. There will be ten bulls ready for service and all are out of great producing cows. There are possibly more A. R. C. blood in these bulls than any ever before offered in the West. There will also be forty-five high-grade Holstein-Friesian cows and heifers, all milking or soon to calve to registered bulls. Every animal in the sale over six months will be tuberculin tested. This Rock Brook herd was established in 1885 by selections from the herds of Thos. Bales, Smith Powell and Mr. Lamb, the first great importers in America. The herd has been under the management of Henry C. Glissman for the past fifteen years and until a few years ago was one of the strongest show herds in the central West. Their wonderful growth of business of late years has compelled them to abandon the shows, as they could not be away from home. Their herd bulls at the present time are sons of King of the Pontiacs and De Kol Butter Boy 3d, two of the greatest sires of the breed. The senior Mr. Glissman wishes to retire from the herd and therefore this dissolution sale, nothing being retained but the herd bulls. The younger Mr. Glissman will restock Rock Brook again from his New York headquarters, but this will furnish breeders and farmers throughout the West an opportunity to buy Holsteins that have never before been offered at any price. On the second day they will sell forty-five head of high-class Holstein grade cows and heifers that are in milk or will be so in a short time. There are a number of cows with A. R. O. records and a lot of them with yearly milk records up to 1,700 pounds of milk and up to 700 pounds of butter in one year. All of the great breeding matrons of the Rock Brook Farm go into this sale, also a lot of their daughters that carry a lot of the most fashionable blood lines of the breed. The bulls are an especially fine lot and every one of them is backed by the best of A. R. O. records and breeding. Write Henry C. Glissman, Sta. B., Omaha, Neb., for illustrated catalog of this sale and it will be forwarded at once, provided you

mention this paper when writing for it. See advertisement on page 39.

Fesenmeyer's Great Offering.

On February 6th, at Clarinda, Iowa, Henry Fesenmeyer will make his annual Poland China brood sow sale and his will be one of the sales that all of the up-to-date breeders will be interested in. It is hardly necessary for us to mention that he is the owner of that noted boar, A Wonder, unquestionably one of the greatest big-type Poland China boars living today, and he will sell thirty sows in this sale that are bred to him, together with ten head of A Wonder sows, or sows that carry the blood of old A Wonder. It will therefore be one of the most important sales of the year. Among the forty head that he will sell will be Lady S. 1st, a daughter of Chief Price 2d, one of the best sows he has, and she is bred to A Wonder. Wonder Giantess, a two year old by A Wonder, goes in bred to his noted young boar, Big Joe, and no man will go wrong who buys her. Giantess Again by Rood's Tecumseh and out of old Giantess, is one of his splendid brood sows and she will be bred to A Wonder. King's Lady by old Long King (the mother of Reubel's A Wonder and Gutchalls' Big A Wonder, is also one of his standbys as a brood sow and she goes in bred to old A Wonder. King's Belle by Long King, Gritter's Top by Choice Chief Price (the top of Gritter's fall sale) and Nelson Superior by Big Price all go in bred to A Wonder. Here is a great aggregation of brood sows bred to one of the most noted breeding boars today in the land. A March spring gilt by Long Price and out of a Long King dam is easily one of the best young sows in the sale. She will weigh 400 pounds by sale time and she is bred to A Wonder. Another feature of the Fesenmeyer sale that is worth noticing is the five Big Joe gilts that he is selling out of dams by A Wonder and these are all bred back to A Wonder. These are outstanding good ones. This boar, Big Joe, is one of the coming boars of the breed and his get in this sale is going to make the boys sit up and take notice. He breeds a wonderfully good back and loin and his get have plenty of size. There are several other good A Wonder sows in his sale, but we suggest that readers of this paper send for his catalog and when writing for it kindly mention this paper. Our Mr. M. T. White will represent this paper at the sale and will care for any bids sent in his care. See page 43.

Extraordinary Poland China Sale.

Carl A. Rosenfeld announces that on Monday, February 3d, he will sell at public sale forty head of Poland China brood sows. A representative of this paper who inspected the offering was more than surprised at the high quality and unusual size of the entire consignment. There will be eight tried brood sows that are good enough for anybody and that carry blood lines that have helped to make the Poland China famous. Two of these are by a son of Big Victor, that made such a great record as a breeder in the Lonergan herd. Two others are by Tecumseh Longfellow, a sire which in the herd of Wm. Lentz sent forward progeny that made its mark in many good shows. Others are by Big Crow, he a grandson of the well-known Miller's Tecumseh. Still others are by Longfellow L. and Iowa Model. There will be twenty-four yearling sows and it is doubtful if any other herds in Iowa has sent into the sale ring a like number of yearlings showing the scale, the broad, well-arched backs and the strong feet that these do. These yearlings are by Rosenfeld's Expansion, Big Crow, Cottage Lad and Blue Valley Gold. There will also be spring gilts by Rosenfeld's Expansion and Pawnee Chief. These sows will have been bred to J. H. Hadley, Pawnee Chief and Great Expectation. J. H. Hadley is a hog which at one time in the herd of J. H. Watson produced some as good things as ever came out of that herd. He is a line-bred Hadley, tracing directly to Snebey's Hadley, a first-prize winner at the great Columbian Exposition at Chicago. On the side of his dam he also traces to some of the most sizable things grown by southern Iowa breeders. Great Expectation is a hog which Mr. Rosenfeld raised himself. His sire was Rosenfeld's Expansion, bred by Henry Dorr, sired by Dorr's Expansion and tracing on the dam's side to some of the blood that has made Henry Dorr's herd one of the best in Iowa. Great Expectation is a remarkably good hog and wil undoubtedly develop into one of the good herd boars. Pawnee Chief is by Dorr's Expansion and out of Pawnee Lady 3d. This is an extra good yearling and one which will be offered for sale. Breeders who admire large hogs and those which are strong in back and feet will find this consignment one of rare merit. There will also be in the sale a limited number of young Aberdeen Angus cattle. See advertisement on page 39 and for catalog write to Carl A. Rosenfeld, Kelley, Iowa.

IN AND AROUND WISCONSIN

UNTIL the fruit growers of Sauk county form themselves into a co-operative association to aid in the marketing of their apples and the purchase of their supplies, they will not make as much from their orchards as they should. This, at least, is the opinion of W. A. Toole, the veteran orchardist of that section. The difference between the prices paid by the consumers and those received by the producers for their fruit will in the near future, he believes, make such organizations necessary in Sauk county as elsewhere. Writing for the official organ of the Wisconsin State Horticultural Society Mr. Toole reports that there were in the spring of 1911 over 1,200 acres of apple bearing trees in Sauk county. Since then many farmers and fruitmen have planted orchards which, of course, are not as yet bearing and he estimates that these would equal fully 400 acres, which would make a total of over 16,000 acres of apple orchards in the county. The varieties most popular with Sauk county orchardists are Longfield, Wealthy, Fameuse, McMahon and Northwestern Greenings.

Arguing that the state fair if located at Oshkosh, Wausau or some other northern town would receive better support and greater farm patronage, residents of Marathon, Winnebago and other upper Wisconsin counties are urging the legislature to move the exposition from Milwaukee to some northern Wisconsin city. A similar proposition was submitted to the legislators during the last session.

The leading Chester White swine breeders of the state will meet in Madison on Friday afternoon, February 7th, for the purpose of organizing the Wisconsin Chester White Breeders' Association. W. F. Belda, of De Forest, and one of Wisconsin's most prominent Chester White breeders and exhibitors, has interested himself in the formation of this association. Prof. James G. Fuller, of the Wisconsin College of Agriculture, will preside at the organization meeting.

William Arnon Henry, former dean of the Wisconsin College of Agriculture, has worked zealously for several years for the enactment of a parcel post law which would permit of the transportation of packages at much more lower rates than have been charged by the express companies. It is here.

Nearly 2,000 square miles in Wisconsin were soil surveyed during the past year by experts employed by the United States Department of Agriculture and the state of Wisconsin. Altogether 8,432 square miles have been jointly surveyed by the federal and state engineers. Complete surveys were made during 1912 of Buffalo, Columbia, Dane, Jefferson, Juneau and Kewaunee counties.

There is a world of useful information to be gleaned from the various seed catalogs. Many hints as to crop-rotation, most profitable crops, new seeds for grain and roughage, will be found in them. Order a goodly supply of them; read, study and profit

HIGH PROTEIN TANKAGE

Guaranteed Analysis

60% .....Protein

F. ALLDRITT'S
ANNUAL SALE
DUROC JERSEY BRED SOWS
Will be held in sale pavilion
ATLANTIC, IOWA
TUESDAY, Jan. 28th

IN this sale offering there will be some fifty head of sows that have been selected from the very best of my large herd. Not a sow listed but that would be a good one in any herd. Fifteen yearling sows, fifteen fall yearlings and the remainder are spring gilts of the very best kind. They are well grown, heavy boned and in good health. The get of such boars as the noted Crimson Wonder Jr. by the great I Am A Crimson Wonder, Billie Davis by Tom Davis, Count Medoc by Medoc, King the Col., Glendale Critic 3d and a few others will be included in this sale. The offering is bred to Crimson Wonder Jr., Count Medoc, Col. Lafollette and C. H.'s Col. I have spared no reasonable expense to put up a good offering. Try and be with us on sale day. Those unable to attend should send all bids to H. S. Allen, representing The Homestead at this sale. Send for catalog at once and mention The Homestead. Address

F. ALLDRITT, 137 No. 25th St., Lincoln, Neb.

Colonels Allen, Kraschel and Lang, auctioneers.

E. E. FARVER'S
EXCEPTIONAL POLAND CHINA BRED SOWS
OCHEYEDAN, IOWA, THURSDAY, JANUARY 30, 1913
40 HEAD ALL IMMUNE 40 HEAD

TRIED sows and gilts by FARVER'S GOLIATH, one of the greatest boars of this type in the very heart of the big-type country. He is not all size, but is smooth and well proportioned, and has gotten pigs after his own makeup. Some of the sows will be bred to him and will be the attractions of the sale. To cross on the sows of my own breeding I bought a boar by the Big Defender, out of Pawnee Belle by Dorr's Expansion, dam Evergreen Susie, one of Dorr's great brood sows. He is a boar of great promise and will grow to one of the real practical big smooth kind. Twenty-two gilts by Goliath in the sale and some more that are safe in pig to him. The rest have been bred to E.'s DEFENDER. Tried sows that have been exceptionally good breeders in my herd will be sold and one of the very choicest lots of gilts is listed for the above date. I would like to send you my catalog so you may judge for yourself the great lines of breeding I am selling. J. A. Benson, auctioneer. Ray L. Gribben, field man.

E. E. FARVER, - - - - OCHEYEDAN, IOWA.

WRIGHT'S BIG-TYPE POLAND CHINA SALE
SALE WILL BE HELD AT THE FARM 3 MILES SOUTHEAST OF
ALLEN, NEBRASKA, WEDNESDAY, JAN. 29, 1913

50 HEAD of mammoth sows bred by myself from the biggest blood I could find. There will be included 6 matured and tried sires, 12 yearlings, and the remainder spring gilts from some of the best sows that I bought last year, together with those that I raised myself. This entire offering is big boned throughout and the gilts are smooth, the sows roomy and the sort that produce size in their breeding. The Wright's big-bone stuff is all characteristically large in bone, and they show him to be a breeder of the best. He is a half brother of Big Jumbo. Other herd boars are big Bone Jim by the well-known Barker boar, Lyon Chief; Big Chief; Big Wonder by Long Wonder 2d, and Long Wonder 2d. The ones of these that I now have on my place have been used on the sows in this sale and with such breeding you will be certain to find something to suit. Write now for the catalogs, as they are ready. Col. W. R. Ritchie will be the auctioneer. Mention The Homestead.

W. M. WRIGHT AND SONS, - ALLEN, NEBRASKA.

Golden Model II. Bred Sow Sale

ON FEBRUARY 11th we will sell 40 Duroc Jersey bred sows, 20 will be bred to the unequaled sire of winners, Golden Model II. Others bred to High Model (grand champion Iowa, 1912), Golden Model 31 (grand champion Sioux City, 1912), and Sensation Wonder (3d Iowa, 1912). Our 1912 herd of show sows are included. More good sows in this sale than will be sold in any other sale this year. Write for catalog mentioning The Homestead. Address

WALTEMEYER BROS., - - MELBOURNE, IOWA.

MASON & BRACKMYER'S DUROC SOW SALE

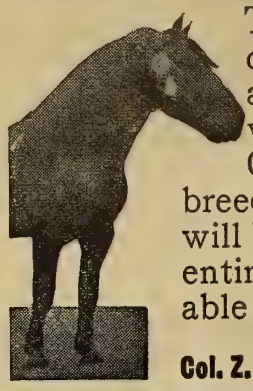
MORRISON, ILLINOIS, JAN. 28, 1913. 50 head of bred sows, sired by S. E.'s Crimson Wonder, State Fair Col., Z. K.'s Col. Bred to Chief Orion, Royal Col. and Mason Wonder. Write for catalog, mentioning The Homestead.

MASON & BRACKMYER, Morrison, Illinois.

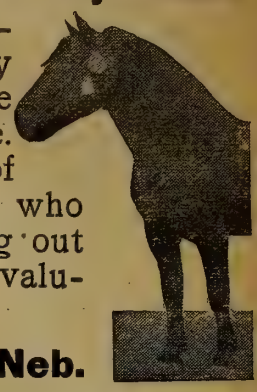
GRAND CLOSING-OUT SALE PERCHERON STALLIONS AND MARES

35 HEAD The Entire Studs of L. M. Phelps, Trumbull; W. D. Phelps, Trumbull, and D. D. Case, Giltner, Nebraska, will be Sold in Sale Pavilion, **35 HEAD**

HASTINGS, NEBRASKA, WEDNESDAY, FEBRUARY 5, 1913



The entire offering is made up of good useful horses. They are all recorded or eligible to record in the Percheron Society of America. Nearly all are blacks, all of working age are broken to work. There will be offered about five stallions that are ready for good hard use. Others will be offered that may be used moderately. The mares of breeding are in foal mostly to the great son of Casino, the noted Monico, who will be sold in this sale. Everything in this sale will sell. We are closing out entirely. Send for catalog, it is full of details of the offering and much valuable information. Address, mentioning The Iowa Homestead.



Col. Z. S. Branson, auctioneer. **D. D. CASE, Sale Mgr., Giltner, Neb.**

McCullough and Hamilton's Great Poland China Sale.

In the sale of Poland China bred sows that will be made at Central City, Neb., on January 30th by O. J. McCullough, Clarks, Neb., and L. W. Hamilton, Kearney, Neb., there will be offered a selection of real big-boned, big-type Poland China sows and gilts that should appeal to the thinking buyer. In this sale there will be much of the get of a number of noted boars and mated to some splendid sires. Price's Jumbo by Chief Price 2d by old Chief Price is one of the leading boars of the McCullough herd. He is one of the breeding boars of the country and comes of a line of good ones. He was used for some little time in the herd of J. M. Coleman, Belgrade, Neb., in which herd he did excellent work. Another boar that Mr. McCullough has in use that we prize very highly is Smooth Big Bone. He is a son of Mr. Herring's noted boar, Smooth Price, and is out of Long Mollie by Big Bone by A Wonder. The dam of Long Mollie is the noted Mouw-bred sow, Mollie Jones 5th. Mr. Hamilton has been using very successfully a boar called Ideal by Smooth Wonder by A Wonder and out of a dam by Thickset by Longfellow. He is a very massive boar with good ten-inch bone and good conformation. Another boar in this herd is Big Sie by Hadley by Big Hadley and out of Maud S. by Commander. These are the boars that the principal part of the offering will be bred to and they are also the sires of many. Other sires represented are Chief Price Again, Price Again by Mastodon Leader, Mc's Union Leader by Wade's Jumbo, Wade's Jumbo and others. The offering is really strong in the very best of breeding and the individuals will please those looking for good hogs. We would like to have you with us at this sale. These hogs will pay you well for coming and if you cannot get away at that time get the catalog at once and make your selections from it and send reasonable bids on same to J. C. Price, of The Homestead, who will be at this sale. Send for the catalog at once and mention The Homestead when writing. See advertisement on page 44.

Marshall's Giant King Sale.

G. F. Marshall & Son, Monroe, Iowa, pioneer breeders of Poland China hogs, announce a public sale of bred sows on January 28th. This firm own the noted Poland China boar, Giant King, and a large percentage of this offering is sired by this noted boar and about ten of the sows are bred to him. Giant King was shown at the Iowa State Fair, 1912, and much favorable comment was made regarding his size, smoothness and heavy bone. Mr. Marshall will sell sixteen fall yearlings and twenty-two gilts sired by Giant King and among them are some good ones. These sows and gilts have never been pushed and will not be carrying the flesh that they should to bring their full value, but this is all the better for the purchaser. The Giant King sows and gilts are bred to Monroe's Jumbo, a son of Mouw's noted Big Jumbo and out of a Big Bone sow. There will be two yearling sows by Long King and two two year olds by him. There will be two litter sisters to Giant King, one by Iowa Lad, one by Pawnee Chief, two by Jumbo and an Expansion-bred sow. Giant King is a son of the noted boar, Big Ex, used in the herd of W. H. Cooper for several years and generally recognized as one of the great boars of the breed. The illustration in the advertisement on page — is a likeness of Giant King in his yearling form. Mr. Marshall has made a record in the Poland China business that dates back many years. His ability to breed and fit the good ones has never been questioned, but his experience has taught him that sows not loaded with fat give the best results in the breeding herd and for this reason he is not loading the sows in this offering with flesh. They are heavy boned, big-framed sows and gilts and have quality. This sale should interest all Poland China breeders and beginners as well, because a sow sired by or bred to Giant King would be a valuable addition to any herd. If you cannot attend the sale a bid sent to Carlos C. Palmer, or C. C. Carlin, Homestead representatives, in care of Mr. Marshall, will receive careful attention. See page 49 and write for catalog, mentioning The Homestead.

Goodenough's Hampshire Sale.

A. L. Goodenough, Morrison, Ill., well-known Hampshire swine breeder, will hold his annual sale at his farm three miles west of Morrison on January 27th. Anyone contemplating the purchase of a Hampshire sow should be interested in this sale, as it will afford one of the best opportunities of the season to secure high-class breeding stock from one of the real constructive breeders of Hampshires. The breeding of Hampshires has not been merely a speculation with Mr. Goodenough, but he has given the breeding business much thought and study and by hard work and perseverance has made a marked success. For foundation stock it is always preferable to get animals bred for several generations in the hands of successful breeders, as these are more likely to introduce the type of animals desired. This is why we can strongly recommend this offering not only to the older breeders, but to the beginners as well. Mr. Goodenough has held several sales and the writer, a representative of this paper, has inspected all these offerings and has been familiar with this herd of hogs for several years, and believes we are in position to say that the fifty-five sows Mr. Goodenough will sell in this sale are by considerable the best lot he has ever offered the public. The offering consists of tried brood sows, fall yearlings and spring gilts. The sires represented in their breeding are the prize winning Shelby Lad, Bon Bon Beauty, Blythedale Jim and Teddy R. B. The sows will be bred to Shelby Lad, first-prize winner at the Iowa State Fair, 1911, and to Dudie, first-prize junior yearling at Iowa, 1912. If you want some good sows attend this sale. If impossible for you to be present send a bid to Carlos C. Palmer, Homestead representative, in care of Mr. Goodenough. Write for a catalog, mentioning The Homestead. See page 52 for advertisement.

The Great Winter Sale of Herefords.

The farmers, ranchmen and breeders of pure-bred Hereford cattle should all keep in mind the great sale of Hereford cattle that will be made by a number of the best breeders in the central West at Grand Island, Neb., February 14th and 15th, under the management of Mousel Bros., Cambridge, Neb. In this sale there will be offered 120 head of cattle especially selected for this sale. There will be seventy-three bulls and forty-seven females and, as said before, those who are in need of cattle should keep this sale in mind, for they will be here and in sufficient numbers to insure that all may be able to secure what they need and without undue competition. Cattle that are the equal of any the writer has ever seen sell will go in this sale. There will positively be bulls and females in this sale that are good enough for anyone, in fact, those who attend this sale will have a rare opportunity to pick from the best of the country. It is not going to be a question of whether or not they are good enough, but it is going to be a question if the readers of this paper can afford to let this opportunity pass without being present. We have seen many of the cattle for this sale and they are positively right. Bulls that will absolutely win money in any show in the country if properly presented. There is no better breeding in the herd books and, all considered, it is one of the great offerings the breed has brought out for some time. Get your name on the list for the catalog. Mention The Homestead when writing. Address Mousel Bros., Cambridge, Neb.

SAM TILLINGHAST'S BRED SOW SALE

Peterson, Iowa, January 31, 1913

40 HEAD the very best in the herd will go under the hammer on the above date. These include ten tried sows, ten fall yearlings and twenty spring gilts. There are many of these that breeders of the best can afford to buy; they are rich in the proper mingling of the blood lines of this breed that meet the practical needs of the man producing hogs of quality and size. Herd boars are the well-known Mastodon Wonder by King Mastodon, dam by A Wonder 107353; Sam's Big Jumbo by the famous Big Jumbo, and I Am King by King Leader, dam by Miller's Happy Tecumseh by Dorr's Tecumseh. Some great tried sows by Long Prospect that are especially worthy of breeders' attention. Colly by Long Prospect raised forty-four pigs in five litters and is safe to Mastodon Wonder. Mention The Homestead when you write for catalogs.

SAM TILLINGHAST, - PETERSON, IOWA.

Col. W. R. Ritchie, auctioneer.

SCHRAM'S POLAND CHINA BRED SOW SALE

TO BE HELD ON THE FARM 6 MILES SOUTH OF

NEW CASTLE, NEBRASKA, THURSDAY, JAN. 30, 1913

36 HEAD of the best sort of brood sows, including ten tried sows, twelve fall gilts and fourteen spring gilts. They are by the following sires: Expansion Prince by Hadley's Surprise, Fair Chief by Chief Price 2d and Hadley's Mogul. For service boars there have been used Hadley's Mogul, Mastiff's Pointer and Valley View Jumbo, a son of Big Jumbo, he by the famous Big Jumbo. The combination of the blood lines used in this herd has been a judicious mingling of the big type and the more medium type, producing hogs that have retained the immense size of the big ones, coupled with that quality that marks the best. It is throughout an offering of the better order, and is worthy of the attention of the best breeders. The catalogs are ready. Write for one today.

Col. W. R. Ritchie, auctioneer.

C. W. SCHRAM, - - - NEW CASTLE, NEB.

The above is a good likeness of one of the choice Poland China boars offered by F. R. Barrett, Cadams, Neb. This boar is a show boar from the ground up. He is a big, smooth fellow and will make some breeder a first-class herd header. See advertisement on page 48 and write Mr. Barrett at once for full description and price.

Smith's Duroc Jersey Sale—Last Call.

This is the last opportunity we will have of calling your attention to the annual sale of Duroc Jersey bred sows to be held by J. E. Smith, Victor, Iowa, January 25th. Mr. Smith will sell fifty head of bred sows consisting of tried brood sows, fall yearlings and spring gilts. They are sired by Smith Crimson Wonder, Royal Colonel, Victor Colonel, Professor Model and Crimson Wonder I Am. They are bred to Mr. Smith's four good herd boars, Golden Prince, Crimson I Am, Victor Colonel and Smith's Crimson Wonder. Smith's Crimson Wonder is the son of Crimson Wonder 3d and has proven a very valuable breeding boar in Mr. Smith's herd. Golden Prince is a son of Advancer 1st and out of a full sister to Model Queen, the Nebraska grand champion sow of 1910. Crimson I Am is the son of Crimson Wonder I Am and out of the top sow in the J. C. Droz sale last winter. Victor Col. is the son of Mr. Morton's noted Premier Col. and out of a line-bred Ohio Chief sow. Mr. Smith is breeding the kind of hogs that are in demand. He sold over fifty boars this fall in a short length of time, which indicates he has the kind that please. Mr. Smith has one of the most complete hog houses to be found anywhere and planned every detail himself. It is a credit to his ingenuity and is well worth while seeing, especially to anyone contemplating the

FESENMEYER'S GREAT BROOD SOW SALE

CLARINDA, IA. FEB. 6, 1913

40 HEAD 40

30 Sows Bred to

A WONDER

The greatest living Poland China boar.

A WONDER

IF YOU want to buy sows bred to the greatest Poland China boar that has ever lived, you will necessarily be interested in this great offering. I am selling some of my best A Wonder sows bred to BIG JOE, a boar that is destined to make his mark as a sire and a big fellow. Write for my great catalog and come to my sale or be represented by a bid. Kindly mention this paper when writing for it. Address

COL. H. S. DUNCAN, auctioneer.
M. T. WHITE, field man for The Iowa Homestead.

HENRY FESENMEYER, CLARINDA, IOWA

erection of a hog house. If you cannot attend the sale, send bids to Carlos C. Palmer, in care of Mr. Smith, and they will be carefully handled. See page 50 and write for catalog, mentioning The Homestead.

Duerr's Duroc Sale.

On January 28th, A. J. Duerr, Milford, Neb., owner of the well-known show and breeding boar, Crimson Col., will make a sale of a select offering of Duroc Jersey bred sows. The writer recently called on Mr. Duerr and we are pleased to say that he has a great line-up of sows for this sale. The only place they are lacking is in numbers, for there will be but about thirty head, not over thirty-five, and to make the number already listed Mr. Duerr is compelled to list some of the very best sows that he has on the farm. The great sow, Miss Col. Educator by Educator, is listed. She is bred for a March litter to Crimson Col. Chief's Wonder Lady by Red Wonder and out of a dam sired by the great Golddust Chief by Ohio Chief is another sow of note that sells. She has been a record producer. Queen's Perfection by Red Perfection 2d and out of Harney's Crimson Wonder by I Am A Crimson Wonder, the sire of Beem's noted I Am A Crimson Wonder 2d is also listed. She is bred to Crimson Col. for early litter. There are a few that are bred to Critic King, a son of the 1912 champion, Critic B., and they should prove to be good, as Critic King is a choice boar. He is the making of a big hog and looks as though he would be smooth and he has heavy bone and good feet. Crimson Col. is sired by High Col. by Prince of Cols. and he is out of Flossy D. by Model Wonder. This boar was shown very successfully, both in 1911 and 1912, and as a sire he is the right sort. Mr. Duerr is an enterprising stockman and one of the Duroc breeders of the state who will be heard from later. He is the sort of a breeder whom men older in the business can afford to support, and he has hogs that they can use. J. C. Price will represent this paper at the sale and those who cannot attend may send bids to him in care of Mr. Duerr. All such bids will be carefully attended to. Get the catalog at once, send in your name, for Mr. Duerr does not want to miss you, and when writing kindly mention The Homestead. See advertisement on page 49.

The Bollman-Sharp Great Hampshire Sale.

One of the greatest events in Hampshire swine circles this year will without doubt be the forthcoming sale at Coal Valley, Ill., Tuesday, January 28, 1913. R. L. Bollman and Mike Sharp & Sons have selected ninety of the tops from their herds and when you get a chance to buy the tops of two such noted herds in one auction it sure means something. These are the two old established herds and their renown throughout the Hampshire world is a matter of history. Most every year they show at the big shows of America. These two herds have won more prizes, including silver cups, diplomas, grand championships, championships in class, herd and group prizes than any other herd in the breed at the last International. Their barrows carried off the grand championship, silver cups, etc., while the sows of their breeding swept the platter. You can get the blood that produced all these winners and you know how true the saying, "To produce champions you must mate champions together," and this is sure the opportunity to get this champion blood. The utmost care has been taken in selecting these animals for this sale to get the best and most useful lot in the two herds. The sows and gilts are mostly bred early to their great breeding and show boars. Many of these boars are champions. In selling ninety head it offers buyers a great opportunity to select their needs. It will be a great day. You can meet Hampshire men from everywhere and you will find them the most genial lot you ever met. It is an opportunity Homestead readers cannot well afford to miss. If you cannot come send your bids to H. E. Browning, who will represent The Homestead. Col. Fred Reppert will be the auctioneer. Look up the advertisement on page 46 of this issue and for catalogs write either R. L. Bollman or Mike Sharp & Sons, Coal Valley, Ill., kindly mentioning The Homestead.

Handley's Big-Type Durocs.

On January 29th, at Carroll, Iowa, E. E. Handley will once more make a sale of his noted big-type Duroc Jersey brood sows and he is one of the breeders who always puts up a good offering. When it comes to breeding them big they will all have to take off their hats to Mr. Hanley, and his offering this time is up to the high standard maintained in this herd. He is selling five matured sows and these are all bred to his old grand champion boar, Frankfort K. He is selling ten fall sows in this sale that are sired by Frankfort K. and these are bred to Crimson Chief Again, a son of Nebraska Belle's Ohio Chief, and he in turn was out of a litter sister to old Crimson Wonder. He is also selling twenty-five spring gilts, half of which are sired by Frankfort K. and Ashgrove Col. Among the good matured sows that he will sell is Della's Favorite, a daughter of old Tientsin, bred to Frankfort K.; Model Queen by Model Advance by I Am Advance, dam Queen Model by Clearmont's Model, and she will also be bred to the old boar. Current Lassie by Crimson Farmer by old Farmer Burns is one of his good brood sows and she will also be bred to the same boar. There are several more good sows that he is offering and the catalog will tell you all about them. There will be three splendid gilts in the sale by Crimson Chief Again, three by Golden Model 17th and three by Col. Gano. Also two by Regulus, out of a Walt Model dam, of the Octavia Hill strain. These gilts and the fall sows will have plenty of size and those who are wanting the large-type kind will be interested in the Handley sale. When writing for his catalog kindly mention The Homestead. M. T. White will represent this paper at the sale and will care for any bids sent in his care. See advertisement on page 47.

Van Patten & Son's Durocs.

It was the pleasure of the writer to call on G. Van Patten & Son, Sutton, Neb., the noted breeders of Durocs, a few days ago and we wish to say that we saw a choice line-up of hogs for their sale for February 19th. The offering is much better than the ones offered a year ago, and of a little different blood lines. Quite a few yearling sows sired by Golden Rod King, the 1910 champion, will go in the sale, and a choice lot of young stuff by Uneeda Crimson Wonder and Queen's Col. make up most of the remainder of the offering. Uneede Crimson Wonder is looking well and we must say again that we think he is one of the very greatest boars of the country. The young boar, Model Wonder by Golden Model 4th, and out of Lucy Wonder by Wallace's Wonder by Crimson Wonder Again, is just a mighty toppy young boar and looks like the very thing to mate with Uneeda Crimson Wonder gilts. He is wonderfully good in all parts, but is not quite as long accordingly as Uneeda, but he sure looks like the type to make a hit with Uneeda gilts. Model Wonder is as heavy boned as any boar of his age that we ever saw, if not the heaviest. He has splendid legs and feet and, in fact, is just about right all over. The writer thought that Model Wonder would land well up toward first place at the Nebraska fair last fall in the six months' class, but he was outside the money altogether. We doubt very much, however, if there are any that stood above him that are as good today. Keep Van Patten & Son's sale in mind and plan to be on hand sale day. It is a sale you cannot afford to miss. Mention The Homestead when you write for catalog.

Strictly big-type Poland China boar at the head of the F. P. Robinson herd, Maryville, Mo. See advertisement on page 44.

DAVID BOESIGER'S ANNUAL SALE

DUROC JERSEY BRED SOWS

will be held at farm near

CORTLAND, NEBRASKA, MONDAY, JAN. 27, 1913

THE sale offering will include some FORTY HEAD, most of which are spring gilts and are the get of the great sires, Lincoln Lad by Lincoln Wonder, Crimson Wonder Boy by A Crimson Wonder and C. H.'s Crimson Wonder by C. W. Again. They are the big, smooth ones with plenty of bone, the sort that make good brood sows. The few tried sows are among the very best that I own, and everyone is a proven producer of much worth. Most of the tried sows and many of the spring gilts are bred to

WIDLE'S WONDER,

the boar that now heads our herd. He was first-prize boar at Nebraska this season. He is a son of Uneeda Crimson Wonder and out of the great sow, Scribner Belle. He was the top of Nebraska sales last fall. A sow bred to him should be a good investment. He is a tried breeder. This is your only opportunity to own a sow bred to him this season. Try to be with us sale day. Colonel Callahan, auctioneer. J. C. Price, field man. Address for catalog

DAVID BOESIGER, CORTLAND, NEBRASKA

Get off Union Pacific motor running between Lincoln and Beatrice at stop 82.

DAVIS' HAMPSHIRE SALE

150 Bred Sows and 40 Boars at St. Joseph Stock Yards Sale Pavilion. Tuesday, February 18, 1913. Sale starts 10:00 a. m. sharp. This is the greatest herd of Hampshire hogs in existence. Write for catalog, mentioning The Iowa Homestead.

W. F. DAVIS - - - SO. ST. JOSEPH, MO.

Geo. Briggs & Sons' Durocs.

The writer recently saw one of the best bunches of Duroc sows that we have seen in years. They were on the farm of Geo. Briggs & Sons, Clay Center, Neb. It is not a hard matter to find some choice sows, and in some herds a lot of them, but when it comes to over 100 head that are every one choice, we claim that it is some bunch of sows. That is the kind of a bunch we saw on our recent visit to the above mentioned farm. From these great sows will the selection for the February 18th sale be made. Daughters of the great Lincoln Wonder, one of the best sow sires of the breed today; Cleatham's Pride, a show boar of prominence, and a breeder as well; also daughters of many other great boars will go in this sale. Keep the date in mind and remember that one of the great offerings of bred sows to be sold this season anywhere will go in this sale. Mention The Homestead when you write for the catalog.

Barr & Sons' Poland China Sale.

On February 4th, at Red Oak, Iowa, W. H. Barr & Sons will make a public sale of forty head of Poland China sows and they never fail to put up a good offering. They are selling three matured sows, seven fall yearlings and thirty spring gilts. These are bred to that splendid breeding boar, B.'s Mastodon, Pawnee Sensation and Orange Longfellow. We have seen the Barr & Sons offering and we know whereof we speak when we say they are selling a grand lot of good well-bred sows with as much size as you want and all bred to most excellent herd boars. Mr. Barr is one of the oldest breeders in the West and you can depend on it he is selling a splendid lot of sows in this sale. Drop him a postal card for his catalog and kindly mention The Homestead when doing so. Watch next week's paper for further particulars about their sale.

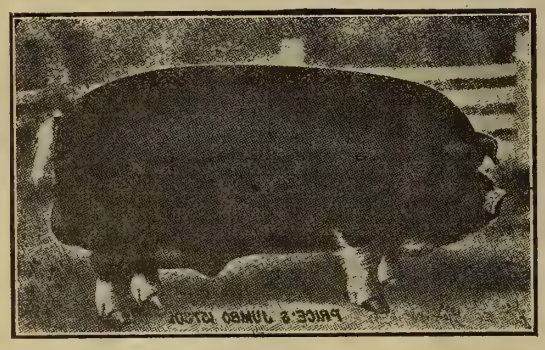
A GREAT POLAND CHINA EVENT

WILL BE THE SALE OF BRED SOWS THAT WILL BE MADE BY

O. J. McCULLOUGH, CLARKS, NEBRASKA, AND L. W. HAMILTON, KEARNEY, NEBRASKA

IN THE SALE PAVILION IN

CENTRAL CITY, NEB., THURSDAY, JANUARY 30, 1913



45 HEAD of big-type sows and gilts make up the sale offering. They are sired by great boars and bred to boars of known value. The get of Price's Jumbo, Mc's Union Leader, Ideal by Smooth Wonder, Big Sie by Hadley, A Wonder Price by Smooth Price and out of a dam by A Wonder, and last, but not least, Smooth Big Bone by Smooth Price and out of Long Mollie by Big Bone. Everything in the offering is either sired by or bred to some of these boars, and they will add value to any herd. There will be plenty of good tried sows and fall gilts and a choice selection of big, stretchy spring gilts. Come to this sale for the good ones. They are certainly here. If unable to attend send bids to J. C. Price, the field man. Colonel Duncan, auctioneer. Send for catalog now. Address

OR

L. W. HAMILTON, - KEARNEY, NEB.

Freeman's Price Wonder Poland Sale.

More of the blood of the noted boar, Price Wonder, will be found in the sale of Poland China bred sows that will be made by N. B. Freeman, Kearney, Neb., on February 1st, than has ever before been offered the public. In this sale there will be upwards of fifteen head sired by this great boar, and as many others will be bred to him. It will be one of the great opportunities of the year to secure breeding that is right at the fountain head of excellence. Price Wonder first did service in the herd of Chas. Morrison & Sons, Phillipsburg, Kan., in which herd he sired the great Poland China boar of Kansas, M.'s Giant Wonder, owned by John T. Curry, Winchester, Kan. Later he was sold to the well-known breeders of the real big ones, Frank Davis & Sons, Holbrook, Neb., and from this herd he went to head Mr. Freeman's herd and is doing good service. Price Wonder is one of the great sons of the noted boar, Surprise Wonder 4th, that sired some of the most noted of the real big hogs of the country, among them Thos. F. Miller's Long Chief, John Miller's Long Wonder, the sire of Miller's Chief Price, also the sire of A Wonder and many other boars that the writer could mention that are making Poland China history. It will be seen that he comes of a line that has produced, that is producing that type today, and that certainly should be valuable for that reason. Breeders and farmers who wish the extra large Poland China should get the line of breeding that will be found in Mr. Freeman's sale, as it is the line that has produced practically all of the noted big hogs of western Iowa. Many of the Long Wonder sows that go in this sale are bred to Price Wonder and the Price Wonder sows are bred to either Big Wonder or the good son of Big Wonder that Mr. Freeman is using. Personally, we think a great deal of this young boar, we believe that in time he will be the most valuable boar that Mr. Freeman has on the farm and we would not hesitate to buy sows bred to him. He is the real big hog with an extremely great amount of quality for the extra big ones. If unable to attend this sale send bids to J. C. Price, in care of Mr. Freeman, and your interests will be carefully looked after. If you have not the catalog lose no time in getting one. Write immediately. See page 50.

Alldritt's Great Duroc Sale.

Probably one of the best offerings of Durocs to be sold in western Iowa this season will be the one that will be offered by F. Alldritt at Atlantic, Iowa, on January 28th. Mr. Alldritt lives in Lincoln, Neb., and these sows are the tops of his large herd of Durcos maintained at Friend, Neb. Mr. Alldritt is planning on closing them all out this winter and the very best of the herd will go in this sale. He says that the offering will be much better than the ones sold at his farm two years ago, when he made one of the very top sales of the entire country. His great herd boar, Crimson Wonder Jr., is liberally represented in this sale. Many of his daughters are included and quite a few of the others are bred to him. This boar has been siring some of the best stuff in eastern Nebraska the past few years, and in this sale there should be some that will interest those looking for the strictly good ones. Crimson Wonder Jr. is a son of I Am A Crimson Wonder and, so far as the writer is aware, there are only two boars living that are sired by that great young boar. The writer thought that I Am A Crimson Wonder was the very best boar ever shown that was produced by the famous mating of Crimson Wonder Again and the great sow, H. A.'s Queen. He sired but a very few litters, however, before he met an untimely death, and the noted I Am A Crimson Wonder 2d and Crimson Wonder Jr. are all that we know of today. Both of these boars have done a great work. Among the other sires represented are Count Medoc, a son of the noted sire of champions; also Billie Davis by the noted Tom Davis, and Col. Lafollette by King The Col. and out of a daughter of Lafollette. Another choice young boar to which several are bred is C. H.'s Col. by King The Col. and out of a daughter of the noted C. H.'s Special. This sale will afford an opportunity to get some good hogs. The sale will be held in a heated pavilion in the city of Atlantic, Iowa, and every hog will be sold to the highest bidder without reserve. They are being taken to this point to sell and that is what will be done with them. Send for a catalog at once and look it over carefully, and if unable to attend send your bids to the well-known Duroc Jersey breeder, H. S. Allen, who will look after all bids intrusted to him.

Wright's Mammoth Brood Sow Sale.

W. M. Wright, Allen, Neb., will hold his annual sale of bred Poland China sows at his farm, three miles southeast of Allen, on Wednesday, January 29th. This offering is described by those who have seen it as a mammoth one and when it is remembered that Mr. Wright has made his selections from the herds that are full of the very best of the larger breeding that it is possible to find, it is not strange that such a description should be given of it. The herd boar that has been used so well and so long in this herd, Wright's Big Bone by the boar that got Peter Mouw's Big Jumbo, and out of Maid B. 4th, is a large, well-built hog that sires, on the offspring of nearly any mating, a big bone with feet that always are good and puts size on his get as well. Some bred to this boar will be the sort that anyone will want to buy to put stretch in the herd. There will also be sold from the sows a matured sow by Big Bone and out of Maid B. 4th, making her a full sister to the chief herd boar in this herd. She is a big one, is roomy, with heavy hams and shoulders, and is a sow that has always farrowed the biggest litters, the last litter that she farrowed numbering fourteen. Another of the herd boars will be sold in the sale. He is Long Wonder 2d by Long Wonder by Longfellow 7th and out of Orange Pride by the original Chief Price 61861. He is a proven breeder, is a good breeder right now and from the get of his in the herd it will be seen that he has done well. He is guaranteed by Mr. Wright to be all right in every way. This will be a good opportunity to secure a herd boar of unusual breeding and should be considered on attending the sale as well as the sows that are to go through the ring. Another of the herd boars that Mr. Wright has is a son of Lyon Chief, the boar that sired the futurity winners at Des Moines this year. Big Chief by Chief H., a yearling, is a big, rugged boar out of the same dam as Wright's Big Bone. There is in this boar the making of one of the biggest, and with the strongly arched back, length and the bone that he has he will be one of the good ones of the breed. The feature of the offering this year is the fact that so many of the better ones are of Mr. Wright's own breeding, and that he is so willing to stand back of them the way he does. There is undoubtedly much size here and the entire lot is healthy, well grown and a breedy looking collection. Write for the catalogs now and please mention The Homestead when you do. Mr. Wright will appreciate this. Address W. M. Wright, Allen, Neb., as per the advertisement on page 41.

ROBINSON'S SALE OF MAMMOTH POLAND CHINA SOWS AND GILTS

MARYVILLE, MISSOURI, WEDNESDAY, JANUARY 29, 1913

50 HEAD: 21 fine tried sows, 3 fall yearlings, 26 big, toppy spring Gilts 50

PAWNEE PETE 55115, one of the truly great 1,000-pound boars, is the sire or the grandsire of seventeen head. His dam, the great **Miss Corwin 2d**, is included. **Prince Ito 56611** and **Prince Tom 5616**, sons of the great Bell Prince, are sires of many. They are bred to **Prince Tom**; **Fred Jamison** by Pawnee Pete; **Montecello Boy**, a prize-winning son of Big Expansion, and **Spotted King** by Long King's Equal. All bred for size and quality and I know they will please you if you want big hogs that make good. All vaccinated with Missouri state serum. Send for catalog and note the best guarantee on mail bids ever put out. R. P. Hosmer, auctioneer. A. T. Cole, representing The Iowa Homestead. Address

F. P. ROBINSON, MARYVILLE, MISSOURI

De Young's Practical Brood Sows.

A. J. & L. L. De Young, Sheldon, Iowa, will offer a strong draft of brood sows from their herd on January 24, 1913. The sale will be held at L. L. De Young's on the northeast corner of Sheldon in comfortably heated tent. One of the features of this herd which will commend itself to the prospective purchaser who is primarily interested in market hogs is the record made by various animals that Messrs. De Young have sent out to men who are raising a better grade of hogs to sell packers. Two different men have sent fat hogs sired by De Young-bred boars to Chicago and sold them at the top of the market. The real purpose of raising pure-bred stock of any variety is to produce stock of the highest market type to feed more economically and mature more quickly than common stock does. If the boars sent out from a pure-bred herd do not do this when mated with good sows, then there is something wrong with the ideals which have governed their breeding. If, on the other hand, they do accomplish such a result, then the herd is a practical one, worthy of the utmost consideration by both farmers and breeders. The boars which head these herds are good ones, carrying the best blood lines. King of Cols. Again by King of Cols., dam by Orion Chief, is a litter brother to the great Defender which sold recently to E. S. Mayes, Jr., Springfield, Ky., the highest boar of the breed now existing and twice the champion of the breed at the International Show at Chicago. King of Cols. Again is a good boar today and has sired a great lot of high-class animals, some of which will be included in the De Young sale. A son of his, Phalas Col., out of a daughter of old Phalas, has proved one of the best breeding boars that John De Young has ever had on his place. L. L. De Young has been using Crimson Advance by Advance 5th and on his dam's side combining the Ohio Chief and Crimson Wonder lines. A number of the gilts are by him and are a well-grown, strong-backed, stretchy lot with quality. Crimson Col. is the sire of about one-fourth of the offering and some of the gilts are bred to him. He is a product of the Sol Frank herd and one of the good show boars produced there. The service boars include Big Bone Climax by Crimson Climax, dam Challenger Girl V.I., is a strongly bred Crimson Wonder boar, an early selection from the choice of O. S. West's herd at Paullina. Model Chief I Am is a fall yearling boar by Model Chief Jr. which is as good a fall boar as is in northwestern Iowa. Look him over sale day and you will see a great boar. There are sows in this sale of great brood sow qualities, one especially a granddaughter of Perfection Wonder on the sire's side and Phalas on the dam's side. She is a sow of good caliber. The older sows have bred prolifically in the past and are in right shape to go ahead and repeat in other herds. Send for catalogs of the sale and study the great lines of breeding offered. Ray L. Gribben will represent The Homestead and will handle bids conscientiously. When writing for catalog mention The Homestead. Ad-

Keepsake 2d, grand champion Hampshire sow at the International Live Stock Exposition, owned by Sal Tone Farm, Greensburg, Ind.

FRANK IAMS' 1912 IMPORTED HORSES

Ikey Buyers—Get Into "Iams' Money Saving Game." See Iams and his "Peaches and Cream" Imported Stallions, "Prize Winners," that he sells at $1,000 and $1,400 (few higher). Imported mares—"Topnotchers"—at $700 and $1,000.

"Ikey," Be a "Wise Guy"—Buy 'Show Horses" of Iams—who has crossed the Ocean 30 times for horses and sold 4,444 Registered Horses. "Iams' 30 years of Success" make him a safe man to buy from at Special Low Democratic Prices. "Everybody Is Doing It."

Iams and Peaches and Cream Percheron Paris Winners.

Of big, classy, wide-as-a-wagon "Peaches and Cream" imported stallions and mares have arrived at St. Paul, Neb., by "special train." "Ikey Boy," smile, and Iams' hundreds of satisfied customers "will sit up and take notice" that Iams, the "King Bee" horseman, is still in "horse business," and good for 50 years, as the "Peaches and Cream" horseman. Iams hypnotizes buyers with "real drafters" at bargain prices, and having "the goods" as advertised. Iams' "competitors" and "hammer knockers" are "boosting Iams" by their "knocks" and making him on "Easy street" and known as the "millionaire horseman." Iams is selling these big, fancy "Black Boys and Girls" cheaper than ever before. Of more and better horses for the money—$1,000 and $1,400 (few higher). Iams has

"100 PERCHERON AND BELGIAN STALLIONS AND MARES"

They are two to five years old, weight 1,700 to 2,500 pounds, 80 per cent blacks, 60 per cent "ton horses." All "registered," approved and inspected by Governments of France and U. S. and certificates "stamped O. K." All sound," "bell-ringers" ("Iams' kind—need no "State Law" to make "them sound"). Many paris prize winners, big flash actors. They are "eye openers"—larger and better horses than you see elsewhere—big "business propositions" that make "the wheels" work fast under a "live buyer's hat." "Georgie, dear," Iams, the business horseman of 30 years' experience, made a "big killing" by buying his 100 stallions and mares in France and Belgium in October and November, 1912. "War scare," "bad crops," "close money" and Iams' "cash" caused the "topnotchers" and prize winners" to be thrown on the market (as the best horses and prize winners are not sold in Europe until the last part of the season). Iams will give his buyers the benefit of his "good luck" in buying. "Ikey Boy," come on down town—sing Iams' song—"Everybody Is Doing It."

BUY "TOPNOTCHERS of IAMS AND SAVE $1,000"

Iams is a "big fly in the ointment" in the horse world. He keeps the "gang guessing." His daily "horse show" will be a day of "pleasure and profit" and worth going 2,000 miles to see. Iams sells only "topnotchers" and "crack business stallions" and "mares." He handles no International "tail ends," no "auction stuff" or peddlers' stallions—no American-bred full bloods of questionable breeding—(only imported horses). Iams has the "real pure drafters" and makes every statement good. Buy of Iams and you won't get "stung" in horse or price. "Dollie D.," waltz me around once again, "Ikey," and land me at Iams' four importing barns and box office filled to the roof with "Big Black Boys and Girls" at "reduced prices." All the world knows Iams, the big horseman, who sells Iams' "Peaches and Cream" "brand" of draft horses. 1912 was Iams' best business year. 1913 promises to be a "bumper year" to Iams and his customers. He saved $300,000 to his customers in 1912. "Watch his smoke" in 1913. Iams' 30 years of successful horse business makes him a safe man to do business with.

HE SELLS HORSES "ON HONOR"--A BOY OR LADY

Can buy as cheap as a man. Iams is the "square deal" horseman. Buyers will find every statement in his advertisement or catalog as represented or you get the $500 Iams hang up. Iams guarantees to

SELL YOU A BETTER STALLION at $1,000 and $1,400

(few higher) than are sold to "stock companies" at $2,500 and $5,000. Imported mares $700 and 1,000. Iams gives 60 per cent breeding guarantee, pays freight on horse and fare of one buyer. He can furnish $1,500 insurance at cost. Iams buys and sells every stallion himself—saves buyers all middlemen's profits. He buys stallions by "train load." He speaks the languages (saving 20 per cent). He is not in "stallion trust." He pays no "slick salesman" commissions. He has no two to ten partners to share profits. He pays cash for horses and sells "topnotchers" by "hot" advertising and having "the goods." "Big Ikey," leave your happy home, December 20, 1912, or after, and buy a "top stallion" and pair of imported mares that bring colts that sell at $500. "Papa," don't let those "auction men" "hand you a lemon" in one of those "so-called" "American Full Bloods" with questionable breeding. Buy an imported stallion or mare of Iams that is "branded" and you will "wear diamonds." Iams' "selling clothes" fit all buyers—you won't leave Iams without a horse. He sells horses to all. Write for Iams' million-dollar horse catalog. Iams' guarantees are backed by "half million dollars." References: First National and Omaha National Banks, Omaha; Citizens State, St. Paul, Neb. Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

ST. PAUL - NEBRASKA

dress A. J. & L. L. De Young, Sheldon, Iowa.

Farver's Extra Good Poland China Bred Sow Offering.

On page 49 of this issue E. E. Farver, Ocheyedan, Iowa, announces his annual sale of Poland China brood sows, to occur on Thursday, January 30th. This is an offering of great interest to breeders of the larger type of the breed, for the herd has at its head a boar that is unquestionably one of the highest ranking sires within the breed today, considered both as an individual and as a producer of the kind of breeding stock that is so strongly in demand at the present time. He is Farver's Goliath by Chief Price 2d and out of Mabel Crow by Hadley Expansion. This is only the top part of his pedigree, but to go back of even this part will not show a single animal with a poor record. It is full of the best breeding all through. He is a boar that many competent judges who saw him last summer at Mr. Farver's considered as great a show prospect as any that were being fitted then in any herd, and although it is easy to guess at things there are a great many who have seen this boar both before and after the fall shows who think that he would have been up at the very top among the aged and champions. He weighed at thirty months of age 915 pounds and was smooth, with a wide and strongly arched back, well proportioned all through, right on his feet and legs, and a big, breedy appearing boar. Quite a number of gilts sired by him will go in the sale and there will be several which will be bred to him that will be sold, so he is one of the most prominent features of the entire sale. The younger herd boar is also one of a great deal of promise and has developed already to a pretty good sort. He is called E.'s Defender, is sired by the boar, Big Defender, that was sold this past fall to go to Illinois at a big figure. The pig at the time he was sold was considered by his breeder, Henry Dorr, to be one of the very best pigs that the Defender boar got. The female side of the pedigree is of the richest breeding. The first dam is Pawnee Belle by Dorr's Expansion, second dam Evergreen Susie, one of the great producing sows in the herd that produced the pig. The litters that will be farrowed by the gilts sired by Farver's Goliath and bred to this young boar will be extra well bred, and if the blood that is back of them counts for anything at all men buying sows at this sale will be the possessors of some mighty good stock of this breed. An unusually strong attraction in this sale is the tried sow, Lady Surprise by Crow's Big Surprise, one of the best and most prolific sows in the herd and a sow that will weigh 600 pounds by the day of the sale. She was bred to Goliath and is now safe to service of November 13th. This is very good breeding to own and a tried sow that has shown that she is a good breeder ought to farrow a great litter from that mating. No. 3 in the catalog is Lady Tecumseh, out of the sow that has done so well in this herd, Fannie Blackbird. Lady Tecumseh is the mother of mighty good boars, among them being Gummert's Minnesota Goliath, and she is as good as anything that will be sold this year of this sort. She was bred to the Defender boar and that mating surely looks good. A big sow by A Wonder 143421 and out of a dam by the old A Wonder 107353, which will weigh around 700 pounds, is one of the good things in the sale. An extrt large yearling by Colosso and out of Mollie Fair 6th, bred to Goliath, will be one of the good things for breeders in this sale. There are a lot of tried sows and yearlings in this sale that are of the same class as this and it will pay you to send for the catalog to see just what an extra good offering this really is. The gilts have grown to a good size, going as high as 340 pounds on December 24th. The heaviest gilt is out of a daughter of Hadley Expansion and is sired by Farver's Goliath. The old boar has put the size on her and the gilt is bred to E.'s Defender. The entire lot of gilts have done well and are in extra fine shape to go ahead in their breeding service. It should be remembered that this herd is immune from disease. For the catalog address E. E. Farver, Ocheyedan, Iowa, and please mention The Homestead when you write See advertisement on page 41 of this issue.

Choice Hereford Bulls are Offered.

With this issue of The Homestead G. G. Clement, Ord, Neb., is starting an advertisement offering Hereford bulls. Mr. Clement is a Hereford breeder well known to Homestead breeders, as his advertisements have appeared in this paper for years, but for the benefit of new subscribers the writer would like to say that he is one of the peer breeders in the country today. He is a man who understands the fundamental principles of producing choice live stock and the country and the Hereford breed are today better, much better, than they would have been without the efforts of this energetic and progressive breeder and stockman. Possessing a rare knowledge of pedigree and individuals that compose these pedigrees, it has helped Mr. Clement to make selections that he could not have made without this knowledge. After all, that is what pedigrees are kept for, but many breeders say that they cannot remember blood lines, and probably they do not make the matter as close a study as they should, for it is only by knowing what is back of your herd bull for generations on both the side of his sire and dam that you can hope to have any idea as to how he will breed. On this point Mr. Clement can enlighten most breeders, and those who write to him for information concerning these bulls will be given an idea as to how they will cross with their herds, if they will state the blood lines of same. This matter is of less import to the ranchman, but the fact that they have come from generation after generatioon of excellent stock will make them more valuable for his work. Sons of the great Fast Freight, Beau Donald 128th and the champion, Sensation, are for sale. Ask about them. They are all bulls that have made reputations as sires are show bulls. See page 39.

Larson's Great Offering.

On January 30th O. S. Larson, Logan, Iowa, will make a great sale of Duroc Jersey brood sows and he will offer forty head of as good ones as he has ever driven into a sale ring and every one immune and cholera proof. Twenty-five of these will be bred to King The Col., the sire of the noted boar, Col. Gano, and this will be the greatest opportunity ever offered to buy sows bred to this noted boar. Here are a few of the choice sows he will offer: Col.'s Beauty, a wonderfully good daughter of the old grand champion boar, B. & C.'s Col., bred to King The Col. November 13th; Ella's Belle by Proud Col., bred to King The Col. November 21st; Nancy Golddust by Golddust Jim II., bred to Crimson Wonder Chief November 17th; Grand Lady by Grand Master Col., bred to King The Col. December 2d; Lady Logan 2d by Goddard's Col., bred to King The Col. November 17th; Lady Dace by King The Col., bred to Golden Model XI. December 12th; Miss Belle by King The Col., bred to old Liberty Chief January 6th; Lady Jewell by King The Col., bred to Select Chief December 11th. The above are all yearling and matured sows and are as good as he has ever sold. He is selling twelve splendid fall sows and two of these, Crimson Lady 4th and Crimson Lady 5th, are both full sisters to Col. Gano and they are bred to Select Chief for early litters. The balance are bred to old Liberty Chief, King The Col. and the Chief Select boar. He is selling some good sows by Golden Model XI. and Col. Willetta. Also nineteen choice gilts, one a full sister to Col. Gano and bred to Select Chief for an early litter; two by Chief Select, bred to King The Col., and two good Advancer gilts bred to the same boar. Another good Col. Gano gilt goes in bred to Liberty Chief and a good C. H.'s Special gilt is bred to King The Col. The Larson offering this year is one that is going to appeal to the best breeders in the land because he has the goods to offer and they are bred to some of the greatest boars now living. You will necessarily want to see his catalog, which will be sent on application. When writing for it kindly mention The Homestead and M. T. White will represent this paper at the sale. See page 51 for Mr. Larson's advertisement.

Osborn's Sow Sale.

On February 1st O. E. Osborn, Weston, Iowa, will make his annual Duroc Jersey brood sow sale, and he will dispose of forty head of the best he has now on the place. Mr. Osborn is one of the oldest breeders today in the state and in his time has bred them as good as anybody. One thing Mr. Osborn can point to, and that is that the Durocs he has sent out from his herd have always done well for those who bought them invariably made money on them and many of our leading show winners have come from his herd. He is selling five matured sows in this sale and some of these are outstanding good brood sows. One of the best of these is that great sow, Chief's Last Pansy, one of the few remaining good daughters of old Ohio Chief. She is not only a very excellent sow herself, but she is a wonderfully good brood sow. Her dam was a first-prize sow at the Iowa and Nebraska State Fairs and she in turn was one of the greatest sows out that year. This sow is bred to the splendid boar, King Gano, the top boar last fall in the W. H. Seddon sale. He is selling two splendid Model Critic sows and these are bred to Osborn's Crimson Col. He is selling two good sows sired by Osborn's Prince of Cols. and eight choice fall sows by the same boar. He is selling twenty-seven choice gilts that are sired by Osborn's Chief Select, a boar that he sold at Des Moines for $600, and the rest will be sired by Osborn's Prince of Cols. He is selling some outstanding good February gilts in his sale that are sired by Osborn's Prince of Cols. and these are out of daughters of old Lafollette, Crimson Critic, Model Critic and other well-known sires. Many of these will be bred to Valley King Again, the top boar last fall in the Barker Bros. & Crowell sale. We can always recommend Mr. Osborn's Durocs because we know just what the outcome will be. He is selling a splendid lot of sows bred to very excellent herd boars and it will be a good place to buy. Write for a copy of his catalog and kindly mention The Homestead. Bids sent to M. T. White, Homestead representative, in care of Mr. Osborn, will be properly handled on day of sale. See advertisement on page 41.

90 HEAD HAMPSHIRE SWINE AT PUBLIC AUCTION

The Property of
R. L. BOLLMAN
and
MIKE SHARP & SONS

Sale to be held
at
COAL VALLEY,
ILLINOIS

TUESDAY, JANUARY 28, 1913

MOST of the noted prize winners at the leading stock shows of America were bred by us, many being exhibited by us. We have won more prizes the past three years at state fairs and the International than any herd in the land. We are not selling show hogs, but the ones that produce show animals. They are bred to our noted boars that have produced our champions, and we are also using Cherokee Lad 9029, a boar that was never defeated in class; also Dr. John 11063, 1st prize International 1912. Many animals will be offered that will make prize winners if fed out. We are selecting only the tops from our two herds and when you come to the sale you will see the best lot of HAMPSHIRES ever exposed for auction. The catalogs are ready for mailing. Cet on our list. Be sure and come. If you can't come send bids to H. E. Browning, representing The Homestead. Such bids will be used with entire confidence and to your interest. Col. Fred Reppert, auctioneer. For catalogs address either

MIKE SHARP & SONS, or R. L. BOLLMAN, COAL VALLEY, ILLINOIS

J. O. James' Sale Poland Chinas.

On Friday, February 7th, J. O. James, Braddyville, Iowa, will make his annual sale of brood sows and he is offering fifty head in this sale. That he is selling a good offering goes without saying, as he is selling twenty-two daughters of the celebrated boar, Big Orange, in the sale, and ten head of sows will be bred to him. He is selling three matured sows and the remainder will be spring and fall yearlings and some extra choice gilts. He is selling three splendid fall sows by Big Sensation and a number of sows in the sale will be bred to him. Quite a number of the sows will be bred to Ott's Big Orange, one of the best young boars used today in western Iowa. Ott's Big Orange is a fall yearling and he weighed 550 pounds at twelve months old, and he is a boar with all kinds of bone. The remainder of the sows will be bred to Gritter's Best, A Wonder Giant, A Wonder B and Big Orange's King. He is selling eighteen spring gilts and three fall sows by Big Orange, and mostly bred to Big Sensation. Many of the gilts will weigh 400 pounds or better by sale day. Nos. 1 and 2 weigh 360 and 370 at this writing. These two gilts are Anna Orange and Anna Big Orange. These are litter sisters to the Elijah Story and Thos. Walker boars that sold in his fall sales at $225 and $200. They are also full sisters in blood to the Gutchall boar, Jumbo Orange, and Ott's Big Orange. No. 1 is much the same type as the Story boar, and No. 2 is a trifle larger. The former, however, has more quality, while the latter has more size. They are both bred to Big Sensation for early March litters. Nos. 3 and 4 are Model of Oranges and Marie Orange, out of Model of 1907. They are a pair of good ones and are bred to Big Sensation. Nos. 6 and 7 are Exey Orange and Exey Orange 2d, out of Exey by Pawnee Giant. No. 8 is Queen Orange, another good one out of Pawnee Queen and bred to Big Sensation. No. 13 is a splendid big gilt by Big Orange and out of Hadley Giantess. No. 16 is Orange Maid out of King Giantess by old Long King and she is bred to Big Sensation. There are a number of other good Big Orange gilts in the sale and there is not a poor one in his offering. There will also be daughters of Pawnee Nelson and Long King's Equal in his sale, and these are very good. Among the good sows he will sell is Giantess M., an 800-pound sow, a litter sister to Long King's Equal, and she cost Mr. James $245, so you know she is a good one. She is bred to Big Orange for a March 1st litter. Other sows bred to Big Orange are Black Giantess 2d by Pawnee Lad, Nelson Price by Big Price; Model Ex by Big Ex, out of Model of 1907. Exey, Anna S., Anna S. 3d and Black Anna S. Rose Sensation and Rose Sensation 2d are two splendid fall sows that are large and smooth and are bred to Big Orange. Altogether he is selling a splendid lot of sows bred to some of the best-known big-type boars in the West. His catalog is now ready and can be had for the asking. When writing for it kindly mention The Homestead. M. T. White will represent this paper at the sale and any bids sent in his care will be attended to. See advertisement on page 50.

Long's Poland China Sale.

One of the earlir Poland China sales that will be held this winter will be that of James G. Long, at Harlan, Ia., on January 24th, and he is going to sell sixty head in this sale and he will sell some good ones. As a special attraction he will sell four daughters of old A Wonder, and two of these are full sisters to his great herd boar, B Wonder, who in turn is regarded as one of the greatest sons of Fesenmeyer's old boar, A Wonder. He is also cataloging thirty daughters of B Wonder in the sale and the most of these are bred to his other 1,000-pound boar, Mastodon Leader. Mr. Long has drawn upon the very best sows he has had in his herd for this sale and he is going to trot out some good things that the breeders and the farmers of western Iowa and the entire West will want. We just want to say this about daughters of B Wonder: They have invariably gone out into other herds and have made good. Mr. Long has time and again had tempting offers for this boar, B Wonder, but would never part with him. Some of the best breeders in the West have been wanting him, and if he is good enough for the "big fellows," why are his daughters not good enough to buy and put into your herd? The two sisters of B Wonder that he is selling in the sale are two of the best daughters of old A Wonder that will be offered this winter. The gilts that he will sell are daughters of Mastodon Leader and Proud Model. Some of these are bred to Mastodon Leader and Black Surprise, the latter boar being a son of old Gold Medal. It will be a splendid place to buy brood sows and the sale will be held in the Harlan sale pavilion and will be heated and comfortable for all those who attend. Mr. Long's catalog is ready and can be had for the asking. When writing for it kindly mention The Homestead. Bids sent to M. T. White, Homestead representative, in care of Mr. Long, will be properly attended to on day of sale. See advertisement on page 50.

AN IOWA STATE FAIR CHAMPION.

The subject of this illustration is the Duroc Jersey hog, Freed's Col., that won grand championship at the Iowa State Fair in 1910 against what was probably as strong competition as has been found on the Iowa State Fair grounds. Better than his winning quality, however, has been his excellence as a breeder. In Mr. Freed's herd there are spring gilts, fall yearlings and tried sows, daughters of this hog that will compare well with those to be found in any other herd. A fair proportion of them will be sold at the sale announced to take place January 20th. There will also be a splendid collection of brood sows of other and popular lines of breeding, which have been bred to this hog. Taken all together, the consignment is one which we are glad to recommend to our readers. It contains quality from start to finish, blood lines of the most prominent character and thrift and health that are a guarantee of future usefulness. Mail or telegraph bids may be addressed to C. C. Carlin, of this paper, who will be in attendance. Catalogs may yet be obtained by writing to S. P. Freed, Ames, Iowa.

Recent Sales at Pioneer Stud Farm.

John G. Truman, manager of the Pioneer Stud Farm, Bushnell, Ill., writes: "Last week we had the pleasure of selling to William Sampson, Will county, Illinois, the Shire stallion, Lilleshall Forester. He is a gray, four years old, one of the wide-as-a-wagon kind, standing on the very best of feet and joints, tremendous knees and hocks and good pasterns. It will be remembered by your readers that this horse was purchased by us at the Peterboro (England) Shire horse sale for 340 guineas. He is perhaps the only son of the noted Lockinge Forest King that has been imported to this country. Mr. Sampson has been breeding Shire horses for many years and was at the International on the lookout for a horse good enough to stand at the head of his stud and decided that Lilleshall Forester was the only horse at the show that pleased him. He is an Englishman and knows what a good horse is. Arthur Bass, Boxbutte county, Nebraska, has also purchased an outstanding imported Shire horse in Bury Skipper, five years old, weighing considerably over a ton, with extraordinary style and action and his conformation certainly entitles him to rank among the very best draft horses in his state. Our new 1913 catalog is now ready for distribution and will be forwarded to any of your readers who are interested in draft horses." See advertisement on page 55.

Last Call Eakle's Duroc Jersey Sale.

On Tuesday, January 21st, S. E. Eakle, Prophetstown, Ill., will sell forty-five very select sows and gilts bred to his great herd boars, S. E.'s Defender, S. E.'s Premier Col. and Captain Model. The offering is a finely bred lot. Two sows are by the great Model Chief and one by Proud Advance and others. Two sows are bred to S. E.'s Defender and two sired by him will be offered and several half-sisters. Many are sired by S. E.'s Premier Col. and bred to Captain Model. Others are offered by S. E.'s Top Col. Many are by the good sire, Manley. One good sow is by Defender. Mr. Eakle will sell eight gilts by S. E.'s Crimson Wonder. They are a nice lot. He has used his usual good judgment in fitting and handling this offering. The sale will be held in Prophetstown in good, warm, comfortable quarters. Free entertainment. Everybody is invited. If you cannot attend the sale send bids to H. E. Browning, Homestead representative. For catalog and further information write S. E. Eakle, Prophetstown, Ill.

HANDLEY'S BIG-TYPE DUROC JERSEY SOW SALE

CARROLL, IOWA, WEDNESDAY, JANUARY 29, 1913.

40 Head--5 Matured Sows, 10 Fall Yearlings and 25 Gilts.

Five of the best matured sows in my herd will be bred to Frankfort K.

Fifteen Spring Gilts in the sale sired by Frankfort K.

The 1,000-pound champion boar at Sioux City.

The Largest Herd of Strictly Big-Type Durocs in the West.

Daughters of Col. Gano, Frankfort K, Crimson Chief Again, Golden Model 17th, Regulus, Tientsin, Model Advance, Ashgrove Col., Chief I Am and others.

If you are a believer in maintaining the strictly **big-type** Duroc, then come to my sale. I will show you some of the largest Duroc sows that will be sold in the state this winter. **I buy the big ones, I breed the big ones and I raise the big ones.** I am selling 10 fall sows by Frankfort K, and a lot of spring gilts that cannot be beaten for size and quality. Write tor my catalog at once and mention Iowa Homestead. Address

COL. N. G. KRASCHEL, Auct. M. T. White field man for The Homestead. **E. E. HANDLEY, Carroll, Iowa.**

Frank Roberts' Sow Sale.

On Friday, January 31st, Frank Roberts, Earlham, Iowa, will make his first annual public sale of forty head of well-bred, big-type Poland China brood sows, and he is selling a good offering. Mr. Roberts has two splendid boars at the head of his herd, and these sows will all be bred to them. One of these is Pawnee Wonder, a son of Fesenmeyer's old A Wonder, and his dam is Giantess Adair by Big Price, and he is by old Pawnee Lad. His second dam is Giantess Again by Rood's Tecumseh. This boar is a combination of A Wonder, Giantess, Pawnee Lad and Tecumseh breeding, and he is not only a splendid boar himself, but he is also a good breeding hog. Few boars of his age carry more bone than does this boar, Pawnee Wonder, and his get seem to be gifted with the same good qualities. Several of the best sows will be bred to him, and most of the gilts will be sired by him. His other boar is Giant Jumbo, a son of Big Jones 3d, and he is out of Wigstone Bros.' famous show sow, Hunt's Giantess. Here is another good boar and all of the Pawnee Wonder gilts are bred to him. Mr. Roberts is selling six of his very best sows with litters and the pigs are mostly sired by Pawnee Wonder. No. 1 of catalog is Quality Adair, a daughter of Will Shrader's celebrated breeding boar, Choice Look. This sow is out of a daughter of Big King and he is a son of old Pawnee Lad. She is a 700-pound sow and is bred to Pawnee Wonder. No. 2 is Giant Look, a daughter of Mart Sheehan's well-known boar, King Giant, and she is out of a Choice Look dam. She is a good sow and will have a litter by sale time to Pawnee Wonder. No. 3 is Long Mollie, a daughter of Expansion Jumbo, and her dam is a daughter of Expansion King Jr. This is one of the very best sows he is selling in the sale. This sow has a little swirl on her rump, but she is such a good sow that breeders cannot afford to pass her up. Three other good sows are Rosebud and Miss Cora and Smooth Lady and these are both daughters of Expansion Jumbo and these will have litters by Pawnee Wonder. The gilts will be sired by Pawnee Wonder, Victor Hadley and King Wonder, and he has some well-bred ones in his offering. He will also sell a splendid team of Shire-bred mares that is about the best team in his section of the state. Both of these are bred and safe in foal and anybody who is looking for a spanking good team of Shire-bred mares will like this team. Another feature of his sale is the twenty choice steers that he is selling. These are three year olds and will weigh from 1,300 to 1,400 pounds. Some man who wants a good bunch of steers will find these are all right. Mr. Roberts's catalog is ready for distribution and will be sent free for the asking. When writing for it kindly mention The Homestead. See page 49.

Nash's Poland China Sale.

One of the important sales of Poland Chinas to be made this season is the one to be made by J. T. R. Nash, Minden, Neb., on February 8th. The writer recently saw the gilts to be sold in this sale and we wish to say that we consider them the best we ever saw on the Nash farm. They are principally the get of the noted Gold Medal, one of the great sons of the noted Gold Metal. The writer said last fall that we thought he would prove one of the greatest sow sires of the country. The bunch that are his get and that will go in this sale will about prove that assertion to be a fact. Most of these big, roomy gilts are bred to Long Jumbo, the boar that topped O. E. Wade's sale last fall. Long Jumbo is a big-boned, smooth boar with extra length and the making of an extra large boar. This will be the place to buy a gilt to raise your next year's herd boar. Keep the sale in mind and if you have not been receiving the Nash catalogs send in your name at once that it may be put on the list. When writing kindly mention The Homestead.

Seddon's Great Sale.

On January 31st, W. H. Seddon, Persia, Iowa, will make his annual Duroc Jersey brood sow sale, and he is one of the breeders that never fails to put up a great offering. Mr. Seddon is the man who brought out Col. Gano, a boar that is regarded as one of the greatest Duroc Jersey boars now living. He is selling two good tried sows by Col. Gano in this sale, and also seven spring gilts by him. He will also sell from twelve to fifteen sows bred to Col. Gano, and these should certainly be attractions enough to breeders of Duroc Jerseys. He will sell daughters of Chief's Protection, C. H. Special, Golden Model 11th, Freed's Col., Clovercroft Chief, C. & E.'s Prince of Cols., Chief Select, A. F.'s Pilot Wonder, seven choice gilts by Col. Gano and six by King The Col. One of the best Chief Select gilts that he will sell goes in bred to Col. Gano. As a special attraction he is going to catalog that great sow, O. R. She is a line-bred Ohio Chief sow and she cost him $280. She will be bred to Col. Gano. A great many of the sows that he is selling will be bred to Model Select, a son of Chief Select, and he is one of the best sons of that noted boar now doing service in the West. The six gilts by King The Col. are good and should be sought after by our very best breeders. As you know, this boar, King The Col., is the sire of Col. Gano, and the gilts in question are out of a Golden Model 11th dam. Those of our readers who want sows with plenty of size will be particularly interested in the Seddon sale and those who want sows bred to Col. Gano will find here is a good place to buy them. His catalog is now ready and can be had for the asking. When writing for it kindly mention The Homestead. Bids sent to M. T. White, Homestead representative, in care of Mr. Seddon, will receive proper attention on day of sale. See page 51.

Barrett Offers Choice Herd Boars.

The well-known breeder of Poland Chinas, F. R. Barrett, Cadams, Neb., is offering the readers of this paper one of the best opportunities to secure some first-class herd boars at low prices that has been presented this entire season. He is offering a number of fall boars of early farrow and sired by his choice herd boars that should certainly meet with approval. Mr. Barrett is a man who has been raised in the business of breeding Poland China hogs. The herd that he now owns has been maintained on the same farm for a number of years and the fact that Mr. Barrett says that some of these boars that he is now offering are as good as he has bred in twenty years is conclusive evidence that they must be right. The boars that have been used in the herd in recent years are Bell Boy, a son of Nebraska Jumbo and out of Bakewell's Peach by Expansion, and generally conceded to be one of the best, if not the very best, sow Expansion ever sired. The next boar is Jumbo Tom by the great Wade's Jumbo and out of the great breeding sow, Long Wilkes by Imperial Wilkes. This boar was used for some time and sold for a long price and then a full brother, but younger, has been placed at the head of the herd. The boars for sale now are of this line of breeding and, as stated above, can be bought well worth the money. If you need a show boar or a breeding boar Mr. Barrett can certainly fill your order. Barred Rock cockerels can also be had from this farm and they, too, are from good foundation stock that has been kept up by frequent additions from the best yards of the entire country. They are priced at from $1.25 to $2.50 each. Our readers need not hesitate to order at once, for a breeder who has been in business as long as he has is a safe one to do business with. See page 48.

O. E. OSBORN'S SALE

DUROC JERSEY BROOD SOWS

WESTON, IOWA, FEBRUARY 1, 1913

POLAND CHINA SWINE.

COOPER'S GREAT BRED SOW SALE, HEDRICK, IOWA, FEBRUARY 4TH

AS USUAL, this offering is selected from our herd with the greatest consideration, to present to our visiting friends greater attractions than any preceding effort and we assure all comers one of the very greatest and best offerings of real big bred sows and gilts to go this season in the corn belt. We will include 25 head of 2-year-old and yearling tried sows, several fall yearling gilts and big, stretchy spring gilts weighing over 400 lbs. sale day. These sows are sired by such boars as Big Bone 2d, our present 860-lb. 2-year-old boar, Big Ex, Giant Look, Superior Look, Big Chief 2d, Chief Ideal, Chief I. X. L. 2d and other noted boars the catalog will give. They will be bred to Big Bone 2d, Big Expansion, a son of Dorr's Expansion, Chief Leader and Giant Chief. Send for our catalog. It will be interesting to you, in the big-type blood lines. Arrange to come and see one of the corn belt's best big-type herds of Poland Chinas and one of the most complete swine breeding plants. Mention The Homestead. Address

W. H. COOPER - - - HEDRICK, IOWA

The Bloomington Horse Sale.

Over 300 head of registered draft horses will be sold at the big breeders' sale at Bloomington, Ill., Tuesday, Wednesday, Thursday and Friday, January 28th to 31st, inclusive. The sale will be held in the big coliseum, so that everybody will be comfortable, no matter what the condition of the weather. Percherons, Shires, Belgians and Clydesdales are all included in this offering, and the following are some of the contributors: Ben Bohlander & Son, ten imported Percherons, stallions and mares; James Loonan & Son, eleven head of imported and home-bred Percherons; D. Augustin & Sons, Percherons; Wm. Richardson, Percherons; W. C. Baughman, eight Percherons; John Witt, Percherons and Belgians; D. S. Forrest & Son, eight Percherons; W. H. Ritter, imported Percheron and Belgians; A. V. Hodgson, Percherons; J. H. Weaver, Percherons; Woulf Bros., ten imported Percherons and Belgians; Turnipseed & Stewart, Percheron stallions and mares; Lonzo McClain & Sons, ten imported Percherons; Leigh Bros., Percherons; Ed Miller, Percherons; W. W. Down, imported Percherons and Belgians; J. R. Prendergast, Percherons; Junkin & O'Neill, eight imported Shire mares with size and bone; Rowe Bros., Shires and Percherons; L. F. Boyle, Shires and Percherons; J. W. Otto, Shires; Chas. Miller, Shires; Ray Dern, Shires; F. W. & H. C. Challand, Shires; A. L. Bryan, Jr., Shires; S. L. Good, Shires. In addition to the draft horses there will be sold sixty head of Shetland and Welch ponies, contributed by Earl M. Dixon, O. M. Dooley, Warrick Jones, A. W. Otis, I. J. Yoder and others. The last day, Friday, January 31st, in addition to the ponies, there will be sold fifty trotting-bred and carriage and coach horses, as well as a few good saddlers. Regarding this sale Manager Hurt writes: "We have not got as large a number of horses as we sometimes get for the breeders' sale, but we are short on stabling. As a consequence we were compelled to cut down our entries, enabling us to pick the best horses of all breeds, and as a result we believe that we are going into the sale ring this time with the very best bunch that we ever sold. The catalog, which is now ready for distribution, proves this fact. We want everybody interested in good draft horses to attend this sale." The advertisement appears on page 53. Lock it up and send for a copy of the catalog to C. W. Hurt, manager, Arrowsmith, Ill. When you write kindly mention The Homestead.

Rude & Son's Last Call.

On January 22d, Rude & Son, Moorehead, Iowa, will make a public sale of forty-five head of well-bred and well-conditioned Duroc Jersey brood sows and it will be one of the good offerings that will be sold in western Iowa this winter. Every sow they have cataloged for this sale has been selected with the view to the good she will do for the man who buys her. Not a poor sow has been cataloged, and as for breeding they are just as good as you will find in the books. Daughters of such well-known boars as Grand Master Col., Lafollette, Col. Willetta, Proud Col., Iowa Col., Model Chief's Last and Golden Wonder will be sold in this sale, and in many instances these are about as good as these boars have ever sired. Many of these will be bred to High Chief, the first-prize junior yearling boar at the Iowa State Fair in 1912, while fiftteen of them will be bred to the 900-pound boar, Iowa Col., that is one of the smoothest big boars today in the state. A few of the sows will also be bred to a son of Crimson Wonder Again. There will be twenty sows in the sale bred to High Chief. It is a high-class offering from beginning to end and we urge those of our readers who want some well-bred sows and some good individuals to make it a point to attend this sale. Their catalog is now off the press and will be mailed upon application. Kindly mention The Homestead when writing for it. Bids sent to M. T. White, Homestead representative, in care of Rude & Son, will be properly handled on day of sale.

Platte County, Missouri, Jack Sale.

The Platte County, Missouri, Jack Sales Company, under the management of J. B. Dillingham, Platte City, Mo., will sell fifty head of Mammoth-bred jacks on Tuesday, February 4th, on the fair grounds, Platte City, Mo. The breeders interested are listing some of their best stock in jacks that stand from fourteen and one-half to sixteen hands high. They range from yearlings to matured jacks which will enable purchasers to get jacks of any age they desire. Jacks that have made show records, others that have sired American Royal and state fair winners are listed. Platte county jack breeders have been particularly successful in producing a class of jacks that sire prize-winning mules and there will be listed in this sale jacks that have sired prize-winning mules at the American Royal and the leading mule shows of northwest Missouri. Twenty jennets ranging from yearlings up and including jennets with jack colts at foot will be sold. Each animal sells under the owner's statement and guarantee. Mr. Dillingham, who has full charge of the sale, requests all who can to come the day before the sale, as all the stock will be in the stalls and numbered so that buyers can inspect them. For catalogs address J. B. Dillingham, Mgr., Platte City, Mo., and kindly mention The Homestead when doing so. See advertisement on page 47.

FOR SALE--BIG-TYPE, PROLIFIC, BRED GILTS

AT from $35 to $40, and aged sows at $50 to $60, and a few choice September 3d fall pigs at $20. All healthy and the kind that sell at sight. Will sell two herd boars after January 1st. Address

J. B. HEISEL, - Grinnell, Iowa.

Shade's Closing-Out Sale.

Duroc Jersey breeders will be interested in the closing-out sale of J. A. Shade & Co., at Kingsley, Iowa, on January 21st, because of the high-class lot of sows and boars that they will sell at that time. Missouri Model Top, the champion and grand champion boar at the American Royal in 1911, will be included, as well as about twenty of his get. This boar was also the sire of the first-prize boar, first-prize sow, first-prize litter at that same show, and one of these sows will also go into this sale. This boar is as active as ever and has been doing splendid work in this herd. He is two years old and will be three in the spring. He is a son of Model Top, the boar that went to Bardwell & Barnard, of Kentucky, at $600, and he is out of a dam by Prince of Cols. Were it not for the fact that

they are closing out this boar would not be sold at any price. Their younger boar is King Superba, a son of old Superba, that Harry Browning sold a half interest in for $1,500. Here is a good young hog and will make a good herd boar when matured. Nearly all of the sows in the sale will be bred to these two boars. All of their celebrated brood sows will be sold, among which will be twenty head by Missouri Model Top, others by Ohio Chief, Prince of Cols., Premier Col., Carl's Col., American Royal, Iowa Notcher, Defiance and two by Searchlight. One of these was first in class, junior and reserve and grand champion at the American Royal in 1912, and the other is just as good. If you are going to want some good Duroc Jersey brood sows, or a splendid herd boar, here is your chance. It is one of the really great offerings of the winter season. Write J. A. Shade & Co., Kingsley, Iowa, for a copy of their catalog and kindly mention The Homestead. Bids sent to our M. T. White, Homestead representative, in care of the above firm, will be cared for on day of sale.

Chas. Herring's Last Call.

One of the important big-type Poland China brood sow sales to be held this month will be that of Chas. Herring, at Columbus, Neb., on January 23d. Mr. Herring owns that noted boar, Smooth Price, the sire of Fesenmeyer's Big Joe and Pfander's Big Ben, as well as many other splendid herd boars, and this in connection with the splendid lot of sows that he will offer should make his sale one of the very attractive ones of the season. He will sell thirty head of Smooth Price sows in the sale and ten of his best sows will be bred to him. Two splendid daughters of Gallman's noted boar, Big Bone, will be sold bred to Smooth Price, and one of these will weigh 900 pounds. A couple of full sisters to Big Joe will go in and one of these is very choice. A daughter of old A Wonder, three daughters of Orange Chief and six daughters of Long Wonder will also be attractions in the Herring sale. A few gilts by Long Wonder and Smooth Price are outstanding good ones. From the standpoint of "big type bred in the blood of the most noted large-type sires of recent times" the Herring offering is full of good things, and it will be a good place to buy some good sows. Catalog can be had for the asking by mentioning The Homestead when writing for it. Our M. T. White will represent The Homestead at the sale and will care for any bids sent in his care.

50 HEAD POLAND CHINA SOWS FOR SALE 50

WE WILL not make a public sale and we are offering 50 of the best big-type sows ever listed at private treaty. Among these are prize-winning sows, yearlings, spring gilts and matured sows. These are bred to our 1,024-pound boar, Chief Price Again 2d, and W.'s Wonder. Bred for January, February, March and April farrow. Write us at once.

WIGSTONE BROS. - - - STANTON, IOWA

CLOSING OUT POLAND CHINA SOWS

I AM offering all my noted big-type brood sows for sale at private treaty. Forty head, daughters of Chief Price 2d, Monarch Chief and other noted boars. I am offering twenty head of brood sows that cannot be equaled in any one herd in the state. I am leaving the farm and they must be sold. Write or come and see me. Address

E. F. ESCHER - - - MANNING, IOWA

40 CHOICE POLAND CHINA FALL PIGS BY GOLD MEDAL 40

I HAVE selected 40 of the very best of a big crop of fall pigs, all sired by the great breeding boar, Gold Medal, one of the very best breeding boars in Nebraska today. Many have pronounced the bunch of spring gilts by him that I will sell in my February 8th sale to be the best bunch of young sows in the West. That is the sort of stuff he sires, and as I am keeping a big number of sows for spring farrow, will sell these fall pigs while they last, singly or in pairs, $12.50 to $15 each. Order at once and mention The Homestead when you write. Address

J. T. R. NASH, MINDEN, NEBRASKA

BIG WONDER, 2d Prize Iowa State Fair Boar

WEIGHS 1000 pounds and the greatest hog today of the breed. Sow sale March 1, 1913. Drop me a card for catalog. Address, mentioning The Homestead,

FRED SIEVERS, - - - - AUDUBON, IOWA.

BIG-TYPE POLAND BRED GILTS

THESE gilts are sired by Longfellow 2d 183143, and Giant Wonder 183147, and are bred to Giant Wonder, L.'s Wonder by Gritters' A Wonder Again and Orange Jumbo by Mouw's Tecumseh Jumbo. Gilts are out of sows by Longfellow, Long Wonder, Miller's Chief Price, Big Orange and Beauty's Jumbo. Write for price, mentioning The Homestead.

THOS. LIEN, ELGIN, IOWA.

IMMUNED POLAND BOARS AND GILTS

THESE are the real Nebraska big-type Poland Chinas. They are from big litters and are now in fine breeding condition, having been immuned in early summer. I am pricing them very low as I need the room for my fall pigs. Order at once mentioning The Homestead.

G. A. WIEBE, - - - - BEATRICE, NEBRASKA.

BAIRD'S POLAND CHINA BRED SOW SALE

ON Saturday, January 25th, I will sell a draft of 45 of my big-type Poland China sows, bred for spring litters. 30 head bred to the thousand-pound champion, Columbus. Send in your name for catalog. Entirely sold out of those fall pigs by Columbus.

R. B. BAIRD, Central City, Nebraska.

A. J. Duerr's Annual Sale

DUROCS

To be Held at Golden Glow Stock Farm, Near

MILFORD, NEB., TUESDAY, JAN. 28, '13

30 HEAD of bred sows will be listed for this offering. They include daughters of Educator, Red Wonder, Red Perfection 2d, Harney's Educator and a few other sires of note. Nearly the entire offering is bred to the great **CRIMSON COL.** and the remainder are bred to **CRITIC KING** by the 1912 champion, Critic B.

In order to get the number to make this auction I am compelled to list a number of the very best sows that I own. They are producers of good stuff, having been retained from last spring for that reason. Being bred to the great show and breeding boar, Crimson Col., I have every confidence in their worth. Your presence will be appreciated. Try and be with us sale day. This sale follows the sale of David Boesiger, Cortland, Neb., and the train service between points is extra good. Colonels Thompson, Page and Wickham, auctioneers. J. C. Price, field man. Address for catalog

A. J. DUERR, **MILFORD, NEBRASKA**

GIANT KING SALE OF BIG-TYPE POLAND CHINA BRED SOWS

TO BE HELD

MONROE, IOWA, TUESDAY, JAN. 28, '13

50 HEAD will be sold, consisting of forty-eight bred sows and two fall boars. There will be sixteen fall yearling sows sired by **Giant King,** the noted son of Big Ex that had so many admirers at the Iowa State Fair in 1912. Two yearlings and two two year olds by the noted Long King are listed. There will be two-year-old sows by Big Ex, Iowa Lad, Pawnee Chief, Jumbo and others. Twenty-two spring gilts by Giant King make up the balance of the sow offering. The two fall boars by Giant King are corking good ones and should go into good hands. Ten of the sows will be bred to Giant King and the balance are bred to Monroe's Jumbo, a son of Peter Mouw's Big Jumbo and out of a sow by John Gallman's noted Big Bone. Bids sent to Carlos C. Palmer or C. C. Carlin in my care will be carefully handled. Write me for catalog. Mention The Homestead.

G. F. MARSHALL & SON, **MONROE, IOWA**

W. B. Duncan, auctioneer.

CLOSING-OUT SALE OF PERCHERONS

of W. R. WILSON, Deceased, at

ARISPE, IOWA, WEDNESDAY, JANUARY 22, 1913

THEY consist of twenty-one registered Percherons, eighteen mares and fillies, including four imported ten mares, five and six years old, balance home-bred mares and fillies. The mares are all safe in foal to the herd horse, weighing 2,300 pounds. This herd horse is five years old and considered one of the best individuals in this state and a sure breeder; he and two of his stallion colts will be sold and they are top good ones. Col. R. W. Stream, auctioneer. The farm will be sold privately. Address

MRS. ALLIE COX, Administratrix, **ARISPE, IOWA**

JAMES WILLIAMS, MARCUS, IOWA

DUROC JERSEY BRED SOWS

WEDNESDAY, JAN. 22, 1913

42 HEAD of tried sows, fall and spring gilts of the choicest blood lines, and including some great types as well. Some of the best brood sows I have ever owned will be cataloged in this sale. Here are a few: Golden Queen 8th by Golden Model II., bred to Model Chief VII.; her daughter, Golden Queen 9th, by Ohio Blossom Col.; Miss Notcher Tolstoi by the famous Iowa Notcher, out of Lady Tolstoi 3d; Model Beauty 1st and 2d by Model Chief VII., dam Beauty Sensation, and a lot of other similarly bred sows. The gilts are by Model Chief VII. which gives them nice bone and stretch, and it will be found that they have a lot of quality besides. The herd boars are Model Chief VII., Col. Scott Jr. and Golden Col., all being bred in the purple. Get in your order for some of this better stock early and you will be sure of some real bargains. Ray L. Gribben will attend the sale for The Homestead in your interest. Address

Col. F. F. Luther, Auctioneer.

JAMES WILLIAMS - - - MARCUS, IOWA

RUDE & SON'S DUROC JERSEY BRED SOW SALE

MOOREHEAD, IOWA, JANUARY 22, 1913

45 HEAD: 14 MATURED SOWS, 7 FALL SOWS, 24 GILTS 45

THIS is the best offering we have ever sold and no better will be sold this winter. We have selected fourteen of our very best matured sows—daughters of **Lafollette, Col. Willetta, Grand Master Col., Proud Col.** and **Golden Wonder.** The seven fall sows are sired by **Iowa Col., Golden Wonder** and **Model Chief's Last.** We have also selected the best gilts we have in the herd for this sale. These will be bred to our two great herd boars, **HIGH CHIEF,** first prize Iowa State Fair boar, and **IOWA COL.,** the 900-pound son of Tippy Col., and a few are bred to a son of Crimson Wonder Again. Write for our catalog and mention Homestead.

RUDE & SON, **MOOREHEAD, IOWA**

Col. N. G. Kraschel, auctioneer. M. T. White, field man for Homestead.

FRANK ROBERTS' SALE

BIG-TYPE POLAND CHINAS

40 HEAD---10 Matured Sows, 30 Gilts---40 HEAD

EARLHAM, IOWA, FRIDAY, JANUARY, 31, 1913

I AM selling **six choice sows with litters at side.** Also some of the very best tried sows on the farm, viz.: Quality Adair by **Choice Look,** bred to my great boar, Pawnee Wonder; Long Molly, Miss Cora and Rosebud, all daughters of Expansion Jumbo; also daughters of **King Giant, Victor Hadley** and **Pawnee Wonder.** The Pawnee Wonder gilts are all bred to **Giant Jones,** a son of Big Jones 3d.

I will also sell **twenty head of fat steers** that will weigh from 1,300 to 1,400 pounds, also a pair of **Shire bred mares,** the best in this part of the state. Write for my catalog at once and mention The Homestead. Address

Col. H. S. Duncan, auctioneer. **FRANK ROBERTS, EARLHAM, IOWA**

KUPER BROS.' SECOND ANNUAL SALE

DUROC JERSEY BRED SOWS

BELLEVUE, IOWA, THURSDAY, JANUARY 30, 1913

30 HEAD will be sold, consisting of ten yearlings and two year olds and twenty spring gilts. The sows are sired by The Professor, Muncie Chief, Model Wonder, Protection Col. II. and Col. High Bred. Three gilts by Springfield Wonder, two by S. E.'s Premier Col., one by Proud Ohio Chief, one by Protection Col. and the balance are by Ames Col. (second-prize senior yearling boar at Iowa State Fair, 1912). The sows are bred to Ames Col. and Young Premier, a son of S. E.'s Premier Col., and out of a Golden Model 6th sow. Write us for catalog, mentioning The Homestead.

KUPER BROS., **BELLEVUE, IOWA**

Theo. Martin and G. Fruin, auctioneers.

B. C. MARTS' SALE OF DUROC JERSEY BRED SOWS

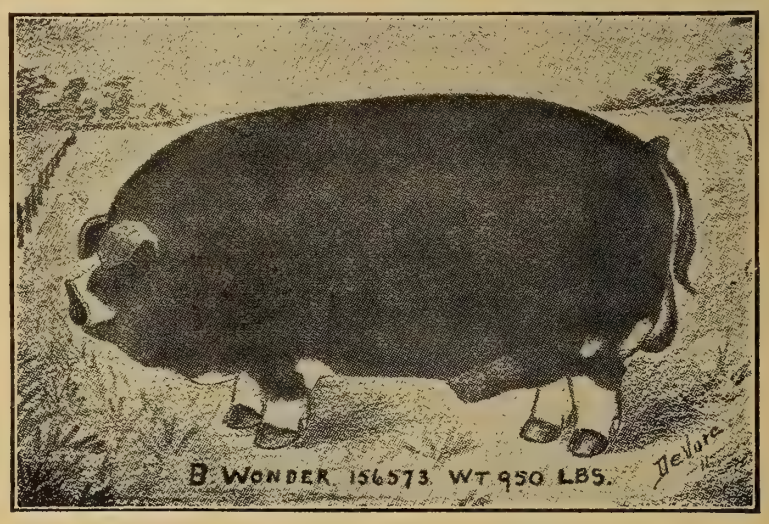
AT HAMPTON, IOWA, WEDNESDAY, JAN. 22

40 BRED sows. The offering consists of tried sows, fall yearlings and gilts bred to our great herd boars, **Chief's Model 104713** by Model Chief by Ohio Chief and out of City Queen by Advancer; WONDER AGAIN 118151 by Crimson Wonder I Am and, HAMPTON KING 102077 by Model Jr. by Model Chief Jr. by Model Chief and dam by American Royal Jr. From point of individuality and blood lines I feel confident in saying that a better lot of stuff will not be offered this season. Send for a catalog, mentioning The Homestead, and arrange to attend the sale. Sale will be held in feed barn in town. Auctioneers, Mossman Bros. Homestead field man, Carlos C. Palmer. Address **B. C. MARTS, Hampton, Ia.**

JAS. G. LONG'S GREAT SALE
B WONDER BRED SOWS

HARLAN, IOWA, JAN. 24, 1913

30 Daughters of B Wonder in Sale.
4 Daughters of Old A Wonder.
(Two litter sisters to B Wonder.)



THESE A Wonder and B Wonder sows are as good as have ever gone through an Iowa sale ring. There will be twenty-two choice gilts by my 900-pound boar, Mastodon Leader and Proud Model. These will be bred to Mastodon Leader and Black Surprise. Write for my catalog and mention Iowa Homestead. Address

JAS. G. LONG - - - HARLAN, IOWA.

Col. N. G. Kraschel, auctioneer.
M. T. White, field man for Homestead.

J. E. SMITH'S ANNUAL SALE
OF
DUROC JERSEY BRED SOWS

To be Held at His Farm 3 Miles Southeast of

VICTOR, IOWA,

SATURDAY, JANUARY 25, 1913

50 HEAD will be sold, consisting of 20 fall yearling sows, 5 tried brood sows and 25 of the top spring gilts I raised this year. The fall sows are a grand lot, being sired by Smith's Crimson Wonder, my great herd boar, he a son of the Nebraska champion, Crimson Wonder 3d, and Royal Col., the great son of King of Cols. that I used in my herd so successfully. The gilts are sired by Royal Col., Victor Col., a good son of the noted Premier Col.; Professor Model, a son of Model Wonder and out of a Professor dam, and the noted Iowa grand champion, Crimson Wonder I Am. The sows will be bred to my four great herd boars, Smith's Crimson Wonder, Victor Col., Crimson I Am by Crimson Wonder I Am and Golden Prince by Advancer 1st and out of Miss Hope, the dam of Golden Model 2d. It is my ambition to offer the public better sows each succeeding year and I feel that I have a much better offering this year than I have had at any time in the past. If you want to buy some good Duroc sows this sale will afford you an opportunity to do so at reasonable prices and I will do my part to accord you courteous treatment in our business transactions. Write me for catalog, mentioning The Homestead. Send bids to Carlos C. Palmer, in my care. Auctioneers, N. G. Kraschel and J. L. McIlrath.

J. E. SMITH - VICTOR, IOWA.

GOODENOUGH'S GREATEST ATTEMPT

IN AN OFFERING OF

HAMPSHIRE BRED SOWS

AT THE FARM NEAR

MORRISON, ILLINOIS,

MONDAY, JANUARY 27, '13

55 HEAD will be sold, consisting of 25 mature sows, 8 fall yearling sows and 22 spring gilts. The mature sows are sired by Teddy R. B., Bon Bon Beauty and Perfectum, a son of Bon Bon Beauty. The gilts are all sired by Shelby Lad and Perfectum. The sows will be bred to Dudie, first in the junior yearling class at the Iowa State Fair, 1912, and Shelby Lad, first in the junior yearling class at the Indiana State Fair, 1911. I will hold no sale in 1914 and for that reason I am cataloging a number of the very tops of my herd that otherwise I would not think of selling. This is the best lot of Hampshires I have ever sold at public auction and you will say so when you see them sale day. I raised them to sell and they are yours at your own price on January 27th. Write me for catalog, mentioning The Homestead, and arrange to be my guest sale day. Send bids to Carlos C. Palmer, Homestead field man, in my care, and they will be honorably treated. Fred Reppert, auctioneer. Address

SALE OF BATES-BRED SHORT-HORNS

MARSHALLTOWN, IOWA,

TUESDAY, JAN. 28TH

ABOUT 40 HEAD
11 ARE BULLS

THE only herd in the state exclusively of Bates breeding and of the most costly and fashionable blood, 21 head of the Duchess and 14 of the Oxford tribes, the two highest-priced Bates families. The herd bull, Earl of Barrington 266481, is included. He is a direct descendant of the noted cow, Imp. Lally 8th by 7th Duke of York (17754). There is only one other pure Bates Barrington bull living. He will be one of the bargains of the sale. A large number of females of breeding age will drop calves early in the spring and are bred from milking strains for which Bates cattle are noted. The sale will afford an excellent opportunity to lay a foundation for a milking herd of Short-horns of the most fashionable Bates breeding. Send for catalog.

O. M. HEALY . - - BEDFORD, IA.

COL. CAREY M. JONES, Auctioneer.

FORD STOCK FARM

YOUR CHOICE of Imported Percheron and Belgian stallions at $100.00 profit, absolute first cost revealed in plain figures, the best money can buy, positive guarantee with every purchase. Correspondence, inspection and personal acquaintance solicited. INVESTIGATE.

FORD & HARRINGTON, Parker, So. Dak.

German Coachers

SEVEN or eight head of the very best this breed can show, stallions, mares and colts. An ideal general-purpose breed and we offer this stock at reasonable prices. Write us about them. Address

HELD BROS., - Hinton, Iowa.

TWO YOUNG PERCHERONS

Remarkably good, big home-grown stallions, extra bone. Registered. One gray coming three; one black coming four. State certificates of soundness. South Central Iowa; good railroads. Anxious to sell.

FRED CHANDLER
R. 7, Chariton, Iowa.

The POWER OF PERCHERONS

BIG crops emphasize the necessity for first-class horse power. Quicker trips to the elevator, with heavier loads, means **real money,** and during the approaching winter mares might just as well be carrying profitable Percheron foals instead of inferior, light weight young. Write me for free bulletin C. It tells all.

Purchase Percherons

Wayne Dinsmore, Sec'y Percheron Society of America, Union Stock Yards, Chicago.

FOR SALE. Registered Percheron stallion coming 7 years old, weighed on New Year's day, 2,110 lbs., sound, sure breeder. Sold for no fault. Address

JOHN E. WALLACE, Weldon, Iowa,

PERCHERON, BELGIAN AND SHIRE STALLIONS and MARES

I CAN sell you **a better stallion than you can buy elsewhere in this state for $1,000.** I have a splendid lot of yearlings, also twos and threes and one six-year-old stallion. I am also offering some splendid Percheron mares for sale of all ages. Write or come and see me.

P. J. EGGERS - DENISON, IOWA.

SHIRES

SOME of the very best of the breed. Stallions and mares. Our prices attractive, our horses must please, also our terms.

ED. H. MAGOWAN & SONS, Gibbon, Neb.

AN EXTRA LOT OF YOUNG CLYDESDALE

STALLIONS that I will sell at right prices. Address **R. O. MILLER, Route 1, Lucas, Ia.**

HORSES.

Importers [of BELGIAN and PERCHERON STALLIONS and MARES.

We wish to announce to the buying public that we will now, as in the past, give you more good, sound, young horses for the money than you can get elsewhere. We do not advertise cheap stock because we do not think the best breeders want that kind, but we will sell you the good ones at as reasonable margin of profit as possible, and do a remunerative business. All horses are backed up by our GILT EDGE GUARANTEE. Write for full particulars. Large CALENDAR after December 15th.

PERCHERONS of this Type and BELGIANS and SHIRES ALSO

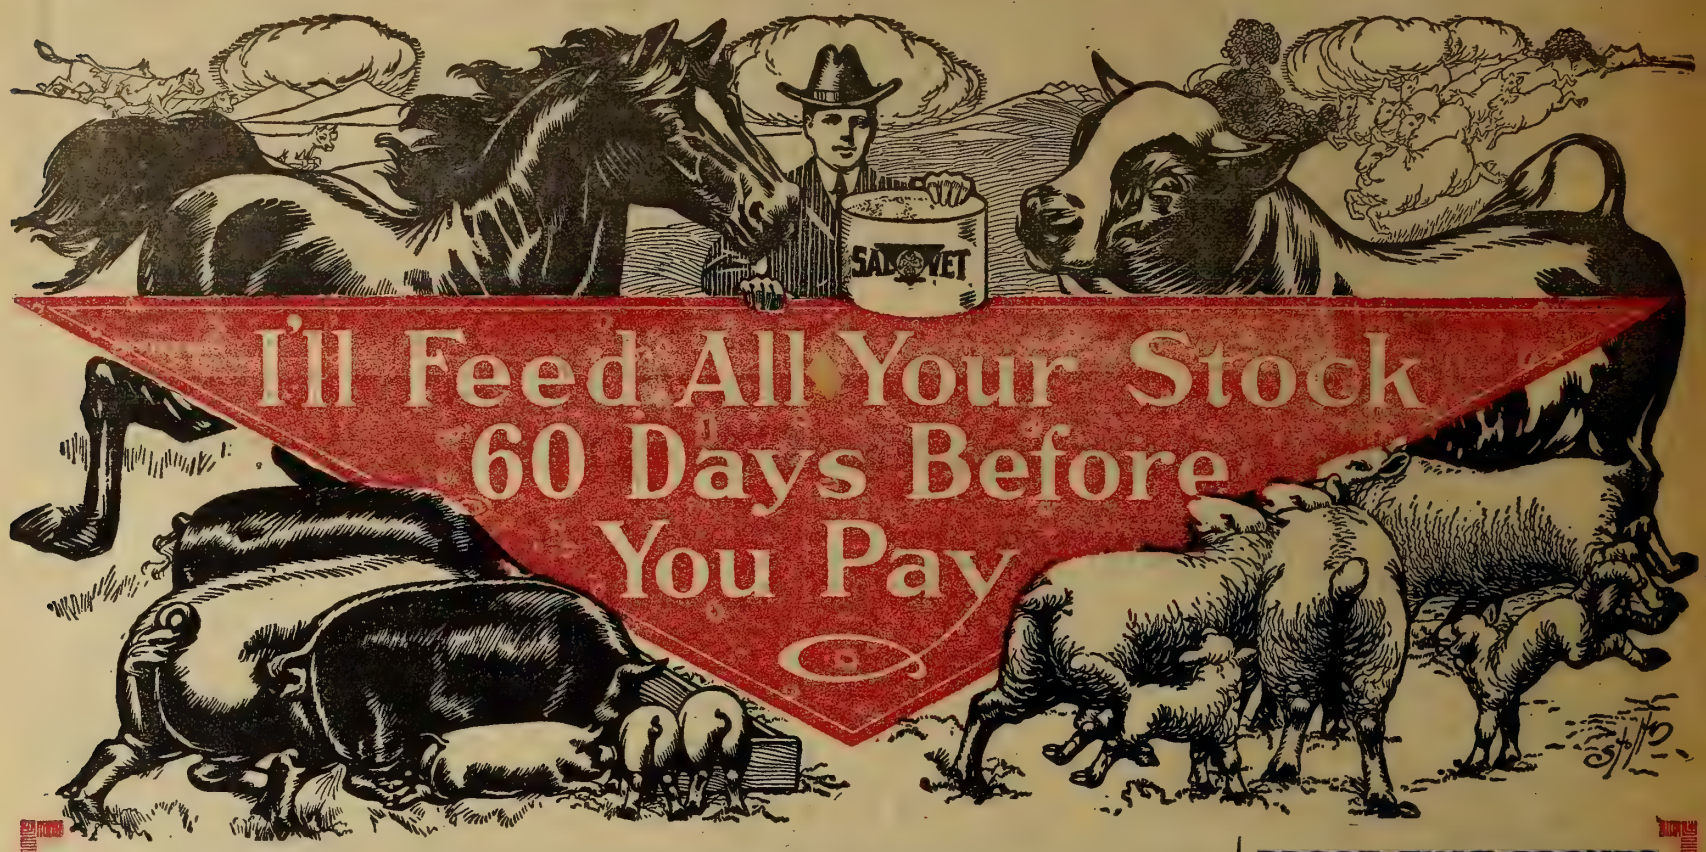
OF the very highest order are the only kind imported by Jos. Rousselle & Son. The Custom House records show that we import the most valuable horses that come to the West. Former buyers our best reference. We sell these horses at the prices ordinarily asked for inferior ones. Let us tell you of them. Address

JOS. ROUSSELLE & SON,

25 miles west of Lincoln. **SEWARD, NEBRASKA.**

I Have Shipped Hundreds of Tons of SAL-VET to Readers of Iowa Homestead

—S. R. Feil



I have done it for thousands of farmers and stockmen—I am doing it every day—I'll do it for you. All I ask is the privilege of sending you enough Sal-Vet to last all your stock 60 days. If it doesn't do what I claim I'll gladly cancel the charge.

The Great Worm Destroyer **SAL-VET** ***The Great Live Stock Conditioner***

I simply want to show you what a remarkable change Sal-Vet will work on your sheep, your hogs, your horses and cattle. I want to show you how it will improve their condition—make them thrive better—look better—put on more flesh and above all ***get rid of the worms and parasites,*** which are the biggest drain on your stock profits. After you see the wonderful results Sal-Vet produces, you will be only too glad to pay its small cost and order more.

Remember, I don't ask a penny of pay in advance. I prove all my claims first.

Your Stock Will Doctor Themselves

S. R. FEIL, Pres.
Reg. Pharmacist and Graduate of the Nat'l Institute of Pharmacy.

No Drenching—No Dosing—No Mixing—No Trouble at All

Simply place the Sal-Vet I send you where all your farm animals can run to it freely, and they will quickly rid themselves of stomach and free intestinal worms. I want you to see with your own eyes before you pay me one penny how Sal-Vet will save your sheep, how it will save your hogs, how it will protect your stock against deadly plagues, how it will make all your farm animals look better and put on more flesh with no more feed. I want you to see how it will do all these things for you by first getting rid of the blood-sucking, life-sapping, disease-breeding worms and then by putting your stock in the pink of condition. That's why I make you this unusual offer.

Send No Money—Just the Coupon

Read the letters at the right from grateful farmers and stockmen who accepted my open offer. See how Sal-Vet stopped their losses and increased their profits, how it rid their stock of the deadly worms—how it prevented losses when contagious diseases were all around them. It will do as much for you. All I ask is that you fill out the coupon—tell me how many head of stock you have, mail it to me and I will ship you enough Sal-Vet to last your stock 60 days. You simply pay the freight charges when it arrives, and at the end of 60 days report results. If Sal-Vet does not do what I claim — if it does not rid your stock of the deadly stomach and free intestinal worms, I'll cancel the charge — you won't owe me one penny. Mail the coupon today. Address:

PROOF THAT PROVES
FROM ACTUAL USERS

"When your 'Sal-Vet' arrived, my hogs were sick and dying. In less than 10 days they were all right and are now doing finely. I will not be without 'Sal-Vet' again."—S. E. Wallace, Ainsworth, Iowa.

"I am very much pleased with the results from feeding Sal-Vet. I have had no sick hogs, while my next neighbor has lost over thirty from cholera. I surely will never be without Sal-Vet on my place again."—Roy C. Truitt, Lincoln City, Del.

"Hog cholera has been all around me, and I have not had one sick hog. I cannot praise Sal-Vet too highly, and I do not hesitate to recommend it to all hog raisers."—(Signed) A. O. Kellogg, Troy Grove, Ill.

"I just finished feeding the 200-lb. barrel of Sal-Vet. My hogs are the only ones left in this immediate locality. I haven't lost one."—James F. Martin, Little York, Ill.

"A great many horses have died in this vicinity of the horse disease, but I have not heard of any having been afflicted with it that had access to Sal-Vet. I, myself, have been feeding it to eight head of horses, and they are now—and have been right along—in the best of condition and working every day."—J. M. Shrader, Dunning, Nebr.

"It (Sal-Vet) certainly knocks worms out of sheep and horses. I have a colt that was not doing well. After feeding Sal-Vet a short time, he passed so many worms, both white ones and little red ones, that it did not seem possible that he could have lived with so many inside of him."—(Signed) F. F. Yarian, New Wilmington, Pa.

"All last winter I used Sal-Vet for 2,500 head of yearlings, and can not find words to say the good things about it that I would like. However, I believe Sal-Vet to be the best thing in the world to keep sheep in a healthy condition and in excellent appetite."—Svend Mauland, Big Timber, Mont.

"'Sal-Vet' is a great worm destroyer. Since feeding it to my hogs and sheep I have never had a healthier bunch of stock in my life. There has not been a single case of thumps among my hogs since feeding 'Sal-Vet,' although this condition prevailed previous to that time."—R. V. Craven, Rt. No. 4, Albany, Mo.

"I found 'Sal-Vet' to do just what you said it would; it is sure death to worms. Moreover, although the cholera has reached throughout this neighborhood, I have not had a single loss since feeding 'Sal-Vet.'"—Joe Gahimer, Alexandria, Ind.

"Your Sal-Vet has wrought a wonderful improvement in my thoroughbred Hampshires as well as in the case of my other stock. I would like to see more farmers use this great conditioner and worm destroyer, as I know it would pay them to feed it."—A. J. Dvorak, Madison, Nebr.

Sal-Vet Is Endorsed by Leading State Experiment Stations

"We have been using Sal-Vet for the past two years; to tell the truth, we are somewhat surprised at the good results we have secured with it. We consider it a vermifuge of considerable merit."—John M. Evvard, Experimentalist, Iowa State College.

Sal-Vet is also used and endorsed by the experiment stations in the following states:

TENNESSEE, NORTH CAROLINA, TEXAS, IDAHO, CALIFORNIA, OKLAHOMA, CONNECTICUT AND ALABAMA.

PRICES: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12. No orders filled for less than 40 lbs. Never sold in bulk; only in Trade-Marked Sal-Vet Packages.

Sixty-day trial shipments are based on 1 lb. of Sal-Vet for each hog or sheep and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular packages.

KEEP YOUR EYE ON THE COLT

Drawn expressly for Montgomery Ward & Company by Charles Dana Gibson

Charles Dana Gibson is America's greatest artist.

He lives in his art—for art's sake.

The lessons of his pictures have punctured more illusions, intensified more sympathies and levelled the loves of high and low to the common standard of humanity.

We asked him to present through his art the message of Montgomery Ward & Co.

He has drawn two great pictures; one is called "Friends for Forty Years," which will appear later in this publication. The other drawing, which appears on this page—"My Father Loved that Book,"

Do *you* get his meaning?

Her father *loved* that book because it made possible more comforts for his family at less cost than he could secure them elsewhere.

Whether he needed foods or furniture, clothes or curtains, machinery or farm implements, he could buy them from Ward's with all the extra profits cut out.

Have you traded at Ward's? Are you one of the millions or more people who have learned the lesson of economy by studying Montgomery Ward & Co.'s Catalogue.

If not, write us today. Copy of the great book will be sent you absolutely free, and without any obligation on your part.

Fill out the coupon. Send it today.

BRIGHTENING THE FARM HOME

Cheap and Practical Expedients by Which the House May Be Made More Habitable and Attractive, no Matter how Small the Means May Be.—*By Avis Gordon Vestal.*

A BRIDE was expected on an Illinois farm. The young husband-to-be had an old three-room house in a barren yard, the whole environment lacking beauty, comfort and convenience for the dear girl who was to spend nearly all of her time there while he was away in the fields. He was a thoughtful young man and he wished to be able to keep through his married life the love he had won in his "courtin' days." So, while getting the farm and its old barns and sheds in shape to make his own work efficient and his stock comfortable, he gave equal consideration to brightening up his house to make it a happy place for his home maker. Here are some of the things he did: The parlor was dark, so he replaced the solid wood front door with one having a large glass panel. Presto! A flood of sunshine entered to brighten it. The door opened only upon a step. During his extra hours he made a broad porch platform where they could sit comfortably together during the summer evenings. The yard was barren. He leveled and seeded down a small front yard, fenced it from marauding piggies and scratching hens, and enriched the soil along the borders near the fence, where he dug beds for the seeds his wife should sow. In the kitchen, which served also as dining room, the floor was a dangerous step down from the parlor. It was also splintered and worn with use by two previous generations. Being a single floor it also was inadequate as a protection from cold. He did what he should here, for he had a new floor of hardwood boards, tightly matched, laid above the old one and on a level with the other rooms. The kitchen window looked out upon the blank wall of a dilapidated old smoke house. He changed this window himself, filled up the hole and placed the frame where a beautiful view down a valley and the road, an inspiring landscape, greeted her view instead.

A GASOLINE STOVE KEEPS THE KITCHEN COOL IN SUMMER AND HELPS THE BUSY HOUSEWIFE.

Reaching the cistern outside the house was an awkward business of going up and down steps with heavy buckets. He extended the floor of the back porch to the cistern platform and cemented up around the pump. He plans, another year, to extend the back porch floor and roof still farther and to screen it in. Then the wife will be protected when drawing water on stormy days. She can sit there to prepare vegetables or do her mending, and they will use it as a sleeping porch on summer nights. Dish cloths and scrub rags are unsightly, yet must be hung to dry, and the house is more convenient than out of doors. The kitchen range had a high back, so this practical lover unscrewed the nuts holding the bolts on the back (the stove stood well out in the room to better heat it). A curved piece of fence wire was inserted before screwing the nut back. The wire was bent into several convenient hooks to hold dish cloths, towels and skillets. Running around two sides of the room and near to the hot-water reservoir of the range he built two wide shelves. Dishes are washed on one broad shelf and stored on the other. Instead of closing up the flue below where the pipe enters he left an opening arranged to hold paper bags, lamp rags, etc. There is also a secret nook hidden away for storing the wedding silver gifts not in daily use.

As there is no cellar a "tight house" of double walls filled in with sawdust was made in the back yard to keep food cool in summer and store canned fruit and vegetables in winter. There is no cool place in the house for keeping food away from the warmth of the kitchen in cold weather, so, to save her many daily trips through the cold at each meal, he made her a window box. This sets outside the window frame and the lower sash is raised when the butter dish or cream pitcher is placed there.

The bedroom had a small, dark-corner closet. He enclosed a space four by six feet, off the back porch, to make a roomy, light closet to hold all their clothing and allow sweaty garments to be well aired. In addition to the door from the bedroom he opened one upon the porch at the rear. This not only gives light and air, but permits him to go directly to the room when he needs to change soiled work garments without passing through the kitchen.

When the wife arrived she set her wits to work to make the old house yet more bright and convenient. In the kitchen she placed a handy cabinet and wall hooks and small sets of shelves to get all of her housewife's "tools of the trade" concentrated conveniently in one end of the room and leave the other half free for dining purposes. She made rugs of old carpet, hung pretty pictures and pennants in a cosy, cushioned corner of the parlor, and added

(Concluded on page 18.)

A CARPET SWEEPER AND A SANITARY MOP DRIVE THE DIRT AWAY.

BRIGHTENING THE RUGS WITH A VACUUM CLEANER.

FRUITFUL SEARCH FOR A CHEAPER FEED.

Thirty-five or forty cents a bushel for corn is not calculated to furnish a very strong incentive to economy in methods of feeding it to live stock, and some agricultural college professors have recently expressed the fear that grain will be wasted this season in many instances through lack of care in feeding, just because it is cheap. Study along the line of finding the cheapest feed for fattening cattle, hogs and sheep has been going on more earnestly in the last year or two than ever before, and it would be a public calamity if research in that direction were halted from any cause. It is doubtful, however, if much corn will be thrown away in careless feeding with prices of stock and feeding grades of live stock at present figures.

Five years ago W. H. McCluskey and Horace Smith, of Owaneco, Ill., commenced feeding their cattle a ration composed of silage, a little corn, and two pounds per day per head of cottonseed meal. These men had been successful feeders of the old ear corn and timothy hay school, so when they say that the new ration will produce the same amount of beef as the old way of feeding at half the cost their conversation is worth listening to. They handle yearling steers, which are fed about eight months and then sold in the baby beef class. In a recent interview in Kansas City they had the following to say about their method:

We have two silos each which have a capacity of 200 tons each. At the time we built these silos and started to feed silage, cottonseed meal and corn it was an experiment. So successful did it prove that we did not think of feeding any other way. We keep a record of all that we feed and an expense account all around and do not hesitate to say that we can fatten cattle this way for just half what it would cost any other way we ever fed. In feeding silage no hay of any kind is necessary. The succulent preserved ration balances the dry corn and cottonseed meal just right.

In starting the cattle on this ration very little corn is given, and about a pound to the head a day of meal is fed. Gradually the meal ration is increased until it reaches over two pounds a day to each animal. It is simply wonderful how these young cattle begin to stretch out and at the same time begin to put on fat. We handle only the highest grade of cattle, and under this system of feeding we can see them gain in weight each day and at the same time they seem to round out and become glossy as they increase in flesh. We had for many years fed cattle in the old way, plain corn and hay, with all the water they could drink. Cattle can be fattened that way, of course, but it takes longer and costs much more, and they do not possess the fine finish when they are ready to go to market as those fed under the new system. Best of all is the great difference in the cost.

In our neighborhood since we started to feed this way many others have fallen into line and are feeding the same way. In no case has any one who has given this a trial doubted but what it was far cheaper than the old way, and no one has ever abandoned the system to go back to the old plan of feeding.

RULES FOR THE RURAL PASTOR.

At practically every rural life conference when the subject of the rural church is brought up three points are emphasized: first, the church should take more direct interest in everyday affairs; second, there are, as a rule, too many churches, dividing the interest and the attendance until they reach almost the vanishing point; third, the pastor should be familiar with farm work by actual, personal experience.

No more helpful or inspiring talks have been made before any rural life conference than those made at the Iowa meetings by the Illinois pastor who revivified a rapidly dying country church by adding musical, literary and atnletic features and attractions and shortly so inspirited the community that a handsome $20,000 church building was erected at the cross roads, a half mile from town, filled every Sunday with interested worshipers and the social center of two townships. Equally helpful and inspiring was the talk of the Iowa pastor who told of inviting into his pulpit dentists, doctors, business men, veterinarians, all sorts of people, from the nearby town, and turning the Sunday evening services over to them for practical talks on the conservation of health and the important things of everyday life. There is general recognition of the fact that the country church must play a more important part in everyday affairs if it is to last and deserve to last. The idea was excellently summed up in the placard prominently displayed at the last Iowa State Fair:

The country church has done everything in its power to pave the farmer's road to glory land, but it has paid far too little attention to his road to the nearest village.

It was this same idea which Professor Holton, of the Kansas State Agricultural College, evidently had in mind when he declared recently, after careful study, that aloofness of the church to the practical needs of the people of the community has slackened their interest and diminished its social and religious value. He has made the following rules for the guidance of the rural pastor:

He should influence the church to think in terms of the community instead of in terms of the pillars.

He should make the church building a social center for community life.

He must clothe the gospel message in the everyday language of the plain people of the Twentieth Century.

He must pacify internal wranglings and discourage community competition between denominations.

All except one church in each community of less than six hundred inhabitants should be abolished.

He should do actual farm work that he may be more able to mix with his congregation.

There is good food for thought in what Professor Holton says. This is the age of practicalization. Political leaders and captains of industry are finding that it pays to get nearer to the people and to stay near to them. Rural pastors should learn the same lesson. The day has passed when the country church (even more than the city church) was a structure for occupancy only one day out of seven and for the exposition of the things of yesterday rather than of today. The fact that scores of country churches are being revivified because they are being made practical and up to date shows that the tendency of the times is full of promise.

METHODS OF VACCINATING HOGS.

There is a very great difference of opinion among men who have undertaken to vaccinate hogs to prevent cholera in regard to the proper plan of procedure. Mr. Walter Taylor, a Nebraska subscriber, thinks that it is a great mistake to vaccinate hogs before they are sick. He calls attention to the fact that in his neighborhood there has been a great deal of cholera, but on the other hand where the disease is once started vaccination has given most excellent results. He says that a neighbor vaccinated 123 head and only lost five. Under the advice of the local veterinarian this bunch of hogs was not vaccinated until it was apparent that disease had entered the herd.

Another subscriber, Mr. Ira M. Monroe, of Knoxville, Iowa, writes concerning his experience with cholera, as follows:

I had thirteen head of old brood sows that got sick very suddenly. I suspected that they had cholera and our local veterinarian thought that I was mistaken because of the fact that the old sows were affected first. Four days after the sows took sick I obtained enough serum to vaccinate fifty-seven head in all. I lost eight out of the thirteen sows, but the shoats that I vaccinated never missed a feed after they were treated and I have never had hogs do better than they have since. My opinion does not harmonize with those who claim that it requires six or eight weeks for a hog to get over the setback he gets from vaccination. I know of a number of instances where men sent away and got the serum and did their own work only to experience the result of losing all their hogs.

It is my opinion that hogs will surely get cholera soon enough without going to the expense of giving it to them and it is my opinion that the authorities should not allow the hog cholera virus to be sold and no one should use the serum except an experienced veterinarian.

An Illinois subscriber, R. O. Osborne, writes:

Having read a communication in your paper on the fatal results of vaccination of hogs, will state my experience with same.

Last spring I had a bunch of sixteen thrifty hogs and as cholera was raging through our locality, and every extensive farmer was advocating vaccination being the only cure. I decided to try it. I called a graduate veterinarian who did the vaccinating, using serum which was sent here by the state. He inserted two kinds of serum, one kind to produce cholera, and the other to counteract it. It evidently took on my hogs, for they were droopy and stiff for a few days afterward and the place where the serum was inserted became swollen. They seemed to be O. K. Then for about two weeks they began to wobble in their hind parts and having hard fits, dropped off until all were dead except one old brood sow. I don't know what the trouble was, but I do know I lost my hogs. My neighbor had a similar experience.

It is an open question at this time whether it is advisable or not to vaccinate a healthy herd of hogs, especially to use what is known as the simultaneous method which, of course, means nothing more nor less than the introduction of real cholera. In our opinion we will never make anything like satisfactory progress in stamping out this disease until systematic work is done by the proper authorities to stamp out the disease there and then whenever it makes its appearance in a neighborhood. It is not a matter that should be left to the choice of the individual, as it is really a community question, and so long as a promiscuous use of hog cholera virus is permitted just so long may we expect to engage in a never-ending warfare.

DEEP SPRING PLOWING.

An Indiana subscriber, Mr. George H. Walker, gives the results of his observation of the effect of deep spring plowing, in a communication which follows:

About fifteen years ago a farmer living in this part of the state broke a field containing about twenty-five acres. The soil was clay, part of the field being new ground under cultivation not more than four years. The timber originally growing on this plot of ground was beech, oak and poplar, together with some hickory. This ground was plowed from eight to ten inches deep while most farmers only plowed about five and one-half to six inches. He plowed the field in the spring and put in corn and naturally I was curious to see how the crop would turn out. The crop was no good at all and not only that, but after living in that neighborhood for about four years more he never could raise a good crop on it, though the field had been producing average crops before.

Another experience which came under my observation was that of a neighbor who commenced to break a nine-acre field about ten inches deep. I reminded him of the other fellow's experience, but he went on and planted it to corn, using 150 pounds of fertilizer to the acre. As a result he raised about five bushels of corn to the acre, which he cut up and put in his silo.

If the soil is two feet deep it will not do any harm to plow that deep, but if only three or four inches, better go slow and do not turn up a pile of clay and turkey gravel on top unless you can give the land a good coat of stable manure after it is plowed. There is no plant food down deep in the yellow or blue clay and I believe the only reason trees and corn send their roots down so deep is to keep from being blown over and the small rootlets furnish the nutrition.

While we believe that the tendency in the future will be to plow land much deeper than has been the case in the past yet it will always be important that good judgment be used as to the time of plowing, while the character of the soil must also be considered. In the case of clay soil such as those described by Mr. Walker it can be easily understood that the bringing of considerable depth of inert subsoil to the surface in the spring of the year might result in starving out the following crop. In such an instance the part of the soil containing most of the vegetable matter is buried at the bottom of the furrow so that the inert lower soil is really placed in immediate contact with the surface feeding rootlets.

In the case of loams no such unfavorable results will follow deep plowing, because in those soils the vegetable matter generally extends down to a depth of twelve or fifteen inches and plowing even to that depth will not bring to the surface crude and inert soil. Those who decide that they must plow their land deeper in the future than in the past will show wisdom if their deep plowing is done in the fall and, furthermore, better results will be obtained if the depth is gradually increased unless those implements of tillage are used which stir the soil in such a manner as to keep the vegetable matter near the surface and the inert material where it belongs. In such a case no objection can be made to greatly extending the depth of the plowing at any one time.

SHIPPING CREAM BY MAIL.

The daily papers are filled with instances of the freakish use (it might better be termed "abuse") of the new parcel post system. After the novelty has worn off, patrons of the postoffice will settle down into the ordinary, practical use of a system which promises much in the way of bringing consumer and producer closer together and eliminating not only the middleman but much of the transportation charge. With the present freakish uses of the system we have little, if any, interest, save as they arouse our credulity or amazement. It is impossible, however, for the service to continue long without being of direct and practical value to every farmer who is a patron of an R. F. D. route.

A recent item in one of the small-town newspapers of the grain belt shows the immense possibilities to the farmer. A patron of an R. F. D. route is trying out the experiment of shipping his cream to the dairy in the nearby town by parcel post. A gallon can of cream is being sent from his home in the country and delivered to the dairy in the town for eleven cents. The empty can is returned by the mail carrier for only six cents. The small-town newspaper comments:

This is much cheaper than to make the drive or to send it by express, and, as the cream is collected by the rural mail carrier and the empty can returned in the same way, there is no bother of driving to town or visiting the express office.

With round-trip transportation charges of seventeen cents a gallon the plan would not be feasible for a farmer having a large quantity of cream to ship to town regularly, but it is feasible for the farmer with but a gallon or two of cream, a few dozen eggs, a few dressed chickens or other produce of small weight. Already a special kind of box to be used for shipping eggs by mail is being advertised. It is inevitable that before the year is out (unless the system is abused or the service curtailed) the American farmer will find the parcel post as profitable as his English cousin long ago found his similar service to be.

SWEET CLOVER TO BUILD UP LAND.

From a despised weed, growing along the roadside, sweet clover has come into favorable notice in a very short time. It used to be said that if there is anything on earth entirely useless it is sweet clover. It was said that nothing would eat it, that it became a great nuisance when growing along roadsides and its smell sickened travelers. There appeared no champion for it and farmers tried to get rid of it. Now all seems to be changed. Many farmers encourage its growth along the roads and fence rows. They even sow it in fields on their farms, and its smell, once despised, becomes beautiful perfume. The price of seed has been advancing right along. Men are mowing the roadsides and fence rows to get it, and everyone is wanting more information about sweet clover.

It may be interesting to those of our readers who have paid no particular attention to the sweet clover boom to know why this right about face in public opinion in regard to sweet clover has taken place. It has all happened because it has been discovered that sweet clover is a great soil builder and improver. It is found possible to start sweet clover on land that will not grow clover or alfalfa. Take hardpan spots, alkali spots and other soil not naturally adapted to ordinary clover or alfalfa and all that seems necessary to get a start of sweet clover is but to sow the seed. Sweet clover begins at once to gather nitrogen for the soil and to store it up. Its roots penetrate deeply, opening up a tough subsoil and making it porous. Drouth or flood seems to affect it but little, its hardiness equaling every other plant of nitrogen-gathering nature. After growing sweet clover for two or three years it is then found that alfalfa or clover can be easily started. As a forerunner of a more profitable crop and as a soil improver, sweet clover has no equal, and because of this the demand for its seed is greater than the supply and evervone with patches of obstinate land on their farms is anxious to sow the seed.

Not alone in soil improvement is sweet clover being considered as a profitable farm crop, but it also is being found a valuable pasture plant when used rightly. The secret of getting good out of sweet clover is to keep it down—to not let it grow up and become old and tough and woody in stalk. If it is kept down so as to be tender, hogs, cattle and horses will all eat it, but it is best of all for hogs. We know of a number of farmers who have it in hog pastures with alfalfa and they say the sweet clover is always kept down as closely as the alfalfa and it seems to have the same feeding value. Let it grow up, however, and stock will shun it. As a hay crop it is not the equal of alfalfa, but if made into hay it should be handled the same as for pasture, should never be allowed to grow large and become tough. As a soil improver, though, sweet clover is getting the most favorable attention, simply because it has received the distinction of "growing wherever sown." In this way it improves poor soil and puts it in condition for alfalfa.

OUR RED LETTER OFFER.

Our 1913 Red Letter Subscription offer makes it possible for every farm family to enjoy an all-the-year-around library of entertainment and instruction at greatly reduced cost. By remitting $1.25 to The Iowa Homestead, Des Moines, Iowa, you will receive a full year's paid-up subscription to each of the five splendid journals: The Iowa Homestead, Kimball's Dairy Farmer, Woman's World, Kansas City Weekly Star and People's Popular Monthly. These journals are leaders in their respective fields and combined they will appeal to every member of the household. Kimball's Dairy Farmer is full of dependable advice and information and no farmer who keeps cows should be without it. The Woman's World is a monthly household magazine of exceptionally high worth, entertaining and artistic. The Kansas City Weekly Star is the leading newspaper of the grain belt, reliable, up to the minute and fair in the treatment of every matter. People's Popular Monthly combines the best fiction, poetry and feature articles. The Iowa Homestead will be bigger and better than ever during the coming year, so that no up-to-date farmer can afford to miss a single issue. Do not delay, but remit at once so that you may receive the big winter numbers of all five of these dependable publications.

THE AUTOMOBILE UPKEEP.

In a former issue of this paper we asked our readers to furnish information relating to the cost of operating automobiles. In doing this we had in mind two things. We desired to give those of our readers who have had no experience with an automobile some idea as to the cost of running one and in the second place we knew that communications of this character would enable those who have machines to ascertain by comparison whether or not their own machine is giving them economical mileage. Mr. T. H. Kitchen, an Ohio subscriber, is the first to respond. He says:

In reading a recent issue of your paper I came across an article, "Is the Auto Upkeep Expensive?" In reply I am furnishing the cost of upkeep on a thirty-horsepower 1910 model five-passenger touring car. The car was bought September 10, 1910, and has covered a distance of 4,135.7 miles to date. It has taken 354 gallons of gasoline to cover this distance at a price ranging from eleven cents to nineteen cents per gallon or a total cost of $47.06 for gasoline. Have used about four pounds each of hard oil or cup grease and transmission grease at a total cost of fifty-two cents for hard oil and sixty-four cents for transmission grease or a combined cost of $1.16 for grease. The car has used eight gallons and one quart of cylinder oil at a cost of thirty-one cents per gallon or a total cost of $2.56 for cylinder oil. It has cost approximately $4.30 for carbide used as lights, saying nothing about the tail lamp which I do not think has consumed over two gallons of coal oil which cost would be twenty cents. I never use side lights. It cost $1.80 to get valves ground once, $8.00 to get two bearings rebabbited and two tires thirty-two by three and one-half, one costing $23.45 and the other $19.50. No batteries for starting have been included because I do not use any, starting entirely on magneto. This of course does not include numbers which in Ohio are $5.00. Nor does it include accessories of any kind. Repairing of tires I do entirely myself with a good vulcanizer which has cost me about seventy-five cents to $1.50 to repair all necessary punctures incurred since buying the car. By adding this together it will be seen that the total cost has been $109.53 to run the car 4,135.7 miles.

These are interesting facts and the results in the case of Mr. Kitchen indicate that the machine has been sensibly handled. This after all is one of the most important factors in connection with operating an automobile. One item in the enumeration calls for special comment, namely, the replacement of two tires before the car had run 5,000 miles. This is probably due to the fact that the car in the first place was undershod, and we venture to say that instead of using a 32x3½ tire that double the mileage would have been obtained particularly on the hind wheels if a 34x4 tire had been used instead. It usually requires ne year's experience to teach the operator of an automobile this important lesson. At least we have found this to be the case in our experience.

This point in particular is properly a matter for discussion and we would like to hear from our readers and obtain their experience relative to the service they are getting out of their tires. The information will be of special value if in every case the weight of the car can be given.

DOES SHOW CORN YIELD WELL?

Every community has its knockers and the individual who starts out in any line of production to do just a little better than his fellows may expect a certain degree of criticism. We are well acquainted with men who have for years been denouncing the plan of holding corn shows, their claim being that the winning corn is not of necessity high-yielding corn. In order to obtain the views of practical men who have taken a prominent part in corn shows we have asked a few successful contestants at the recent Iowa Corn Growers' Association to state to our readers the result of their success in growing corn. We have asked them about the yielding ability of corn that will stand well in competition. Henry J. Longstreet, Eddyville, Wapello county, Iowa, was one of the winners in the southern section of Iowa, and his opinion is briefly given in the following communication:

The method I have used in selecting my seed corn has improved my corn from ten to twenty bushels to the acre. Show corn is high-yielding seed corn and by selecting the good ears, planting them in a seed plot and picking the good seed from that plot the yield will be increased at least five to fifteen bushels to the acre. Many farmers are doing excellent work in trying to grow better corn, but the farmers who are cultivating these seed plots are getting fine show corn and at the same time increasing the yield in the larger fields. I know by my own experience that I am increasing my yield through the use of these seed plots and am not only getting larger yields, but better and more high-yielding seed corn every year. The farmer who is growing corn good enough to win at the state contest is also increasing and producing more corn to the acre than is the farmer who goes to his corn crib in the spring and gets his seed corn. Such a farmer is behind in good seed corn, even though he raises forty bushels to the acre by weight, and the man who raises good high-yielding seed corn will get more feeding value out of his corn. The corn selected from the crib will produce big ears, but they are immature, with big cobs and shallow kernels, while the seed from the high-yielding corn will produce matured corn, all ripened evenly and with deep kernels, all of which goes to show that show corn is the best seed to plant, giving the farmer larger yields to the acre and better profits.

A winner in the northern section of Iowa, H. A. Bates, Algona, Kossuth county, is of the opinion that corn must be selected for its yielding ability and he believes that the selection of good looking ears at random will not necessarily result in increasing the yield. Mr. Bates says:

We have tried a number of show ears in our breeding work and very few of them have ever made records which got them a place in the crossing block. Where show corn has been bred as our corn now is and each ear has a definite history, uniformly good results could be expected. Where show corn is picked at random, taking every good ear that can be found, ears that probably grew under very favorable circumstances, no dependence can be placed on them to reproduce themselves.

To me corn, like cows, must show by a performance record what they are able to do. Then only the best get a place in the crossing blocks.

Much good has come from the corn shows, but I would rather have a very common ear with a good record in the ear to row test block than a champion show ear without a good record. By our method of breeding it takes three years before the corn is ready to sell to the public.

Another prize winner in the contest referred to, H. C. Leonard, Elkader, Clayton county, Iowa, believes in the yielding ability of show corn. A practical endorsement of his contention is shown in the fact that his neighbors are finding it profitable to grow the improved strain of the particular variety shown by Mr. Leonard. Among others things he says:

The sample of corn with which I won at the Iowa Corn Growers' Association was originally Goddard's Silver King. I have been growing this corn the last four years and by careful selection of a certain strain I have been able to increase the size of the ear without affecting the maturity. This is a 100-day corn and will yield from seventy-five to 100 bushels per acre. The sample shown was not raised in a small plot, but was raised in a forty-acre field. If it is a good thing to raise show corn in a small plot, why not try and grow all your corn as near show corn as possible, and then you will get a good yield and a fine lot of corn? My neighbors are all beginning to grow this corn and all who have tried it are well pleased with it.

After all the real test as applied to the merit of corn involves two things: Its yielding ability and its quality. We find that as a general proposition men who begin selecting corn for show purposes are soon led to the practice of using the "mother" ear system whereby seed is saved only from prolific ears. While all good looking ears might not be prolific, yet it stands to reason that the most prolific ears will be found among those that show up well in length, in filling out at the ends, in depth of kernel and in soundness. This being the case we must continue to place a high value on corn contests properly conducted because, as intimated before, it leads immediately in most cases to the plan of selecting back to an individual high-yielding ear.

CONCEIT WILL NOT IMPROVE LIVE STOCK.

In certain classes of live stock the United States takes as high a rating as any of the older countries. This applies to several breeds of hogs, to one or two breeds of horses and to at least two breeds of cattle. For so new a country as ours this is creditable progress, but we have scarcely scratched the ground when we consider the subject in the light of the improvement in the common stock of the country that is so urgently needed. While we must ever give credit and support to those far-seeing individuals who make it their life work to improve the pure-bred animal, yet we must remember that, after all, the greatest benefit can come from this improvement by getting much of this good blood into the common live stock of the country.

We must keep our show-yard standards high, but at the same time we should give more attention to raising the standard of the common farm beast. While our pure-bred live stock is unquestionably improving there is some doubt if the standard for the grade is actually being raised. Because of this we believe that those state supported organizations like beef and dairy associations are deserving of even stronger support in the future than in the past. The state can afford to go to some expense in order that the elbow of the average man may be jogged so that he can be reminded of the fact that as a business venture and as a patriotic act he can ill afford in his herds and flocks to use anything but meritorious pure-bred sires. If he is engaged in dairying then by all means should he select a sire that is bred along lines of large dairy production. If it is beef he is after let the real beef machine be used and not a mongrel product such as we find disgracing too many of our pastures today.

At the present time the nation is short of cattle and it will require at least seven years to produce even a normal supply. We hope that at the end of that period it can be said that the standard judged from the standpoint of economic production has been greatly raised. It can only be done if men can be induced to pin their faith to improved pure-bred males and thereby in their breeding operations be pulled from the slough of despond.

A certain amount of sensible conceit over what has been done in improving our pure-bred stock is desirable and proper, but this ends only where it begins if the strata below the pure-bred line is not in the future our chief concern.

HOME VENTILATION AND GOOD HEALTH.

Be a fresh-air crank and give your family plenty of fresh air. Then health will be written on your countenances and life will be long and sweet. So when the weather is cold, rainy, or windy don't lock down your windows and keep them closed all the time. Throw them wide open a time or two at least during the day and let in the pure oxygen.

The lack of good ventilation is the cause of many of the diseases that prey upon mankind. Headache, indigestion, anemia, pneumonia and the Great White Plague are often due to badly ventilated homes. The disease germs live and thrive in the foul air, and fasten their deadly grasp on the human body. Then follows sickness and probably death in the home.

A man's house may be his castle, but it should never be his prison and his tomb. It should not be overcrowded and should always be kept well ventilated. Poor ventilation is as harmful as overcrowding. The death rate in families occupying one room is very large, running as high as forty to the thousand, while families occupying four rooms have a death rate of seven to a thousand. So where the ventilation is poor the death rate increases.

One would not think of kindling a fire in a stove and shutting off all drafts so that the smoke and gases could not escape. One would soon be suffocated. It is the same way with the human body. It is always taking on oxygen and burning up food, which is converted into body tissues, animal heat and energy. If the windows to the home are closed it is like closing up the chimney. The carbon dioxide, the smoke of the body, and other injurious products cannot escape and fresh oxygen cannot be taken in. The life fires begin to grow dim. The energies flag, circulation and digestion are impaired, and disease finds an easy entrance.

Window means wind-eye, therefore keep it open much of the time. Air and sunshine and the blessed invigorating breezes must be our constant companions. These are not to be feared as a boy fears soap and water, but are to be looked upon as our friends and life preservers. So do not carry on the activities of life in dingy and stuffy rooms and go on breathing impurities from day to day, but open the windows or even the doors and let the room fill with the life-giving oxygen.

FACTS ABOUT GRAVEL ROADS.

This paper has been endeavoring to get its readers interested in gravel roads, conscious of the fact at all times that there are many counties in the corn belt where this kind of road-surfacing material does not exist. At this time we are able to present a few facts regarding the cost of graveling four and nine-tenths miles of road. This work was done under the supervision of Mr. Ralph Bolton, secretary of the Greater Des Moines Committee of the city of Des Moines, Iowa. Through the co-ordinate support of the township, the county and the city of Des Moines sufficient funds were raised to grade and gravel this stretch of road. Something like $600 was spent in making fills, cutting ditches and placing the road surface in a condition so that it would drain properly.

The gravel used on this road was purchased from a property owner adjoining the road under consideration, and it was purchased at ten cents per load comprised of a yard and one-third. The greatest haul was two and one-fourth miles. The total expense for hauling, loading, unloading and spreading 3,400 loads of gravel was $1,948.50. For the short hauls it cost fifty cents and for the longer hauls seventy-five cents per load. Where the road consisted mostly of yellow clay about four yards of gravel to the rod were used while places where the soil was inclined to be sandy about one yard to the rod was placed on the surface. Graders were used to spread the gravel to the width of about twelve feet.

According to these figures it cost $1,948.58 to gravel four and nine-tenths miles of road, 3,400 loads of gravel being used for the purpose. This is practically $400 per mile which together with the cost of grading amounts to a trifle over $500 per mile. It might be interesting to state in this connection that shovelers were paid $2.00 per day for nine hours' work. Mr. Bolton found that a team could conveniently cover a distance of ten miles a day loaded. This, of course, would mean traveling a distance of twenty miles. It was found advisable at all times to use a snap team out of the gravel pit and with this assistance the average farm team could easily handle a yard and one-third at each load.

Mitchell

THE Mitchell is the best automobile for you, because it is the most efficient, powerful, reliable and convenient automobile ever offered to you at a moderate price.

You know that those are the four qualities your car must have; the Mitchell has them and many others that you will like.

The power and efficiency come from the new Mitchell T-head motor with the real long stroke—six and seven inches.

The reliability is guaranteed by the high standards maintained through 78 years of vehicle building. You have learned what the Mitchell name means—the best of workmanship and materials.

The unequaled convenience of the Mitchell automobile is due to the left hand drive with *center* control, the electric starter and the electric lighting system.

Comfort is assured by the extra long wheel base, the deep upholstery and the French Belaise springs.

All Mitchell 1913 cars have left drive and center control; Bosch ignition; Rayfield carburetor; Firestone demountable rims; rain-vision windshield; Jones speedometer; silk mohair top with dust cover; Turkish upholstered cushions; Timken front axle bearings; gauges on the dash to show air pressure and oil pressure; gauge in gasoline tank showing amount of gasoline it contains; and a portable electric lamp which also illuminates the instruments on the dash.

All with T-head motor, electric self-starter, electric lighting system, and 36-inch wheels

FARM FURROWS
TURNED BY A PRACTICAL FARMER

All rough feed has fed out from the field in fine shape so far this season, being almost as bright as the day it was cured. I am hauling in fodder from the shock now, and it looks pretty enough to make into tea—that is, the leaves do. I imagine it would make as good tea, too, as some of the cheap stuff that can now be purchased under the name of tea.

The milker who loses his temper around the dairy barn at milking-time is pretty sure to lose some dairy products as a result.

A good way to spoil a child's term of school is to side in with the child when there is a petty grievance against the teacher, and to "egg" the child on to make it as disagreeable for the teacher as possible. A child's education is worth too much to fool away in spite.

When attempting to "break the ice" with a new-found acquaintance try a melting smile.

Help the women folks out with the washing these wintry days, as this is not so much a time of idleness with them as it is with most of the men folks of the farm.

Dragging snow off the roads does just as much good to the roads as to drag the bare roadway when in condition to do the most good. The slip of the drag is, of course, reversed when dragging the snow off the grade.

Snow blowing into the hog house does the occupants therein no particular good. It does melt and make the bedding wet. A hog isn't prospering when compelled to sleep in damp bedding.

Many of the Russian farmers live in communities, sometimes a mile or two from their farm or the furthermost borders of their farm. Here in America we would object to going that far to our work, and the most of us do not like to have too close neighbors. I am sure the Russian farmers do not raise much poultry, especially turkeys.

Order all seeds in time to give them a thorough test.

I heard a man say the other day, that he could raise a heavy draft horse cheaper than he could a little insignificant pony, weighing scarcely 1,000 pounds. I was on the point of asking for his formula when he passed on. I am a believer in the draft horse, but I cannot understand how it is possible to produce it cheaper than the pony.

No incubator on the farm yet? Better look one up while it is fresh on your mind and you are in the notion.

The present high price of beef is interesting a great many in the old-fashioned way of raising cattle by keeping stock cows just for the increase. It would be profitable to keep a herd of cows on the very highest priced farm land just for a calf from each, annually, if prices should remain this high, but I am afraid the farmer on high-priced land had better stick pretty close to dairying and let the man on cheaper land raise the beef calves.

Tack some old felt or leather on the bottom of the ladder, and thus avoid the danger of serious accidents by its slipping.

It does the herd of milk cows no good to drive them a quarter or a half mile to water, with the thermometer saying it is zero, then to compel the cows to get down on their knees on the ice to reach the water when they get there. You can safely figure a shrink of 20 per cent arising from such inconvenience and exposure.

The women folks are beginning to talk about hen setting and incubator management. Although below zero, cheer up, for here is the first harbinger of spring.

Just now we are sick of the sight of ice, but next summer it will look good to us—a reminder that a small ice house on the farm, filled with what is now plentiful, will prove a blessing.

Compressed air can be made to do a great deal of useful work, and nothing more useful than to force water where wanted about the house and farm buildings. A little compressed air does wonders in moving water through pipes and is much more satisfactory than to depend upon gravity.

Being economical by putting on an insufficient amount of grass seed when seeding is a small saving at a big expense.

It is quite commonly believed that to severely trim fruit trees, to drive railroad spikes in the trunks and otherwise bruise the trees induces bearing of fruit. It comes about in this way—such treatment hastens the death of the tree, and all trees when struck with death put forth an effort to reproduce before death. Thus fruit bearing is often brought about at the expense of the tree.

Good shelter means solid comfort and less feed.

The right time to halter break colts is when the colt is still so small you can make it behave. I start with the halter by midsummer, and at weaning time the colt is thoroughly halter broke. This is better than to wait so long that the colt has the strength to

handle you instead of you being able to handle the colt.

Have you inspected this season's supply of garden seeds? You may need to buy more of them than you thought. Not only those which are actually spoiled, but some that seem good will, when closely examined or tested, show such weak germinating qualities as to be absolutely worthless.

See if any of the weaker bee colonies are getting short of supplies.

We rarely hear of a farmer sending away for a change of seed oats, neither do we notice any appreciable increase in the yield of oats. In nine out of every ten neighborhoods the oats simply have degenerated and "run out" till the production is only about one-half what it should be.

Just because ducks and geese quack around and act lively is no reason why they should not be given a little attention during cold weather. See that they have some good water to drink, toss them a little clean grain feed every feeding time, and above all furnish them a shelter at night, where they will not freeze their feet.

Have all the hot-bed material right at hand to put in the first favorable day for the work.

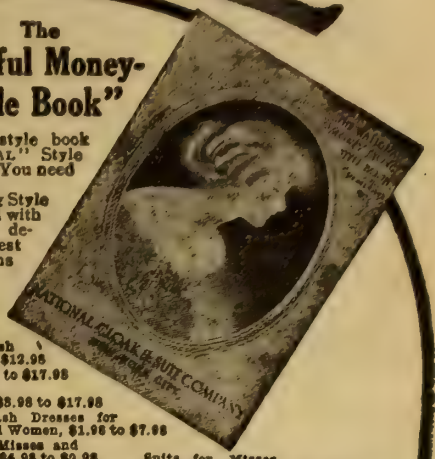
It is very easy to run a store bill, but hard work to catch up with one.

W. M. SWAIN, PRESIDENT OF THE INDIANA SILO COMPANY.

THIS is an age of rapid development. The stripling today is the giant tomorrow. Vast industrial enterprises spring up almost in a night. Ten short years ago two young men of far-reaching vision grasped the possibilities of the silo on the American farm, and with practically no capital, but possessed of unbounded enthusiasm and a capacity for hard work, organized what has grown to be a gigantic industrial organization, employing several thousand men, doing a business that runs each year into the millions, and shipping its products all over the grain belt. The story of W. M. Swain, president of the Indiana Silo Company, is the fascinating story of the success that comes to energy conducted along the right lines. When Mr. Swain and his partner, Mr. Wilson, organized the Indiana Silo Company, the silo was just coming into an existence of practical utility. It had been demonstrated as a success and a great acquisition to the American farm, and the Indiana Silo Company may be said to have appeared upon the scene at the psychological moment. The agricultural press and the agricultural experiment stations had awakened farmers to the benefits to be derived from scientific farming, and there was a replacing of the old slip-shod methods with new ideas and broader measures. Mr. Swain is a product of the farm, descended from a long line of Quaker ancestry, inculcated with the idea that only honest effort and honest product can achieve success. He won his spurs, at an early age, in the employ of The Iowa Homestead representing this paper as a live stock field man in Indiana and Ohio. His talent for winning and keeping friends, for honest representation and for industry and perseverance made him an unqualified success in this work and he left it only to embark on the bigger venture with the best wishes of his employer and associates. Starting the silo business with practically no capital, not a customer on the books, no organization and no credit other than that inspired by the known integrity of the men behind the proposition, the management of the Indiana Silo Company has seen that institution grow from a total output of only forty-eight silos during the first year of business to an industry that has a capacity for making over 100 silos per day. Mr. Swain is a young man still in his thirties, but he has achieved a measure of success that comes to few men of even far more advanced years. But it is success that has been honestly earned and that represents untiring energy, a capacity for hard work, and an ability to foresee the future development of the agricultural conditions of the country. Mr. Swain not only has been a prime factor in the success of his company as its directing head, but he early earned his spurs as a salesman, and pioneered the silo field when the sentiment of the farmer was far from favorable to the silo. He is a striking example of what can be accomplished when a man puts honest effort back of an honest proposition.

"NATIONAL" STYLE BOOK SENT FREE

The "Beautiful Money-Saving Style Book"



Free—the most beautiful style book ever issued—the "NATIONAL" Style Book. One copy is yours free. You need only mail the coupon, that's all.

This Money-Saving Style Book is just filled with illustrations and descriptions of newest styles and bargains such as these:

Save the Price of a Horse

(Return Apron)

By Buying the Moline Low Down Spreader

How do You figure the Cost of your farm machinery—the price of the machine alone, or what it takes to run it?

This splendid Low Down Spreader is not only easy to load, being but 42 inches in height at the rear wheels, but it is also

"The Lightest Draft Low Down Spreader Ever Built."

We have seen the large size Moline Spreader in use in a field with other makes, under exactly the same conditions, when it required one horse less to operate the Moline Spreader than was necessary to operate the others.

In figuring the cost, then, there is a saving in buying the **Moline Spreader** equal to the price of one horse.

Correct Mechanical Construction—Steel Frame—Steel Wheels—Steel Beater—Chain Drive—Roller Bearings.

The Moline is easy on the Man and Easy on the Team.

Our Handsome Spreader Booklet Free.
Also 1913 Flying Dutchman Almanac.

Which Tells About the Greatest Improvement of Farm Wagons in 50 Years

The Peter Schuttler Patented Roller Bearing has revolutionized wagon construction. Official tests by Road Experts of the U. S. Agricultural Department show remarkable results. Every farm wagon will soon have roller bearings.

Peter Schuttler
Roller Bearing Wagons
Do One-Third More Work and Do It Easier

Two horses do the work of three because it runs so much easier and goes more miles. It saves time—horses—harness—feed—repair bills—greasing—trouble, and wear on the wagon. The Schuttler Roller Bearing Wagon is a big money saver—it pays for itself many times over in economy of operation.

Modern farming demands modern methods, and no recent invention has been of such great interest to farmers. Let us tell you all about the **improved and perfected Schuttler Roller Bearing.** Write for the free book now—before you forget.

Buy This Outfit On Approval —Name Your Own Conditions

Test this Avery "Light-Weight" Tractor and "Self-Lift" Plow in your own field before you buy it. We take the risk. We sell it to you **on approval.**

Think what this means. It must mean that we have thoroughly tested out these machines and know that they will do what we say. It must mean that you can depend on what we say about Avery Tractors and Plows for we give you a chance to test their truth before you accept the machinery.

Farming with an Avery "Light-Weight" Tractor and "Self-Lift" Plow is a wonderful advance over horse or mule farming. With one of these outfits you can farm cheaper, easier and better. Records kept by Avery owners prove that they cut the cost of horse plowing in **half** and even lower. Also **save on all kinds of farm work,** discing, seeding, harrowing, harvesting, hauling, threshing and general **traction and belt work.** Three sizes—they **fit any size farm, small, medium or large**—12 Traction 25 Belt H. P. plows 10 to 12 acres per day, 20-35 H.P. plows 15 to 18 acres per day, 40-80 H.P. plows 25 to 30 acres per day.

And compared with other makes of outfits **Avery's are much different and far better.** You or your boy can operate an Avery Plow Outfit alone. The Tractor steers itself. The Avery "Self-Lift" Plow lifts and lowers itself. No plowman needed, saves his wages and board. Simply pull a cord and the plows lift and lower by power taken from the plow wheels. No other plow like it. Entirely outclasses ordinary hand lever style.

Avery Tractors are "Light-Weight"—12-25 H. P., pulls 3 to 4 plows and weighs less than 7,500 pounds—20-35 H. P., pulls 5 and 6 plows and weighs less than 11,500 pounds—40-80 H. P., pulls 8 to 10 plows and weighs only 20,000 pounds. They don't pack the ground—they don't waste fuel moving useless dead weight—they travel over any kind of ground in condition to be worked with horses. And the simplest tractors built—easy to handle and keep in running order.

AVERY.
"Light-Weight" Tractor and "Self-Lift" Plow

Power Farming Facts Free Hundreds of men are already farming with Avery "Light-Weight" Tractors and "Self-Lift" Plows. You can do what they are doing in cutting down expense, saving hard work and raising bigger crops. Avery Tractors are sold at a low price. You can pay for one quick in your own work and even quicker by working for your neighbors if you want to. They are built by a large established company and backed up by Strong Guarantees. Write at once for complete Avery "Light-Weight" Tractor and "Self-Lift" Plow catalog and Free Power Farming Facts.

Largest in the World. 1107 Locust St., Kansas City, Mo.

CURRENT EVENTS

THE formality of the members of the electoral college meeting and casting the votes of the various states for the presidential candidates was gone through with last week, the result being the formal declaration of the election of Governor Wilson. Unofficially the votes of the three leading candidates are as follows: Wilson, 6,303,063; Roosevelt, 4,168,529; Taft, 3,439,529, the plurality of Governor Wilson being 2,134,449. At last week's meeting of the electoral college the votes of two states, Utah and Vermont, were cast for Taft for President and Nicholas Murray Butler (president of Columbia University, New York City) for vice-president, Dr. Butler having been chosen by the republican national committee to fill the vacancy caused by the death of Vice-President Sherman; the votes of five states were cast for Roosevelt (Minnesota, Michigan, Washington, California and Pennsylvania); the votes of the remaining forty-one states were cast for Woodrow Wilson, while owing to the peculiar election law in California he received the votes of one of the eleven electoral districts in that state. On the day that this formality was being carried out, President-elect Wilson addressed the electors of New Jersey, pledging himself anew to align himself with the progressives and to pick out only progressives to aid him in running the government. The electors of the various states met in their state capitals and chose one of their number to act as messenger to carry the result of the ballots to Washington, where, on February 12th, the returns will be canvassed by congress and the last formality of the election observed.

ROBERT W. ARCHBALD, of Scranton, Pa., for twenty-nine years an occupant of the Pennsylvania state bench, federal bench and the United States Commerce Court, was declared guilty by the United States Senate of "high crimes and misdemeanors," was stripped of his office and forever disqualified from holding a position of public honor or public trust. Judge Archbald was found guilty on five of the thirteen charges preferred against him, the chief ones being that he used his judicial position for his personal profit and that he induced railroads while litigants in his court to enter into business deals by which he profited in large sums of money. Judge Archbald was appointed to the commerce court by President Taft, who has repeatedly blocked every effort on the part of congress to dispense with the court, which has been found not only useless, but a deterrent to the execution of the orders of the interstate commerce commission. It will be recalled that the commerce court was created by the iniquitious Wickersham bill, which was so amended by the progressive senators (under the able leadership of Senator Cummins, of Iowa,) as to lose all of its original intent and harmful effect with the single exception of the creation of the commerce court to review the findings of the interstate commerce commission. The impeachment of Judge Archbald, together with the record of the court (which in a great majority of cases has overruled the interstate commerce commission and decided in favor of the railroads, at the expense of shippers), will probably bring about an early repeal of the law which created this court. The impeachment of Judge Archbald is the third successful one in the history of the United States and the only one in which the defendant appeared to answer the charges preferred against him.

RESUMPTION of war between the Balkan states and Turkey is looked upon as inevitable, due to the failure of the peace delegates at London to arrive at a decision. Turkey has been following a policy of procrastination and on the plea of waiting for instruction from Constantinople the Turkish delegates have succeeded in making the Balkan delegates mark time in London for several weeks. At last, with their patience exhausted, the Balkan ministers issued an ultimatum declaring that unless Turkey surrendered the territory demanded, and particularly the fortress of Adrianople, the peace conference would be called off and war would be resumed at once. Inasmuch as Adrianople is one of the sacred cities of the empire the Turks refuse to surrender it, although it has been besieged for weeks and there is every reason to believe that another week's decisive fighting would compel its capitulation. The Balkan delegates declare that they will not listen to another peace proposition from Turkey until they are at the very gates of Constantinople and that the peace terms of the next conference will be all their own way and include the surrender of all of Turkey-in-Europe, with the exception of the city of Constantinople, together with a war indemnity of at least $200,000,000. During the peace conference the Balkans have arranged for heavy loans and have renewed their fighting forces, so that they take the field once more confident of continued success.

FREE rough and dressed lumber, hewn and squared timber, shingles, lath and fence posts will be admitted free of duty under the present plan of the house ways and means committee. The tariff hearings have progressed to such a stage that announcement of the removal of tariff from lumber and from the cheaper grades of silk used by the common people, together with its retention on the higher grades of silk, has been made. This decision has been arrived at by the ways and means committee of the present house, under the leadership of Chairman Underwood, who will be chairman of the ways and means committee of the special session before which the actual work of tariff revision will come. Discussing his plan Chairman Underwood said: "We ought to get a large amount of revenue on luxuries so that we can put a smaller tax on the necessities of life. Where there is a large percentage of imports we do not want to cut the rates. We are desirous, however, of cutting the rates where there is no competi-

tion." The remainder of the month will be devoted to a continuation of the tariff hearings.

THE issue of early Filipino independence looms larger than ever before, due to the conference of the Filipino delegates to congress, Manuel Quezon, with President-elect Wilson. Mr. Quezon declares that his people have progressed to such a stage that it would be practical to give them entire independence within the next four years, whereas the Jones bill, now pending in congress, proposes eight years. Mr. Quezon has urged on the president-elect the advisability of making a trial of self government by appointing as members of the Philippine commission, the upper house of the present Philippine government, only native Filipinos, instead of Americans, now constituting the majority. It is known that Governor Wilson is favorable to the plan of letting the islanders rule themselves, while the democratic national platform declared squarely for this issue. Unless party lines are strictly adhered to, however, it will be difficult to get the Jones bill through congress, as the republicans are practically a unit in supporting President Taft and in holding on to the islands which came to the United States unexpectedly, as a result of the Spanish war. Whether the islands will ever be anything but a liability and an expense is a much debated question, on which the old-line parties disagree. There are those who would be only too glad to let go of the islands, upon which troublesome outbreaks of the natives are frequent, while others are as insistent that they are far too valuable to be thrown away after having cost so many American lives and dollars.

SENATOR GORE, of Oklahoma, has introduced a bill in congress increasing the membership of the United States Supreme Court from nine to eleven and providing that seven of the court shall constitute a quorum. The evident intention of Senator Gore is to give to President-elect Wilson the appointing power for at least three or four members of the court, in order by progressive appointment to offset the large number of conservatives appointed to the court by President Taft. With the two additional members and with one or two old members who are likely to retire during the next administration, President Wilson would be in a position to appoint almost as many members as President Taft and owing to his repeated declaration that only progressives will be called to assist him in the government the conservative majority in the United States Supreme Court would be offset. Senator Gore's bill created a stir in congress when it was introduced and it is said there is good prospect of its being passed at the special session. Inasmuch as Senator Gore has lately returned from a conference with Governor Wilson it is believed that his bill has the sanction, tacit at least, of the president-elect.

WOODROW WILSON'S views on "big business" were outlined before a recent meeting of Chicago bankers and railroad magnates. The president-elect made it plain that he believes in "big business" and does not care how large it grows, "provided it grows big in contact with keen competition." Instead of arguing for a stricter enforcement of the Sherman anti-trust law or any governmental regulation, he urged his hearers to take the initiative in bringing business into the fold of upright conduct, declaring that the business future of the country does not depend upon the government, but upon the businessmen themselves. Elaborating this idea the president-elect said "The government cannot breed a temper, it cannot generate thought and purpose. Things done under the whip of the law are done sullenly, somewhat reluctantly and never successfully. The hope of America is the changing attitude of the business men toward the things they have to handle in this country. I want to take sternness out of this country. I want to see suspicion dissipated. I want to see the time brought about when the rank and file of the citizens of the United States who have a stern attitude toward the business men of the country shall be absolutely done away with and forgotten. Perfectly honest men now are at a disadvantage in America, because business methods in general are not trusted by the people, taken as a whole. That is unjust to you; it is unjust to everybody with whom business deals and everybody whom business touches." The idea gained from his speech is that he proposes to use moral suasion rather than the "big stick" and that he has high hopes of the co-operation of business men generally, so that governmental investigation and prosecution will not be so necessary in the future.

THEODORE ROOSEVELT takes the ground that it is absolutely impossible for the republican and progressive parties to come together unless the republicans accept the plans and platform of the new party. Overtures have been made by a number of republican leaders and by such progressives as Senator Cummins, of Iowa, who, while coming out for Roosevelt for president, remained loyal to the republican state ticket and who now maintains that if "the proposed republican convention soon to be held reforms the basis of representation and takes steps to sustain the state primary laws, 75 per cent of the voters of the republican party and progressive party would vote under one party head." This same proposition has been advanced by no less a progressive leader than Frank A. Munsey, the prominent newspaper and magazine publisher. Replying to his overture Colonel Roosevelt, "simply speaking as one of the men in the ranks of the progressive party," declared that the progressives should "no more enter into a combination with the republican machine than with the democratic machine." Continuing Colonel Roosevelt said: "I firmly believe that all good progressives who may happen yet to adhere to either the republican party or the democratic party will in the end see that the chance for honest government and for the practical achievement of social and industrial justice lies in the progressive party, and only in the progressive party." Regardless of whether they were republicans or democrats in the recent contest Colonel Roosevelt declares that honest men who believe in the progressive principles will be welcomed to the ranks of the new party, concluding his statement by saying: "We will treat them on an entire equality with ourselves, and will work hand in hand and shoulder to shoulder with them for the betterment of the social, industrial and political conditions of this great nation." Following President Taft's speech, at the recent reorganization dinner, it is proposed to make a number of reforms in the republican party, notably in regard to the cutting down of the unfair representation of southern democratic states and in granting the people state-wide primaries.

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED.

ELOPEMENT OF MINORS.

A Subscriber, Oskaloosa, Iowa.—(1) Can a young couple not yet of age, living in Iowa, elope to Missouri and get married there without the consent of their parents? (2) If they should do so would the marriage be lawful? (3) How can I proceed to get the girl back?

Answer.—(1) Previous to any marriage in Missouri a license must be obtained from the recorder of the county where the marriage is to take place. And the law provides that no recorder shall issue a license to a man under twenty-one years of age or a woman under eighteen years of age, unless by consent of the parents or guardian in writing, unless they be present to give such consent. If the recorder issues a license where the parties are under age he is guilty of a misdemeanor and liable to a fine of $500. (2) However, if such marriage actually takes place it is not void. (3) You could obtain custody of the girl before the marriage takes place by suing out a writ of habeas corpus in the circuit court of the county where you find the girl.

HUNTING IN OKLAHOMA.

A Subscriber, Calera, Okla.—(1) Please tell me something about the hunting laws of Oklahoma—who are entitled to hunt and where it may be done? (2) How can the owner of a twenty-acre farm keep hunters away from it?

Answer.—It is unlawful to hunt antelope at all. The open season for deer is between November 1st and December 1st. It is unlawful to kill any deer without horns, and only one buck can be killed by a person during the hunting season. Open season for quail, November 15th to February 1st. One wild turkey gobbler between March 15th to April 15th, and three wild turkeys from November 15th to January 1st. Prairie chickens from September 1st to November 1st. Ducks, geese, brant, swan and crane from August 15th to May 1st. Various other limits for lesser game. Any citizen of the state over fourteen years of age may obtain a hunting license from the game and fish warden or from the county clerk, by filing his application and a descriptive affidavit and paying a fee of $1.25. (2) Such owner can have the hunters arrested and prosecuted for a misdemeanor. The penalty is a fine not less than $10 nor more than $100, or imprisonment in county jail not less than ten nor more than thirty days, or both fine and imprisonment.

SUIT ON NOTE—CREDITS.

A Subscriber, Grand Junction, Colo.—A borrowed $1,000 from B, payable in three years with 10 per cent interest payable annually, and gave his note therefor and put up as collateral security five shares of stock in an insurance company, upon which $1,000 had been paid. The insurance company was not notified of the transaction and dividends were received by A semi-annually from the company. The note was not paid when due, but B wanted the interest. About seven months after the note was due B notified A that he had price quotations on the stock at $300 per share, and requesting A to come and sign over the stock. A did not go, but sent power of attorney to sign and the matter was handled by B's bankers and the five shares were sold for $675 instead of $1,500. B was then informed that $300 was the company price, and that obtained was curbstone or broker's price. B then authorized the recovery of the stock or other certificates, but did not secure them. A was then informed of the transaction and asked what was to be done, and A gave instructions to dispose of the stock for not less than $900. A heard nothing more for five months and was then informed that the stock had been sold for $675, thus leaving a balance on note of $325 and accrued interest of $165. If suit is brought can B recover said balance and interest on note?

Answer.—If B brings suit on the note for balance and interest A should employ a lawyer to set up a claim in defense for the difference between $675 and $900, viz., $225. A is entitled to at least that much credit and perhaps he could claim more on account of the representation of B that the price quoted for the stock was $300 per share.

PARTITION FENCE.

Mr. Frank Scherer, Buckhart, Mo.—I want to fence some wild timber land for a cattle pasture. (1) If I put my fence on the boundary line can the owners of adjoining land, when they get ready to fence their land, use my fence without paying me for half the value of it? (2) If they can so use it how far from the line must I set my fence in to prevent them from using it without payment to me?

Answer.—(1) They cannot use your fence without paying half the value of it. When the parties get ready to use their land if you cannot agree with them you should call upon the fence viewers to assign to each party the part of the division line he is to keep fenced and make an estimate of the value of half your fence, and if the parties refuse to pay for sixty days after such value is fixed and your demand for payment, you can by suit recover the value together with viewers' fees and costs. (2) You should set your fence exactly on the line.

PARENTS' LIABILITY.

Mr. Joe Vogel, Jefferson, Wis.—Where city children go out into the country and do damage to buildings by breaking windows and breaking door locks to empty houses and the like, are their parents liable for such damages?

Answer.—The parents are not liable for such damages where the acts were done without the knowledge or consent of the parents. Generally parents are not liable for the wrongful or unlawful acts of their children unless it be shown that they approved or consented to such acts.

RECOVERY OF LAND BY HEIRS.

Mr. A. E. Danforth, Winterset, Iowa.—A and B were husband and wife and A owned 800 acres of Iowa land thirty years ago. He died, leaving a will by which he gave his wife eighty acres of the land, and 200 acres to C, a son, and to another son, D, he gave the balance of the land, 520 acres, to hold and control during D's lifetime, and at his death to go to D's heirs, E, F and G. At A's death, twenty-five years ago, B, C and D came into possession of said land. B and C brought suit to set aside the will in order to give D absolute right and title to the 520 acres, but the will has never been set aside. However, D disposed of the 520 acres and died recently. His three heirs are of age. Can they recover said 520 acres of land?

Answer.—D had only a life estate in the 520 acres of land and therefore could only sell his life interest in it. When he died his heirs, E, F and G, were entitled to the title in fee, and they can recover the land by a suit in the district court.

HEIRS' CLAIM TO LAND.

Mr. J. D. Laughlin, Haigler, Neb.—A got a patent from the government for a homestead in Missouri in 1902 and had it recorded in 1907. A died and his widow sold the land to B with court proceedings, giving a clear abstract of title to the same. B sold the land to C, giving him a clear abstract of title. What claims, if any, have A's children to the land?

Answer.—If the court proceedings were regular and the abstract of title showed right of the widow to sell the land, A's children have no lawful claim to it. However, a positive and reliable answer to the question could only be made after an examination of the court proceedings which authoriz-

Each a Lucky Car

By R. E. Olds, Designer

In every make an occasional car proves almost trouble-proof. No breakdowns, no repairs.

The man who gets it tells his friends he got a lucky car.

But every buyer of Reo the Fifth gets a lucky car. This is how I insure it.

How I Do It

A lucky car means simply a car built with proper care and caution. I have spent 26 years in learning all that is necessary.

I have all of my steel made to formula. Then every lot is analyzed twice to prove its accord with the formula.

Then the finished parts are tested. In every part I require over-capacity, not less than 50 per cent.

The gears are tested in a crushing machine, to prove that each tooth will stand 75,000 pounds.

Springs are tested in another machine for 100,000 vibrations

Added Cost

I use big tires—34x4—to save you tire expense and trouble. This year, by adding 30 per cent to my tire cost, I have added 65 per cent to the average tire mileage.

I use in this car 190 drop forgings, to avoid all hidden flaws. Steel castings would cost half as much.

I use 15 roller bearings—11 of them Timken, 4 Hyatt High Duty. The usual ball bearings cost one-fifth as much, but ball bearings often break.

I use a $75 magneto to save ignition troubles.

I doubly heat my carburetor—with hot air and hot water—to deal with low-grade gasoline.

I use a centrifugal pump, instead of a syphon, to insure positive circulation.

I use 14-inch brake drums for safety. Also seven-leaf springs, two inches wide.

1,000 Tests

The various parts of this car, during the making, get a thousand tests and inspections.

Each engine, for instance, is tested 48 hours—20 hours on blocks, 28 hours in the chassis.

Fitted parts are ground over and over, until we get utter exactness.

Each body is finished with 17 coats. It is deeply upholstered with genuine leather, filled with the best curled hair.

The electric dash lights are set flush with the dashboard. Thus the car's appearance shows the care we use.

Center Control

No other car has such easy control as you find in this Reo the Fifth.

All the gear shifting is done by moving a handle only three inches in each of four directions.

Both brakes are operated by foot pedals. So the car has no levers, either side or center, to clog the way in front.

You get in this car the wanted left side drive. The driver sits close to the cars he passes. Yet you shift the gears with your right hand, just as with the old right hand drive.

Costs Me $200 Per Car

Reo the Fifth, without these precautions, could be easily built for $200 less. For the first few months you might not know the difference. But in years to come this skimping might cost you several times $200.

I know this well, for I have built cars for 26 years — over 60,000 of them. I know the cause of troubles.

I save this $200 per car by building only one model, by building all my own parts, by wonderful factory efficiency. And I put that saving into these extremes, to save you after-cost.

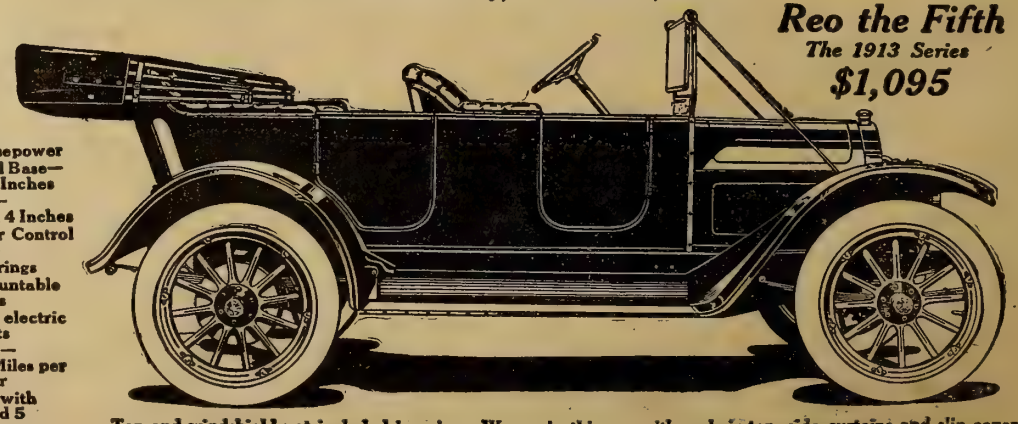
If you think that it pays to have a car like this, ask us to send you the details.

Our thousand dealers now are showing the 1913 model of Reo the Fifth. Write for our catalog and we will tell you where to see the car.

R. M. OWEN & CO. General Sales Agents for **REO MOTOR CAR CO., Lansing, Mich.**

Canadian Factory, St. Catharines, Ont.

Reo the Fifth
The 1913 Series
$1,095

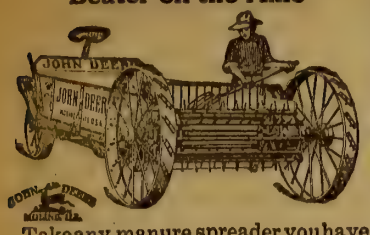


30-35 Horsepower
Wheel Base—112 Inches
Tires—34 x 4 Inches
Center Control
Roller Bearings
Demountable Rims
Three electric lights
Speed—45 Miles per Hour
Made with 2 and 5 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank for headlights, speedometer, self-starter, extra rim and brackets—all for $100 extra (list price $170).

John Deere Spreader

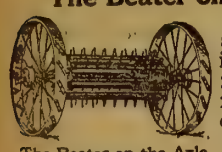
The Spreader with the Beater on the Axle



Take any manure spreader you have ever seen, remove all the clutches and chains, all the countershafts and stub axles, do away with all adjustments and mount the beater on the rear axle.

Rebuild the spreader so that the top of the box is only as high as your hips. Make it stronger. Remove some two hundred trouble-giving parts and throw them away. You will have some sort of an idea of what the John Deere Spreader, the Spreader with the Beater on the Axle, is like.

The Beater on the Axle



The Beater on the Axle

The beater and all its driving parts are mounted on the rear axle. This construction is patented. You cannot get it on any other spreader made.

Power to drive the beater is taken from the rear axle through a planetary transmission (like that on automobiles). It is positive, runs in oil, and does not get out of order.

Few Working Parts

The John Deere Spreader is so simple that there are no adjustments. It has some two hundred less parts than the simplest spreader heretofore made.

Out of Gear

There are no clutches to throw it into gear. The lever at the driver's right is moved back until the finger, or dog, engages a large stop at the rear of the machine. All the chains and adjustments have been done away with.

Only "Hip-High"

Easy to Load

Because the beater is mounted on the rear axle, it is only "hip-high" to the top of the box. Each forkful of manure is put just where it is needed. You can always see into the spreader.

Roller bearings, few working parts, the center of the load comparatively near the horses, and the weight distributed over four wheels, make the John Deere Spreader light draft.

Spreader Book Free—*Tells about manure, when and how to use it, how to store it, and a description of the John Deere Spreader. Ask for this book as Package No. Y.27*
